EDWIN O. LEWIS

In 1939 a local chapter of the Sons of the American Revolution listened to the rumblings of cannon across the Atlantic with an experienced ear. It turned its attention to ways and means of preserving Independence Hall and the Liberty Bell from possible bomb damage. In the group was a hearty, distinguished son of Virginia who presently sits as presiding judge of Philadelphia's common pleas court No. 2.

"That's when I first became interested in the hall," Edwin O. Lewis recalls. He subsequently widened his interest to include Congress Hall, the Head House, Christ Church, Carpenters' Hall, the old Stock Exchange, and a dozen other neglected relics of the War for Independence gradually wilting in the weed patch of loft buildings, slums, and rag-tag stores which comprised Philadelphia's bloody fifth ward.

It was also in 1939 that a group of private citizens living in the vicinity petitioned Congress to appropriate funds to improve the rundown neighborhood, rip out the deteriorating buildings, replace them with grassy malls, restore the old buildings, and create a national shrine.

To implement this project, the Independence Hall Association was formed and Judge Lewis persuaded to head it.

As one associate recalls, "the judge plunged in with messianic fervor. He talked Independence Hall to anyone who would listen. He never let a day go by without a conference or a meeting to further the cause.

For a span of 15 years Lewis supplied the necessary determination, diplomacy, and energy to make the project a success. It was Lewis who presented then Governor, now Senator MARTIN, with the idea for the Commonwealth's Mall from the State House north to Vine Street. The mall—budgeted at $27 million plus—is off to a healthy start. And not to be overlooked is its influence in upgrading the neighborhood; it provides the solid core for the redevelopment of the Old City.

RICHARDSON DILWORTH

"I am accused of being an emotional man," remarks Richardson Dilworth. "But where would this city be today if it didn't have emotional men who were willing to fight for it?"

Probably the stormiest petrel ever to occupy the mayor's perch is the scrappy incumbent. A fiery, extemporaneous orator, Dilworth's golden tongue and lightning mind have done much to set the aggrieved, enlightened tone of Philadelphia reform.

Like Clark, Dilworth was a Chestnut Hill lawyer; like Clark, he is a well-heeled liberal. There the resemblance ends. For to Dick Dilworth politics is more art than sense, and his connoisseurship is unquestioned.

His entrance on the local political scene in 1947 as a mayoralty candidate was spectacular. He came out of nowhere (that is, a prosperous legal practice rather than the organizational hierarchy) to wage a ferociously personal campaign which rocked the city and brought him within 92,000 votes of upsetting a 63-year-long Republican hold on the office.

His stump was a sound truck, and his arena the street corner. More than any other contributing factor, it was Dilworth's sensational charges of graft and corruption—larded with names, dates and places—which set off the chain reaction that blew the lid off city hall.

Two years later, he carried the city in his campaign for treasurer. He carried it again, but lost the State, in a bid for the governorship in 1950. The following year, in tandem with Clark, he was elected district attorney with an overwhelming plurality.

Ten years after his first major fling at politicking, Dilworth is as indefatigable as ever, spends up to 16 hours a day at his job. He is also still ferociously personal. He does not hesitate to brand as bums, louses, and liars his political enemies with a refreshingly bipartisan wrath. And except for one defection—reportedly to honor a campaign promise—he has continued to muster the support and admiration of the good government crowd in and out of his party.

JAMES M. SYMES

Center city renewal revolves around two constellations. To the east is Independence Mall, to the west, Penn Center—the largest, single, central city plot ever thrown open for renewal.

Charting the course for the latter swing is James M. Symes, the 13th man to head the sprawling corporate dynasty which is the Pennsylvania Railroad.

Although it has been forgotten in the press of contemporary headlines, the Penn Center concept has been championed vigorously by the railroad since the late 1920's when the Pennsy was able to complete phase one of a grander scheme: the construction of underground suburban station and the towering 21-story office building which caps it. The removal of anachronistic Broad Street Station and the formidable, red buttress of trackage, the Chinese Wall, was blocked first by the capital famine provoked by the depression, then by the materials-manpower shortage of World War II. Shortly after war's end Symes, then executive vice president of the Pennsy, was assigned the task of implementing the postponed development. While planners debated where and how to begin, Symes chafed at the bit. Newton's observation on inertia: "A body in motion tends to stay in motion," he felt, made a sound precept. He gave the project a healthy push by starting demolition of the Chinese Wall and hired consultants to recommend an approach for redevelopment.

The logjam was broken. In less than 2 years from the date Broad Street Station shuttered (to the tune of Auld Lang Syne played by the Philadelphia orchestra), construction of the first office building was underway.

Symes personally nursed the 22-acre site through conferences with planners and politicians, realtors and investors.

It would have been easy to sell off the center piecemeal for indiscriminate development, but Symes took a determined stand not to let the land become another Market Street.

"The railroad," he maintains, "is only in the redevelopment business to make sure that Penn Center and nearby land is consistent with the best interests of Philadelphia."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Each Age Has Its Problems and Its Opportunities

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. JOHNSON of Texas. Mr. President, a deeply thoughtful and realistic discussion of the problems of the pioneers, as compared with the problems of our people today, was published recently on the editorial page of the Tulia, Tex., Herald.

The Tulia Herald has a truly outstanding editorial page, made so by the skill and knowledge of H. M. Baggarly, editor and publisher of this national prize-winning weekly newspaper. Mr. Baggarly has the gift in his writing of going directly to the heart of matters.

That gift is well demonstrated in the editorial I have mentioned. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIFE THEN—AND NOW

Again we pause to honor Swisher County pioneers who were responsible for developing a virgin wilderness into one of the most progressive farming regions of the Nation.

In many instances these hardy pioneers left their friends and relatives in other sections of the country already developed and struck out for a new frontier much more rugged and brutal than it was romantic. Like all of us, our pioneers tend to remember the pleasant and forget the unpleasant as they reminisce. Some even venture the wish that they could turn back the calendar and live again the "glorious past" in preference to 1957 with its many problems.

Nevertheless, life was no bed of roses in 1890, even though man was not confronted with the problems of a civilization as complex as it is modern.

Not only were the pioneers deprived of conveniences not then developed, but they were also deprived of most of the comforts enjoyed back in the older sections of the Nation at that time.

Consider life without electricity, natural gas, and even coal in some instances, life without improved roads and automobiles. Consider life in a country where the nearest shopping center was 50 miles away with little or no public transportation. Consider life without ice in the summer, without air conditioners or even electric fans, not to mention such things as insulation.

There were the natural hazards of blizzards, grass fires, grasshopper plagues, against which man had little defense.

There was the absence of medical attention just around the corner, and a hundred other things we take for granted today.

We have not mentioned such hardships as loneliness and longing for friends and relatives back home.

Surely it took stamina and fortitude for our hardy pioneers to stick it out.

Today most of the real pioneers are gone. A new generation has taken over.

Gone are the hardships faced by the pioneers. We live in a new age. We live in a country which has conquered those things which made life hard for the pioneers. Transportation and communication leave little to be desired. Many Swisher farmers live better than kings lived in 1890.

But dare we say that the frontier has at last been conquered, that all our problems of life are solved?

Certainly not.

We moderns are faced with problems just as perplexing and difficult as those faced in 1890. They are different, to be sure, but they are just as real and just as taxing to our intellects.

We have the problem of what to do with the fruit of our land in an age when synthetics are stealing our markets.

We have the problem of financing our many needs in a day when taxation is already back breaking. Every political subdivision is clamoring for more money, the school, the city, the county, the State, and the Nation. And the needs are real.

We have an ever-growing delinquency problem that has yet to be solved.

We have the problem of a cold war that ever threatens to become hot.

These are only a few.

Life is relative, to a great extent, in comparing life in 1957 with that in 1890, the really important thing is man's reaction to life as it was or is. It includes such things as contentment, happiness, neighborliness, helpfulness, friendliness, sturdiness, fortitude, progressiveness, and morality.

If the 1890 pioneer was better contented than the 1957 person, then the 1890 man did a better job in meeting one of his problems than has the modern. If the 1957 person displays greater fortitude in tackling his problem than did his grandfather, then he is a better man.

The important thing isn't when we lived. It is how we lived.

National Interest Calls for Curbing Excessive Oil Imports

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. JOHNSON of Texas. Mr. President, if oil imports have reached a point at which they damage the Texas oil industry—and they certainly have—then those imports are too high from the standpoint of our national security.

That is the telling point made in a thoughtful and factual editorial in the San Antonio (Tex.) News.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIGH OIL IMPORTS WORRYING TEXAS

The oil and gas industry pays more than one-third of the taxes supporting the Texas government.

That revenue fluctuates sensitively with the level of production.

The State government, with a billion-a-year budget, is now committed to spend right up to the limit of its anticipated income.

Since the Suez Canal reopened, Texas allowable oil production—legally geared to market demand—has been cut 700,000 barrels a day, while imports of foreign oil have zoomed to 1,700,000 barrels.

Should that trend continue, the State government could be thrown into a deficit tailspin, crippling vital public programs.

Those are the fundamental facts behind Senator LYNDON JOHNSON'S campaign to get the Eisenhower administration to order a reduction in imports, a move now reportedly under serious consideration.

Congress has recognized, in law, that a healthy petroleum industry is essential to national security. When imports reach a level discouraging to domestic explorations and development—and hence detrimental to mobilization preparedness and related to economic stability—they can be restricted to a reasonable level.

Any level of imports damaging to the Texas oil industry—which fills a third of United States demand—is also too high from a national security viewpoint. Both national and State interests, therefore, dictate import restrictions.

Part III of the Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. KERR. Mr. President, the distinguished journalist, and vice president of the United Press Associations, Lyle C. Wilson, sets forth in clear language today the known facts about one of the great mysteries of our time.

It is: How did part III get into the civil-rights bill?

Mr. Wilson points out that the provisions of this title—whatever the intentions of the authors—are tricky and devious, and they add up to a roundabout but effective method of bringing troops into the South.

I ask unanimous consent that Mr. Wilson's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of July 17, 1957]

WHO DRAFTED HIDDEN GOBBLEDYGOOK IN RIGHTS BILL?

(By Lyle C. Wilson)

It would be a fair question to ask Attorney General Herbert Brownell, Jr., who in his department drafted the administration's civil-rights bill and, also, the names of any outsiders who helped on the job.

With the authors identified, it would be reasonable to ask them about the legislative gobbledygook in part III of the bill. Part III authorizes the use of the land and naval forces of the United States and the militia to enforce civil rights for Negroes in southern communities.

About all that is known of the authorship of the bill is that it was drafted in the Department of Justice or, at least, was made available to the House and the Senate by that Department. Intentionally or not, the bill's authors chose a tricky and devious method of empowering the President to use troops in the South to enforce such rights as integrated schools.

It would be fair to ask the bill's authors whether they sought to bury out of sight the provision for the use of troops. Their method was round-about but effective. Back there in reconstruction days, roughly 1866 to 1871, Congress imposed some heavy-handed legislation on the South and backed it up with the Armed Forces of the United States.

One of those reconstruction bills with a legislative history spanning from July 31, 1861, to April 20, 1871, is identified now in the United States Code as act No. 1985. Part III of the civil-rights bill pending now before the Senate actually is an amendment of that reconstruction time act No. 1985.

This act, in turn, depends for its enforcement on still another reconstruction force bill now identified as act No. 1993, enacted first in 1866 and amended in 1871. The authority for the use of troops to enforce a miscellany of civil rights is well disguised.

From line 12, page 9 of the administration bill it is necessary to pursue the hidden meaning all the way back to 1866–71 before the reader encounters this language:

"It shall be lawful for the President of the United States, or such persons as he may empower for that purpose, to employ such part of the land and naval forces of the United States, or of the militia, as may be necessary to aid in the execution of the judicial process."

It would be fair to question the authors about another interesting point. Why was this great enforcement power by land and sea forces provided for the miscellany of civil rights and not provided to enforce the greatest right of all—the right to vote?

The Senate bypassed its Judiciary Committee in bringing the bill to the floor. If the bill had been referred to that committee, Senator RICHARD B. RUSSELL, Democrat, of Georgia, could have sought the presence of the bill's authors as witnesses and such questions as are suggested here undoubtedly would have been asked. Senator RUSSELL doesn't like any part of the bill. He especially objects to what he regards as deceit and double talk in its presentation.

"The purpose of this bill," he told the Senate, "was to tie the whole proposition into a law authorizing the use of troops to integrate Southern schools and not for the purpose of assuring the right of any citizen of this country to vote."

Another fair question to the authors and assistant authors would be: Was that the purpose?

Situation in the Sugar Beet Industry

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. HRUSKA. Mr. President, during the last session, the Congress passed a bill making certain amendments to the Sugar Act. The bill was signed by the President, and has been in effect for approximately 1 year.

For the first time in many years the raisers of sugar beets have been able, by reason of that law, to participate in the expanding sugar market. For example, by reason of those amendments, the sugar-beet industry was able to make and to market 150,000 extra tons of sugar, which thus were made available to the consumers in the United States. Furthermore, if the consumers need it, the sugar-beet industry is able to supply an additional 350,000 tons of sugar this year.

Mr. President, a number of statements have been made in regard to the effect of the passage of the bill last year.

Early this week there was prepared by Mr. Harry Clark, of the American Sugar Beet Industry Committee, a statement bearing on those matters. I wish to ask unanimous consent to have the statement printed in the Appendix of the RECORD.

Furthermore, I may say that the American Sugar Beet Industry Committee represents the Nation's sugar beet growers and the beet sugar processing companies.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT MADE BY AMERICAN SUGAR BEET INDUSTRY COMMITTEE THROUGH ITS CHAIRMAN, HARRY CLARK, SUGAR BEET GROWER OF AULT, COLO.

THE STATEMENT

Just about everybody in the sugar business recognizes that a tug of war is going on with respect to the price level of foreign and domestic offshore raw sugar supplies for the United States market. Various forces and groups, domestic and foreign, are involved. In recently published statements concerning this situation, the United States beet sugar industry—a bystander in this contest—and the American Government's sugar program have both been accused of being at fault.

Specifically, it has been charged that the 1956 amendments to the Sugar Act and the increased beet sugar marketing quotas resulting from those amendments are responsible for the level of refined sugar prices in Northeastern States. It has been alleged that a shortage of sugar exists in that region. The beet sugar industry has been accused of not providing its full share of consumers' needs and, by inference, of not having the ability to produce or market its full share. Such charges and inferences are utterly without foundation. Here are the facts:

THE NORTHEAST SITUATION

The level of refined sugar prices in the Northeast is basically the result of two factors, both obviously beyond the control of the beet sugar industry. One is the cost of raw cane sugar to eastern cane refiners, and the other is the cane refiners' margin or spread between what they pay for raw sugar and the price they charge for refined sugar.

Today's raw sugar prices are the direct result of (a) the fact that nearly all raw sugar supplies in offshore areas are in the hands of a few strong sellers, (b) the effect on the United States market of higher prices for raw sugar elsewhere in the world, and (c) the buying practices of raw cane sugar purchasers.

There is no shortage of raw sugar available for the Northeast. More raw sugar supplies are available this year to cane refiners than were available last year, with no indication that consumers are going to buy as much refined cane sugar as last year. The Sugar Act still permits refiners to refine and market in the Northeast as much of the total raw sugar supply as may be necessary to meet the needs of consumers in that area.

All evidence points to the fact that there also is no shortage of refined sugar available to the Northeast. Eastern refined cane sugar is being shipped hundreds of miles westward where abundant beet sugar supplies are available. Refined cane sugar is being freely offered in the Midwest at prices substantially below the basic eastern seaboard price plus freight.

Beet sugar is being offered at less than eastern cane prices as far east of the normal beet sugar sales area as Buffalo and Pittsburgh, but buyers there have so far shown little interest in the face of abundant offerings of cane sugar.

BEET SUGAR MARKETING ABILITY

Beet sugar marketing during the first 6 months of this year exceeded those for the same period last year by more than 80,000 tons. Cane sugar sellers, on the other hand, have marketed almost 120,000 tons less than at this time a year ago.

Some of the most significant increases in beet sugar deliveries this year have been in the States on or just beyond the eastern fringe of the industry's normal marketing territory. For example, most recent trade figures show that compared with 1956, beet sugar deliveries during the first 5 months in 1957 were up 144 percent in Ohio, 130 percent in Indiana, and 16 percent in Illinois—in view of the heavy beet distribution in June these percentages no doubt will be significantly higher when the June figures are available.

The crop report issued by the Department of Agriculture just last Wednesday indicates that sugar beet production this year, from 11 percent more acres than last year, will be large enough to provide an alltime high quantity of beet sugar—2,150,000 to 2,200,000 tons of sugar, topping all previous production records by 150,000 to 200,000 tons. With adequate stocks on hand and the harvest of this huge crop to begin in a few weeks, the beet sugar industry's ability to market its full proportionate share of whatever volume of sugar consumers may need this year is at an alltime high.

For the obvious purpose of affecting sugar prices in the Northeast, the Department of Agriculture has set total marketing quotas this year at an admittedly inflated figure of 9,300,000 tons. This is 500,000 tons higher than the Department's own estimate of actual consumption and distribution for the year. The beet sugar quota resulting from the Department's action is now 2,101,000 tons—about 150,000 tons greater than the record beet sugar quota and marketings of 1,955,000 tons in 1956.

The 1956 amendments to the Sugar Act gave American sugar producers the opportunity to share with foreign suppliers in filling increases in sugar requirements of a growing nation. Part of the increased need for sugar arises because of the West's fast-growing population. It was both natural and imperative that this increase be supplied in considerable part by increased quotas to the beet sugar industry, which produces in the Midwest and West.

There has been and is plenty of sugar available for every hamlet and every consumer in the United States, and there will continue to be ample supplies to meet all American demands. Thanks to the present Sugar Act, the average prices of sugar to United States consumers has resisted the upward pressure of prices to a much greater extent than have the prices of virtually all other food products. While there has been a moderate advance in the sugar price level, it has not advanced proportionately with living costs and is even below the level considered reasonable and fair as measured by the Labor Department's Consumer Price Index, which the Sugar Act authorizes as a

gage. Because of the present Sugar Act, American consumers have been protected from the skyrocketing world sugar market, on which prices more than doubled in the last few months of 1956. Since last November, the world market price has been above, much of the time substantially above, the United States price.

The beet sugar industry's increased marketings and its prospective greater output for this year—both of which are direct results of the 1956 amendments to the Sugar Act—will continue to help give positive assurance of adequate supplies and reasonable prices for American sugar consumers.

Federal Aid to Education—Resolution by Idaho State Federation of Labor

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. CHURCH. Mr. President, at its annual convention in Coeur d'Alene, Idaho, last June 10 to 13, the Idaho State Federation of Labor adopted a resolution setting forth its views on the subject of Federal aid to education. The resolution contains a cogent summary of the reasons which make such aid imperative, and reflects the typically constructive and intelligent attitude of this great labor organization toward a problem of great public interest. I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE 41ST ANNUAL CONVENTION OF THE IDAHO STATE FEDERATION OF LABOR, COEUR D'ALENE, IDAHO, JUNE 10–13, 1957

Whereas although 63,000 new classrooms were erected last year, this construction hardly accommodates the 45,000 additional classrooms needed each year merely to take care of the enrollment rise plus normal replacement of buildings that have been in use for 50 years; and

Whereas failure to provide Federal Aid to School construction threatens the freedom and welfare of all Americans; and

Whereas millions of children are now being deprived of their birthright—a decent education opportunity; and

Whereas communities throughout the country are now bearing the heavy burden of child delinquency, crime and social maladjustment—a bitter harvest reaped from both their own local educational deficiencies and that of communities from which new migrants come; and

Whereas many Americans are very migrant there has been great concern of all people of all States to see that all American children are deucated no matter where they live; and

Whereas State and local taxes for schools have reached the point of tremendous burden on its source; and

Whereas we viey with great alarm the tendency to postpone needed Federal aid to education: Therefore be it

Resolved, That the AFL–CIO go on record as supporting Federal aid to education by urging its passage, and that copies of such be sent to members of the House Education and Labor Committee and our own Congressmen.

Wheat Marketing Quotas

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. LANGER. Mr. President, I ask unanimous consent that there may be printed in the RECORD the GTA Daily Radio Roundup of June 24, 1957, prepared by the public relations department of the Farmers' Union Grain Terminal Association, St. Paul, Minn.

There being no objection, the radio broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY ROUNDUP, MONDAY, JUNE 24, 1957

The wide margin by which farmers O. K.'d marketing quotas in the wheat referendum last Thursday did more than surprise Washington. It shocked the experts in the Department of Agriculture. They should have been shocked, because it was clear proof that the experts in the Department of Agriculture have lost contact with farmers—don't know how farmers feel or what they really think. The experts in Washington said that the wheat referendum would pass, squeak by on a narrow vote—might even be defeated. Farmers, they said, were filled up with regulations, and wanted the free market so assiduously preached by the Secretary of Agriculture.

And, what was the result? The vote was the smallest in any wheat referendum. That was what we told you to expect, because most of the disgusted vote stayed at home. The vote was about 225,000, compared to 280,000 last year. That' about 1 out of 4 eligible voters. But, here in the strong GTA and Farmers Union States, where the Farmers Union Central Exchange and other co-ops also joined, there was another record-breaking "yes" vote. North Dakota, alone, accounts for more than one-fourth of all the votes. There are seven counties still missing in North Dakota. But, the vote so far is more than 55,000 "yes" and about 1,700 "no." That makes 96-percent "yes" for North Dakota, and pulls the national "yes" average up to 86 percent.

We want to make one thing clear. The vote is in no way an approval of the $1.78 price for wheat. It's 25-percent short of parity, 40-percent short of what a wheat farmer should have in order to get a fair share of the national income. It is just a matter of not jumping out of the frying pan and into the fire. The vote is no blessing on the way the wheat program hase been run—clip, clip, clip on support prices, year after year, by the Secretary of Agriculture. But it is better than no program at all. Farmers did recognize that it stopped the Secretary of Agriculture from putting the wheat price still lower, which he would have liked to have done.

In Congress, the vote is a real boost to Members who have tried to get a fair farm program worked out. It served notice on some farm-organization leaders, too, that they had better listen more to farmers and less to the Department of Agriculture experts. Already, the more alert of the farm papers are saying that the wheat-referendum victory, the big "yes" vote, serves notice on Washington, that come what may, farmers don't want to go back to the free market, depend on the grain exchange, to fix their prices. They are saying it at the very time when one farm organization is booking a grain operator to talk at picnics, telling farmers to stay out of politics and just farm harder.

Farmers are not fooled by that kind of talk. The real disagreeable truth is that farming is a sick industry, and the medicine that farmers have been getting (the treatment from the Department of Agriculture policymakers) has been making them sicker and sicker. The prescription is more politics, not less; better farm laws, not fewer; more leadership, not less. The Nation is starting to recognize this, and in the months ahead you'll be hearing a lot more about what causes the sickness and what kind of a remedy will cure the sickness without killing the patient.

This concerns not only farmers, but all of us. People must eat, and they want to have enough at reasonable prices. What GTA and the Farmers Union want is a program that will do that, and do it fairly for consumer and producer. We believe a good farm program is as big a concern to city people as it is to farmers.

Cooperation Among Scientists

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Cooperation Among Scientists," published in the Norman, Okla., Transcript of July 14, 1957. This editorial deals with the International Geophysical Year, and the pattern which scientists have set in world cooperation, to help advance the frontiers of science.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COOPERATION AMONG SCIENTISTS

The most remarkable thing about the International Geophysical Year just getting under way this month is that it is being undertaken in a fine spirit of cooperation.

The year actually will cover 18 months. In that time scientists of some 60 nations will give the earth the most intensive checkup it has ever had in such a time span.

They will record coordinated measurements of the earth's crust, its interior, the oceans, the atmosphere, and the forces beyond the atmosphere—cosmic rays, effect of sun spots, and the like.

That the world's scientists should agree to the wisdom of this study is an inevitable tribute to their insatiable curiosity, their willingness to seek again and again for fresh understanding of this well-trod planet.

For centuries men have been applying the yardstick to this earth, sniffing its atmosphere, poking into its depths, climbing its heights, plumbing the oceans. No one imagines the task is complete, and of course it has been going forward steadily with the passing years.

Yet much vital measuring and discovering has long since been done, and it was quite an idea, therefore, that the scientists of many lands should cooperate in so intensive a survey as has now been launched.

Of necessity, much past measurement has been on a limited, more or less individual basis. An overall portrait of the earth and its interior has been gained by piecing together the assorted fragments.

The great virtue of the studies in the Geophysical Year is that through the fortunate collaboration of so many nations the findings will be fully and thoroughly coordinated. General conclusions may emerge from this study that otherwise might not come to notice for decades or longer.

We wish all of the world's political figures would show the same willingness to cooperate in international relations that the scientists are showing in this project.

The "Big Cheese Deal"

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. LANGER. Mr. President, I ask unanimous consent that there may be printed in the RECORD the GTA Daily Radio Roundup of July 15, 1957, prepared by the public relations department of the Farmers' Union Grain Terminal Association, St. Paul, Minn.

There being no objection, the radio broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, MONDAY, JULY 15, 1957

The Government's big-cheese deal is back in the news. You remember that one. It happened in 1954, but the odor still lingers on, because dairy farmers were hit with a big price cut, and processors and handlers of cheese got a big windfall. In 1954 Secretary of Agriculture Benson had been in office 1 year. Farmers were beginning to get a real taste of price flexing, because Mr. Benson already was trimming supports every time he could find a loophole in Federal law.

Dairy farmers had been getting a price support at 90 percent of parity. In March of 1954, Benson trimmed that down to 75 percent of parity, as low as the law allowed. It's still down there. But, just before it cut the dairy price support, the United States Department of Agriculture moved to take care of processors and handlers of dairy products, who might be caught with an inventory worth a lot less money, because of the price cut from Washington. The Department offered a special purchase-resale deal to the processors and handlers. It worked this way: Cheese firms were allowed to sell cheese to the Government at 90 percent of parity, and then buy it right back again at 75 percent of parity. The cheese, of course, never went into Government warehouses at all. The food firms kept it all the time—just a paper transaction, but worth plenty of money.

Now, it's pretty hard to keep a deal like that under cover. There was an investigation by Congress, and now the Government is suing the various food firms. It wants to get back almost $2,400,000 which the congressional committee says were nothing more than windfall profits to the big food firms—Swift & Co., National Biscuit, A. & P., Kraft, Borden, and others. The courts will decide whether or not they have to pay it back to Uncle Sam.

But the courts can't do anything for the farmers who took a 15-percent dairy price cut in 1954, and are still living with it, at least those that survive. A lot of them have had to close the barn doors for the last time. Benson was within the law when he cut dairy price supports, and the supports on all the other crops. Now he is asking Congress for a new law giving him power to make farm prices even lower in Washington.

Every farmer ought to understand this low-farm-price attitude in Washington, because he's got to shape his plans to fight it at every turn—at the ballot box, through his farm organizations, and through GTA, the co-op way.

Saving the Trees—The Importance of Wood Products Research

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. WILEY. Mr. President, one of the great institutions of my State and of this Nation is the renowned Forest Products Laboratory, located at the edge of the campus of the University of Wisconsin, in Madison.

This laboratory has contributed invaluably to all the woodworking industries of the United States.

It is one of the best illustrations of the value of research conducted by the Federal Government.

Time after time, down through the years, I have pointed out how a single tax dollar invested in the Forest Products Laboratory repays itself in terms of new national wealth created and new taxable revenue created—by ratios of 10 to 1, and even higher.

I was pleased, therefore, to note in yesterday's issue of the Wall Street Journal an article describing some of the amazing research projects carried on by this Forest Service Laboratory.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAVING THE TREES—FEDERAL SCIENTISTS FIND WAYS TO TRIM WASTE, STRETCH WOOD SUPPLY—UNITED STATES LAB TURNS CHIPS INTO CHEMICALS AND HARDWOOD INTO NEWSPRINT—A NEW SAW SAVES ON SAWDUST

(By Richard P. Janssen, Jr.)

MADISON, WIS.—A husky chap in a white T-shirt pours sulfuric acid and wood chips into his huge green percolator.

Another man, neatly attired in a business suit, hacks vigorously at a board with a tiny, half-inch-long saw; he throws the pieces of wood away and carefully saves the sawdust.

Two attractive girls, a blond and a brunet, sit busily whittling on pine sticks.

These odd goings-on have a serious design. They're taking place here at the edge of the University of Wisconsin campus in the trim limestone building that houses the United States Forest Service's Forest Products Laboratory, the Nation's largest wood research facility. The wood projects these men and women are tackling are among the hundreds the laboratory's 440 scientists and other workers are engaged in. The 47-year-old lab's research is aimed at finding ways to use more of each tree toppled, discovering applications for weed species, and improving products of the Nation's wood industry.

DOUBLE BY 2000

The research should help make United States tree resources go further and help provide enough wood to meet fast-growing demand. Two of the biggest users of wood—paper makers and homebuilders—have slowed down this year, but the dip is likely to prove temporary. Lab Director J. A. Hall predicts wood use will double by the year 2000. In 1956, paper producers consumed about 36 million cords of pulpwood, up from 18 million as recently as 1940. United States lumber output last year was 37.5 billion board-feet, nearly one-third more than in 1939.

"The annual cut is in precarious balance with new growth," says Dr. Hall, "but too much of our growth is on kinds and qualities of trees for which our use is limited."

Research now in progress here promises to contribute to such diverse benefits as lower cost house siding, boats, bridges, and baseball bats from layers of wood glued together; blue-blood strains of trees producing stronger wood, and newspapers printed on paper made, not from softwood, but from such hardwoods as oak, magnolia, and gum.

Roger Lloyd, the man cooking up the queer concoction in his green percolator, is one of the lab's chemical engineers. He's not, of course, striving to invent some kind of fiendishly strong coffee, but is searching for ways to use scraps of wood and types of trees now wasted. The wood industry already has made considerable progress in this direction, but even so, about one-fourth of each tree cut is still left on the forest floor, at the sawmill or wasted by paper firms. Mr. Lloyd's experiments are aimed at converting wood into chemicals.

MAY OVERSHADOW COAL, PETROLEUM

"We're about 10 years away from extensive use of wood as a source of chemicals," predicts Dr. Edward G. Locke, chief of the division of wood chemistry. "In another 50 years, wood that's now discarded may overshadow petroleum and coal as a source of industrial chemicals."

Mr. Lloyd shovels chips of aspen in the top of the 2-story-tall percolator, pours in dfluted sulfuric acid, and turns on the heat. From the spout at the bottom comes a sweet, sticky material, something like molasses.

The lumber lab men once thought this might be useful in livestock food, but it couldn't compete with blackstrap molasses. Dr. Locke's researchers now are processing it with the aid of a type of microscopic plant.

The plant is a type of yeast known by the jawbreaking name of torulopsis magnoliae. Its relatives, of course, earn their keep by fermenting beer, producing antibiotics, and making bread rise. The variety that's at work here is a black sheep species, the lab men found it in spoiled honey at the university's agricultural college.

Digesting the molasses-like material, the yeast turns part of it into alcohol. From the solution that's left, chemists also extract glycerin (used in such widely varied things as cosmetics and high explosives) and acetic acid, an ingriedient of rayon, plastics, and mother of such common products as vinegar.

Dr. George Hajny, who is in charge of this phase of the yeast research, says that lab studies indicate that the break-even cost of making glycerin is about 28 cents a pound, that's roughly equivalent to the present market price for this versatile product. Glycerin is now made both from petroleum gases and as a byproduct of soap.

USES FOR LIGNIN

The lab is hard at work, too, searching for uses for lignin. Wood, basically, is made up of cellulose, the fibrous material used to produce paper, and lignin, the substance in a tree that binds the fibers together. The paper industry now discards most of the lignin, only about 1 percent is used. The balance is a nuisance, polluting streams into which it is dumped.

The lab has been helping Howard Smith Paper Mills, Inc., Cornwall, Ontario, perfect a way to salvage lignin by bubbling carbon

dioxide gas through papermaking waste liquids. The mill sells the product to companies which blend it with more costly resins used in sticking together sheets of paper which make up laminated kitchen counter tops. Other firms use the dark brown powder to make vanillin flavoring (spelled that way to distinguish it from genuine vanilla), linoleum paste, and bug spray. Long used in Portland cement, it retards setting to give workers more time to work with the product.

Several technicians are even subjecting bark to chemical analysis, probing potentialities of that largely neglected part of the tree.

Experimentally, the lab also has discovered how to make some chemicals now produced from coal—phenol or carbolic acid, cresol and catechol. This group of chemicals is particularly useful in making such products as drugs, dyes and plastics. Up to now, however, researchers here have not been able to produce these chemicals cheaply enough to compete with their coal tar counterparts.

RENEWABLE RESOURCE

Wood has one big advantage over coal and petroleum as a source for chemicals, Dr. Locke notes: Wood is a renewable resource.

The Nation's hardwood forests get a great deal of attention from researchers here. More than half the 489 million acres of commercial forest land in the United States is covered with broadleafed hardwood trees, yet they account for only 30 percent of the current wood supply being used. One segment of research in this field is just starting to pay out.

Because of their hardness and short fibers, hardwood trees (distinguished from the needle-bearing softwoods by the leaves they shed each autumn) cannot be made into newsprint by conventional methods. To soften the wood and make it possible to separate the fibers to produce usable newsprint pulp, the laboratory has found a mild chemical treatment necessary. One such method is the lab's cold soda process. The cold soda process gives extremely high yields from hardwoods; it involves soaking the chips of wood in caustic soda for 2 hours or less at room temperature.

The first pilot plant to use the new process for newsprint went into operation at the Bowater Southern Paper Corp., Calhoun, Tenn., several months ago. That plant is using such hardwoods as gum and oak, which are available in large quantities. After operating for several months the pilot-plant experiment is considered a success, not only as a means of extending the wood supply but also because of the enhanced quality of the newsprint.

PLAN TO HIKE OUTPUT

It is understood that Bowater will boost its current 40-ton-per-day pilot-plant production to 200 tons daily in a year or so, blending the hardwood pulp with conventional softwood pulp.

A second pilot plant to use the cold soda process started operation quite recently at Coosa Pines, Ala., at the mill of the Coosa River Newsprint Co., a subsidiary of the Kimberly-Clark Corp. The Alabama plant is using wood from such hardwoods as magnolia, cottonwood, red gum, birch, and oak, which cover half of the company's forest lands.

Even sawdust gets consideration at the Forest Service laboratory here. The man wielding the midget saw, L. H. Reineke, is a technologist who is at work attempting to cut down the amount of sawdust. His saw has alternating long thin teeth and wide short ones. The long tooth makes a deep cut and the short tooth widens the cut. Result: A smoother cut, less sawdust, little or no planing, less power to drive the saw.

BOARDS FOR 120,000 HOMES

Weighing the sawdust, Mr. Reineke finds the blade produces about 25 percent less of this waste product than an ordinary saw. So what? To answer the question, he picks up a slide rule and figures that the annual output of sawdust in the United States is equal to 4.8 billion board feet of lumber. If his two-cut saw were used to produce all the lumber in the United States, it would save enough boards to build 120,000 two-bedroom framehouses, he figures.

Glue opens a number of ways for upgrading the value of forest products. Researchers here, for example, have utilized an adhesive in a way that could cut the cost of lumber and is already proving beneficial to sports fans at the University of Wisconsin. The adhesive-aided process prevents bleacher seats from splintering, with obvious advantages to the fans who sit on them.

The process involves an overlay—resin-impregnated paper is glued firmly to knotty, low-grade lumber. Covering visible defects with a smooth, easily paintable surface, the overlay cuts lumber shrinking and swelling by one-third, laboratory men say. Through three seasons, 300 Wisconsin stadium seats with paper overlays are little worse for wear—"even the ones that look like they've been gouged with track-shoe spikes haven't peeled off," a Government gluer reports.

Overlays are going commercial. The Boise-Payette Lumber Co., in Everett, Wash., is using a variation of the process, the laboratory reports, and paper-covered plywood is made by such firms as Georgia-Pacific Plywood Co., for applications in highway signs and elsewhere. Cost of applying coatings to both sides of a board runs about a nickel a square foot, the laboratory estimates.

BOWLERS BENEFIT

Perhaps unknowingly, bowling enthusiasts are benefiting from another of the laboratory's glue projects. To get around the shortage of knot-free hard maple needed for bowling pins, the laboratory worked out a method of gluing together 8 or 9 chunks of maple. This way, bowling-pin makers can use much more than the 15 percent of the tree utilized when solid pins are made, and don't have to discard a whole pin-sized piece when one defect turns up. Brunswick-Balke-Collender Co. has been producing this new type of pin for the past 5 years.

Not content with getting the most out of today's trees, the laboratory is devoted to growing bigger and better ones for future generations. That's why the two young women are whittling the pine stocks.

Their whittling is aimed at trimming down chunks of tree to segregate one slice of annual ring—the alternating light and dark concentric circles you see when you look down at a stump. The light portion of each year's growth ring is called springwood, which has large open spaces within thin-walled cells so great amounts of water can be carried to rapidly growing parts. The dark part is called summerwood—cell walls in this portion are thicker, with smaller open spaces.

This is of more than academic interest, as the summerwood areas, having a higher specific gravity (or the ratio between their weight and the weight of an equal volume of water) and greater density, produce a greater yield of pulp for papermakers, more strength for builders.

GROWING BETTER TREES

Weighing and measuring of the two types of wood have revealed that a tree's density—and value—increases in the parts that grow in later years of a tree's life. "We can't say yet how this will be applied," Dr. Maxon Y. Pillow, who is in charge of this research, concedes, but he's sure this new basic information will help grow superior trees in the future.

While basic studies such as these make the scientists most happy, they're kept hopping to solve more pressing problems posed by trade groups, corporations, and individual home owners who are having their troubles with timber. The load of mail, half of which requires an answer, currently runs around 110,000 pieces a year, up from 75,000 10 years ago. Advice seekers whose queries touch off a sizable research venture usually pay their share of the expense. Any new process or product turned up by lab workers, incidentally, becomes public property; anyone can use it without fear of infringing on a patent.

The Oregon Lumber Industry

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. NEUBERGER. Mr. President, the problems confronting the lumber industry are numerous and complex. The impact of the Government-stimulated increase in interest rates and its result in curbing construction of new homes for American families is well known. But the makers of wood products are perplexed also by the penetration of the home-building and construction market by substitute materials.

The competitive difficulties which beset the lumber industry are discussed in an editorial in the Eugene Register-Guard of July 9, 1957. The writer of the editorial has provided a penetrating analysis of the conditions which hamper the industry's progress. He has also directed attention toward possible solutions of the problems. More precutting of lumber, more primary processing of wood into forms readily usable for building, better advertising of the finished products and promotion of lumber's versatility, low cost, and other factors which favor wood over substitute materials, have been proposed in the editorial to improve the demand for lumber.

Mr. President, I ask unanimous consent to have printed in the RECORD the editorial from the Eugene, Oreg., Register-Guard, entitled "Modern Techniques Can Help Lumber."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MODERN TECHNIQUES CAN HELP LUMBER

Lumbermen—scrambling to overcome the effects of falling consumption in their primary market, the home construction industry—also are becoming generally aware of another inroad being made in their business. This is the campaign being waged by aluminum, steel, plastics, and ceramics industries to take a bigger share of the housebuilders' dollars.

This campaign by individual companies and by trade associations is having a telling effect on the long-run future of lumber-producing areas, not only in the Northwest but in the South and the Lake States. One producer of substitute building materials, for example, feels justified in spending more in promoting its products on a single television show than is being spent by the entire west coast lumber industry in promotion of all kinds.

For several months, this subject of product promotion has been a popular topic among lumbermen. Producers and wholesalers associations, such as West Coasts Lumbermen's

Association, and the Western Pine Association, have made some tentative steps toward a "beefed-up" promotion program. At least one trade magazine, the venerable and sometimes testy Crow's Digest, for several months has cajoled and needled industry readers into a greater awareness that the battle must be joined with the producers of substitutes. Fight them, or sit back complacently and watch the business go to the manufacturers of metal studs and window frames. That is the choice given the lumber industry.

Advertising, intelligently and consistently used, can create a public appetite for a product. It is a necessary part of any battle for the building and maintenance dollar. There is another important flank, however, on which the lumber industry also is vulnerable.

To appeal to today's market in competition with other industries will require more than pretty pictures and modern promotion. It will also require a modern product. Too much lumber these days is still being made and sold as pieces—not component parts but just pieces of half-finished raw material only a step better than the "jap squares" of the old days. The plywood industry has made some beginnings toward producing merchantable parts: sheathing panels, box beams, and embossed panels are examples of products which come on the building site ready for placement without additional manufacturing. Studs which have been precut to standard lengths and the efforts at prefabrication made by some individual mills are other examples of the first primitive attempts to meet the competition.

But the industry has a long way to go. To hold its own—certainly if it is to gain on the producers of substitutes—lumber is going to have to overcome the resistance of buyers to such situations as these:

You want to build window screens for your house. If you make cost comparisons, you'll find lumber is less expensive than aluminum for the frames. But, if you use wood, you'll find yourself handling 8, possibly 9, separate pieces; counting both frames and molding, you will have to carefully cut and fit 8 corners; then you must stretch the screen straight and taut; you'll have to nail cautiously to avoid splitting; and you must paint the 16 surfaces at least twice to protect the wood.

Or, you can cut and bend one piece of aluminum channel, fit the screen and press it into the channel by using two previously-formed clips. You may paint it, or simply hang the bright, weatherproof screen without finish.

The conclusion for most purchasers is obvious, whether they are making one screen or enough for a development of 100 homes: take the easy, timesaving way.

At stake in this contest between building materials producers is a multi-billion dollar business. On one side are a few large manufacturers who learned long ago the advantages of offering a brightly packaged product which requires little additional work and which is preceded on the market by thousands of dollars of advertising.

On the other side is our lumber industry made up of hundreds of businessmen. Many are too busy to see the threat. Too many think that grandpa's products and grandpa's methods of merchandising still are adequate.

Lumber today has the edge over other products. It's traditional. It feels and looks and smells good. It's versatile enough to meet the challenge—provided the hundreds of individualists in the industry will rally behind a few farsighted industry leaders.

The Future of Television

EXTENSION OF REMARKS
OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 17, 1957

Mr. MAGNUSON. Mr. President, the development of a nationwide television system in this country is gravely imperiled today. In fact, the future of our entire television system appears to be at the crossroads.

The Committee on Interstate and Foreign Commerce has held extensive hearings on television broadcasting, with special emphasis on the problem of preserving the so-called UHF—ultra-high-frequency—portion of the television spectrum. When the FCC lifted the television freeze in 1952, its allocation plan provided for a nationwide competitive television system made up of 1,875 commercial assignments and 252 educational assignments. Of this total, almost three-fourths of them are in the so-called UHF band. For a number of reasons, UHF stations encountered almost insurmountable obstacles; and, as a consequence, only 90 are on the air today. The failure of a fuller utilization of the UHF channels has greatly impeded the expansion of our competitive UHF situation. Unless something is done to improve the utilization of the UHF channels, these valuable frequencies will fall into disuse, and the potential service to the people which they represent will be lost.

Many different explanations and solutions have been offered to our committee, but on one proposition all parties concerned are in agreement. All the witnesses who appeared before us indicated that one of the chief causes of the UHF problem lies in the fact that only 7 million of the 40 million TV sets in use today are capable of UHF reception. In order to remove this disparity and to encourage the manufacturing of all-channel television receivers, the Committee on Interstate and Foreign Commerce has strongly recommended that the Federal excise tax be eliminated on all-channel TV sets. This would serve to eliminate the price differential between VHF sets and all-channel sets, and would lead to the general production of all-channel sets.

Every impartial group, every congressional committee that has looked into this subject matter, as well as the Federal Communications Commission, has strongly recommended the removal of the Federal excise tax on all-channel sets as a necessary device to develop fully the all-important 70 UHF channels, which are so essential to a nationwide competitive television system.

Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Jack Gould, radio and television editor of the New York Times, and one of the most outstanding and knowledgeable men in the industry. In the article he forcibly demonstrates the importance of developing UHF television channels and the important role the removal of the Federal excise tax on all-channel TV sets will have in this development.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of July 14, 1957]

THE TREASURY DEPARTMENT AND TV'S FUTURE

(By Jack Gould)

It may come as a surprise to many viewers that the Treasury Department in Washington could exercise an influence over the television programs that the public may or may not see for perhaps generations to come.

Yet it happens that a Treasury Department policy stands as one of the most formidable barriers to the full development of television in the national interest. This policy clearly deserves urgent and earnest re-examination, if only because the matter is scheduled to be acted upon momentarily by the Subcommittee on Excise Taxes of the House Ways and Means Committee.

The fundamentals of the situation may be stated simply: On the one hand, there is roughly $100 million in annual tax revenue to be considered. On the other, there is the long-range expansion and development of a medium with a social force surely not to be minimized.

UNANIMITY

What adds to the intriguing aspects of the case is the list of individuals and groups taking a position opposed to that of the Treasury; it constitutes a display of unanimity almost without parallel in broadcasting's history.

Included in these ranks are the Federal Communications Commission, which licenses all stations; Republican and Democratic Congressmen intimately acquainted with the problems of the airwaves, including major committees which are particularly alert to possible monopolistic practices; the national networks, the small independent broadcasters, the set manufacturers and numerous educational groups.

The heart of the problem involving the Treasury Department lies in a question that this corner recently discussed in part: The importance of finding enough physical room on the airwaves for an adequate national television service. Because of the shortage of space, many important communities still have only one or two TV outlets, the cause of educational TV has been severely handicapped and the introduction of pay-as-you-see television greatly complicated.

CHANNELS

To recount briefly, the only way to obtain this additional room on the air is to activate channels 14 through 83, known as the ultra-high-frequency band. But because channels 14 through 83 cannot be received on most existing sets, the UHF band, except in a few areas, appears likely to be abandoned and wasted. It is this lack of audience for UHF that threatens to stunt TV's expansion.

The reason for the preponderance of sets receiving only channels 2 through 13 is twofold. First, for many years these were the only channels authorized: this initial band of channels, known as very high frequency, gained a terrific head start.

But, more to the point, the production of a set with a tuner equipped to cover channels 2 through 83 involved an additional manufacturing cost. With no substantial public demand for all-channel sets, manufacturers operating on narrow profit margins concentrated on the less expensive device; namely, the channel 2 through 13 receiver.

It can be argued, and perhaps should be, that manufacturers acted selfishly in not assuring the usefulness of UHF television by making all-channel sets. But in a free-enterprise system the law of competitive economics cannot be ignored. Crying over spilled milk, in any case, is no excuse for not thinking about possible remedies that have the important virtue of practicality.

There is such a remedy. All television sets are subject to a 10-percent Federal excise tax that is imposed at the manufacturer's level. The proposal that has been advanced for a long time—and is now coming to a vote by the Subcommittee on Excise Taxes—is that this tax should be set aside in the case of all-channel receivers, but retained on sets picking up only channels 2 through 13.

COST

The effect of the proposal is to equalize the retail cost of the all-channel receiver and the channel 2 through 13 set. In other words, there would be no competitive advantage for a manufacturer not to make an all-channel receiver. On the contrary, the situation would be exactly the reverse of what it is at present. Anything less than an all-channel receiver would not be competitive.

In other words, all concerned with television could anticipate a steady, if gradual, expansion of UHF television in the course of normal replacement of obsolete receivers. If 6 million sets were sold annually, in only 5 years it would mean a potential of 30 million homes for UHF.

Adoption of the proposal would not of itself mean an immediate easy life for those interested in UHF channels. But it would give a purpose and a direction to the whole future of television. With today's channels protected and 70 new channels opened up, there would be a minimum of intraindustry politics, more opportunity for producers of all types to see their wares on the home screen and a challenging opportunity for new services as yet untried.

POSITION

The Treasury Department, however, has come out formally against the proposal and for reasons that are not hard to understand. If only all-channel sets are made, the Treasury has noted, there will be no excise revenue from any sets. Such a change, it was added, would involve "modification of the tax law for an ulterior purpose, a particular form of industrial development."

The Treasury Department's reluctance to open Pandora's box in the matter of the excise taxes is altogether understandable. But at the same time its narrow concept of the future of television as involving only industrial development must be deplored.

Any medium that disseminates ideas, information, and entertainment—or has the potential to do so—must not be considered in the same light as routine commerce. The avenues for reaching the public mind and national consciousness also must be judged in terms of their cultural and social importance. The destiny of an instrument of communications that absorbs the attention of millions upon millions day in and day out surely is not to be dismissed without searching concern and caution.

The Senate Committee on Interstate and Foreign Commerce, which unanimously favors removal of the excise tax on all-channel sets, has noted that broad stimulation of the TV industry might ultimately result in greater revenue to the Treasury than would be temporarily lost. In any case, there are a number of precedents for such action. It must be hoped that the Treasury Department will reconsider its position. Failing that, the Subcommittee on Excise Taxes, headed by Representative AIME J. FORAND, Democrat of Rhode Island, should favor the proposal.

Levittown, Pa.

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. MARTIN of Pennsylvania. Mr. President, there is in Bucks County, Pa., known as Levittown, a community of 50,000 people, and it has grown to that size in a period of 5 years. This community, if incorporated under one municipality, would rank as the 10th largest city in the Commonwealth of Pennsylvania. I ask unanimous consent that a report on the community be printed in the Appendix of the RECORD, as I know many of my colleagues would desire to read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Five years ago this month, amid clouds of dust and unseasonably hot weather, the first families began to move into Levittown, Pa.

Crazy people, some said. Levittown was a question mark, a big unknown, and many were its Cassandras. Prospective buyers, stopping at small towns along the way to ask directions, were greeted with a solemn shake of the head and a warning forefinger. Everyone had a story about Levittown.

"They're built on swamps, them houses. Couple years and they'll be under water." "There ain't no cellars and I'm telling you, them houses are gonna be cold and damp all year round." "The way that fella builds them houses, just one good rain and your cellar'll be waist-high in water." "You don't really own the house when you buy it, ya know. He owns the land, anyway. He's the boss and you can't do nothin' he don't want you to." "Tar paper and spit, that's all them houses are."

But the crazy people keep coming, and buying, and by June 1952, when the first families took possession, an entire year's production had been sold out. Today, more than 15,000 homes have been occupied and the population of Levittown is over 50,000. Next year, when building is expected to be completed, 70,000 people will be living in the 17,000 homes that will be Levittown.

What is Levittown like today? Even its most grudging critic will admit that it's in pretty good physical shape, while its ardent boosters point to Hurricane Hazel and the damaging floods and proudly proclaim to the world that neither left a mark on Levittown.

The community is so big and so different from every other city in the country that newcomers at first are confused by the lack of landmarks, such as corner drugstores, for example, which were not allowed to be built anywhere except in neighborhood shopping centers. This was to give the community a clean, open look.

To this end, it has been successful, for here in the country is everything a city needs—and none of the grime. A dozen new schools embodying the most modern educational concepts dot the community, and more are on the drawing boards. There are churches of all faiths. The community has its own downtown section containing 60 stores in a vast shopping center covering 60 acres—as well as other smaller centers located within the community at major intersections. Levittown has its own railroad station on the main line of the Pennsylvania Railroad. The community recreational facilities are among the finest in the Nation.

All metropolitan services such as sewer and water systems, streets, street lights and sidewalks are built-in by Levitt & Sons. There is a town hall with two auditoriums plus smaller meeting rooms, now being used as headquarters by the Levitt firm. These will be turned over free of charge for community use after the building job is finished.

The shopping centers serves as a trading hub not only for Levittown but for the entire surrounding area. The stores, including branches of leading national chains as well as Pomeroy's large department store, are arranged on both sides of a landscaped L-shaped mall that is centered in a parking area for some 5,000 cars.

Levittown's built-in recreational facilities consist of 5 highly developed park areas spread throughout the community and averaging 4 to 6 acres in size, as well as a baseball field of major league dimensions. The hub of each recreational area is an Olympic-size swimming pool, 75 feet wide and 125 feet long.

Additional facilities in each recreational park are wading pools and play areas for tots, sun decks, hard surface courts and Little League ball fields. These facilities are turned over free to the community. Maintenance is provided by an annual charge of $10 per family. This charge includes free and unlimited use of all facilities, and provides for a summer-long field sports and water safety program, including free swimming lessons.

Much has been written about life in Levittown. In the past 5 years it has become the most photographed, most written about community in the world. Foreign and domestic magazines, newspapers, radio and television have covered everything in Levittown from high fidelity to infidelity. Levittowners have been told that they are unique, that they are subnormal, that they are above the national income level and that they will be living in a slum 10 years from now.

If there is anything unique about Levittowners, it stems from the fact that the population consists mainly of young, married couples. Single men and women are rarities and only in the past few years has the teenage population appeared. This offers an explanation for the low crime rate and the high birth rate in the community.

Socially, Levittowners are possibly further along than other communities but more through necessity than choice. In the beginning of Levittown, before adequate communications with the outside world were established, Levittowners felt a strong need for companionship and comfort. Friends and relatives, along with the railroads and bus lines, registered dismay and sometimes even horror, at the thought of coming to Levittown. As a result of this enforced isolation, every time one Levittowner met another on the street, an organization was formed. Today, almost every Levittowner belongs or has belonged to some organization, league, club, association, or group.

Politically, Levittown is a nightmare. Its active officeseekers, like young athletes, leap blithely back and forth across established party lines to the chagrin and bewilderment of old-line politicians who have been known to resign in disgust. Falls Township, Bristol Township, Middletown Township, and Tullytown Borough all lay claim to Levittowners but none feel secure, for among the secret dreams of many Levittowners is a united Levittown, the 10th largest city in the State.

After 5 years, Levittown shapes up as a vigorous, youthful, growing community, playing an active role in the country's everyday life. While there are still critics who rant about the drabness, the sameness, the mediocrity, and the cracks in the picture windows, Levittowners see only a few smudges that can easily be wiped away.

The New Security Proposals

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The New Security Proposals." The editorial relates to the Commission on Government Security and Loyalty.

The editorial is thoughtful and analytical, and discusses with objectivity what I consider to be the good points and the sound points in the recommendations of the Commission, as well as the recommendations which have stirred up a considerable amount of controversy, and which in my opinion are not very helpful.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Sunday Tribune of June 30, 1957]

THE NEW SECURITY PROPOSALS

"The most crucial problem of our day is to find the formula for obtaining the maximum degree of security with the minimum sacrifice of our great national traditions."

Those words were spoken by HUBERT H. HUMPHREY in opening Senate hearings on a joint resolution to establish a Commission on Government Security, in March 1955.

They were good words, for they recognized both the necessity for effective security and the truth that any quest for absolute security could destroy basic American freedoms. They recognized, in short, that no Government employee loyalty-security system could be perfect.

The Commission subsequently created has now completed the most exhaustive search ever conducted in America for that formula of which Senator HUMPHREY spoke. It claims with justice that its 800-page report, drafted after 18 months of work, represents the first complete and detailed study of the subject. As such, and because of the quality of Commission members—Senators, Congressmen, a Governor, Government officials, lawyers, and educators—it deserves the most respectful consideration by Congress and the country. We strongly recommend a reading of at least the report's basic recommendations.

In our judgment, some of these would bring us substantially closer to the Humphrey formula and others would represent retrogression from it. First, the good points:

1. The Government once and for all would separate the problem of loyalty from that of security or suitability. Thus, a loyal but indiscreet employee could be transferred to a nonsecurity job or dismissed under ordinary civil-service procedures without risking the disloyal onus he may acquire under the present system. This would end the so-called numbers game with the loyalty-security dismissal statistics.

2. An employee subject to a loyalty investigation could confront and cross-examine his accusers under oath, except when this would compromise national security. This would be fairer to the accused and would give pause to the busybody type of informer and gossiper, who has been protected by anonymity in the past.

3. A vigorous effort would be made, partly through the efforts of a new central security office in the executive branch, to standardize loyalty and security rules, regulations, and procedures in all Government departments and agencies. This would eliminate, for example, a situation such as that of Wolf Ladejinsky, who was found unsuitable for work overseas by the Agriculture Department after he had been cleared by the State Department.

4. A legal basis would be provided for the United States Attorney General's list of subversive organizations and any future listing would be made only after FBI investigation and a hearing for the accused organization. It still can be argued that no such list should exist, but if it is to be continued, this provision would help to minimize possible abuses.

On the other hand, we are disappointed that the Commission would restore loyalty checks for all Government employees and would otherwise greatly expand the security system's coverage. Only a year ago, the Supreme Court ruled that under existing law, only employees in sensitive jobs were subject to the loyalty-security program. That made sense to us and also to a committee of the New York City Bar Association, which urged that on grounds of workability and efficiency, the program be confined to such employees.

But the Commission would also extend the program to the civil air transport industry; would broaden its application to Americans working for international organizations; and would even have Congress and the judicial branch establish their own loyalty-security systems.

Finally, we are disturbed that the Commission wants a law that would make it a criminal offense for anyone inside or outside the Government willfully to disclose information classified as secret or top secret.

This would make it a crime for newspapers to publish information labeled secret by some Government official. Under such a law, either of the two men in our Washington bureau who won Pulitzer prizes for uncovering classified information which the Tribune believed Americans had a right to know could have been fined $10,000 and jailed for 5 years.

We repeat: This report deserves respectful consideration. The country is in the debt of this Commission. But with Humphrey's formula as a guidepost, the administration and Congress should proceed with great caution in considering some of the Commission recommendations.

Civil Rights Bill Stresses Negro Ballot Impact

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. REED. Mr. Speaker, under leave to extend my remarks, heretofore granted, in the RECORD, I am inserting in the appendix of the CONGRESSIONAL RECORD an article by Mr. Richard L. Strout, which article appeared in the Christian Science Monitor of Monday, July 15, 1957. Mr. Richard L. Strout is staff correspondent of the Christian Science Monitor.

The facts which Mr. Strout sets forth give light to speculation as to the psychological change which will take place in our Government in the years to come, if the civil-rights bill, as now written, becomes the law of the land, which it undoubtedly will.

The article follows:

CIVIL RIGHTS BILL STRESSES NEGRO BALLOT IMPACT

It is time more Negroes voted in the South.

That belief, in essence, tells the story of the present civil-rights battle in the Senate.

Complicating factors as to how this administration goal is to be achieved have produced side issues, but the basic issue is and remains that at a time of global controversy over democracy the voting rights of millions of Negroes in the United States are seriously limited.

The Senate has agreed to vote July 16, around suppertime, on step one in the administration civil-rights bill. This is a preliminary motion to take up (make the bill the pending business of the Senate). Approval of step one is certain probably by a good margin. This in itself will be a landmark in recent civil-rights history.

Then comes the real debate and chances of modifications, changes, and amendments. The big issue still goes back to the feeling, not confined to the North, that the time has come to make some new advances in Negroes' voting rights.

The story of Negro voting in the South can be told statistically. Here are figures from the Southern Regional Council showing by States the estimated number of Negroes eligible to vote and those who actually do so.

State	Eligible	Voters
Alabama	516,000	23,000
Arkansas	233,000	68,000
Florida	367,000	149,000
Georgia	634,000	163,000
Louisiana	510,000	161,000
Mississippi	497,000	15,000
North Carolina	550,000	102,000
South Carolina	390,000	98,000
Tennessee	371,000	149,000
Texas	551,000	200,000
Virginia	423,000	85,000

There has been a marked increase of Negroes' voting rights in the past couple of generations. It is widely believed that this will continue whether the current measure is passed or not. The pressure of the present debate in Congress is apt to spur the progress. Most observers, northern and southern, believe that forward movement of the franchise is inevitable.

UNITED STATES REBUTTAL DULLED

The question involves the rate of progress and as often happens in major social changes there is a tendency to accelerate as the trend is established. At present only about 85,000 Negroes in Virginia vote out of about 423,000 eligible, and only 18,000 out of 497,000 in Mississippi. These are difficult figures with which to face Communist arguments in the cold war in Asia, Africa, and around the world.

A rise in Negro voting in southern states would have profound political consequences at home. If the factor of Negro votes became something for politicians to consider in the South (as it already has in northern cities) the slowly improving social and economic status of the race would be accelerated.

Many sitting southern Congressmen who have fought civil rights for years would have trouble. However sincere their motives, they also have a self-interest in the matter for the increase in the Negro franchise will almost certainly disturb the old, comfortable, one-party system that reelected them and gave them seniority in Congress which the hard-pressed northern Democrats had to fight for.

COMPROMISE HIT

Senator PATRICK V. MCNAMARA, Democrat, of Michigan, counseled backers of the civil-rights bill to stand firm against compromise proposals which he said are aimed to gut this bill of any effectiveness, according to the Associated Press July 15.

In a Senate speech, Senator MCNAMARA said that no matter what changes were made the die-hard opponents of this legislation will vote against it.

His own position, Senator MCNAMARA said, is to "support this proposed legislation, word by word and section by section."

Arguments for and against the injunctive procedure for enforcing court orders under the proposed administration bill are the center of current debate.

Senator PAUL H. DOUGLAS, Democrat, of Illinois, an advocate of civil rights, points out that the Federal judges who would be called upon to enforce the provision in the South are themselves almost 100 percent southerners born and reared in the traditions of the area.

One of the leading jurists, for example, is a brother of Senator RICHARD RUSSELL, Democrat, of Georgia—the spokesman who has used the most emotional language in drawing a picture of rule by the bayonet if judicial enforcement is provided.

Over the weekend the civil-rights debate proceeded by radio and television over the Nation. Millions of listeners heard the arguments from one end of the country to the other.

Many of these arguments dealt with details of the administration program and not the heart of it—the simple question of voting rights of citizens. Few opponents cared to meet the issue on this point. In the long run, however, this is the basic matter involved.

In Defense of Civil Rights

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column entitled "In Defense of Civil Rights," written by Dillard Stokes and published in the July 14, 1957, issue of the Council Bluffs, Iowa, Nonpareil. It is a presentation which puts the present debate on the Brownell bill in its proper perspective and is an analysis which is deserving of the careful study and consideration of every Member of this Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN DEFENSE OF CIVIL RIGHTS
(By Dillard Stokes)

WASHINGTON.—The citizen's right to cast his ballot is precious. To tamper with it was a crime at common law and is a crime today, both in the States and by Federal law.

Backers of the civil-rights measure think these laws not strong enough; they want to put more teeth in them.

This raises issues on which honest men may differ, which reasonable men may debate.

But so far the civil-rights debate has been addressed, not to acknowledgment of any right but to denial of a right.

What is being dealt with in this case is no petty wrong, but a crime.

A crime, for which men may be fined and slapped in jail.

This is as it ought to be, to be sure: it would be an odd code of laws that did not make it a crime to deny a citizen his right to vote.

By the same token, one accused of crime has a right to a trial by jury. This is an old right, wrung—from the English crown at Runnymede, and written in plain words in the Bill of Rights.

Yet so far debate has been chiefly about whether to take this right way.

Backers of the civil-rights bill say frankly they do not think juries could be trusted to convict, in cases of denial of the ballot.

But they have a curious faith in judges, seeming to feel that putting a black robe on a man and calling him "Your Honor" will somehow make him more brave and honest than if he sits in a jury box.

The pending bill would allow the judges to order people not to commit crimes, and then—if men were accused of doing so—to try the offenders without a jury.

Thus, to secure one civil right, the bill would strangle another.

Where does this lead us?

In time of war, why not have the judges put out injunctions saying nobody must commit treason, or sedition, or dodge the draft?

At any time, why not enjoin housebreaking, homicide, rape, robbery, and obtaining money by false pretenses.

These, too, are horrid offenses and people accused of them are tried by juries every day, and turned loose.

If it is wise and just to bypass the jury in the case of an offense against a man's franchise, surely his person and property ought to have no less protection.

These proposals, of course, rest on a theory new to American law, though well understood in Nazi Germany and Soviet Russia.

That is, that the aim of a trial is to convict somebody. And so the trial must run in such a manner and by such rules as will bring this to pass.

It is said denial of the right to vote is so horrid that these measures are called for.

If Congress agrees, will it not be argued next year that some other crime, too, is so horrid that it must have the same summary process?

And so on, until there is one simple, sweeping court order forbidding anybody to violate any law at all.

Thus the issue is drawn, and thus the lines of debate, in the Congress day by day, and as seems likely, for weeks to come.

United Nations Emergency Force Helps Keep Middle East Peace

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article concerning the United Nations emergency force. The article was written by Mr. Wilbur Elston, editorial editor of the Minneapolis Tribune.

I note that on yesterday the junior Senator from Alabama [Mr. SPARKMAN] called to the attention of the Senate the action of the Foreign Relations Committee in approving the resolution calling for the establishment of a United Nations emergency police force. The article I now have before me pertains to that very subject matter, and, I believe, sheds considerable light upon the importance of an emergency police force under the auspices of the United Nations. The article points out the excellent work accomplished by the UNEF, and discusses in some detail how the UNEF was established.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNEF HELPS KEEP MIDDLE EAST PEACE

A small band of 6,000 men—an international army representing 10 different countries—is playing an important role in keeping the peace in the Middle East.

The Eisenhower doctrine is perhaps the major deterrent to further Communist penetration and use of force in the Middle East. But the United Nations Emergency Force (UNEF) also performs an essential role in helping keep the peace in Israel and Egypt.

UNEF was created last November under a resolution of the U. N. General Assembly proposed by Canada's Lester Pearson. Its job was to secure and supervise the cessation of hostilities in Egypt and take over the policing job after the invading forces of England, France, and Israel had withdrawn from different parts of Egypt and the Gaza strip.

However, Egypt quickly reestablished its sovereignty over the Suez area that had been occupied by the British and the French, and later over the Gaza strip after the withdrawal of the Israeli forces. As a result, a new U. N. General Assembly resolution authorized UNEF to take on a new role: Implementation of the Egyptian-Israeli armistice agreement in order to safeguard peace between the two countries. This still is UNEF's job although Israel maintains that the demarcation lines have no validity because Egypt has broken the armistice agreement.

UNEF patrols the Egyptian side of the Gaza strip—the Israelis have refused to permit UNEF to patrol their side. UNEF troops also are stationed in the Sharm-el-Sheikh area. From an air station at El Arish, UNEF's air arm—provided by the Canadian air force—flies regular communication flights to and from its base at Naples, Italy.

Canada, with 1,180 men in various units, has the largest contingent in UNEF. Other nations represented, largely by infantry, are India, 840 men; Denmark and Norway, 1 composite battalion of 650 men, plus another Norwegian medical company of 195 men; Yugoslavia, 760 men; Indonesia, 580 men; Brazil, 530 men; Colombia, 520 men; Sweden, 330 men; and Finland, 250 men.

UNEF still is an emergency and temporary force. Its duration still is to be determined, although the purposes for which it originally was set up—to secure the cessation of hostilities in Egypt and a withdrawal of the invading forces—has now been accomplished. UNEF is in Egypt only by Egypt's sufferance or consent, and Egypt even exercises an informal veto over the troops and officers to be stationed in the country. In addition, the members contributing troops can withdraw them at any time.

Even though it may be a weak reed, it has been effective in patrolling the armistice line (although Israel has complained that UNEF in Gaza has become a shield for the fedayeen raiders and has protected them from retaliation). Perhaps of greater importance is the small force of 250 Finnish riflemen stationed at Sharm-el-Sheikh, where an Egyptian battery formerly blocked Israel's access to its port of Elath. The Finns' presence helps keep the Gulf of Aqaba open, discourages the Egyptians from setting up a new blockade at that point, and thus prevents the outbreak

of hostilities that Israel has promised in event of a new attempt to halt its ships.

UNEF's greatest influence, however, may be as a precedent for a permanent international force to halt aggression. Admittedly, UNEF's influence is limited and its power is slight, but it may well be a beginning toward the organization of a force that someday under international jurisdiction may be strong enough to keep world peace.

Canada's Pearson sees UNEF as providing the U. N. with a precedent for "a halfway house at the crossroads of war." On the basis of the experience obtained in Egypt, he suggests, in a recent issue of Foreign Affairs quarterly, that some principles be adopted now to set up U. N. machinery and, as required, a peace supervision force to be used in avoiding, ending, or limiting any future hostilities. Among his proposals are:

Member governments should be invited to express a willingness to contribute contingents to the U. N. for noncombatant purposes, such as the supervision of agreed cease-fire and peace supervisory functions; the Secretary General should be given a permanent military adviser and a small staff to assume responsibility for directing any truce arrangements agreed upon; an advisory committee similar to the one that now assists the Secretary General with the UNEF should be appointed; the force should be capable of defending itself; and the force should enter a country only with the consent of the country involved, as in Egypt.

"The early arrival of a U. N. force of this kind at a scene of an emergency would give assurance to the fearful and hope to the despairing," Pearson says. "It would act as the U. N. policeman and his watchdog * * *. [But] if a plan anything like that I have outlined is to succeed, governments must, both within and outside the U. N., follow policies consistent with its objectives and its capabilities.

"Are we to go from crisis to crisis improvising in haste? Or can we now pool our experience and our resources, so that the next time, we, the governments and peoples whom the United Nations represent, will be ready and prepared to act?"

Oregon Participation in 100th Annual Convention of National Education Association

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 17, 1957

Mr. NEUBERGER. Mr. President, few States were more active or prominent than Oregon at the recent 100th Annual Convention of the National Education Association in Philadelphia. This was only fitting and proper, because Oregon has an outstanding school system of which all of us are justifiably proud. Heading the Oregon delegation to the NEA Convention were Miss Martha Shull, Portland classroom teacher who served as national president of the National Education Association, and Miss Mildred Wharton, a Multnomah County High School vice principal, who is president of the Oregon Education Association.

An excellent article describing the vital role of Oregon delegates appeared in the July 5, 1957, edition of the Medford Mail-Tribune, of Medford, Oreg. Author of the article is Mrs. Olive Starcher, women's editor of the Medford Mail-Tribune, who accompanied the Oregon delegation to the NEA meeting in Philadelphia.

I ask unanimous consent that Mrs. Starcher's informative article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON IN LIMELIGHT AT NATIONAL EDUCATION ASSOCIATION'S 100TH ANNUAL CONVENTION

(By Olive Starcher)

PHILADELPHIA, July 2.—Oregon is in the limelight for the centennial convention of National Education association which opened here yesterday with Miss Martha Shull, Portland teacher of English and national president, presiding, the Oregon delegation is seated on the main floor of convention hall directly in front of the platform. This morning when Miss Shull opened the first business session, her home State delegation was 106 strong, plus the press.

AMENDMENT OFFERED

When business began, Oregon took the spotlight almost immediately for the delegation had been instructed by the Oregon education association to offer an amendment to the proposition which would raise NEA dues from $5 to $10 annually. Wilfred Burgess, of Pineville, immediate past president of OEA and delegation head, offered the amendment which would have increased the dues to only $8 and spoke for it. After an hour's debate during which only 2 or 3 delegations supported the Oregon amendment, the convention voted the raise of dues to $10.

Just prior to the convention opening, the Oregonians met at the Benjamin Franklin Hotel to organize the delegation. Mrs. Antonia Crater, Newberg, past president of OEA and NEA director from Oregon, presided, and Mrs. Maxine Smith, Medford, was named secretary.

OTHER DELEGATES

Included among the delegates was Mrs. Mabel Winston, Ashland, dean of women and registrar of Southern Oregon College, who had just come from the annual convention of American Association of University Women held in Boston. Mrs. Winston, who for the past 6 years, has been Pacific Northwest regional director for AAUW, was replaced during the convention by Dr. Marian Cox, Seattle. Mrs. Winston brought the news that Mrs. Robert Y. Thornton, Salem, past president of Oregon AAUW, was named to the arts committee of the national body and that two Pacific Northwest colleges, Marylhurst, Portland, and Whitworth, Spokane, had been accredited by AAUW.

Dr. F. M. Hunter, Eugene, NEA president in 1921 and former chancellor of higher education for Oregon, was introduced and honored. Dr. Hunter is attending his 50th annual NEA convention.

GAVEL PRESENTED

At the convention's opening ceremonies Monday night, the Oregon delegation presented Miss Shull with a gavel, with Miss Mildred Wharton, Portland, OEA president, making the presentation. The entire delegation stood and was presented to the assemblage. Miss Shull was also given a portfolio of the anniversary postage stamp issued in celebration of the NEA centennial, and for which first-day envelopes were sold and postal cancellations arranged.

Monday afternoon another Oregonian, Ewald Turner of Pendleton, was elected first vice president of the department of classroom teachers of NEA. Miss Vivian Powell, librarian of Priest School, Detroit, Mich., was elected president. This department, largest of the 30 NEA affiliated departments, has a membership of almost 600,000 members. This made two Oregonians named to national office during the teacher sessions, since Jim McDonald of Medford was elected president of Student National Education Association at the student's meetings in Washington, D. C., last week.

Signs on the walls of convention hall state that NEA was founded in 1857 in Philadelphia with an enrollment of 43 members, including 2 women. Membership is now 703,829, with men outnumbered 3 or 4 to 1. One of the organization's current projects is completion of a large headquarters in Washington for which teachers raised the sum of $9 million.

TALK MERIT RATING

Merit rating, adopted on a trial basis recently by the Medford School system and opposed nationally by many teachers, was discussed at a special press conference which Miss Shull held Monday noon. She said she approved of some types of merit rating but believed that more study and investigation should be carried on before it is adopted by more systems.

Teacher shortages, better salaries, improvement of teacher education, curriculum changes to meet the demands of changed world conditions, and other phases of education were discussed at the conference. Miss Shull said everyone should work to promote better understanding and communications between the profession and the rest of the citizenry.

Questioned about teacher shortages, she estimated the shortage figure would be at least 150,000 teachers by fall. Asked how this could be remedied, she mentioned methods to interest more youth in teaching, cooperation of parent-teacher associations and other groups, better salaries and better working conditions, and Federal aid to education. She said the latter should be channeled to the areas in greatest distress.

CURRICULUM NEEDS

Asked about curriculums to keep pace with world technological needs, Miss Shull said there is need to increase instruction in the field of science and technology, but that the proper balance must be maintained with the humanities. She mentioned that teachers must be adequately trained in world affairs and conditions and said they should have a broad cultural background.

Speaking of teachers in general, Miss Shull declared the most important thing is to have sufficient properly trained teachers and added "there is no substitute for the good relationship between teacher and pupil." She added that such methods as television can only supplement and not replace personal classroom instruction.

Are We Getting Our Money's Worth Out of Foreign Aid?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of our colleagues an address made by Bernard S. Van Rensselaer before the Detroit Economic Club on April 22, 1957. Mr. Van Rensselaer's address was as follows:

ARE WE GETTING OUR MONEY'S WORTH OUT OF FOREIGN AID?

I deeply appreciate this opportunity to discuss with you one of the most difficult and

controversial problems confronting our Nation, our efforts to assist three-quarters of the world with American financial and material resources.

For, like it or not, that is exactly what we are trying to do.

To travel here I boarded an airplane in Washington, D. C., at 2:40 p. m. yesterday. I arrived in Detroit 3½ hours later. In that very brief space of time our Federal Government spent $1,500,000 for military and economic aid to foreign countries.

I mention this because I think it illustrates two of our national characteristics. We move fast, and we do things in a big way.

In little more than 100 years we overcame every imaginable kind of human and material obstacle and forged a bright new world from millions of square miles of tangled wilderness and open plains. By faith and relentless efforts we created a new way of life and made it the best mankind could offer.

We believe so much in this way of life that we have fought for it in nearly every part of the globe. American cemeteries in many countries are moving evidence that Americans, more than any other people, have proved it really is a small world.

With the highest of motives and with our usual superabundance of energy and optimism, we are today contributing to the economies and welfare of some 60 countries. For a time at least, ours is a necessary mission. Foreign aid has become, in just 10 short years, an important part of our foreign policy. We are now so deeply committed that we simply cannot pull out in the foreseeable future.

This entire program is being conducted with a great sense of urgency. We are constantly led to believe that if we don't move fast the roof will fall in, that only our dollars can save the world from communism. If large sums of money are squandered, it's unfortunate, but the Communist threat must be overcome.

At this point, however, the situation loses focus. We're told in effect that we can only fight communism successfully if we lift up all the underdeveloped areas of the world by their bootstraps, and change their ways of life, and make them over into what we think they should be. Thus the idealism and emotions of a generous people become involved and practical considerations tend to be brushed aside.

I personally believe very strongly in the principles of American aid to needy countries. But this must be done within our own ability to pay the bill and administer the program efficiently. It must also be kept within the capacity of the recipient countries to absorb and make good use of what we give them.

And we must be realistic and admit frankly that we have a self-interest motive: specifically, gaining and holding trustworthy friends in the family of free nations.

When we first launched a formal program of assistance to other nations, back in 1947, our primary concern was the relief and rehabilitation of war-torn Europe. We poured money and materials and technological know-how into the area, and in a very short time our European friends were back on their feet.

Then we branched out into the Middle East, Africa, southeast Asia, the Far East, and Latin America. We approached this worldwide undertaking with the same formula that had worked so well in Europe, do it big and do it fast. And here we ran into trouble. The old formula didn't work any more.

It is obvious now that the methods that had rescued Europe simply could not produce the same results in the arid deserts of north Africa and the teeming areas of southeast Asia and the remote back country of Latin America. Our efforts to do big things in a hurry in underdeveloped countries has resulted in chaos, confusion, and dollars down the drain.

Unfortunately, this lesson remains unlearned within the high councils of foreign-aid planning in Washington. Evidence of this abounds in thousands of pages of congressional reports and transcripts of hearings.

Between July 1, 1945, and September 30, 1956, the United States paid out $56.8 billion for military and economic assistance to other nations. Besides this staggering sum, $10 billion more had been appropriated by Congress but was still unspent. For fiscal year 1957, Congress granted $3.75 billion for foreign aid, both military and nonmilitary. For fiscal 1958, the President is asking a foreign-aid budget of $4 billion, a modest increase over the current year.

In addition to all this, we have provided overseas aid totaling $2 billion in the form of surplus agricultural commodities.

I do not intend to comment on the purely military phase of foreign aid. This is a highly technical and complicated program which the average layman is not qualified to discuss. When the President and the Joint Chiefs of Staff tell us that our national security will suffer unless we continue to provide military hardware, training, and logistical support at present level, we are in no position to argue, and few Members of Congress care to assume the responsibility of trimming military aid dollars in the face of such authoritative pronouncements.

However, I think the American taxpayer is directly concerned when military aid becomes interwoven with economic aid, when civilian planners are allowed to influence the programing and day-by-day conduct of military assistance, and when complicated economic projects are disguised in military garb.

The need for a clear-cut separation between these two basic forms of foreign aid is strikingly illustrated by a half-billion dollar project to rehabilitate and expand the British Royal Air Force.

In 1953 and 1954 hundreds of millions of American dollars were committed to add new aircraft to the RAF. It was known that these planes, when and if they were finally delivered, would be greatly inferior to the supersonic planes then in production in this country and in Russia. But the effect of this grant-in-aid to the RAF was to release British Government funds to subsidize the development and production of commercial jet aircraft in competition with American airframe and engine manufacturers.

In short, what purported to be purely a military program was actually a fiscal maneuver to ladle more American dollars into the British economy and fortify that nation's budget. For this the then Director of Mutual Security and his economic planners were really responsible. Furthermore, Congress was not fully informed about the nature of this transaction when the funds were requested. It's quite probable, that if Congress had known all the facts, it would have refused to grant the necessary funds. But as it turned out, the disguise worked, and as usual, the American taxpayer paid the bill.

Even disregarding military assistance entirely, our present economic-aid program is vastly more complex and far reaching than anything contemplated under the original Marshall plan 10 years ago. Economic aid today includes point 4 activities; the economic development of backward countries; a nebulous sort of thing called defense support; budget support; and the sale of surplus agricultural commodities for local currency which is then returned in the form of grants or loans.

Regardless of the terminology and sometimes confusing categories, it all adds up to one thing—economic assistance on a grand scale. In one form or another, this program covers more than 2,000 projects in virtually every field of human activity as well as all kinds of commodities, services, and even United States Treasury checks. No less than 8,000 persons are employed by the Government to plan and administer this program.

What do these people do to keep busy? Sometimes even Government officials wonder. An official visitor to one of our Asian missions reports that he asked an attractive young woman the nature of her assignment. She explained that she was revising the third reader for the local schools. The visitor expressed interest in the project and asked if she had any help. "Oh, yes," she replied, "I have nine assistants."

Here are other examples of what we are providing for a large part of the world: engineering and technical services; factories; dams; power stations; highways; the procurement, transport, and distribution of huge quantities of machinery and basic commodities such as food, raw materials, fabricated steel, medicines, and hospital equipment; and railway rolling stock.

Obviously, a program of such magnitude, involving the expenditure of vast sums of money—not to mention the welfare of millions of people abroad—requires a high degree of careful planning and efficient management if it is to operate successfully.

Is this what we're getting? Let me illustrate the kind of "careful planning" that goes into our foreign aid program:

A few years ago it was discovered that out of a $14 million allocation for the country of Burma, only $8 million had been obligated by June 1. Only 30 days remained before the fiscal year would end. Following standard procedure, a rush meeting was called to discuss new ways to commit the remaining $6 million without delay. I attended this meeting.

After several possible projects were discussed and summarily dismissed, one of the planners present suggested importing blacksmith equipment into Burma. Someone quickly pointed out that you couldn't put much of a dent in $6 million with these items. But the planner had big things in mind; he wanted enough blacksmith equipment to put a complete unit in every town and village in the country. This, he said, would use up a million dollars or more.

But one of those present opposed the idea. Rather cynically, he asked his colleague: "What are you trying to do, shoe every elephant in Burma?"

This little story, however, has a happy ending. Eventually enough projects were improvised to commit all of the $6 million before the fiscal deadline and it was spared the fate of lying around gathering dust in the Federal Treasury.

Now I think we will all concede that in any large institutionalized undertaking, whether private business or government, we must expect a certain percentage of human error. It's inescapable. But the disturbing fact is that available evidence of bad planning and mismanagement in our foreign aid program transcends anything that might reasonably be expected or forgiven. This is all a matter of public record. And the sad truth is that we were making the same costly mistakes in 1956 that we made in 1952, indicating that somewhere along the line of command there is an inability or unwillingness to learn from experience.

The brief history of American foreign aid provides a lesson in itself in the intricacies of bureaucratic nomenclature. We started with the Economic Cooperation Administration, progressed through the Mutual Security Agency, the Technical Cooperation Administration, and the Foreign Operations Administration to what we now call the International Cooperation Administration.

But while the titles have changed, there have been too few new faces on the policy-making and planning level, except at the very top. In the past 7 years the economic aid program has had 5 directors. None has

been on the job more than 2½ years and one stayed only only a few months.

Repeated congressional investigations of our foreign-aid program have failed to turn up anything resembling a well-defined governing policy. And so we sometimes find ourselves offering aid before it is even requested. Or on occasion being forced to sell the need for economic aid to the recipient country when it becomes obvious to our aid planners that the nation we are dealing with just doesn't know what is good for it.

It's a matter of record that some of the countries which accepted our aid were so little interested in the grand projects we had planned for them that they failed to contribute their agreed share of the cost and frequently benevolent, generous old Uncle Sam wound up paying the entire bill.

Here are several pertinent examples: In Mexico a cooperative agricultural contract under technical assistance was made at a proposed cost of $750,000 to the United States. The project never got underway because there was opposition within the Mexican Government, which then failed to meet its contribution amounting to about 25 percent of our share. Reportedly our contribution was reprogramed and reobligated for other purposes.

Similarly, in Uruguay the United States committed itself to technical assistance projects in 8 difference fields, for a total obligation of $1,121,000. Uruguay, however, made substantial contributions to only 1 of them, after agreeing earlier to helping defray the cost of all 8 projects.

Now let me quote from the findings of a congressional subcommittee: "A 1954 United States contribution of $300,000 to the agricultural services in Brazil was held up for 2 years because Brazil failed to make a matching contribution. Another $150,000 set aside in 1952 for a rural education program was carried over as an expended item year after year because the Brazilian Government never put any matching funds into the program."

Does this sound like the reaction of governments sincerely interested in the kind of projects we were promoting?

Another major problem is the exchange rate at which our foreign aid dollars are converted into local currency. In certain countries, this conversion has been made at unrealistic rates to the great disadvantage of the dollar. In Korea, for example, where the volume of our economic aid program is very large, we are compelled to convert our dollars at the rate of 500 Korean hwon to the dollar, while the free rate of exchange fluctuates between 800 and 1,300 to 1 This means we are surrending half of the purchasing power of our dollar; it costs us twice as many dollars to accomplish our aid objectives as it should.

The tragic part of the situation is that we tolerate it. We seem to be unable to persuade the Korean Government to adopt a more realistic attitude.

This penchant of ours for picking up the tab, this apparent overanxiety to demonstrate to one and all that we are ready, willing, and able to foot the bill for everything from blacksmith tools to hydroelectric projects, runs sharply counter to the fundamental concept of foreign aid: that our mission is to help others help themselves, and to cement lasting international friendships in the bargain.

It is difficult, indeed, to reconcile this concept with a policy of helping those who haven't asked for help simply in the hope that after they receive what we can give them, they will be everlastingly grateful because they will see what they have been missing.

I have strong doubts, however, that we encouraged this reaction when we helped construct sugar plants in Iran, where there is little sugar, and when we helped erect cotton mills in Korea, where there is no native cotton, and when we helped put up flour mills in Korea and Formosa, where there is little or no wheat.

We have constructed industrial plants, but failed to install the needed power. In Iran we helped finance a textile factory. We spent some $500,000 for American-made looms and installed them in the plant. Unfortunately, the looms required high-grade cotton—of which there was very little—and skilled operators and maintenance helpers—of whom there were none available in the native population. But we installed a half-million dollars' worth of looms anyway, then didn't provide the power machinery to run them.

The deplorable situation in Iran, as you know, has been widely explored by Congress. Perhaps you are not aware, however, that in 4 years the industry division of our foreign-aid mission there had 6 directors. In order, they were: A weaving technician, a fishery expert, a retired industrial consultant who had never been overseas before, a former investment counselor, a graduate forester, and a mechanical engineer who specialized in engine design.

Little wonder, then, that our foreign-aid planners, when taken to task, have defended many of our projects, technical and otherwise, solely on political grounds when economic justification was impossible.

I believe the evidence is clear—and you may have reached the same conclusion as you watched the development of our foreign-aid program—that the planners and theorists in the State Department and the International Cooperation Administration have been too preoccupied with the outflow of dollars and too little concerned with the things for which the dollars are spent.

A big program isn't necessarily a worth while program, just as a big budget isn't necessarily a justifiable one. This, too, is a lesson still unlearned in many Washington offices. Can the taxpaying public think otherwise when a member of our aid mission in Pakistan is reproved for planning a limited technical-education project which his superiors rejected on grounds it was too modest? In this particular case, the planner was assured that his idea would be approved if he expanded it to national scale.

Unfortunately for Congress and the country at large, the true cost of this free-wheeling, irresponsible approach to a program of tremendous scope, the true cost of mismanagement and lack of direction and just plain bungling is extremely difficult to compute. It shouldn't be, but it is. There is a startling scarcity of reliable information available to those trying to bring the entire program under close scrutiny and review.

Early last January, the Comptroller General of the United States wrote a letter to the Director of the International Cooperation Administration enclosing a General Accounting Office memorandum calling attention to certain operational deficiencies in the economic aid program and suggesting remedial action. Among other things the memorandum stated that ICA had asked for new appropriations to meet the expenses of specified projects, although funds previously allocated to these same projects had not been fully used or even obligated. The memorandum also observed that there were no systematic records in ICA to enable anyone to say how or why aid levels were established in Washington for given countries or projects. It further noted that ICA's presentations to Congress in support of appropriation requests were inadequate and that ICA headquarters failed to maintain sufficient information regarding the progress of field projects and the use of funds.

After a lapse of 3 months during which ICA paid no attention to the letter and memorandum of the Comptroller General beyond an acknowledgment of their receipt, the matter came to the notice of the Hardy subcommittee of the House Committee on Government Operations which opened public hearings. The Director of the International Cooperative Administration testified that he had instructed his people to reply to the Comptroller General within 2 months and was surprised to learn that it had not been done.

This is indicative of the difficulties that confront Congress and the public in obtaining reliable information regarding the foreign aid program.

Congress is disturbed by this situation, as it should be. My good friend, Representative GEORGE MEADER, of Ann Arbor, and others are calling for a top-to-bottom review of our foreign aid structure. This concern in Congress is pushed forward by each new committee report unearthing new instances of waste and chaotic conditions in this program.

Let me read a particularly significant passage from a report issued only a few months ago by the House Government Operations Committee. Here is what the committee concluded after questioning the top policy-makers in the International Cooperation Administration:

"The overwhelming reluctance which key ICA officials have displayed in laying their cards on the table before this subcommittee, indeed the apparent intent of some of the principal witnesses to snow the subcommittee under with irrelevant and gratuitous side issues, has shaken the subcommittee's confidence in the soundness of the reports on which Congress has based its judgments of the entire foreign aid operation. As a result, the serious deficiencies in the Iran program are not now the principal concern of the subcommittee. With the exercise of a good deal of charity it might be possible to understand many of these as isolated and peculiar to the time and place. But the most far-reaching and disturbing discovery the subcommittee made in the course of this investigation was that the principal officials in charge of this program either could not recognize these deficiencies or were dedicated to the task, especially in dealing with the Congress, of defending by highly questionable means indefensible performances."

That's tough talk. And not to be taken lightly. These are the views of some 30 Members of the House of Representatives, a bipartisan cross section basing its conclusions on documented evidence and direct testimony from the administrators of our foreign aid program.

In the light of such authoritative opinion, I for one am not inclined to laugh off the remark of one Government official of a country in which we have spent many hundreds of millions of dollars, to the effect that American aid projects were "wasteful but"—and get this—"inoffensive indulgences." In this man's mind we were literally tossing our money out the window, but we weren't hurting anybody, so what's the harm? Nor am I disposed to applaud the comment of a foreign-aid official, still on the job with ICA, who said, in referring to a last-minute obligation of aid funds, "We told them we would give them the money. What difference does it make how it's spent?"

I hope, in these few minutes, that I have been able to convey to you my grave concern with our foreign-aid program, even though in many instances this program has performed a useful service. Some of our technical assistance projects have yielded excellent results; the Fulbright and Smith-Mundt training programs have proved truly useful; and I have nothing but admiration for our antimalaria project in a number of nations. I also wish to pay tribute to many able and dedicated people in the program, from the rank of mission chief down the line.

As I noted earlier, we are committed indefinitely to a foreign assistance operation of

substantial proportions. We can't abandon it, but we can—in fact, we must—improve it.

What we need most today is a realistic recognition by all concerned—and that includes every American taxpayer—that our assistance was never intended to be perpetual, that the indiscriminate expenditure of dollars in one country after another on projects that are too costly on one side and unwanted or inappropriate on the other can only lead to a state of mutual distrust and frustration.

Our original conception of foreign aid was to help others help themselves, and then let them stand on their own feet. It's a splendid idea; and it's high time we put it into practice.

I profoundly believe that unless we quickly and vigorously overhaul the foreign-aid machinery we have put into motion, work the kinks out of an engine that has been lubricated too often with too many American dollars, we will find ourselves saddled with an international WPA of frightening dimensions, with all its implications of state socialism and economic imperialism and with a fantastic bureaucracy of reckless planners and irresponsible spenders.

The effect of such a state of affairs upon our foreign relations would be nothing short of disastrous. And in these days of uncertainty and international tensions, it's a disaster we cannot afford to risk.

Now, where do we start the overhaul? I think our first job must be to find out in accurate detail just what has happened to the money we have already spent. Some can be traced today; some cannot. But at least if we know where and how some of it has gone we can learn both from our mistakes and accomplishments and chart a new and more effective course.

In 1956 seven members of the Hoover Commission's task force on economic overseas operations, under the leadership of Mr. Henning W. Prentis, Jr., former chairman of this task force, and the Honorable Charles Sawyer, former Secretary of Commerce, urged Congress to create a joint committee or Hoover-type commission to conduct such a review in the field of foreign-aid operations and spending. The objective is a comprehensive study tracing foreign-aid dollars from their appropriation to final expenditure. These actual costs could then be related to the impacts of our aid projects both on the recipient countries and on the United States. A majority of Congress has not yet shown any disposition to act on this proposal.

However, the need for this type of study is obvious. We cannot plan for the future, unless we know definitely what has happened in the past.

The foreign-aid program is 10 years old. The Marshall plan, in spite of waste and mismanagement, had happy results. The emergency was met and dealt with. Since then, under the pressure of other emergencies, a new set of programs has blossomed all over the world. The end has not been reached.

This program has taken on the characteristics of a mushrooming improvisation. It seems to be impelled in part by the noblest motives and in part by an apparent belief that enough dollars, enough dams, enough powerplants and enough steel mills, if provided rapidly wherever there is poverty, illiteracy, brutality, corruption, and suspicion, will somehow save the souls of men and rescue the world for our type of democracy. Of course, this isn't true. Nevertheless, we are permitting ourselves to be pressured into the continuing expansion of a program that has already gotten out of control and has exceeded the ability of its administrators to manage it properly.

This country has always been, and I pray always will be, ready to assist other less fortunate countries in realizing their legitimate aspirations and improving their lot. But we cannot live in a dream world, and many things we would like to see accomplished in other parts of the globe will take a long time and must be done bit by bit within the capacities of the struggling nations to carry their own load. They can be helped but not permanently subsidized. What we are doing at present encourages a spirit of dependence rather than independence among a number of young countries that have only recently thrown off their colonial ties and are just learning to stand on their own feet. This can defeat our purpose by embittering the people we are trying to help. As a high Pakistan official told one of our economic-aid officials when he learned of the size of our prospective staff in his country, "We have just got rid of the British because we didn't like to have them ordering our lives, and we have no intention of permitting the Americans to move in and replace them."

It's time to create rigid policy framework for our foreign-aid program and stay within it. Let's commit ourselves to a useful and sensible point 4 program doing a few significant things in each country. Let's assist in industrial development within realistic limitations, to the extent that hard-bitten judgment justifies a given project from our point of view as well as the other fellow's. And when I say hard bitten, I mean the reasoned opinion of experts, not dreamers or promoters. Let's cut out grants-in-aid except in the most unusual circumstances, remembering when we lend that loans beyond a certain point can break a country, not make it. Let's stop, or at least reduce, a lot of the so-called budget support which is advancing rather than controlling inflation. When we decide to render such support, let's do it in a straightforward and businesslike manner.

Management is another problem. Foreign aid is the greatest merchant banking and engineering business in the world. There are few commercial banks in this country big enough to handle all of ICA's banking business. As in any vast enterprise, the need here is for practical, realistic, experienced management. Until the invaluable asset of sound administration is added, we cannot hope to wipe out the waste and extravagance which has beset this program for 10 years.

A final word. We have not sought leadership in this troubled world. It has been forced upon us, and to the best of our ability we have tried to respond to the call. We have made mistakes and we have absorbed a lot of criticism, but when the chips were down we did our best—and I think every one of us has the right to be proud of the part the United States has played to bring about a better world.

But I sometimes wonder if we haven't been a little oversold on our duties to the rest of the world and if perhaps we might not be entitled to a greater degree of cooperation from some of the people we are trying to help. I would like to regard it as a two-way street, with our representatives, both here and abroad, acting just a little bit tougher in defending the interests of Uncle Sam and the American taxpayers.

We must discard, once and for all, the notion that foreign aid can ever become a substitute for diplomacy and a realistic foreign policy. We cannot hope to win respect or affection by ever being jockeyed into a position of paying tribute, bribery, or even blackmail to accomplish our objectives. After all, we are dealing with some very realistic and tough-minded people. We'll help them out, but we don't want to be exploited and we don't want our generosity to be regarded as a sign of weakness. Let's encourage stiffer trading on the part of our own people, to insure that what is good for the rest of the world is in fact good for the United States.

Programs like foreign aid never remain static; they expand or contract; they improve or deteriorate. If our economic aid program continues on its present course, I believe the ultimate results will be most unhappy for everyone concerned, and the cost will be terrifying.

Our real hope for reforms in the foreign aid program rests in the application of the democratic process. It is everyone's business. To the extent that opinions exist, they should be expressed to those in authority. In so doing, it is my firm belief that a great service will be rendered both to the United States and to the world.

An Inconsistent Supreme Court

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. SCHERER. Mr. Speaker, there have been many editorials written concerning the recent decisions of the Supreme Court.

An exceptionally fine one appeared in the Monday, July 8, issue of the Evening Outlook, Santa Monica, Calif., entitled, "An Inconsistent Supreme Court." I feel that all Members of Congress should have the benefit of this splendid editorial and I am, therefore, inserting it in the CONGRESSIONAL RECORD.

The editorial follows:

AN INCONSISTENT SUPREME COURT

As the Supreme Court prepares to give its final decision of an historic term—in the case of William Girard—it finds itself the center of a controversy unequaled since the 1930's. The High Court's novel rulings on congressional investigative powers claim the brightest spotlight, this including the cases of 14 California Communists who were either freed or given new trials after having been convicted by Federal courts in this State. But also on stage are decisions indicating that the pendulum has swung a full arc since the days of the nine old men.

In that era of the thirties, the New Dealers, led by Franklin D. Roosevelt, complained that the Court leaned over backward in rigid interpretation of the Constitution, in reliance on precedence and continuity in the administration of law. Today's Court, led by Chief Justice Earl Warren, is criticized for an opposite tendency—for what is seen as a purely sociological interpretation of the Constitution and a blithe nosethumbing at precedence and consistency.

The Court's critics among the legal profession point out that an orderly civilization demands a degree of predictability and strict legality in legal affairs. Wholly unpredictable, inconsistent and cockeyed was the Court's recent ruling reversing itself to free two women convicted by military courts of killing their husbands, on the grounds that military trials of civilians charged with capital offenses overseas are not constitutional.

The ruling overturned a previous Supreme Court decision, handed down only a year before, that such trials are constitutional. The cases were the same; the Constitution is the same. The only change was in the reasoning of the Court.

Another example of startling inconsistency was the decision requiring Du Pont to divest itself of General Motors stock. For 40 years, interpretation of antitrust statutes had held that companies could hold stock in noncom-

peting companies but not in competitors. The Court's new ruling, disregarding all precedent, put thousands of law-abiding corporations in the category of lawbreakers overnight.

The Court's decision outlawing segregated schools reversed a 60-year-od decision legalizing separate but equal school facilities—the basis for enormous expenditures by the South in its public-school plant. Irrespective of the sociological aspects of the Court's reversal, it was in marked contrast with its own rulings in another controversy involving organized baseball.

In 1922, the Supreme Court held baseball was a sport, not a business, and did not come under the antitrust laws. Recently, the Court held that the 1922 ruling was really wrong, but declined to reverse it because enormous capital had been invested by the baseball magnates in reliance on its permanence.

A still more glaring inconsistency was that of Justices Hugo Black and Felix Frankfurter in their opinion sharply challenging the rights of congressional committees to question Communists. In the 1930's, these two New Deal Justices wrote opinions strongly upholding congressional inquiry into the alleged wrongdoing of big corporations. The civil liberties which they are now so zealous to invoke for Communists were not so sacred to Black and Frankfurter when bankers were the targets of inquisition in the 1930's.

It is hard to respect a Supreme Court which turns the Constitution into an emotional weathervane, capable of reversing whenever the social predilections of certain Justices are involved. For this we fear that Chief Justice Earl Warren is in part responsible.

Los Angeles—It Works Toward Greatness

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Kimmis Hendrick of the Christian Science Monitor, entitled, "Los Angeles—It Works Toward Greatness."

The amazing development going on in Los Angeles is one which, because of its implications on the entire country, is really of note, and while we may be accused of provincial pride, I hope this article will be of interest to all. The article follows:

LOS ANGELES—IT WORKS TOWARD GREATNESS

(By Kimmis Hendrik)

For years Los Angeles has been aiming to become the greatest city in the American Far West. It has plumed itself on the thousands pouring in month after month, on its industries, its freeways, its shopping centers, its schools, its playgrounds, and its weather.

It has advertised. It has—tell it not in Gath—boasted.

But now somebody has suddenly made the target so compelling that it seems certain Los Angeles will actually pull the trigger.

Los Angeles is to have one of the biggest, most impressive, most useful, and possibly one of the most esthetically effective skyscraper building groups ever designed and constructed.

Announced today, Ambassador International is a building project breathtakingly bigger than New York's famed Rockefeller Center. But the size is almost of secondary importance. The compelling factor in the plan is the dramatic center it will give this huge, spread-out city, a kind of center that seems bound to influence city design in every direction for miles and years.

Details are just now available to the public, but the preliminary planning has been a drawing board and conference job for over a year. The world experienced architectural-engineering firm of Daniel, Mann, Johnson, and Mendenhall has the assignment.

It is an assignment to transform the 21-acre site of the gracious Ambassador Hotel, in three stages probably and over a long period of years certainly, into a sky-piercing hotel and commercial area for Schine Enterprises, the present owner.

This is the largest single piece of property on Los Angeles' most renowned thoroughfare. Only a quarter of a century ago, when the hotel opened, the grounds were almost completely surrounded by open country. Wilshire Boulevard west from this point was still a dirt road.

Now it is the very heartland of prospering Los Angeles. The Tishman buildings, the new Texas Co. building, Bullock's Wilshire, Maghin's, the Brown Derby, the Chapman Park Hotel, and the Town House—these, and the familiar wide, handsome gardens of the Ambassador, are famous with all who know Los Angeles.

DMJM partners are reluctant to describe the Schine property development in dollar terms. They suggest what they regard as more meaningful comparisons.

LIKE EXPLODING A CANNON

For instance, Douglas Russell, a DMJM partner who has worked closely with Schine Enterprises during the early planning, says the ultimate office space goal for the project is 10,500,000 square feet. The Empire State Building has 2,500,000 square feet.

Another way to look at it, Mr. Russell says, is that Rockefeller Center occupies about 12 acres. Ambassador International will cover 21 acres, with parking underneath and outer space above.

For Los Angeles, limited for years to buildings 13 stories in height, undoubtedly the transforming touch that will be felt soonest will be the 35-story tower addition to the present Ambassador Hotel.

Lloyd Aldrich, who was for 21 years the city engineer here and now in private practice is associated as a consultant to DMJM on this project, describes the impact of the Schine announcement by saying with a quizzical smile, "For the city fathers, it is just like exploding a cannon in their living rooms."

But this is the kind of big boom everybody has been waiting for.

People and automobiles and plenty of space have made the city what it is today. Planning has scarcely entered the question. City hall has turned out at least three master plans, and citizen groups have devoted dedicated hours to studying the transit dilemma without solving it. The pattern has lacked center, focus, simply because there seemed to be no need for either.

But now comes along a private interest that has built its fortune on sensing trends. It sees the enormous significance of Los Angeles' rapid growth as a hub for global airways. It sees the continuing influx of population, the new market, the holiday possibilities. Jet airlines will soon be bringing Los Angeles within 4 hours and 15 minutes of New York, 4 hours and 40 minutes of Honolulu, 11 hours and 25 minutes of London.

So the trigger becomes a group of buildings.

"There has never been an outstanding building except city hall," Mr. Aldrich comments. He means, he indicates, that the low height limit, to which city hall is a deliberate and handsome but quite modest exception, allows nothing that excites the horizon.

Last year the voters removed the height limit, and this month, for the first time, planners of commercial buildings can let their vision soar.

INTENTIONS MONUMENTAL

Of course, J. Myer Schine and his son, G. David Schine, are fully aware that Ambassador International will not be the only pioneer of Los Angeles' upper space. The father is chairman of the board, the son is president, of Schine Enterprises. They are men who understand that a project like theirs will spark, attract, and encourage others.

What makes their project potentially unique for this city is their intention to use their land in a monumental way.

S. Kenneth Johnson, the DMJM partner in charge of the architectural concept, points out that they might have covered the 21-acre site with huge boxlike buildings. Instead, they plan to keep the present park that fronts on Wilshire Boulevard, enhance it with a lake, and take the buildings clockwise around the property.

In this the development will somewhat resemble Rockefeller Center. But the latter's beautiful forecourt is some 60 feet in width. Ambassador International's will be 260 feet.

As Mr. Aldrich indicates, what makes the project so revolutionary for Los Angeles is not so much its size and cost as its challenge to find answers to basic, long-neglected questions. For a catalyst has this effect. And the catalyst is not just the Ambassador; it is the practical consideration that where one vast investment comes others are bound to follow.

The questions are such as these:

When is Los Angeles going to get a mass transit system? Can it ever catch up building the freeways that today are overcrowded before they are done? What about smog? Is smog at least partly the effect of having induced industry to settle on cheap land—in the wrong places?

Questions like these take time. Schine Enterprises realizes this, and has asked DMJM to anticipate a development that can be completed over as long a span of years as the Los Angeles economy requires. Its further stipulation is that, throughout this time, whatever portion of the project is completed will be operable without interruption during further expansion.

Phase 1 contemplates the tower enlargement of the hotel, plus office and convention space.

Phase 2 adds further office buildings, gradually occupying the grounds now used by the beautiful Ambassador bungalows.

Phase 3 finally replaces the old hotel with the new, pushes the garden center clear back through the property, and places three 50-story office buildings at the south end of the property for backdrop.

The U-shaped use of the large property, keeping Wilshire Boulevard the open side, is intended to give Los Angeles' commercial area a parklike openness that will protect for a busy city something of the resort atmosphere that surrounded the present Ambassador in its early days.

This kind of planning sounds a thrilling keynote, as everybody from Mayor Norris Poulson on is saying. It sets a pace. It establishes a tone. It works toward greatness.

Hold Yourself Accountable

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. SCHERER. Mr. Speaker, for years one of the chief objectives of the

Communist conspiracy in the United States was to abolish the Un-American Activities Committee. Such a movement coming from the Communists is understandable since most of the legislation controlling the Communist Party activities in the United States was recommended by this committee. Furthermore, it was the Un-American Activities Committee that brought to light the penetration in the Government agencies by the Communist apparatus.

Today, the cry for the abolition of the committee has been taken up by much of the leftwing of this country. There is a volume of propaganda being fed the American people to the effect that the Communist Party in the United States is disintegrated and that it is no longer an effective force in this country. It is further charged that the members of the committee are beating dead horses for their own political advantage.

J. Edgar Hoover, who perhaps knows more about the internal subversion of this country than any other individual, was the guest columnist of Victor Riesel on Independence Day, July 4. In this column he effectively and conclusively answers these contentions.

Mr. Hoover's statement reads as follows:

HOLD YOURSELF ACCOUNTABLE

(By John Edgar Hoover)

Men risked their lives to secure the freedom which we enjoy in this Republic. They did so deliberately and with full understanding of exactly what they risked. A wise leader had warned them as they emphasized their revolt against tyranny by signing the Declaration: "We must all hang together, or assuredly we shall all hang separately."

With each stroke of the pen, every man present knowingly put his life in jeopardy. Those men took the chance which gained us our freedom, yet no one knew better than the Founding Fathers that the winning of freedom was only a first step. They knew that the problem of maintaining freedom is complex and demanding, and they dedicated themselves to its maintenance.

No one recognized more clearly than those early Americans that only by personal accountability could freedom be retained uncorrupted. The concept of government which they projected was based upon individual responsibility. That concept proclaims today, as it did then, "Freedom depends on you. You are accountable."

When we cease to be accountable as citizens, we sign the death warrant of freedom.

Abraham Lincoln once said: "If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen we must live through all times or die by suicide."

Public apathy is the sure way to national suicide—to death of individual freedom. Public apathy enabled Hitler's fifth columns to prepare Europe for each Nazi coup. Public apathy allowed the Communists to penetrate and make satellites of once free countries, and it is presently enabling them to honeycomb and weaken the structure of freedom in the remaining countries. And there is today a terrifying apathy on the part of Americans toward the deadliest danger which this Nation has ever faced.

Some of that apathy is deliberately induced by elements which desire you to believe that the Communist Party, U. S. A., no longer represents a threat to America. You hear that domestic communism is reduced in numbers, that it is divided, split, shattered. You read the proclamations of well-meaning but uninformed individuals who, from their mountain of ignorance, maintain Americans are too worried over domestic communism. They charge that citizens who consider the misguided aberrations of a handful of persons to be a danger to our security are mistaken.

The facts indicate the contrary.

The Communist Party in the United States is not out of business. It is not dead. It is not even dormant. It is, however, well on its way to achieving its current objective—which is to make you believe that it is shattered, ineffective, and dying.

When it has fully achieved this first objective, it will then proceed inflexibly toward its final goal. And let no one for a moment forget that the Communist Party, U. S. A., is part and parcel of an international conspiracy whose goal is conquest of the world.

Nor should any citizen forget that it was through force, through deceit, through infiltration, and through citizen apathy that this conspiracy gained control of 17 countries, and that by the iron first of ruthless suppression it maintains control of approximately 40 percent of the peoples of the earth and 25 percent of the world's land surface.

The Communist conspiracy will not halt its forward march automatically. It must be halted. We have succeeded for a brief moment in throwing alien-inspired domestic Communists off balance. We must keep them off balance. We must expose them. We must not let them regain the desperately sought cloak of respectability behind which protection they wrought such infinite damage to American security.

Is the Communist Party, U. S. A., small in numbers? So, likewise, it was in Russia when freedom died in that unhappy land. The informed do not measure the strength of the Communist conspiracy in numbers, but by the areas where it finds its support and by its ability to influence, to pull strings, and to wield control.

The United States is presently the major bulwark of freedom. We who are aware of the many insidious moves to destroy that bulwark cannot be apathetic. We know the character of the Communist Party. We know it to be an active, effective adjunct of the international Communist conspiracy, and that those who try to minimize its danger are either uninformed or they have a deadly ax to grind.

But apathy toward the danger of communism is not the only threat to freedom today. We have been apathetic in other areas. We have not held ourselves accountable. We have allowed men to get by with small violations of the law, and those small violations have suddenly become large violations. The record reflects a high of 2,563,150 major crimes committed during the year 1956. This is 13.3 percent above 1955 and the first total above the 2.5 million mark.

And what are we doing about it? No one knows better than readers of this column what can happen when public apathy allows the development of a climate where the criminal mob can flourish. The war with the mob must not be left to one man to fight, or even a few men. The war against crime is everybody's war, for if the arrogant men of the mob are allowed to stand above the law the freedom of every citizen is in peril.

A President of the United States summed up the individual's responsibility in a message to Congress:

"It is the duty of a citizen not only to observe the law but to let it be known that he is opposed to its violation."

The maintenance of freedom, as the Founding Fathers knew, is a complex, demanding task for which every American citizen is responsible. If a free America is to survive, you must hold yourself accountable.

Foreign Spending

EXTENSION OF REMARKS

OF

HON. WILL E. NEAL

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. NEAL. Mr. Speaker, I am not one who shares a profound reverence for the total admonitions of George Washington at the time he relinquished command of the original army of our Republic.

At that day and time, when fledgling America was separated by weeks, even months, from the shores of Europe, with Asiatic affairs only a quaint and distant echo across the Pacific and our total continent, General Washington could speak with considerable authority when he urged the wisdom of no entangling alliances.

We did not need them, nor did we desire any connection with the quarreling family of nations across the Atlantic.

This was, I might say, the golden age of American political innocence. It endured, roughly, for more than a century, during which time we engaged in numerous wars, but always, it can be said, as the sole participant, unentangled by any firm commitments to another power.

Then, as history measures time, in a comparative moment of development there burst upon the world the internal combustion engine, the telegraph, and the other great and wonderful technological developments which, still continuing, have reduced our globe to the size of an acorn, where planes fly faster than sound and there is no section too remote for us to have fast and accurate intelligence concerning it.

We have lived to see the embers of human freedom spread into worldwide conflagration involving many nations of people imbued with the desire for freedom and self-determination. In sympathy with their struggle against dictatorial aggression we have indeed become entangled in a web of moral responsibility for their welfare.

With our capacity to improve our lot, we have built trade alliances but with humanity's innate mischief, kept well apace in destructive capacity. For every peaceful use of atomic power, there goes hand in hand with it the ominous shadow of its sinister companion—the bomb.

For every minute lopped off the flying time of an oceanic trip, the chilling fact is brought home that less time now is required for an enemy bomber to strike at our family hearth.

We do great deeds in the field of prolonging life through new and shining effort in the areas of medical research, but the same laboratory where means are found of lengthening our span can also be used as the breeding place for fantastically deadly germs which, also, are enlisted now in the arsenals of total war.

It is against the backdrop of these inescapable facts that I have considered S. 2130, officially styled Mutual Security Act of 1957.

From my study of the entire question of foreign aid, I am compelled to believe that this is a long road upon which we have set our feet. In a great many instances, it has been a road full of twists and turnings, with unpleasant surprises awaiting the Nation at many of its convolutions.

Yet, its proponents present a persuasive case.

They measure past accomplishments since the first Mutual Security Act of 1950 and boldly state, as did President Eisenhower some months ago, that it has operated virtually as an antiwar insurance policy.

How much the absence of war has been due to this mutual-security program and how much due to Russian unwillingness or unpreparedness, I am not able to detect. Yet, in the absence of any proof of Russian timidity, one is forced to the conclusion that mutual aid probably has kept the world, so far, in a single piece.

Under this bill, our State Department, ICA, and the other official almoners downtown propose to spend $3,242,333,000, a reduction, I might say, of more than $600 million from what the administration had originally requested.

There is some doubt in the minds of many that friends that we have purchased are friends worth keeping. They point out that there is no abundance of love for America abroad. Mutual aid has been likened to a great scheme of international blackmail in which the United States is cast in the role of sucker.

To this, I can only say that the United States through the inexorable courses of history has been forced into a position of world leadership.

And, being a nation whose foundations are securely cemented to immutable moral law, we cannot in conscience and before God maintain that leadership by raw and naked force as world leaders have done since the days of the Pharaohs.

The American concept of world leadership is a startling departure from the record of the Romans, of Charlemagne, of Napoleon, and other dominant men and nations.

We believe in peace, and peace we shall give the world, better bought with dollars and the things of the marketplace than with the blood of our sons.

It is too late in the day for this House to reverse the tide. We can only hope to apply the brakes. History is carrying us along in its relentless sweep. For better or for worse, we are committed to the burden of carrying the free world upon our shoulders in order that, should war come, we will again be fulfilling the classic military strategy of the United States, that of keeping actual war as far from our shores as it is humanly possible to do.

Yet, the coin has another side.

What has gone before was idealism. Now, let us face the realities.

In maintaining our position of world leadership we must necessarily have a great national strength and unity at home. In respect to these things, I wonder from time to time if we truly possess these required qualities.

We have a huge national debt, a growing inflation as people everywhere demand more goods, a need for conservation and costly public works projects, all demanded of our society whose citizens are bearing an abnormal tax load.

We can build armies and public works projects around the world, but yet we can sacrifice our preeminent position in world affairs if we fail to bolster and sustain our national solvency.

It is totally unsound to assume that we can continue foreign spending indefinitely at the present rate. After 10 years of lavish outpouring of our substance, the time has come to reduce commitments in substantial amounts each year in order to encourage foreign nations to stand on their own and at the same time take steps to restore our own financial and economic storehouse.

Our people will not, in fact they cannot, afford deficit spending and high taxation indefinitely.

Only a strong and united America, financially sound, can continue to play her traditional role as friend and supporter of struggling free nations.

FBI Files Need Protection

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. SMITH of California. Mr. Speaker, the results of the case of *Jencks* v. *United States* (353 U. S. 657) decided by the Supreme Court on June 3, 1957, are alarming indeed. I urge the Congress to take immediate steps to clarify this decision.

In further reference to this serious problem I ask leave to extend my remarks in the RECORD by including the following editorial from the Glendale News-Press:

FBI FILES NEED PROTECTION

The administration has responded swiftly and prudently to the recent Supreme Court decision that has the effect of opening up of FBI files.

Time was indeed of the essence.

On June 3, the Court ordered a Federal judge to give Clinton E. Jencks, a New Mexico labor organizer, access to relevant statements and reports collected by the FBI. These had been used by United States attorneys to win a two-part conviction of Jencks for falsely swearing that he was not a Communist when he filed an affidavit required by the Taft-Hartley Act.

Within 48 hours 14 Federal judges reportedly had opened up various Government records to defendants. In an appearance before a Senate Judiciary Subcommittee, Attorney General Herbert Brownell testified that the way one Rhode Island court has interpreted the Jencks decisions could result in the freeing of a convicted tax evader and four convicted kidnapers.

It would be unfair to charge that the Supreme Court was shortsighted or fatuous in its Jencks decision. The decision was 7 to 1, Justice Clark dissenting and Justice Whitaker not participating. The Court had to deal with a specific case and to determine whether justice had been done.

It ruled that justice had not been done. Doubtless the fact that the unsavory Harvey Matusow had supplied some of the crucial information influenced the seven judges.

It was not within the Court's province to propose specific plugs for the loopholes it had to open. That is the job for Congress, aided by the administration's recommendations.

Attorney General Brownell made those recommendations. And after a 1-hour hearing the Senate Judiciary Subcommittee unanimously approved a bill closely modeled after the Brownell proposal. The full Judiciary Committee approved the bill and rushed it to the floor with a must priority.

It appears to come to grips with the central issue. Under its provisions a defendant could inspect only the FBI information that a judge holds to be pertinent to the trial. Thus enemies of society will be denied the Roman holiday rummaging through confidential files that Justice Clark decried. The FBI files will retain most of the confidential character that J. Edgar Hoover regards as essential. Yet defendants will gain the right to inspect pertinent documents.

Capt. Stephen Darius and Lt. Stanley Girenas

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like to have permission to extend my remarks in the RECORD with respect to an important commemoration taking place in Chicago on Sunday, July 21. I am going to attend this ceremony.

I refer to the annual parade under the auspices of American Legion, Darius-Girenas Post, No. 271. This parade commemorates an event occurring in 1933, when Capt. Stephen Darius and Lt. Stanley Girenas began their flight from New York to Kaunas, Lithuania. The flight as we all know ended tragically.

We have not forgotten Captain Darius or Lieutenant Girenas. These men were trailblazers just as our Charles Lindbergh was. The three had something in common. They were pioneer airmen. They had infinite courage. They loved freedom.

As we live today we know abundance in almost every department of life but we also know uneasiness. This condition has become more manifest by another event occurring in 1933 at which time the United States recognized U. S. S. R. The two events are diametric in nature. One was symbolic of man's quest for peace. The other act spearheaded the way for international subversive communism. We shall long remember the courage of Darius and Girenas but we have lived to regret the dark days free peoples everywhere have had, and still have, because of communism.

History shows that freedom was never very far below the surface in any Lithuanian. Our Lithuanian friends have

been caught in mighty tides of diplomatic intrigue, Napoleonic wars, and oppressions of the czars. Their love of God and freedom, two cardinal virtues, has sustained them. I am confident that no force will conquer or change this inherent belief but instead will cement our national affection, understanding, and sympathy for our Lithuanian friends.

Address by Lt. Gen. Bruce C. Clarke, at Vaihingen, Germany, July 4, 1957

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith a short speech delivered by the distinguished commanding general of the 7th United States Army, now in Europe, Lt. Gen. Bruce C. Clarke.

His is a significant and most thought-provoking pronouncement. General Clarke made his address on the occasion of the celebration of July 4 at Vaihingen, Germany. I consider it a great privilege to place these remarks in the permanent archives of the Congress.

The speech follows:

REMARKS BY LT. GEN. BRUCE C. CLARKE, AT VAIHINGEN, GERMANY, JULY 4, 1957

Distinguished guests, officers and men of the 7th United States Army, ladies and gentlemen:

A year ago at a similar ceremony held here, I spoke to a group of distinguished guests and my officers and men on the occasion of the 13th anniversary of the organization of the 7th United States Army. Now another year has passed and I think it fitting that we pause again to commemorate its organization.

This year we considered it appropriate to combine organization day of the 7th Army with the 181st anniversary of the independence of the United States of America. Therefore, we have asked you to assemble with us briefly this morning while we celebrate these two occasions, to pledge allegiance again to the principles for which our country stands, and to observe the birthday of one of the instrumentalities of the United States, the 7th United States Army.

The 7th United States Army is a unique organization. It is the only full-strength, combat-ready field army ever maintained by the United States in time of peace. The 7th Army being maintained on foreign soil in a friendly host country 4,000 miles from our homeland adds to this uniqueness. You can realize the tremendous effort 7th Army represents when you consider that its personnel with their dependents number about one-quarter of a million Americans. They are stationed in about 160 localities of the Federal German Republic in an area roughly equivalent to one of our larger States.

Every soldier who arrives in the 7th Army is impressed immediately with the reasons for his being in Germany. These reasons are illustrated in poster form and are kept constantly before him in his barracks. They are:

To play his part on the NATO team.

To help maintain the peace by being constantly combat ready.

To be a good neighbor to our German neighbors.

To fight, if necessary, for the rights of free men in a free world.

It is my belief that the 7th Army is performing, or is capable of performing on short notice, all of these missions.

Last year in speaking at this occasion, I made the statement: "The presence here today of such distinguished visitors and guests and their willingness to join with us in this celebration points up another grave responsibility those of us in the 7th Army have to the community in which we work and live. The freedoms which we are dedicated to preserve must not be jeopardized by thoughtless acts prejudicial to the harmonious relationships within each community.

"The 7th Army must combine, along with its combat readiness, the ability and the desire to live in harmony with its neighbors. I insist that we conduct ourselves in our personal behavior in such a manner that it reflects only the highest credit on the 7th Army and the United States. This is a job for all of us, and if well done—as I expect it to be—will contribute materially to the overall effectiveness and reputation of the Army."

Now, a year later, I feel I can report to you that the 7th Army has achieved the goal which we set for ourselves in the field of good German-American relations. I should be remiss if, at this time, I did not express my appreciation to our distinguished guests and to my officers and men and their families for the part that so many have played in our mutual effort to be good neighbors together in Germany. My aim during the coming year shall be to further cement these good relations wherever and whenever possible.

In addition to celebrating our organization day, today we are celebrating the anniversary of our country's independence.

One hundred and eighty-one years ago a group of American patriots assembled in Philadelphia and displayed their courage before the world by announcing that they believed in and would fight for the basic rights of freemen. They proclaimed a set of principles by which they believed freemen in a free world should be governed. Some 7 years later, by force of arms and with the assistance of France, they achieved their independence and established a form of government which has existed since that time; a form of government that emphasizes the dignity of man and his rights as a freeman. The pattern set by these early American patriots has profoundly influenced the thinking of liberated people everywhere.

The freemen that contributed to the foundation and growth of the United States of America did not come from any one land. They came from many nations and spoke different languages; however, under the benign governmental atmosphere of the New World, they developed into a nation of 48 States which in unity has become a leader among the free peoples of the world. It is in furtherance of this leadership that the Seventh Army finds itself today as a part of the shield of NATO. Behind this shield many nations of the Western World live and carry on their daily activities in confidence and with assurance that any aggressive act toward a partner nation will be dealt with promptly and effectively.

We of the Seventh Army are strengthened by the knowledge that, if called upon to fight, we are provided with the finest men and equipment our country is capable of producing. We are also strengthened by the knowledge that we are a part of the great NATO dedicated to the preservation of peace and to the observance of the fundamental rights in which we believe.

So I say to you that the Seventh United States Army will endeavor to fulfill its assigned missions with the same enthusiasm and dedication that have characterized it in the past, and that it will strive to achieve even greater success in accomplishing the purposes for which it is stationed in Germany. It knows it can count on your cooperation in its efforts.

Airline Reservations

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. SCHERER. Mr. Speaker, since I have been a Member of Congress, almost weekly during congressional sessions I have had problems with the airlines involving reservations.

This week, the airlines, in an apparent effort to solve the almost unbelievable tangle that has developed over reservations and no-shows, have issued new orders with reference to this matter.

Mr. Henry N. Taylor, the Cincinnati Post's fine Washington correspondent, in an excellent article has analyzed the effects of the new regulations. Congress may, sooner or later, be compelled to deal with this problem, and, therefore, I am including in the RECORD for the benefit of my colleagues, Mr. Taylor's article. The article follows:

AIRLINE RESERVATIONS

The Nation's airlines this week struck a blow at troublesome no-show passengers by making it more complicated for everyone to ride an airplane.

Beginning September 14, it will cost you $3 to miss a plane.

Meanwhile, new ticketing rules, now effective on all scheduled airlines, require that passengers phone or visit airline offices at least 6 hours before flight time to reconfirm that they're in town and still want to ride.

The airlines are frankly holding their breath to see how the customers will react.

The new rule, second of three hurdles set up by the Air Transport Association and approved by the Civil Aeronautics Board, aims to separate sincere passengers from the kind who make half a dozen reservations, keep only one, and don't bother to cancel the others.

This habit has been costing the airlines millions of dollars a year, according to industry sources. It's also proved most irksome to passengers of good faith waiting for planes booked solid which later take off half empty.

"We wish we could run airplanes like buses; everybody just show up and climb aboard," said an ATA spokesman. "But gas and these new planes cost too much to operate empty seats. So now we're trying for a firmer advance idea of just who really plans to ride where."

First step, last June, was to require all passengers to pick up tickets a certain number of days or hours before flight time. Second step is reconfirmation, compulsary to all riders except those in town for less than 12 hours.

Penalty is loss of the reservation. Beginning in September, penalty for missing the flight—even if all other rules are observed—will be $3, collected when the passenger tries to cash in the unused ticket or use it for another trip.

This 3-rule plan is only a trial run, for 1 year. Some airline observers are afraid it's

asking passengers to jump through too many ticketing hoops. They cite the following dangers:

Reconfirming and cancelling calls will put new burdens on airline telephone exchanges, already so overloaded that in many cities it can take 15 minutes to get through.

The $3 fine will mean vast new paperwork and intercity communications, all subject to human error. Passengers who cancelled reservations by phone will have no proof on their tickets that they did so in time. Many will have to pay the $3 then wade through more paperwork to re-collect.

For many passengers, a mere $3 won't be enough penalty to change their no-show habits.

The whole new set of complications can't help but antagonize many riders, who so far this year have already sent the CAB a record number of complaints of airline passenger policies.

Some will get so fed up they'll skip reservations entirely and just go-show, in other words show up at the airport unannounced and hope to go.

If this were to happen on a large scale, it could turn out to be as much of a headache as the no-show habit these new rules were designed to combat.

Treatment of Mental Illness

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 17, 1957

Mr. NEUBERGER. Mr. President, leaders in the field of medicine and social welfare throughout the Nation are constantly searching for better methods of coping with the great problem of mental illness. Important strides have been made at the Oregon State Hospital in Salem, Oreg., in this urgent and important realm of endeavor. An excellent article analyzing these advances at the Oregon State Hospital appeared in the Oregon Journal of Portland for July 7, 1957. The article goes into detail in explaining the innovations and reforms developed by the capable staff of the Oregon State Hospital under Dr. Dean Brooks, superintendent of the Oregon State Hospital. Author of the article is Mr. Tom Humphrey, editor at large of the Journal, and a newspaperman who has made a specialty of studying problems involving social welfare, human health, and public education.

I ask unanimous consent that the article from the July 7 issue of the Journal by Mr. Tom Humphrey entitled "Editor Sees Heartening Gains at Oregon State Hospital," be printed in the Appendix of the RECORD for the information of my colleagues:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDITOR SEES HEARTENING GAINS AT OREGON STATE HOSPITAL—TREATMENT METHODS, CARE, FOOD REFLECT VAST CHANGE

(By Tom Humphrey)

David Snider's experiences in Oregon State hospital for the mentally ill, some good, some bad, but all intensely interesting in that he wrote of it from the voluntary patient's point of view in a series of articles recently, impelled me to revisit OSH the other day.

Parts of the Reverend Snider's articles, especially those parts recounting the unhappy times he had 10 years ago and even 3 years ago with misfit attendants, poor equipment, poor food, antiquated methods, understaffing, underbudgeting and his bouts with hospital routine, reminded me of the horror stories I wrote 15 and 10 years ago in an effort to shock the public, the legislature and the State board of control into remedial action.

I found, just as Mr. Snider found on his last trip to the hospital earlier this year, that great improvements have been made to the physical plant and a heartening change has occurred in treatment methods and facilities and attitude toward patients is evident today, as compared with a decade ago.

But I also found that we still have a long way to go to bring OSH up to the level people of the State have learned to regard as necessary, prudent, and humane.

Oregon State hospital is better managed, better staffed, quieter, cleaner.

There are more open wards, less physical restraint. The food is better, especially since the ration system developed at Oregon State penitentiary by Al Richardson has been adapted to OSH needs.

The appearances and attitude of attendants or aids are much better. The place looks better, smells better, feels better.

It is successfully making the transition from the custodial bedlam, which I encountered and blasted 15 years ago and again 10 years ago, to the modern mental hospital for the mentally ill.

This doesn't mean that we've got it made at Oregon State Hospital.

The Journal's Rolla Crick found this out 18 months ago when he actually worked in the hospital and wrote of his personal experiences. I found it out on revisiting the hospital the other day, and recalled previous inspections 5 years ago, 10 years ago, and 15 years ago.

OSH still is overcrowded, despite a multimillion-dollar construction program. Its attendants still are overworked and underpaid.

Its doctors—there are 19 for 3,550 patients today, as compared with 8 for 2,700 10 years ago—still can give patients only minutes a week when they'd like to give hours.

Despite the food-ration system which provides better balanced meals more economically the food should be better. You can't provide sufficient red meat and desirable special diets on a net food cost of 54 cents per patient a day.

Old ward 7, with 46 elderly, bedridden patients out of a total of 72, looks exactly the same today as it looked 10 years ago. It's still the worst-crowded ward in the 60-ward hospital. It still cries to high-heaven for more geriatrics wings, such as the new six-story geriatrics wing at OSH and the one planned at the new Wilsonville Hospital. It's quieter, of course, thanks to the new tranquilizing drugs. It doesn't smell as bad, thanks to 2,500 sheet changes a week. But it's nothing to be proud of.

The same goes for ward 21 for elderly women. Its 52 bedridden patients still occupy the ancient temporary frame structure originally built for TB's, and since replaced by a modern TB hospital. But it, too, is quieter and better staffed.

And old ward 38, the maximum security ward for the so-called criminal insane, hasn't changed. Though it's quieter and safer, it's still a problem ward.

While I saw only 2 patients in physical restraint in the dozen wards I visited (where it used to be common to see 8 or 10 to the ward) I saw something new had been added—something I did not like.

Scattered through the various wards are a score of children under 18—some mentally ill, some mentally retarded, some merely incorrigible runaways from Woodburn. They're in Oregon State Hospital simply because there was no other place for the courts to commit them—no psychiatric wing for children, no room at Fairview or Woodburn or Hillcrest. Truly a tragic problem.

To summarize:

Oregon State Hospital, Oregon's largest institution, is getting out of the physical facilities jam it was in 10 years ago. It is in the second phase—the better staffing phase, or what Dr. Menninger calls the brains instead of bricks phase.

As the Mental Health Association of Oregon points out, and as I rediscovered, the hospital got from the 1957 legislature only half of the additional doctors it asked for and needs 6 instead of 10. It was denied enlargement of the outpatient clinic, and last its able director, Dr. Reid Kimball, accordingly.

But Oregon State Hospital will have 22 doctors on the job by fall and has authorization to bring the medical staff up to 27 in the current biennium. Its budget for drugs has been doubled. The social workers staff will be hiked from 3 to 11. One psychologist and two industrial therapists are being added to find jobs to fit patients instead of patients to do jobs.

In spite of Reverend Snider's reaction to shock treatment and the tranquilizing drugs, these psychiatric tools are proving exceedingly useful and beneficial, coupled with followup therapy in treating the mentally ill.

They aren't cure-alls, either alone or in combination with therapy. They have bad side effects on some patients. But they permit doctors to reach and treat patients who heretofore were unreachable and untreatable. And they have brought the necessity for physical restraint down toward zero.

There still are too many bars at Oregon State Hospital, as Mr. Snider points out.

But there are now five open wards where patients move about freely, set up their own regulations and move more rapidly toward mental health. And the ward-adoption program of the churches and civic groups has been extended to 13 wards, speeding their journey to open-ward status.

A new trial run total rehabilitation program will be started in the fall. Four chaplains are taking hospital training. The educational program is being overhauled. A psychology fellowship is coming up, though not yet officially approved.

There still is a 42-percent turnover in attendants, due to the low wage scale, in comparison with the State scale for laborers and prison guards. But improved conditions in the hospitals have made it easier to fill vacancies on the registered nursing staff of 30 and has won conditional approval of the APA board as a standard mental hospital.

Public-health nurses and social workers who do field work for the hospital come in 10 at a time for orientation work. College groups from Monmouth and such groups as the group of 15 sponsored by the American Friends service committee, we encountered the other day, work in the hospital summers as teachers, aides, and recreation directors. Ex-patients groups such as the Friendship Club of Salem and the Transition Club of Portland are being formed as self-help organizations remindful of AA.

The overall ratio of employees to patients—1 to 10 in 1947—gradually is being reduced. It's 1 to 3.8 now.

All these things, taken together, account for the most favorable sign of all, the complete reversal of the first admission ratios between court and voluntary committals. About 53 percent of all admissions were voluntary last year. Ten years ago less than 20 percent of the first admissions were voluntary. In short, the public now accepts Oregon State Hospital as an effective mental hospital to which it can turn in time of need.

True, the ratio of medical and technical staff to patients still is far short of desirable goals. Followup work with patients leaving the hospital still is sketchy. Preventive work, research, and outpatient clinical work are barely started. Integration of the University of Oregon Medical School and the hospital is below par; perhaps a better job will be done at the new, closer in Wilsonville Hospital. And there still isn't an adequate training program for psychiatrists, psychiatric social workers, and psychologists.

The medical staff still spends three times as much time on telephone calls and relatives as it does on continued treatment.

But we're moving in the right direction at Oregon State Hospital—from custodial care to treatment, from bricks to brains. All too slowly, but surely nonetheless.

Give Dr. Dean Brooks and his whole staff credit. They're doing right well with the tools we've provided.

Pacific Powerland

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD at this point, an editorial from a newspaper in the Second Congressional District. The editorial, entitled "While Others Argue," appeared in the July 11 issue of the Mount Vernon Argus, a weekly newspaper published at Mount Vernon, Wash.

In his editorial, publisher Steve Mergler points out the harmonious and progressive development of the Puget Sound-Cascade area's hydroelectric resources. This program has enabled our section of the country to be ready with an adequate source of power for new industries. Just last week the Puget Sound Power & Light Co. signed a 10-year contract to supply power for a giant new oil refinery being constructed by the Texas Oil Co. at March Point.

The people of this area, much of which comprises my congressional district, have made their outlook on power known—they want it on the line, not as a political football. Through the Puget Sound Utilities Council, several groups embracing various forms of ownership, are working together to make certain that the power for tomorrow's industrial needs will be available through today's action, not argument.

Text of the editorial is as follows:

WHILE OTHERS ARGUE

While other regions continue embroiled in argument over who shall develop new sources of electricity—most noticeably Hells Canyon—people of the Puget Sound-Cascade section of Washington State appear more settled than ever (1) in the belief that their power agencies, private and public, can and should cooperate and (2) in a feeling that the less we look upon power problems as a political issue, the better.

One strong reason people of this region hold such convictions undoubtedly is that in past years they had enough of political electricity. Even stronger probably is the progress they are today seeing come out of cooperation, such as fostered through the Puget Sound Utilities Council. Seattle and Tacoma City Light agencies are busy developing new hydroelectric facilities; Chelan PUD acquired unused portions of Rock Island Dam and installed new generators; Snohomish PUD is working out its power needs, and Puget Sound Power & Light Co. is pushing ahead with its big Baker River Dam, has within the past week started up its new equipment at Snoqualmie Falls to add 20,000 kilowatts of new hydro energy, nearly doubling that plant's former output. Here we are indeed seeing the fruits of power agency cooperation as new industries come in, finding the electricity they need assured, the electric agencies devoting their management energies to service instead of wasting effort on shooting off political fireworks and building backfires against political attacks.

That the people of the Puget Sound-Cascade region do approve was shown by the 1957 opinion poll taken by Lou Harris and Associates, on behalf of Puget. The Harris report found that our people did not consider power a top issue in the 1956 elections. It indicated that the region's performance for the partnership-cooperation, philosophy had grown from 3 to 1 in 1956 to 4 to 1 in 1957, with nearly 7 out of 10 citizens expressing a rather firm belief that electric utilities work in harmony to meet today's and future power needs and to fully develop the Puget Sound-Cascade region.

Long an advocate of local control of our power services, the Mount Vernon Argus says a fervent "amen" to the conclusion of the Harris survey that people feel that they have found in the Puget Sound Utilities Council a new middle course on power, best suited to the maximum growth of the region.

Plane Crash Sounds New Warning

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. SMITH of California. Mr. Speaker, a situation in California, particularly in my district, is extremely alarming in connection with airplane crashes in recent months and on July 10, 1957, there appeared an editorial in the Glendale News-Press which I wish to have included in the Appendix of the RECORD. The editorial follows:

PLANE CRASH SOUNDS NEW WARNING

How much longer do residents of Glendale have to live in constant fear of airplanes falling through their homes or onto schoolyards?

The crash of a fast jet military plane in densely-settled Glendale yesterday again highlights the need for something to be done, and to be done quickly, to protect civilian populations from this sort of thing.

That no lives were lost is fortunate, but purely accidental.

The fatal crash some months ago at Pacoima when 1 of 2 planes which collided in midair spewed its wreckage over a schoolyard was only a signal of a series of crashes to come.

Yesterday's was the climax for Glendale.

Action has been promised back in Washington.

In this case the pilot apparently saw no alternative to bailing out. His plane could have landed in a crowd instead of a yard occupied only by a dog.

How many of these accidents must occur, how many Pacoima school tragedies spread across the front pages, before the military test planes actually are barred from the metropolitan area?

The News-Press pointed out last February 1 that precautions should be taken to prevent test flights over populated areas.

Let's have less whitewashing and some action.

A Note on Foreign Aid

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Council Bluffs (Iowa) Nonpareil of July 11, 1957:

A NOTE ON FOREIGN AID
(By Dillard Stokes)

Why quit our own to stand on foreign ground? Why, by interweaving our destiny with that of any part of the world, entangle our peace and prosperity in the toils of foreign ambition, rivalship, interest, humor, or caprice?

These inquiries are not wholly new. An old man asked them once before, in almost these same words.

It may be he just did not have the international outlook. He wrote: "There can be no greater error than to expect, or calculate upon real favors from nation to nation. It is an illusion."

A hardheaded fellow, this George Washington. He had the idea the Government of the United States ought to address itself to the interests of this country and no other.

He knew other nations would take care of their interests, and he warned: "Against the insidious wiles of foreign influence * * * the jealousy of a free people ought to be constantly awake; since history and experience prove that—foreign influence is one of the most baneful foes of republican government."

In coddling other nations Washington saw dangers at home. He said the practice "gives to ambitious, corrupted, or deluded citizens facility to betray or sacrifice the interests of their own country."

The first President said, too, that real patriots who resist foreign intrigue are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests.

Now it is not advanced here, that President Washington foresaw that 161 years after he wrote these words, the Congress would seriously deliberate how much of the wages and profits of his countrymen to give to five dozen foreign nations.

Whether to give an amount equal to the income of all the people of Iowa, or only 75 or 80 percent of that sum?

Whether to put this global giveaway on a permanent basis?

Those are the issues this week engaging the House of Representatives here in Washington.

What would the old general think of such goings on?

He might ask some questions. For instance:

What reason is there to suppose the nations that get these billions ever will fire a shot in our behalf?

Or that any of them will serve any interest but its own?

And without such reason, why give them a dime?

It is rather a pity President Washington is not here this week. So far, those questions have not been asked nor answered.

Annual Accrued-Expenditure Accounting System

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. MAY. Mr. Speaker, in an editorial appearing in the July 7 edition of the Hartford Courant, the editors of the Courant have performed an outstanding public service to the people of Connecticut. They have drawn a clear picture of what is entailed in the passage of H. R. 8002 which embodies the recommendations of the Second Hoover Commission for an annual accrued accounting system for the Federal Government.

One of the most important things to be considered in this legislation is the effect it will have on long-range defense contracts which affect many industries in Connecticut. This should be studied quite thoroughly as well as the overall impact of the legislation.

The editorial follows:

A BUDGETING SYSTEM THAT CAN SAVE MONEY

The Hoover Commission's proposal for an annual accrued-expenditure budget has now moved into a stage close to action. Budgeting is a dull subject. The saving that this measure represents should not be dull. Basically, it calls for agency budgets to be expressed in terms of what the Government would get in any one year. That would permit Congress to retain supervision over expensive programs leading to the acquisition of aircraft, ships, construction, and other items that usually take more than a year to select, order, and build.

Right now, Congress votes an entire appropriation to cover a class of aircraft or missiles. It may take years to get them from the drawing boards to test flights, from production to the flight line. In that time, changes may be made, there may be reason to resurvey policy, or the class itself may become outmoded. But Congress has no chance to reclaim this obligational authority. Transfers of funds often challenge the purpose of Congress.

An example of how this system works is ready at hand in the present budget. It has been estimated that $70 billion, almost equal to the entire new budget, is available in carryover funds. If Congress had authority to take a new look at the need for these expenditures, it might well make substantial savings. The President, Secretary Humphrey, and 50 Senators are among those who have urged that the new method of accounting be adopted. Professional accountants have endorsed it. Spokesmen for the Hoover Commission believe there is no single recommendation that could save as much money as this one item. A reduction of only 1 percent in carryover funds could save the country $700 million.

The Senate has passed a measure endorsing the budgeting method unanimously. A similar measure, H. R. 8002, has been favorably reported by the Committee on Government Operations, of which Representative MAY is a member, and should soon come up for a vote.

There are reservations that can and should be made about the program. They must be studied carefully. Efficiency in some cases is dependent on greater freedom in planning expenditures than even the present system now provides. The House decision to ratify long-term economic assistance is a case in point. So is the citation that has been made by opponents of the new budgeting method, who contend that when Congress has reviewed contract authorizations in the past, it has often increased spending through cancellation, acceleration, or delay of projects being done by private business. But the case for closer congressional control of spending appears overwhelming. If Government waste is to be controlled, this measure is imperative.

A Letter to President Dwight D. Eisenhower

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the President:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 12, 1957.

Hon. DWIGHT D. EISENHOWER,
The President, The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: In your news conference of July 3, you are quoted as saying that your objective in the civil-rights bill was only to prevent anybody illegally interfering with an individual's right to vote, but that you are always ready to listen to anyone's presentation of his views.

Since the bill goes much further than you believe, we feel impelled to call your attention to some of its provisions and their legal effect.

The points we wish to discuss at this time are as follows:

1. The bill by its terms specifically includes, in the extraordinary powers given the Attorney General, not only voting rights but all other alleged civil rights now on the statute books. The existing statutes are broad enough to cover any and all real or imaginary civil rights protected by the Constitution, and go way beyond any sectional application.

2. It was represented to the House by the advocates of the bill that it was not intended to deprive any citizen of a trial by jury for an offense that he would be entitled to jury trial for under present law. The bill definitely does deprive citizens of a right of trial by jury in contempt cases. It does so by the simple device of requiring all such cases to be brought in the name of the United States instead of in the normal way, that is, in the name of the aggrieved party.

3. Since the founding of the Republic, the courts have uniformly held that a citizen claiming that his rights under the Constitution have been invaded must first exhaust his administrative remedies provided under State law before resorting to the Federal courts. This bill, for the first time in history, seeks to abolish this rule. This provision likewise is not confined to voting rights but to all varieties of civil rights protected under the present law.

In order to document the foregoing statements beyond any doubt, we will discuss them in the order mentioned above:

1. The bill does not deal only with the right to vote, but covers all the broad categories of civil rights now encompassed under existing civil-rights statutes. This is accomplished under the bill in the following manner:

Part III. To strengthen the civil-rights statutes, and for other purposes: This section amends section 1980 of the Revised Statutes (42 U. S. C. 1985) by adding two new paragraphs numbered fourth and fifth. The paragraph numbered fourth provides that the Attorney General may bring suit in the name of the United States when any person commits or threatens an act which would constitute an offense under paragraphs first, second, or third. Obviously, the injunction powers given the Attorney General apply with equal force to every right protected under paragraphs first, second, and third, and are not confined to voting rights as you apparently have beeen led to believe. These first three paragraphs cover voting rights plus every other civil right claimed to exist under the Constitution.

We refer you specifically to page 16 of the House report enclosed where paragraphs first, second, and third are printed in their present form followed by the proposed amendments, paragraphs fourth and fifth. You will note that the paragraph fourth proposed in the bill covers all types of civil rights and extends the injunction power of the Attorney General not only on voting rights, but all the various categories of civil rights mentioned in paragraphs first, second, and third of existing law.

We call particular attention to the broad language in paragraph second as follows: "* * * if two or more persons conspire for the purpose of impeding, hindering, obstructing, or defeating, in any manner, the due course of justice in any State or Territory, with intent to deny to any citizen the equal protection of the laws, or to injure him or his property for lawfully enforcing, or attempting to enforce, the right of any person, or class of persons, to the equal protection of the laws."

We also call your special attention to the broad language in paragraph third of existing law prohibiting conspiracies, "for the purpose of depriving, either directly or indirectly, any person or class of persons of the equal protection of the laws, or of equal privileges and immunities under the law."

Paragraph fourth, which is the proposed amendment, then gives the Attorney General the power to seek injunctions in any of the instances mentioned above. It will be seen that by this method the Attorney General is authorized in the name of the United States to proceed by injunction not only in the matter of voting rights, but in all the broad categories of civil rights protected under paragraphs first, second, and third.

2. The bill has been represented as not intended to deprive any citizen of a trial by jury for an offense that he would be entitled to jury trial for under present law. Representative KEATING, the ranking minority member of the Judiciary Committee, in discussing that phase of the bill on the floor of the House, said:

"I will say to the gentleman that I was the author of this provision as it came to me from the Justice Department. I say to the gentleman categorically that, while it may be an admission of ignorance, it never entered my mind that I was taking away anybody's right to a jury trial when I introduced this measure or when I voted for it in committee and in the last Congress. Such a motive was never in my mind. I do not know whether it was in the mind of anyone else or not."

Whereupon Representative CELLER, Chairman of the Judiciary Committee, said:

"I want to say at the outset I agree with what the gentleman from New York [Mr. KEATING] said with reference to our motives. As I said before, I am a libertarian, and I would not want by any stretch of the imagination to take away any rights from anyone.

All of the civil remedies under section 1980 are covered and prohibited as crimes under the Criminal Statutes. Section 3691, title 18, United States Code, entitled the accused in a contempt proceeding to a trial by jury where the contempt complained of constitutes a criminal offense, except in those cases where the United States is a party.

Paragraph 4 of section 121 above referred to, by requiring all suits to be brought in the name of the Attorney General, effectively and positively deprives the accused of a right to trial by jury in all civil rights cases.

Can there any longer be any doubt that in any case of alleged discrimination, including discrimination by school segregation, that any person accused of violating an injunction would be tried and sentenced by the judge without a jury?

3. The bill abolishes the present law that a person claiming violation of his civil rights must first exhaust his administrative remedies before resorting to Federal courts. The bill in two places specifically abolishes this law and permits the Attorney General to invade the age-old States' rights requirement and proceed by injunction before the aggrieved party has even applied to the State authorities under State law for the relief desired.

On page 12, line 9, the bill provides: "The district courts of the United States shall have jurisdiction of proceedings instituted pursuant to this section and shall exercise the same without regard to whether the party aggrieved shall have exhausted any administrative or other remedies that may be provided by law."

On page 10, line 8, amending section 1980 of the Revised Statutes above referred to, the bill provides:

"Fifth. The district courts of the United States shall have jurisdiction of proceedings instituted pursuant to this section and shall exercise the same without regard to whether the party aggrieved shall have exhausted any administrative or other remedies that may be provided by law."

In conclusion, permit us to call your attention to section 1993, title 42, United States Code which implements section 1985 referred to above as covering all the broad field of civil rights. Section 1993 provides that the President, or such person as he may designate, may employ land and naval forces of the United States or the militia to aid the Federal courts in the enforcement of their orders under section 1985. Since the enactment of this statute in 1866, the dictates of experience and common decency have caused this provision to fall into disuse. The present bill revives and emphasizes the potentiality under which the President may delegate to the Attorney General or other person the power to commit the use of the Armed Forces to enforce all civil rights statutes (including the right to vote) by hauling hordes of citizens before a district court and committing them to jail for indeterminate sentences without trial by jury.

The virtues or evils of laws should not be tested by what a well-intended administrator will do, but by what evil can legally be done under their provisions.

Although these views are respectfully submitted for your earnest consideration, we do not request a formal reply.

Sincerely and respectfully submitted,

A Vicious Catchpoll Bill

EXTENSION OF REMARKS
OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting editorial which appeared in today's Richmond Times-Dispatch in which Senator HARRY F. BYRD, of Virginia, is commended upon the able, courageous, and forthright manner in which he enumerated and criticized the iniquitous proposals contained in the so-called civil-rights bill.

The editorial is as follows:

A VICIOUS CATCHPOLL BILL

Josef Stalin died March 5, 1953. It is safe to assume that he had no hand in drafting the "civil rights" bill now before the Senate. Yet had the Soviet arch-strategist dictated its monstrous terms, it could not be more calculated to foment destructive discord.

The broad scope of this "iniquitous bill," as Senator BYRD branded it, could reduce the South to the status of "a conquered province," it could disinter the mouldering bones of reconstruction, and reestablish the political autocracy which humbled the South after Appomattox.

Senator BYRD's fierce frontal attack on the bill came as a surprise, not only because Senator JOHNSON had tried to finesse the administration into a mood of compromise, but because the senior Senator from Virginia rarely resorts to such devastating oratory. He did so in this instance, presumably, because he considered it his duty as a statesman to expose the bill's hidden evils in the most scathing words at his command.

His denunciation of "the modern Thaddeus Stevens, now cloaked in the robes of the Chief Justice of the Supreme Court" did not come from a lax-lipped demagog, but from a Senator universally respected by colleagues of both parties.

It seems hardly necessary to stress his parallel by recalling that the sardonic Stevens whipped the Reconstruction Act through the 1867 Congress—not only to crush the South economically, nor to exact atonement for secession, but principally because the Republican Party then, as now, was nationally a minority—and Stevens was determined to emasculate the Democratic Party of the South.

Having thus classified the erstwhile Governor of California, and Mr. Eisenhower's Attorney General as a man "whom this bill would make a 20th century American caesar," Senator BYRD reverted to his role as a skilled legislative anatomist. Wielding a razor-sharp scalpel, he dissected this monstrosity to reveal the cancerous growths within.

He demonstrated that, under the terms of the bill, a reconstruction era statute could be invoked to authorize the use of "armed might" for enforcement of its provisions, including the school decision.

He damned the railroading tactics by which its sponsors evaded the regular course of legislation through committee in the hope of passing it amid the confusion of "rewriting the bill on the floor."

He showed, with searing irony, that the President, the chairman of the House Judiciary Committee, and Representative KEATING, as one of its patrons, had confessed failure to grasp the explicit or implicit provisions of the bill.

He quoted Mr. Eisenhower's self-humiliating admission (at a news conference) that he was baffled by the general language of the bill whose passage he had urged, and that he was stumped by its legal quirks.

Then the Senator proceeded to do what the White House palace guard had deliberately failed to do—he cited, and analyzed, 20 legal quirks, which would give the Attorney General the one-two subpena-contempt punch, under purposely vague provisions, to protect citizens against discrimination by reason of color, race, religion, or national origin—not only after such discriminations had been proved to a hodgepodge semivolunteer commission, but even where such discrimination is merely threatened.

These vast powers this bill would grant to the 20th century Caesar—leaving to a kangaroo commission the discretion to determine what precisely constituted a threat against civil rights, presumably including the refusal of southern communities to accept compulsory race mixing in the schools * * * with defendants to be tried, fined, or imprisoned without jury trial.

Mr. Eisenhower now says he hopes that the bill can be softened by amendments. If he values national unity as essential to free world defense—he should demand its withdrawal.

The Guiding Light for Our Youth

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Mr. Harry H. Schlacht for the East Side News, a weekly publication with wide circulation in the 19th Congressional District of New York:

THE GUIDING LIGHT FOR OUR YOUTH
(By Harry H. Schlacht)

The guiding light for our youth must be the home. The spark of this light must be the knowledge of God. The fuel of this light must be the strength of prayer.

J. Edgar Hoover, the distinguished head of the FBI, once electrified the Nation with frightful revelations of juvenile delinquency. It is an appalling toll of moral disaster in the ranks of our youth. It is a callous and shameful picture. It is a challenge to every American. We are facing a condition and not a theory.

The adult criminal of tomorrow is the juvenile delinquent of today. It has been shown that the impressions of our childhood remain with us through life. It is never seriously modified. It is recognized that habits of thought and pattern of life become part of oneself.

It is much easier to learn, than it is to unlearn. The churches, the schools and the homes have a duty now more vital than ever. It is better to light a candle than curse the darkness.

We must combat the forces that weaken our moral structure. We must provide wholesome recreation. We must encourage spiritual guidance. We must help our children into good citizenship founded on respect for the laws of God and man.

A democracy cannot long exist unless the great body of its citizens be not merely intelligent but moral. In an illuminating article Herbert Hoover advised that the cure for juvenile delinquency lies in the home of the Nation.

"A godless home," he wrote, "is built upon sand. Buffeted by the tides of envy, avarice, greed, and sloth. The structure weakens and finally crumbles. Decay seeps into the physical and moral structure and crime finds an inviting breeding ground."

A godly home is the fortress against evil. The child who heeds the teachings of his parents, of his spiritual leader, of his school teacher, is not likely to become a delinquent. They are the greatest influence in building the life of a child.

Tracing through Bible pages stories which have graced the ages, parsons, rectors and rabbi's gray, O'America hear their message today. There is no substitute for religious education. Nothing can take its place.

Every time a bad boy is reclaimed, a good man is born. It is our greatest concern that the children be saved from vicious habits—for the vicious child is the father of the vicious man. Mr. Hoover admonished us to combat juvenile delinquency and turn again to the faith of our fathers and reap the harvest of God's blessings.

May we and our children serve God in deeds and thoughts as well as in words. May we and our children realize that today and tomorrow are one even as the morning wind and evening breeze are one—and in this united thought—let us dedicate ourselves to the glory of God and the service of our country.

"Sow a thought, reap an act.
Sow an act, reap a habit,
Sow a habit, reap a character,
Sow a character, reap a destiny."

The time to teach our youth is in the high chair, and not in the electric chair.

Growth of the Port of Los Angeles

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and list of figures regarding the port of Los Angeles, sent to me by Mr. Carl F. White, collector of customs, Treasury Department, Bureau of Customs, which describes the tremendous growth of the southland, and I trust the Members will find this data of interest:

TREASURY DEPARTMENT,
BUREAU OF CUSTOMS,
Los Angeles, Calif., July 5, 1957.

Hon. JAMES ROOSEVELT,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: Herewith some rather startling figures reflective of the tremendous growth of the southland, which may be of interest to you and possibly useful on occasions.

We may today be pushing Philadelphia for second place only to New York if and provided the nationwide increase is 6 percent (as I have been informed) as compared to our 27.4 percent. The increase in workload (entries) of 20 percent is consistent with collections; that is, 20.8 percent for the last fiscal year and 85.7 percent over the 4-year period 1953–57. This has been accomplished with the same number of employees, less one, than we had in 1953.

Very truly yours,
CARL F. WHITE,
Collector of Customs.

Port of Los Angeles (Los Angeles-Long Beach)

	Total collections	Dutiable entries
July 1, 1956, to June 30, 1957	[1] $54, 520, 458. 93	[2] 41, 164
July 1, 1955, to June 30, 1956	42, 785, 332. 01	34, 084
Increase	11, 735, 126. 92	7, 080
Increase (percent)	[3] 27. 4	20. 8
July 1, 1956, to June 30, 1957	$54, 520, 458. 93	41, 164
July 1, 1952, to June 30, 1953	28, 498, 848. 96	22, 171
Increase	26, 021, 609. 97	18, 993
Increase (percent)	[4] 91. 3	85. 7

[1] Average per week, $1,067,780.50.
[2] Average per week, 791.
[3] 1957 over 1956.
[4] 1957 over 1953.

School Construction

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter I received from the president of the American Federation of Labor and Congress of Industrial Organizations, together with a statement of the executive council on Federal aid to school construction.

The letter and statement follow:

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., July 15, 1957.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I am writing at this time to urge your support for the enactment of the school construction bill (H. R. 1), which, we understand, is to be scheduled for floor action during the month of July. The bill provides a $1.5 billion program of grants to States and localities over a 5-year period. Half of the grant funds would be allotted to State educational agencies on the basis of total school age population, and half on the basis of need.

The critical shortage of classrooms in the Nation's schools continues unabated and has become a serious problem. Failure to build much needed classrooms places a terrible handicap on the future of our children. It is apparent that most of the States cannot solve this problem unaided. Immediate financial assistance is needed and only the resources of the Federal Government are adequate to meet this challenge.

As you know, the President and Secretary Folsom of HEW have on numerous occasions spoken out in favor of this legislation, and both political parties in the recent campaign pledged their support for such action. The AFL–CIO also issued a statement on school construction, copy of which is enclosed for your information.

The school construction bill (H. R. 1), as reported, is a compromise reached by both Democrats and Republicans in committee, and should be entitled to the support of all Members of Congress without any complicating and crippling amendments which have helped to defeat it in the past.

Prompt enactment of this legislation is vital to the future welfare of our country.

Sincerely yours,
GEORGE MEANY, *President.*

STATEMENT BY THE AFL–CIO EXECUTIVE COUNCIL ON FEDERAL AID TO SCHOOL CONSTRUCTION, MAY 21, 1957

For years, the critical shortage of classrooms in the Nation's schools has continued unabated. At the beginning of the present school year, there were 159,000 fewer classrooms than needed to adequately house America's more than 32 million schoolchildren.

Failure to build these needed classrooms has meant a terrible burden on the future of our children.

Hundreds of thousands are forced to go to half-day sessions in over-crowded buildings. As a result, they have not been able to get the kind of education which American society demands of its citizens, and which they need if they are to compete successfully in a world where expanding technology makes greater and greater demands on individuals.

Other schoolchildren daily risk injury and death in ramshackle firetraps kept in use long after their useful life has ended.

This is a heritage to our children which America should not and cannot permit. The implication of poor education extends not only to the children themselves, but to the future of our nation in a divided world.

We deplore the action of the United States Chamber of Commerce in misusing statistics to minimize the apparent school needs. Misrepresentation in this critical area is inexcusable.

It has been clear for some time that the States cannot meet this problem alone. Despite heroic efforts the States have been unable to erase the backlog of school construction.

Only the resources of the Federal Government are adequate to meet this challenge, and progress has been made to this end. The Committee on Education and Labor of the House of Representatives has reported favorably a bill, H. R. 1, authorizing $1.5 billion in grants to the States for school construction.

The bill is a compromise measure. It is entitled to the support of all Americans, without any of the complicating amendments which have helped to defeat it in the past.

The AFL–CIO urges the Congress to meet its obligation to America's children by promptly enacting H. R. 1 into law, without crippling amendments.

Modern Republican—One Who Bows to Pressure on Spending

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. GROSS. Mr. Speaker, in an excellent editorial, the Waterloo (Iowa) Daily Courier states that the only important split in the Republican Party relates to governmental expenditures. I, for one, am proud to be branded as old fashioned, if that is the label to be worn by those who advocate economy in Government. The editorial from the Courier follows, and I commend it to the attention of my colleagues, especially those on the Republican side of the aisle:

There are some 60 million separate and distinct political philosophies in the United States, these being the ideas and attitudes of that many American voters.

But, somehow, these 60 million different viewpoints must be compressed into the ideologies of only 2 major political parties. And it is no more possible under these circumstances to have party unity than to expect 60 million women to wear the same style of hat.

Much talk has developed about alleged disunity in the Republican Party; and President Eisenhower has sharpened and intensified the disunity that exists by his talk about modern Republicanism. This is intended to leave the impression that anyone in the party who disagrees with him is an old-fashioned Republican.

Such designations are only superficial slogans which have little relationship to the realities of politics. Essentially, the Republican Party is the political agent of the American middle class; and it can continue to win in elections only so long as it continues to serve the interests of that class. The rapid increase during the postwar years in the number of Americans with middle-class incomes has been the dominant factor in the recovery of the Republican Party from its eclipse during the New Deal and Fair Deal period.

The only important split in the Republican Party today relates to governmental expenditures. In this connection, the Eisenhower Republican wants to spend more money than the anti-Eisenhower Republican but probably a little less money than the New Deal type of Democrat. It really is as simple as that.

And we believe that President Eisenhower's advisers have failed to grasp the attitude of the millions of middle class Americans on whom the Republican Party must rely for its success. These Americans respect and admire President Eisenhower and cast their votes solidly for him in the 1956 election. But these same Americans are energetically tax-conscious and realize that they are paying a third of their incomes for governmental services, many of which they do not want or need. And they do not conceive that the Republican Party is serving their interests unless it can accomplish a moderate decline in governmental expenditures.

On the other hand, many voters who are influenced more by slogans than by analysis of the issues would probably develop an unfavorable attitude toward the GOP if headlines proclaimed that old-fashioned Republicans defeated Eisenhower on the budget issue. They would conclude that by some mysterious process reactionary elements had taken control.

Thus, if the Republican Party is hurt by the difference of opinion over the budget, it will be primarily Eisenhower's doing. If anyone who advocates governmental economy is to be branded as old-fashioned, then we might as well turn all our incomes over to the Government and let the Government take care of us.

Mrs. Roosevelt Banned From China

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger, of July 13, 1957:

MRS. ROOSEVELT BANNED FROM CHINA

Mrs. Franklin D. Roosevelt has been refused a passport to visit Communist China. The State Department rejected her request, just as it has rejected requests of newsmen who seek to go to China to report on the situation there.

We have never agreed with the State Department's policies in banning American newsmen from China, nor do we believe that it had the authority to ban travel by newsmen to a foreign country with which we are not at war, even though admittedly we are on opposite sides of the totem pole.

We do not think Mrs. Roosevelt is entitled to any special privilege, or that she is entitled to visit China any more than legitimate newsmen, who have sought to go there. However, the fact that the wife of a former United States President is refused permission to travel to China brings out the ridiculous nature of the State Department's policy.

She holds no official position, she could not speak for the United States, and all she could do would be to report her views and tell what she sees in China. The American people are mature enough to digest such reporting without turning Communists or being overimpressed by any achievement Mrs. Roosevelt, or any other reporter, might encounter in China.

We cannot accept the conclusion that American newsmen are so naive that they would gullibly fall into the propaganda traps the Communists set up for them, or that they would be won over to the Communist claims that they have done great things for China. On the contrary, American reporters could report the truth from China, and that is something which had been sadly lacking in recent years.

Newsmen Have Kept Top Secrets

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. MOSS. Mr. Speaker, the Commission on Government Security, headed by Mr. Lloyd Wright, has charged that American newsmen have been guilty of deliberately betraying the Nation's security. I would like to call to the attention of my colleagues an article by Lyle C. Wilson, Washington manager of the United Press, revealing the little known story of how the World War II Chief of Naval Operations found he could trust reporters with some of the Nation's top secrets. Mr. Wilson's story appeared in the Washington Daily News of July 10. The story follows:

HERE IS EVIDENCE NEWSMEN CAN KEEP TOP SECRETS

(By Lyle C. Wilson)

The idea that special legislation is needed to prevent newsmen from endangering the national security is a puzzler for the paunchy World War II veterans of Adm. Ernie King's Arlington County Commandos.

Chairman Loyd Wright, of the Commission on Government Security, wants such a law. It would impose a fine and imprisonment on newsmen found guilty of exposing Government information classified as secret or top secret.

The Chairman has not come up with much specific proof of need for what is known around town as Wright's law. The little known story of the admiral's commandos is pretty good evidence that news reporters can keep top secrets. The commandos were a slack outfit, short of spit and polish. The late Fleet Admiral Ernest Joseph King's fellow officers will never believe the wartime navy boss ever could have taken up with their likes.

Admiral King did, however, and how and why make one of the better hidden stories of the late, great war. Admiral King became Chief of Naval Operations and commander in chief of the United States Fleet after the Navy's humiliation at Pearl Harbor. Franklin Delano Roosevelt wanted a tough man for those jobs and he got him.

The commandos were organized in October, 1942, shortly after Navy prestige was hard hit again with announcement of the loss of five cruisers in the Solomon Islands. Three were Americans 1–1, the brightly new *Quincy, Vincennes,* and *Astoria.*

The announcement stirred bitter criticism of what then was the Nation's most costly military arm. Much of this sharp talk was in the National Press Club among newsmen in a position to give the Navy a hard time. The late Cornelius Bull, a former newsman, and husband of the admiral's niece, sensed that the Navy was in for some hard going. Bull took a chance.

Despite his knowledge that next to Japanese and Germans, Admiral King most disliked newsmen, Neely Bull proposed to the admiral that he meet a hand-picked group of Washington reporters. "The hell with 'em," said Admiral King.

He finally was persuaded, however, and within a fortnight a chilly meeting took place in Mr. Bull's Arlington County home. Admiral King talked a little, explained a bit and stiffly answered questions.

Perhaps to the admiral's surprise, news of the secret meeting was not all over town within a single day, or ever. Mr. Bull arranged another some weeks later. Admiral King was warmer by then. A third meeting came after a lesser interval.

They continued throughout the war in an atmosphere of real warmth and friendship. Admiral King's frankness sometimes was frightening. The newsmen got a lot of information and guidance from Admiral King during the war years and the admiral unquestionably got the Navy's story before the public in its best light.

The commandos alone knew how and why Gen. Dwight D. Eisenhower was picked to lead the Normandy invasion. And there was the day when FDR was half minded to kick Gen. George C. Marshall upstairs to some kind of global command, exact duties unknown.

Admiral King didn't like the idea and rallied his commandos in opposition, leading the charge in person. The blast of unfavorable publicity was beautiful to behold. The project folded. And of all the top secrets Admiral King divulged over a friendly can of beer, none ever leaked.

Soil Bank May Knock Kansas Out of 20-Year Top Spot as Wheat Producer

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following article by Max Good which appeared in the Southwest Daily Times of Friday, June 14, 1957:

Kansas, because of heavy participation in the soil bank program, stands to lose its rank as the Nation's top wheat producing State this year for the first time in 20 years.

The June 10 Department of Agriculture estimates of State-by-State wheat production shows North Dakota as the probable top producer supplanting perennial Kansas, with Montana having a chance of edging the Sunflower State for second.

North Dakota's 1957 crop is estimated at 110,629,000 bushels; Kansas, 101,680,000; Montana, 98 million. These are the Nation's three as of June 10.

What happens during the later growing season in the two northern States will have a decided effect on which one ranks where, the crop experts agree.

And they agree too, it is the soil-bank participation that will cause Kansas to drop from first place—an ironic twist is that late 1956 and the first months of 1957 have had better moisture and growing conditions than for several years in many sections of the State.

The story is told in the soil-bank figures taken from the State agricultural Stabilization and conservation office statistics here.

Kansas had an allotment of 10,193,958 acres for 1957 wheat crop planting; 4,260,007 are in the soil bank in the State.

Not all the four million-plus acres soil banked are wheat land, the experts pointed out, but they generally agree that most of it is. There is no doubt that a healthy chunk of Kansas wheat production has been cut out because the farmers have chosen to get paid for not planting rather than sowing wheat.

In the 10 top wheat-producing counties of the State there were 1,980,722 acres allotted for wheat production this year. And in the same 10 counties 979,307 acres were soil banked—or 49 percent of the total wheat acreage.

In some individual counties the percentage—the bulk of it potential wheat land—is even higher.

In Gray County, for instance, 208,495 acres were allotted for wheat and there are 164,794 acres in the soil bank—79 percent. Meade County, with 160,691 acres allotted has 121,984 in reserve for a total of 75.9 percent. Numerous of the heavier wheat-producing counties have percentages in the forties and fifties.

But there are some much lower. Sumner County, always in the top bracket, if not first, in bushels harvested, had 290,826 acres alloted for wheat planting but banked only 32,511 acres or 11.8 percent.

The top 10 wheat-producing counties of the State in 1956, their acreage allotments, amount in soil bank, and percentages:

	Acreage allotment	Soil bank	Percentage
Sumner	290,926	32,511	11.8
McPherson	198,516	56,468	28.4
Barton	233,330	45,929	19.6
Dickinson	140,701	10,286	7.3
Saline	127,354	12,462	9.7
Reno	276,770	79,992	28.9
Sedgwick	186,491	46,779	25.1
Harper	191,008	35,941	18.8
Kingman	168,089	45,028	26.7
Rice	161,369	41,756	25.9

That soil bank payments are a pretty good harvest to reap is indicated in the ASC figures. With 37,711 acreage reserve agreements in effect on 4,260,007 acres there is a total maximum compensation potential of $79,406,680 providing all agreements are lived up to.

The soil bank, although heavily participated in as a whole over Kansas, has not caught on in all sections.

In the extreme Western section, where the percentages are the highest and where there are the greatest acreages devoted to wheat, the participation is an outgrowth of exceptionally dry weather during the planting season last fall. Farther East and in the southern tier of counties where moisture was better for fall sowing, there are counties like Sumner with its 11 percent.

Although Kansas stands to lose its first-place record of 20 years, this year's crop estimates, again ironically and to be laid to soil bank participation, are based on a higher per-acre average yield than anytime since 1952, according to John L. Wilson with the USDA crop reporting service in Topeka. This would seem to indicate better growing conditions in the State for the most part.

The estimate of 101,680,000 bushels for this year's Kansas wheat crop compares to the average annual output of about 145 million bushels. The greatest production on record was slightly in excess of 300 million in 1952.

Dr. Bela Schick

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Abe E. Eisensten for the East Side News, a publication with wide circulation in my congressional district, on the occasion of the 80th anniversary of the birth of Dr. Bela Schick:

DR. BELA SCHICK

"To him who devotes his life to science, nothing can give more happiness than making discoveries, but his cup of joy is full only when the results of his studies find practical applications"—Louis Pasteur.

July 16 will mark the 80th anniversary of the birth of Dr. Bela Schick, East Side, New York, and America's famous devoted physician to whom so many are indebted and who saved millions of children's lives throughout the world. He is the discoverer and developer of the Schick test for immunity to diphtheria, pioneered in many other fields, and is one of the world's famous medical scientists and pediatricians.

Son of Jacob and Johanna (Pichler) Schick, Bela Schick was born to the Jewish faith at the home of an uncle, Dr. Sigismund Telegdy, in Boglar on the shores of Lake Balaton in Hungary, where his mother had been visiting. He is 1 of 4 children. His father was a grain merchant and his mother was then considered the most attractive woman in Graz. Papa Schick died August 2, 1922, in the 74th year of his life and Mother Schick passed away on January 12, 1939, in her 80th year.

The physician, healer, researcher, educator, lecturer, and tireless Dr. Bela Schick obtained his preliminary and professional education in Graz, Austria. He received his M. D. from Karl Franz University in 1900. For more than 20 years he was connected with the University of Vienna. It was here as extraordinary professor of children's diseases he found the Schick test.

Thirty-four years ago, Dr. Bela Schick was called from Vienna (he was one of the first to receive the honor to practice medicine in America without passing the doctor's examination) to become chief pediatrician (now a consultant) of Mt. Sinai Hospital in New York City and has held this post for 20 years. In his long years of service as a child specialist, he has served as chief pediatrician (consultant) at the Sea View Hospital (Staten Island), the Willard Parker Hospital, the Beth Israel Hospital, the New York Infirmary for Women and Children, and had taught 7 years at the Columbia College of Physicians and Surgeons. He is chief of the Pediatric Department at Beth-El Hospital (Brooklyn), Chief of Pediatric Consultant to the nonsectarian Jewish National Home for Asthmatic Children at Denver, Colo., and a visiting professor at the Albert Einstein University's medical school. The pediatric department at the university bears the name of Bela Schick Department of Pediatrists.

He is coauthor of Scarlet Fever, Child Care Today (the foundation for sound physical and mental health should be laid in infancy and childhood), and in addition he wrote articles on concentrated feeding in childhood, diphtheria, the nutrition of newborn children, tuberculosis, allergy, etc., and today he is concentrating on the problem of premature births.

The story of his life and achievements can be read in the highly absorbing book Bela Schick and the World of Children, by Antoni Gronowicz.

This great servant to our society and truly great humanitarian and one of the great scientific benefactors of mankind, Dr. Bela Schick was awarded the New York Academy of Medicine Gold Medal, the Addington Gold Medal (British award) for the most valuable discovery for relieving pain and suffering in humanity. The Forum of Allergy Medal for his pioneer work in the field of allergy; the John Howland Medal from the American Pediatric Society, among others.

Dr. Bela Schick married the former Miss Catharine Carrie Fries in 1925.

East Siders, New Yorkers, and countless friends in America and throughout the world, add their tribute to the general chorus of praise, Dr. Bela Schick, on your 80th birthday. God bless you so that you may continue enriching medical knowledge and practice and particularly in the world of children.

Address by Hungarian Delegate Baron George B. Bessenyey, Before the Assembly of Captive European Nations

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the following speech made before the Assembly of Captive European Nations, on April 26, 1957, by the Hungarian delegate, Baron George B. Bessenyey:

ADDRESS BY HUNGARIAN DELEGATE BARON GEORGE B. BESSENYEY, BEFORE THE ASSEMBLY OF CAPTIVE EUROPEAN NATIONS

The Hungarian revolution has shaken the very foundations of the Soviet system and nullified the results of Communist propaganda. As these events have already received unparalleled publicity, it would be superfluous to evoke them here, but a brief analysis of the inherent political conclusions might be useful.

As a point of departure let us use the speech made by Mr. Khrushchev at the 20th congress of the Soviet Communist Party in February 1953. The Communist leaders were then at the height of their power, and they sincerely believed that they were on the point of winning the cold war. "One and a half billion men, the majority of the population of the globe, have joined together in the peace camp," Mr. Khrushchev cried out. "We are convinced," he added, "that the workers, the workers of the entire world, seeing with their own eyes the advantages which the Communist system presents, will take the road to socialism."

It goes without saying that this favorable evaluation of the general situation was based not only on the extraordinary progress of Soviet industry and the obvious successes of Communist propaganda abroad, but also on Moscow's deep conviction that 10 years of occupation, indoctrination, and propaganda had transformed the so-called satellite states into real people's democracies, tested and tried friends and allies of the Soviets.

This gigantic error is due to several circumstances. The present Soviet leaders, no longer knowing from personal experience that the entire world has fallen victim to their own propaganda, knowing thoroughly only their own country, having the feeling that they have given Russia—at the expense, to be sure, of enormous sacrifices—a heavy industry, an army, and frontiers such as they have never possessed, forgot that the conditions in the captive countries were entirely different and that, consequently, the system which had produced spectacular results in Russia must be a complete fiasco in the occupied countries. These nations, which, in effect, had enjoyed not only remarkable material well-being but also all the advantages afforded by the democratic freedoms, could be compelled only by force and terror to bow to the doctrinary intolerance, economic exploitation, and national humiliation to which they have been submitted.

The deception (disappointment?), confusion, and fear must have been terrible for Moscow at the end of October and beginning of November 1956. Too bad that the Western World, divided within itself, and taken by surprise by the rapid and startling successes of the Hungarian revolution, did not know how to react vigorously and promptly. It is very likely that a solemn warning issued at the opportune moment by the Government of the United States would have made a deep impression on the Moscow leaders who, during those critical weeks, would—at the first indication of American dissatisfaction—have withdrawn their tanks from the Austrian border, ceased talking about volunteers for Egypt, and moderated their intervention in Syria.

It seems rather difficult to understand the reasons for the complete passivity of Washington. Is it true, as some have said, that, after Yalta, Hungary as well as the other captive countries of Central and Eastern Europe were regarded as part of the Soviet sphere of interest?

Or was it, rather, the fear—and, may we add, the enormous responsibility—of unleashing by an unforeseen action world war III? This apprehension was not altogether fantastic. On the occasion of their visit to London in April 1956, Messrs. Bulganin and Khrushchev told Mr. Eden that there were certain regions of vital interest to the Soviet Union, and that it had decided to fight in order to maintain its blanket of ice (absolute domination) over Central Europe.

Or, simply, didn't America—satisfied with the results of its strategic, economic, and psychological offensive, the success of which it was ready to attribute, at least in part, to the revolutionary state of mind in the captive countries as well as to the effervescence among the young people and the intelligentsia in Russia, the traditional revolution foci in that country—want to take additional risks? In his remarkable book, War or Peace, published in 1950, Mr. John Foster Dulles stated: "Even today the Communist structure is overextended, over-rigid and ill-founded. It could be shaken if the difficulties that are latent were activated." That is exactly what America has tried to do, and, as the facts have shown, not without success. Why then, from the Washington viewpoint, plunge into a hazardous adventure when a little patience, about 10 or 15 years, might lead to the desired result? Be that as it may, America has limited itself to expressions of sympathy and aid which it generously gave to the refugees.

Insofar as the United Nations is concerned, we also feel that we have justified complaints. For some 10 days, from Imre Nagy's installation as Prime Minister on October 24, until his régime was crushed by the Soviet armies on November 4, there was ample time for the despatch of official observers to Budapest as well as for a personal visit by Secretary General Hammerskjold. That was the moment, the only moment, when a rapid and vigorous intervention by the U. N., combined, as stated before, with a solemn American warning, would have had a positive result. As the chance of that moment was missed, the whole thing became bogged down in the morass of sterile debates and ineffective resolutions.

The passivity of the great Western Powers, divided, besides, by the Suez problem, as well as the impotence of the United Nations, had the natural and logic consequence of encouraging Moscow to adopt, after some hesitation, an even more rigorous attitude and to apply to unfortunate Hungary a policy of bloody repression which surpassed even the horrors of the Stalin era.

Insofar as the United Nations is concerned, the psychological moment for positive intervention having been missed, we have very few illusions concerning its effectiveness in the future.

It seems, however, that, in spite of everything, there is still some hope. The special committee set up by the U. N. to study the Hungarian problem has just terminated its work and is about to present its final report. According to reliable information, this report, drafted with utmost care and greatest objective, is so damning for Soviet Russia that many governments, which had up to now hesitated to take a positive stand, might change their attitude and join the majority which has already condemned the intervention of Moscow.

A new, overwhelming majority within the General Assembly might have a salutary effect on Moscow. In any case, the least that may be expected from and even demanded of the United Nations, would be that it keep on its agenda, continually, the question of Hungary and that of the other captive nations.

Knowing, however, the limitations of the United Nations Charter, we would, besides, have confidence in measures taken directly by the great western powers, under the leadership, naturally, of the United States. Such measures might take the form of diplomatic intervention, international blockade, refusal to participate, with the Soviets, in international conferences, until the martyrdom of Hungary as well as the tyrannic oppression of the other captive nations is terminated.

We know full well that we are here touching upon the great problem of risks. For years, the Assembly of the Captive Nations and the national and international delegations, have refrained from even alluding to the famous risk of war. But I think that the time has come for approaching the problem frankly. First of all, one must take into account that no policy, especially foreign policy, is without danger. Besides, risk is an integral part of life, and even the daily existence of a peaceful citizen is full of risks and dangers.

After the end of the hostilities, there was not a moment without danger for mankind. Suffice it to mention the civil war in Greece, the Berlin blockade, the wars in Korea and Indochina, the events on Cyprus, the Suez affair, etc. It is, therefore, not a matter of seeking to create an international situation without danger (that would be impossible), but of coldly judging and comparing the possibilities of finding a policy offering relatively less danger than all others that might be pursued.

Many well-informed minds, seeking an answer to this problem, believe to have found a solution in the neutrality idea. I hasten to say that, as a Hungarian, I would naturally be delighted to see an end being put to my country's suffering by application of that principle, which has, besides, been officially voiced by the government of Imre Nagy.

However, I fear that, not only in the case of Hungary but in relation to the entire problem of Central and Eastern Europe, it will be but a psychological escape act, a refusal to face reality.

Besides, it seems that a certain confusion obtains with regard to the subject itself, since the word "neutrality" may be inter-

preted variously even by those who are accustomed to using it. Suffice it to point out that there is an appreciable difference between imposed and freely adopted neutralization, between armed and disarmed neutrality, between neutrality guaranteed by the great powers or by a general security pact or one without any guaranty, and so forth.

The neutralization plans discussed in the assemblies and in the press fall generally into two categories:

One of these theories contemplates the possibility of creating, within the presently captive countries and part of Germany, a broad demilitarized and neutral zone serving as a buffer between the Soviet empire and the NATO powers. The fact that, if this were the case, the Soviet as well as Western troops would have to withdraw from the zone in question renders this solution completely unrealizable. Since last year Moscow has known full well that only with the support of the Red Army and of the Communists in the people's democracies can it remain in power, and that the withdrawal of the Soviet troops would be equivalent to the loss of the entire area.

This plan would be out of the question from the Moscow viewpoint in that, parallel with the Soviet evacuation of the territory of the captive countries, the armies of the Western Powers would withdraw from Germany to a distance such as would render their intervention in a conflict entirely illusory. It is in that sense, therefore, that one must interpret the Bulganin plan of last fall, which proposed a demilitarized zone of at least 1,600 kilometers, by far exceeding Mr. Eden's plans as well as all other plans of this kind. The zone proposed by Mr. Bulganin would encompass not only the whole of Western Germany and the Benelux countries, but a part of France itself, while it would leave the Soviet armies in eastern Poland quite close to their natural basing point.

I believe it is important to underline here the difference between Moscow, the Russian capital, and Moscow, the vatican of the Communist church. Moscow, as the capital of a conventional great power, might decide to accept a compromise solution; but as the capital of the Communist world, never for this would mean at the same time giving up its ambitions of world domination. And we are still very far from that.

The second favorite theme of the neutrality theorists is the neutralization of all Germany. A Germany evacuated by the Western and Soviet troops, being neutral and disarmed, would obviously be the solution dreamed of by Soviet policy and strategy. That Western statesmen and even German politicians may visualize and discuss such a possibility seems difficult to understand, even in view of the pseudo-guaranty of a so-called general security treaty.

On the other hand, a unified and neutral Germany, free from all obligations, and militarized as only the Germans know how to do it when they apply themselves thereto, is a solution not without danger for the West and absolutely inacceptable for Moscow both from the Russian as well as Communist viewpoints.

It seems, therefore, that, despite the ingenuity of the advocates of neutrality, it is impossible to find a formula which, satisfactory to the Russians, would simultaneously accord reasonable security to the free world. For, and that is the essential point, a neutral zone in the heart of Europe cannot be, by its very nature, but a defensive solution for both sides. So long as the live forces of communism are not crushed, Moscow will continue to pursue its goal of world domination and refuse any agreement that would present serious obstacles for its aspirations.

I believe, therefore, that real peace in this world is not possible until the vital forces of Soviet communism are broken and Moscow loses faith in the realization of its dream of world conquest. This real peace can be obtained neither by uncertain negotiations nor by a policy of neutrality, but only by vigorous action under the leadership of the great powers and within and without the framework of the U. N., as proposed above.

Almost 2 years ago, at Geneva, the Western powers had been in the much desired and so laboriously obtained position of being able to negotiate from a position of strength. They had preferred conciliation and generosity, in hopes of arriving at a peaceful solution satisfactory to all interest parties. They had been cruelly disappointed. Let us hope that this mistake will not be repeated, and that Moscow will not again be given the time and the occasion to bring about an almost desperate situation. A weak policy would certainly be the most dangerous of all policies, for Moscow has well learned the lesson of the events in Hungary and has reacted with all the force inspired by fear. Having lost all illusions, it now knows that there are only two means by which its world domination can be accomplished, i. e., force and fraud. And it will make ample use of both.

It seems, on the other hand, that the time has never been so propitious as right now for taking a vigorous stand. The de-Stalinization campaign has shaken the foundations of the Communist doctrine; the concessions made to the Russian people have given sustenance to new intellectual currents unfavorable to the regime, the economic and financial situation of Moscow, suddenly deprived of the resources from the satellite countries, is lamentable (see the freeze on loans and the new, feverish, economic reorganization decrease). Finally, the Hungarian revolution and events throughout the captive world have shown that Moscow can count neither on the young people, nor on the intellectuals, nor on the workers, nor on the armies, nor on the peasants of these countries.

Everything that we other exilees and emigrees from central and eastern Europe have loudly stated for many long years was not wishful thinking, a reproach to which we have so often been subjected, but the pure and simple truth. The bloody and victorious Hungarian revolution, which symbolizes the spirit of resistance of all captive Europe, has shown that our people hate communism wholeheartedly, and that, despite 10 years of indoctrination and terror, they have adhered faithfully to the ideal of freedom and national independence.

But the Hungarian revolution has also shown that the simultaneous presence of two elements is necessary to attain that greatly desired freedom and independence: courage and the spirit of sacrifice at home, and vigorous and effective support from abroad. The European captive nations are ready to play their part in this greatest human drama; let us hope that the free world will no longer hesitate to play the role which fate has assigned to it.

Savings Bond Sales Down Despite Increase in Rate

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. MULTER. Mr. Speaker, the following article which appeared in the Wall Street Journal of July 9, 1957, makes most interesting reading:

SAVINGS BOND SALES FELL, CASH-INS UP DURING FIRST HALF—SALES WERE DOWN $200 MILLION AS REDEMPTIONS ROSE 14 PERCENT DESPITE INCREASE IN RATE—CASH-INS TOTALED $2.8 BILLION

(By a Wall Street Journal staff reporter)

WASHINGTON.—Despite the new 3¼ percent interest rate, sales of Uncle Sam's savings bonds during the first half of the year fell 16 percent below the like period of last year and cash-ins continued to exceed sales.

The Treasury reported 6-month sales of series E and H savings bonds, the types usually bought by individuals, totaled $2.3 billion. This compared with sales of more than $2.5 billion during the same 6 months of last year.

At the same time, investors cashed in nearly $2.8 billion of E and H savings bonds from January to June. This was 14 percent increase over cash-ins of $2.4 billion during the like period of 1956.

INTEREST RATE RAISED

In April, the Treasury hiked the interest rate on series E and H savings bonds to 3¼ percent from 3 percent and made the increase retroactive to all bonds bought after February 1, 1957.

The higher interest rate was designed to perk up sales of new savings bonds which had fallen behind cash-ins since August of last year. The lagging program got so bad the Treasury decided to discontinue its monthly sales report this spring.

The new sales report for the first half year showed that savings bond sales had failed to perk up despite the new 3¼ percent rate since cash-ins have exceeded sales each month. In April, redemptions topped sales by the substantial margin of $97 million. In May, this gap was reduced to $62 million, but in June it increased again to $88 million.

The series E bonds can be bought for as little as $18.75 and the interest is paid only when the bond is cashed in. The series H bonds can be purchased only in denominations of $500 and interest is paid by check every 6 months.

BOND SALES DECLINE

The Treasury said sales of the series E bonds during the first half of the year dropped 10 percent to just under $2 billion from more than $2.2 billion during the like period a year ago.

First-half sales of series H bonds totaled $332 million, the report said. This was 38 percent decline from the $540 million sales total for the like period of last year.

As for cash-ins, the Treasury said investors turned in nearly $2.7 billion of their series E bonds during the first half of the year—12 percent more than a year earlier. Redemptions of series H bonds totaled $113 million, or an 86 percent increase over the first half of 1956.

The Budget, the Cabinet, and the Farm Bloc

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. McGOVERN. Mr. Speaker, the June 6, 1957, issue of the Grant County Review carriers three excellent editorial comments that I think will be of interest to the Members of Congress.

Mr. W. S. Dolan, the editor of this paper, is one of the oldest and most respected editors in South Dakota. What

he has to say on the issues of the day is always of interest to thoughtful citizens.

I include the editorials as follows:

WOULD YOU BELIEVE IT?

If someone told you that the Federal budget for the year 1935, back in the days of Franklin D. Roosevelt as President, the drought, depression, and NRA, WPA, CCC, PWA with all their various ramifications, and what various and sundry prophets assured us would bankrupt the Nation, was the sum of $6,136,000,000? The budget for the present year is $75,975,000,000, or about 12 times greater.

Strangely enough, too, we now have no paralyzing drought, no war, no depression, yet our Government is spending more than 12 dollars for every 1 it spent in 1935, and with far less direct benefit to the average citizen, yet we are told that to cut down two or three billion our lavish Federal spending would so cripple our national defense as to endanger national security.

By 1940, under Roosevelt, the Federal budget had risen to $9,933,000,000. Then in late 1941 the Japanese made their sneak attack on Pearl Harbor, plunging us into another world war and emergency defense spending. The result was a boost in the budget to $14,533,000,000 for that year, and by 1942 it had climbed to $35,142,000,000.

This was skyrocketed to $80 billion for 1943 and by 1945 had been upped to $97,957,000,000 by the time the dropping of atomic bombs brought a quick cessation of war, and a prompt slacking off of wartime spending.

Under the administration of Harry Truman the 1949 budget was down to $43,003,000,000, and in 1950 it was $46,567,000,000, before another spiral started.

In 1955 under President Eisenhower and promised curbing of inflation, the budget went to $74,541,000,000, and by 1956 was up to $75,975,000,000. The estimated Federal spending for this year is $80,200,000,000 and proposed for 1958, including balances to be carried over and added to the budget appropriation asked by President Eisenhower, the amount is set at $86,200,000,000.

Any way you wish to figure it, we are now spending more in a peacetime period than at any time during our great wars, which is not too surprising when you consider that our national defense departments are still handing contracts out to big industries without bids, on what they call "negotiated" agreements, which amounts to eliminating competition and letting the industries set their own prices.

This explains enormous costs to an extent, but does not entirely make clear the many billions that are being dished out. Congress, it would seem, might well take action to put all Government business on a competitive basis, as it is supposed to be.

Secretary of the Treasury Humphrey has tendered his resignation from President Eisenhower's Cabinet. There seems to be general feeling that it would be well if John Foster Dulles did likewise and made place for a younger and more vigorous man, while a lot of farmers wouldn't have serious regrets if Ezra Taft Benson should elect to seek an easier way to make a living. Few, we believe, question the sincerity of Mr. Benson or his efforts, but his theories just haven't worked out as he or most of the rest of us had hoped.

FARM BLOC DIFFERENCES

For many years the interests of farmers of the Nation have gotten sympathetic treatment in Congress because of what has been known as the farm bloc, a group of Members from agricultural States who united in support of needed farm legislation, without regard to their political differences otherwise.

Opponents of farm legislation have frequently endeavored to stir dissention and cause this group to become disorganized but until this year with very little success. Now, however, the picture seems to have changed and sectional strife is believed to have become so bitter that no longer can the Democrats of the South, interested in cotton, rice, and tobacco, be depended upon to unite and vote with Republicans and Democrats of the North interested in corn, wheat, and other of our major farm products.

This has caused rejoicing on the part of Members from the big industrial centers, as well as residents of such communities, who have long swallowed the propaganda that the high costs of foods is largely, if not entirely due to high prices paid producers, thanks to the farm program.

As a matter of fact nothing could be further from the truth. What the producer is paid constitutes a minor share of the cost to consumers.

United States and Red China

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following sincere and truthful editorial which appeared in the Boston Daily Record of July 9, 1957:

UNITED STATES AND RED CHINA

In Mao Tse-tung's infamous report on the achievements of his revolution, made a fortnight ago, he blithely announced that 800,000 Chinese—his own countrymen—were killed to establish his government.

Chou En-lai, his premier and foreign minister, reminding the opposition of what the Chinese Communist Party can do if it needs to, gives the impression that those killed were even in larger number.

The admission was made by Mao and Chou that China had suffered great natural calamities, meaning floods and loss of crops.

Those who have lived in China know that very often crop failures are not due to natural calamities but to frightening results of passive resistance, during which the Chinese peasant plants a crop but does not reap it.

There have even been instances of scorched earth in China.

In fact, the process was invented in that country, the peasants burning the standing crops as a mark of rebellion.

It is becoming clear that the British insistence upon the sale of goods to Red China and subsequent recognition in the United Nations amounts to bailing out the Red Chinese who cannot hold the good will of the Chinese people but can only control them by murdering them.

Why should the British want to bail them out?

For the comparatively small trade that Hong Kong can get out of Red China?

Even if that trade is important to the old China firms that are still sticking it out, of what value is all this to us?

After all, the British have long since thrown up the sponge in the entire Pacific area, except Hong Kong.

They have loaded upon us the defense of the interests of the Western World and even of such countries as Australia, New Zealand, India, and Indonesia.

Thus far, it has been our armaments, our money, and principally our sons that have been thrown into an effort to contain the Red Chinese in the territory which they now hold.

We shall have to fight for Japan, the Philippines, and even India when the time comes.

Therefore, why should we agree to the proposition that bailing out the government of Mao Tse-tung and Chou En-lai is to our interest? Why? What is the reason?

Correctly, President Eisenhower and Secretary of State Dulles have turned down the proposition of the British and the neutralists, to whom a dollar today looms too large and blinds them to the tremendous loss of life that it will bring in the future.

Correctly, the President and Secretary read the history of this miserable regime.

Chiang Kai-shek has recently written a book, Soviet Russia in China, in which he recounts in detail how the Russians and the Chinese Communists fooled him and other Chinese.

He says:

"It is my earnest hope that the bitter lessons China has learned may prove instructive to countries and governments, and especially those in Asia which now face the same threat of communism.

"Often it is not easy for most people to realize the presence of this threat in their midst, and by the time they do it may already be too late. * * *"

Dulles has made this pertinent point:

"Trade with Communist China is wholly controlled by an official apparatus, and its limited amounts of foreign exchange are used to develop as rapidly as possible a formidable military establishment and a heavy industry to support it.

"The primary desire of that regime is for machine tools, electronic equipment, and, in general, what will help it to produce tanks, trucks, planes, ammunition, and military items."

Why do people exaggerate the volume of foreign trade when actually, in comparison with the total economy of the United States, it hardly equals a sneeze upon the ocean?

If a calculation were made of our trade with China since 1840, and our contributions to churches, hospitals, and schools over that period, including the numbers of Chinese who studied at American universities at the expense of the American Government since the Boxer Rebellion in 1901, the balance is against us.

And yet this Chinese Communist Government preaches hate against us as though we had always done that country evil.

The historic truth is that we have served China as we have served no other nation for more than a century—strictly from the heart.

Girard Deserves Court-Martial

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Cheraw (S. C.) Chronicle of July 11, 1957:

GIRARD DESERVES COURT-MARTIAL

By the time this editorial appears in print, the Supreme Court may have overruled a lower district court which ordered the Army to give Private Girard a court-martial.

However, until the Supreme Court rules one way or the other, we shall assume that the lower court order will stand and that

the American soldier from Illinois will be tried by the American military.

That is as it should be, we believe. We do not know all the facts in the case. Certainly, Mr. Dulles and President Eisenhower are intelligent, honorable men, and if they wanted Girard tried in the Japanese court, they must have information which would back up their decision. One legal expert who has studied the case says that it can be argued with merit on both sides.

We do not know whether the shooting was an accident or whether Private Girard lured the woman onto the base by throwing out shrapnel which the Japanese had been collecting for scrap. Certainly we do not agree with Girard's brother, who told him a few days ago that, while the Japanese might hate him, Girard was a hero in America.

Well, no man who shoots a defenseless woman and leaves her five children motherless is much of a hero to us. Such remarks are scarcely calculated to win friends and influence people in Japan. Our relations with our former enemy and present ally are already shaky enough.

Be that as it may, we believe that any soldier who commits a crime while in the performance of duty and while on American territory, as an Army base is considered to be, deserves a trial by American authorities. It would have been a different matter if Girard had cracked a Japanese Giesha girl over the head with a beer bottle in a Tokyo night club. In such a case Japanese civil authority would surely prevail. In this country we expect to try in our courts any foreign personnel who commit a crime while in our land. But if they commit such a crime in a foreign consulate, we would recognize the right of their homeland to try them.

The question of American relations with Japan is not a proper one to consider in this case. Furthermore, it's dubious to us how much respect and friendship we can comand by supinely appeasing mob demonstrations and mass hysteria, whether it occurs in Japan, Formosa, or elsewhere.

Communism in the Caribbean

EXTENSION OF REMARKS
OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. LONG. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD an address entitled "Communism in the Caribbean," by Ambassador Manuel de Moya Alonzo, delivered before the Commonwealth Club of California, in San Francisco, Calif., April 5, 1957.

Ambassador de Moya is an expert on the subject of communism. As he so ably points out, his own country, the Dominican Republic, has little to fear from Communist infiltration. His country knows how to deal with the Communist menace. Atheistic communism is concerned with his country only as a steppingstone to be used in its stated and ultimate goal of conquering our own great Nation, and thus imposing upon our people a brutal and pagan form of government which deliberately aims at the complete and final elimination of our individual liberties and the destruction of our Christian faith. The address follows:

COMMUNISM IN THE CARIBBEAN

(An address by Hon. Manuel de Moya Alonzo)

My topic is Communism—Communism in the Caribbean. It's such a vast and complex subject that I can only hope to provide you with a frame of reference—a context—which will enable you to better understand some of these rather strange, often mystifying stories that come out of the Caribbean from time to time.

I cannot stress too strongly the need for greater American comprehension of the situation. The Communist penetration and exploitation of the Caribbean forms a definite pattern. American unawareness of this pattern of subversion is the Soviet's secret weapon in the farflung area we are discussing.

Now in discussing Caribbean communism, we don't have to go at once to the Caribbean. We can start right here in San Francisco, United States of America.

I don't think you realize what a large colony of Central Americans you have here in San Francisco. Just as hundreds of thousands of people from the Caribbean islands have poured in to New York and other eastern seabord cities, so have other thousands of Central Americans migrated to New Orleans and San Francisco.

Now the vast majority of the people in both migrations are decent, hard-working people—loyal to their homelands and to their adopted country. They are basically anti-Communist.

But, it was inevitable that some of the social and political agitation which is keeping the Caribbean area in a turmoil be imported—imported to New York, to Miami, to New Orleans, and to San Francisco.

What is going on is this: Outside every Caribbean country there are organized exile groups that are seeking the downfall of their respective governments. Those groups have tended to merge together into a loose-knit federation. They have formed what amounts to a cooperative—a cooperative designed to destroy almost every stable government in the Caribbean. They have established centers—underground and openly—in every nation which will receive them as host—and that includes the United States of America.

In San Francisco, as in the other cities I mentioned, this group—the Caribbean revolutionary movement—has penetrated the local Latin American colony and established cells. And, until recently, this activity was not concealed. The various propaganda organs of the Caribbean revolutionary movement habitually printed the names and addresses of new members and the establishment of new cells.

And now we get to the crux of the problem and the main point I hope to make clear today.

You are entitled to tell me: All right, so you have a lot of revolutionary exiles and agitators in the Caribbean—if that's news—so we have even got a few in San Francisco—but what does that have to do with communism?

It has a great deal to do with communism, ladies and gentlemen, to very great deal. International communism is seeking—and has at least partially succeeded—to channel the traditional revolutionary currents of the Caribbean for their purposes. It is capitalising on the present discontent of the great masses of the peoples of the Caribbean who are now being suddenly exposed to the 20th century industrial revolution. It is using power-hungry office-seekers, corrupt politicians, rapacious political opportunists. It is using the idealism and discontent of the youths in the universities. And, perhaps above all, it has harnessed many, many intellectuals of both Americas into the service of Soviet imperialism.

Now at the risk of boring you with now-familiar Communist tactics, I will let Comrade Manuilsky—the late Comrade Manuilsky—take the mike and tell you how this was done.

Speaking at the Sixth International Congress in Moscow in 1938 Manuilsky told the Latin American delegations the following:

"Never take direct action. Leave that to our friends. Always remember that one sympathizer, generally speaking, is worth more than a dozen militant Communists. A renowned writer, a retired general, an educator or a union leader is more effective than 500 poor devils who only know how to get beaten up by the police. Everything is relative in value, and you must avoid falling into sentimental confusion. Keep in mind that a party card by itself means little. The labor leader, the writer—anyone in a position of respect or authority—their assistance is worth more than any number of party cards."

At this point the also-late Comrade Dimitrov took over.

"Those who are not party members enjoy much more freedom of action. Activity not undertaken in the direct name of communism evokes less resistance, less immediate opposition, than would a Communist frontal approach. We learned in the revolution—the Bolshevik revolution—and are now having the lesson repeated in Spain, that it is possible to mobilize people who do not think as we do and who would reject any overtures to enlist themselves in our ranks."

"In the application of this tactic you must use all who approach whatever their motive. There are some who come to us out of romanticism, the love of danger, the spirit of adventure. Those are usually young people. Others are moved by literary vanity, by intellectual influence. They desire to ease the sufferings of the world. They are sometimes sincere, sometimes not. Then there are those who are coming in increasing numbers—the opportunists, the ambitious politicians, the restless men who seek to rise above their present station in life. They see the party as a ladder. We will put them on that ladder, and we will take them off when it suits our purposes. We can work with them all * * * and we will."

In 1948, Maj. Sergei Yuwowro, writing in the Red Star, the official Red army newspaper said: "The strategic zones of America are: (1) The Colombia-Panama zone; (2) the Antillean belt; (3) the Central American isthmus; (4) the Brazilian hump; (5) the Bolivian plateau; (6) the Argentine-Chile meridional tip."

He said in this article, "The Antilles, which include Cuba, the Dominican Republic, Puerto Rico, Jamaica, and the other islands will require a large number of men for occupation. Therefore, it is necessary to occupy them by other means."

And, ladies and gentlemen, that is the policy that is being implemented today in the Caribbean. We have the phenomenon that there are vastly more non-Communists serving the Soviet cause in the Caribbean than Communists. But by the term "Communist," I mean the cardcarrying, red-flag-waving party militant. The fellow traveling variety is just as effective in the service of Soviet Russia and every bit as dangerous to the cause of the western democracies whatever name he gives himself.

Now, of course, popular front tactics are not confined to Latin America. But it is particularly in Latin America—and above all, the area of the Caribbean—that such tactics are used. It is not merely more easy for Communist infiltration * * * it is absolutely necessary. It is only in alliance that communism can survive in the basically unfriendly atmosphere of our nations.

Marxist theory is too complicated, too exotic, to have much appeal for any Americans—North or South. It's alien. It's an Old World import, and communism—standing alone—will always be alien to this hemisphere.

Let's look at the names of some of the founders of Latin American communism—Frederick Glaufbauf, Leton Guralsky, Humbert Droz, Leon Vernochet, Mauricio Luft, Adi Stachlovich. Going way back to the first Kremlin missionaries to Latin America, we find the Hindu, Manabanta Math Roy, and the Japanese known as Katayama San.

Now, how well did they succeed? Did they establish strong Communist parties? No; they did not. But did they establish Communist influence? They certainly did.

You see, even the official Communist countries of the Caribbean seldom use the word "Communist" in their nomenclature. Generally they call themselves something like the "Popular Socialist Party," "The Revolutionary Socialist Party," or "The Socialist Revolutionary Party." Names like that. But make no mistake—they are as Red as any party this side of the Iron Curtain. Costa Rica's party, for instance, which calls itself the National Vanguard Party, recently stated—when the blood of Hungarian patriots was flowing in the streets of Budapest—that "We once again confirm our solidarity with the great Soviet Union."

Now these parties are generally illegal. About the only officially recognized Communist parties you will find in the Caribbean are in Mexico and Costa Rica. So they operate either underground or in exile, or both. They don't lack for company, nor for allies. There are literally scores of other leftwing exile groups giving themselves almost the same names. They also have two other traits in common, they want power, and they hate the United States. For one thing, these revolutionaries consider the United States the great barrier to that power. And there are many other reasons, emotional as well as political. Let's face it, Uncle Sam would win no more popularity contests among Latin American leftists and nationalists than among Egyptians or Syrians of the same type.

Now, it would be a mistake for you to dismiss these people as comic opera revolutionists. They are not. They are both deadly serious and deadly. They kill people. They have killed many people, and will kill more unless the governments of the Americas make a concerted effort to break this thing up.

I wonder how many of you really know what happened in Guatemala in May and June of 1954. Guatemala at that time, if you will remember, was just about as far down the road to communism as a nation can go. With one exception—the army was not completely undermined. That ultimately proved fatal to the Reds—but not before they had released a Soviet-type terror that had quite literally never before been seen in this hemisphere. As their power crumbled, the Reds went mad with rage and frustration. They attempted to liquidate every possible anti-Communist in Guatemala. Thousands were massacred, other thousands were tortured. Tongues were torn out, genitals were smashed with clubs, limbs lopped off with machetes. People were buried alive, machinegunned, drowned in tubs. * * *

Ladies and gentlemen, Guatemala had temporarily ceased to be an American nation. Guatemala was not comic opera. Guatemala was not leftwing or liberal. Guatemala was Soviet terror in this hemisphere. All this has been amply documented and reported. I invite you to look into it further.

Now who was responsible? Some Guatemalan Communists, yes—but only a handful. The fact is there were never enough local Reds to possibly control the country. They called in allies. We find the Dominican Revolutionary Party—of which so many members are enjoying the sanctuary of New York and the usage of the press. More about them later. We find the Dominican Revolutionary Socialist Party and the Dominican Popular Socialist Party—the official Communist parties of our country. All three are composed of about the same members, but the Revolutionary Party is the more effective because it can operate under the non-Communist label.

Then there were Venezuelans from a group known as Accion Democratica—Democratic Action—which is probably the smoothest operating unit in the whole movement. Accion Democratica people are the intellectual type—meaning they seldom kill people themselves; they get others to do it.

There were also many Nicaraguans. Those Nicaraguans have plenty of parties, all with about the same members and the same activities. We find the regular and very tiny Nicaraguan Communist Party, the large Nicaraguan Revolutionary Party, the Movement of Nicaraguans Supporters of Democracy, and so forth.

And Salvadoreans. The Salvadoreans are specialists in labor agitation in the revolutionary movement's scheme of things. And Spaniards—republican Spanish exiles who are both tough and smart. They are a kind of Soviet version of the point 4 program. They provide the know-how for a lot of Caribbean operations requiring both strong-arm tactics and a knowledge of subversion.

And many others: Mexicans, Costa Ricans, many Chileans, Cubans, and even a few Europeans besides the Spaniards.

Well, that was the group in Guatemala in 1954. That is the group that butchered thousands of innocent people. And that is the group that is active today. Active in the Caribbean, in the eastern and southern cities of the United States, and active here in San Francisco.

Now I want to review briefly a few of the major operations of the Caribbean revolutionary movement up to their debacle in Guatemala in 1954. In 1945 the Democratic Action government took over Venezuela. It was, however, ousted 3 years later. In 1947 the Caribbean Legion—the military arm of the international revolutionaries—attempted to invade the Dominican Republic from Cuba by sea. That was broken up. They were successful, however, in 1948 when Caribbean Legion invaders from Guatemala joined with local rebels to take over Costa Rica—control that continues to this day. They were unable to get another invasion launched against Nicaragua. And in 1949 they made another assault on the Dominican Republic. That time by air. Again they were routed. Then they shifted tactics.

Let me tell you briefly some of the background of the current unrest in Cuba. First of all, Fidel Castro and his brother are both dedicated Communists. Castro, while a student at Havana University, assisted in the uprising in Bogota in 1948. He was indicted by the Colombian Government, but escaped to his home in Cuba through the usual method of finding sanctuary in the Cuban Embassy. A previous Cuban Government found it agreeable to play ball with him, and so he had no trouble in his Communist activities until the present regime came into power.

He is a dedicated Red, despite what his apologists have to say about him. He publicly bragged about killing seven priests in the Bogotá uprising. His operation in the deepest jungles of Cuba is characteristic of similar operations by the Communists in Indochina and in other places.

A month ago, Cuban police raided a bomb factory in the outskirts of Havana and captured 12 men making bombs. Nine of the 12 were card-carrying Communists who had been trained in sabotage behind the Iron Curtain. The other three had been trained in sabotage in the United States. It is significant that in the present Cuban troubles out of 28 bombs planted in recent weeks 24 of them were against property owned or controlled by Americans—notably, electric-light companies and other American services.

The uprising got the blessing of a distinguished New York reporter several weeks ago, and shortly afterward a bold attack was made by 15 or 16 heavily armed men upon the presidential palace of General Batista. The leader of that uprising was Jose Antonio Echevarria. He was a student, and records obtained not only in Cuba but also in Mexico indicate that he was trained 3 years ago in a Communist school, and specialized in assassination and attack upon constitutional authority.

That is the story in Cuba.

Now I won't bore you with the endless intrigues, plots and conspiracies, the unceasing propaganda, the arms smuggling, the war of nerves, the intermovement bickering, the assassinations of minor political enemies, the constant agitation, that they undertook meanwhile, and particularly after their military defeats. There is a Caribbean Legion, and it exists today, but as a weapon of power it just has not been effective. Incidentally, one last word on the Caribbean Legion:

There are some very interesting haciendas in Mexico's Yucatan peninsula and on the island of Cozumel off the coast. The "cowboys" are made up of the usual exiles; they wear a semblance of a uniform, are armed with automatic weapons, and are organized into military units under the command of Colonel Francisco Cosenza, a Guatemalan exile. Colonel Cosenza recently transferred some of his "cowboys" to Costa Rica after the assassination of Nicaranguan President Anastasio Somoza last September.

But, as I say, the Caribbean Comintern shifted tactics. They went on an orgy of self-criticism after they were thrown out of Guatemala. They had a lot to criticize. You see, they had disregarded part of Manuilsky's and Dimitrov's instructions, a very important part. They had all kinds of popular front operations in the Caribbean—but not in the United States apart from infiltrated Latin American colonies. They had neglected to establish contact with the revolutionary proletariat in the United States as they had been ordered. They had seriously alarmed and antagonized the United States. And that was at least a major cause of their downfall in Guatemala.

So, on June 11, 1955, 26 leaders of the movement gathered in a home in Mexico City and charted the new course. They discarded the idea that the United States was one inseparable monolithic unit, that it was the enemy. That was a luxury they could no longer afford. They agreed that the American public must not be alarmed. They agreed that contact must be established with the American Revolutionary proletariat if there is such a thing. They agreed that American power could even possibly be used. Finally, they agreed that the major objective must be to drive a wedge between the United States and certain Latin American states, that those states were to be isolated to break up the common front.

Now—how do we know this? We know this because Generalissimo Trujillo has developed one of the finest intelligence services in the Caribbean, an intelligence service that is designed to be our country's first line of defense against a threat that will be with us in the Caribbean as long as there is communism in this world. And we know it because like Hitler and his Nazis, like Stalin and his disciples, the leaders of Caribbean communism often do not hesitate to tell you exactly what they are going to do. And then—apparently to everyone's sur-

prise—they do just that. It is only when speaking for American ears that they make much attempt to hide their true character.

Well, the New Look of Caribbean communism has at least temporarily been successful. Apparently they did not find much of a revolutionary proletariat with which to work in the United States. But they did find a number of intellectuals willing to undertake any activity that is sugar-coated with the words, "democracy," "freedom," and "civil liberty."

This strange alliance is one of the great phenomena of our age, and of our struggle against the forces of international communism. It was J. Edgar Hoover who recently commented that pseudoliberals as self-styled reformers "have become the ready tools of the Communist conspiracy."

This was a speech a few weeks ago at Valley Forge, Pa., when Mr. Hoover was presented Freedom Foundation's highest award for 1956. He also said that, "the pseudoliberal has increasingly conceived committees in the name of defending every freedom, but none to uphold authority he claims social progress. To be sure, the pseudoliberals proclaim themselves anti-Communists * * * but they have made efforts in recent years to curtail the Government's authority to defend our national security. Some of them may be honest and sincere, but they are misguided. Others seek the pseudoliberal cloak to conceal more sinister objectives, because deceit is the very essence of communism."

I believe, ladies and gentlemen, that we in the Dominican Republic can probably most fully appreciate Mr. Hoover's words. Generalissimo Trujillo was the first to recognize what the Communists were doing in Guatemala. He warned the peoples of both Americas that what was going on was not liberalism, it was not spiritual socialism as one Guatemalan Communist leader called it, nor was it agrarian reform, which if you will remember was the euphemism also applied at that time to the movement in China that was led by Comrades Mao Tse Tung and Chao En Lai. It was the birth of communism, that later showed its brute fury, just as surely as did the Soviets in Budapest.

But that warning was not heeded until thousands had died, nothing was done until international communism in the Caribbean grew to a size and degree of organization that survived even the loss of Guatemala itself. The cry of "red herring" has become such second nature to the pseudoliberal intellectuals of both Americas that there are those who simply refused to believe the facts, refused to admit their error even after that error was conclusively proved. And so today I am equally sure that in some quarters this warning will be met with the same reaction—red herring.

Now, let me explain a bit about the machinery of the revolutionary movement, and I think it will give you some idea of Soviet subversion in the Caribbean, and how it ultimately links up with pseudoliberalism in the United States.

Oversimplified perhaps, the Communist-revolutionary alliance operates on a Mexico City-San Jose, Costa Rican-San Juan, P. R., axis. Mexico is home base, and the direct link with the Soviet Union through the Soviet Embassy there. San Jose, capital of Costa Rica, is the stronghold of the movement in Central America, the site of the development of a peculiarly Latin American neocommunism, and the link with the intellectual author of Caribbean subversion, who has his present base in San Juan, P. R.

Now, self-confessed or publicly stated political coloring undergoes a progressive change between Mexico City and San Juan. What begins a deep red fades to pale pink by the time our intellectual leader in San Juan makes contact with New York pseudoliberals. And if you doubt that, that pipeline exists between San Juan and New York, just watch the reaction this speech will get from a New York group calling itself the Inter-American Association of Democracy and Freedom.

This gentleman in Puerto Rico, our intellectual leader of the Caribbean alliance of professional revolutionaries, is a rather fabulous character. He is the man who twice instigated armed invasion of the Dominican Republic; the man accused of the attempted assassinations of President Anastasio Somoza of Nicaragua and President Marcos Perez Jimenez of Venezuela; a leader who, after decades of outspoken Communist affiliation, changed his label only when it was politically expedient; the mastermind who has directed subversive operations against virtually every anti-Communist government in the Caribbean; and the intellectual who is the darling of New York pseudoliberals. He is Romulo Betancourt, chief of Accion Democratica and ex-President of Venezuela. He is also the master propagandist behind the present smear campaign aimed at the Dominican Government, and particularly at Generalissimo Trujillo.

Now if you will think back, you'll notice that most major political thrusts in the Caribbean are aimed at individuals—not at political parties, nor dogmas, nor systems of government. There is a reason for this.

The structure of most Latin American governments is based on an individual leader. That is, people who believe in that leader, who support him and his policies, form themselves into a political party dedicated to those principles that he represents. I am not saying that it is better or worse than the United States system. I am saying that is the way it is.

Necessarily, the destruction or weakening of that leader, by any means, is a demoralizing blow to national stability.

The assault against men occupying key posts may take several forms. The revolutionary movement has increasingly used assassination; it has also successfully used the threat of assassination and a war of nerves. It has had less luck with armed assault.

But when all else fails, there is one weapon remaining in the Communist arsenal of political warfare—assault by slander: character assassination.

The last method is now being attempted against Generalissimo Trujillo. Internal subversion has failed. Armed invasion has been beaten off. A loyal, alert people have made attacks on his person virtually impossible. It is their only remaining weapon.

He has become a priority target for several reasons. Trujillo has made the Dominican Republic a rock of stability in the otherwise turbulent Caribbean. Moreover, as I mentioned previously, he has never been content to isolate his country in self-satisfied prosperity while communism makes inroads elsewhere in the Americas.

Generalissimo Trujillo knows communism. He knows how to fight it, and he knows how to win. Moreover, he has fought alone. He has fought with little aid or encouragement. Nor does Trujillo need such prompting.

There is no need to bribe or cajole Generalissimo Trujillo into taking action against the forces of international communism. His record speaks for itself. It is this role that has infuriated the enemy, that has made him the leader most feared and hated by Communists in the Caribbean.

Through their present assault by slander, they hope to discredit his warnings of the danger in the Caribbean. They hope to have raised the familiar cry of "red herring" when their activities are revealed for what they are.

They hope, moreover, to reduce Trujillo's effectiveness as a fighter for freedom by isolating him from the other peoples and governments of America—including, particularly, those of the United States. Such isolation, they reason, will also have adverse economic repercussions, as well as sabotage the tourist program now being developed.

Now I'm sure you have heard of the two recent attempts of these elements to do just that. The Communists call them operation Galindez and operation Murphy. Both were beautifully timed and executed propaganda offensives. And both times the opposition succeeded in having non-Communist elements carry the ball.

If you will remember, Jesus Galindez was a Spanish Basque exile who disappeared from New York a year ago last month. A hate campaign aimed at the Dominican Republic got underway immediately. It was timed with the appearance of a book purportedly written by Mr. Galindez. This book was a virtual encyclopedia of every propaganda lie, accusation and innuendo formulated by those people against the Dominican Republic for the previous 25 years. And, naturally, Mr. Galindez—vanished—converted that rehash of aging investment into an up-to-date propaganda barrage. Various groups in New York managed to keep the program going by a series of sensational charges that culminated in the headline-grabbing accusation that Mr. Galindez had been inserted in the boiler of a Dominican ship.

Well, a number of facts about Mr. Galindez later came to light showing that he was involved in a great deal more undercover activity than that related to the Dominican Republic. In any case, the story soon died out. But it was not forgotten by the enemy, and we knew it.

Then last December an American copilot named Gerald Lester Murphy turned up missing in the Dominican Republic. Investigation by Dominican and American authorities got under way immediately. Suspicion pointed to a fellow employee of the same local airline where Murphy worked, and that man was arrested. Some days later he hanged himself in his cell, leaving a note confessing to the murder of Gerald Murphy. The story was printed, of course, in the local press. That issue immediately caused a great deal of excitement. We knew that a new campaign—or rather a renewal of the former one—would get underway just as soon as they could get ready. Mr. Betancourt flew to New York where he conferred with the veterans of "Operation Galindez."

Well, they pipelined it to the press and to the Congress. The story broke first in Life magazine, and then was picked up by Representative PORTER of Oregon. You have probably read or heard about it. Galindez was removed from the boiler and put aboard a plane flown by Murphy. But actually the new assault wasn't as dangerous as we had expected. It was too hastily done, far too flimsy. A score of representatives in the House took it apart and showed it for the crude manufacture that it was. Moreover, unbiased investigators—both private and official—had long since pretty well established the facts up to almost minutes before Galindez disappeared. They can assure you that no matter how Galindez vanished, it wasn't into Murphy's plane.

Now, naturally when someone starts beating you over the head, you want to find out what kind of a club he's using. Maybe you can get one bigger. That's what we did. After the uproar of the Galindez case died down, we continued to study it. That wasn't the first time, you know—they did the same thing in 1947 and 1949 in coordination with armed invasions—nor would it be the last.

There wasn't much to go on at first; just a lot of intriguing facts. For instance, the police searched Galindez's apartment twice, and found nothing directing suspicion to the Dominican Republic. Then, the third time, there was a note lying right on top of his desk. The note, addressed to the police and signed ostensibly by Galindez, said that

if he was missing to look for his kidnappers in the Dominican Republic. Then there was the million dollars Galindez had allegedly collected for the Basque Government in exile in Paris. The fact that half of the money is still missing is, of course, interesting. And almost equally so is the fact that not a single Basque in the United States has ever reported donating a nickel to the so-called government in exile. That is according to the records of the United States Bureau of Internal Revenue.

But most of all we were interested in the smooth coordination of the operation. A man vanishes, and the campaign got under way with machinelike precision, every charge perfectly timed and placed. Even apart from the fact that a human life was the newspeg for this offensive, it was evident that there was a tremendous organization behind it.

Well, we followed a trail that led us to Mexico City, to Havana, and Miami—way south to Santiago de Chile—then back to Mexico City, and finally up to New York.

We soon found that Mr. Jesus Galindez did not write that famous book. He rewrote it. It was based on material long before prepared by a Dominican exile named Juan Isidro Grullon. That material was expanded and revised as a joint project by several other Dominican exiles—particularly one named Enrique C. Henriquez—and by several Spanish Republican exiles, members of a group calling itself "the Democratic Front of American and Spanish Exiles."

The project began about 1949 in Mexico City. Galindez was approached late in 1951 and was offered a large unspecified sum of money for the use of his name. He was also required to rewrite the material in his own peculiarly tortuous style. Galindez agreed, and the following year secured permission from Columbia University to present the work as his doctoral dissertation.

During this time Galindez talked a great deal about the book and about Trujillo. His activities, however, centered about the New York Latin American colony, and little seems to have been accomplished until 1955.

His closest non-Latin American associate during this time was a writer named Frank Tannenbaum who was induced to believe that he was responsible for "persuading" Galindez to publish his thesis. It was no coincidence that the publishing house selected was the Editorial del Pacifico—which had also published some of Tannenbaum's books. Editorial del Pacifico had long since been so designated.

A check in Santiago—something that nobody else for some mysterious reason had done—produced some interesting facts. First, the publishing house is probably the major print shop in this hemisphere for Soviet propaganda. Secondly, it is run by such party liners as Alfonso Naranjo who was directly in charge of the book's publication. And lastly, we discovered an interesting crew associated with that publishing house, or active in publicizing the book throughout Latin America. There was Pablo Neruda, Stalinist intellectual wheelhorse. There were several Guatemalans like Luis Cardosa y Aragon and Manuel Galich. But biggest star of all was the expresident of Guatemala, Juan Jose Arevalo. Mr. Arevalo, if you will remember, is the man who launched an American nation down the road to complete Sovietization, a journey that was only interrupted by the armed invasion of Guatemala by the forces of Carlos Castillo Armas in 1954.

But it was in Mexico City that "Operation Galindez," per se, seems to have been most developed. It was there that the Spanish Republican brain trust was most openly active on the project. It was there they published a condensation of the book at least 2 years prior to the official publication. And it was there—for reasons which are still not clear—we were contacted by an agent of Galindez. He offered to "sell" the book to us for $25,000. It was, of course, not his to sell. Was Galindez seriously considering double-crossing his sponsors? Or was there something else behind it? We don't know.

Until the spring of 1954 Betancourt was in contact with the Operation Galindez task force in Mexico from his headquarters in Costa Rica. He was forced to leave them when the Nicaraguan Government named him as the sponsor of the first of a series of assassination attempts against the now late President Somoza. He went to Puerto Rico. His forced move to a new base of operations actually worked to his benefit; it put him in closer contact with New York pseudo-liberals, and enabled him to set the stage for the events that exploded in March 1956.

Well, there is a great deal more to the background of those twin propaganda assaults—much that canont be brought out at this time. A comprehensive report has been turned over to a unit of the United States Government that is also interested in communism in the Caribbean and the manner in which it is penetrating into the United States itself. You will be hearing more about it.

Meanwhile, investigation has returned to New York and what happened to Mr. Galindez after about 10:15 p. m. on the evening of March 12, 1956. The answer is in Manhattan's Spanish-speaking colony, and I have a feeling the final solution is not far distant.

To us, the explanation of Operation Galindez-Murphy is not only important to give the lie to the smear campaign against our country. It will—it should—expose once and for all Communist tactics in the Caribbean—and in the United States. When we have done this, that tremendous barrage of propaganda against us will have only served to finally alert the American people to a threat that is really posed at them. You—not Generalissimo Trujillo and the Dominican Republic—are the ultimate target of international communism.

Newsmen and Security Leaks

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of July 16, 1957:

NEWSMEN AND SECURITY LEAKS

A great stir is being caused among the newspaper profession and in Congress by the report of the Commission on Government security. The report, among other things, proposes to make it a crime for newsmen to reveal secret security information, a crime punishable by a maximum penalty of 5 years in prison and a $10,000 fine.

It is charged that some reporters have been guilty of stealing secret information, and it is known that, during World War II, in a few instances, security information of a vital nature was willingly published, to the harm of American fighting men.

We hold no truck with those who believe that newsmen are immune from accepting a responsibility in the field of security. We do not think there is any justification for allowing newsmen to get whatever information they can, and publish it, and then blame the Defense Department or military security officials for not being able to keep them from obtaining the information.

The freedom of the press, as we know it in the United States, is a freedom which entails a responsibility. It will last only as long as those who enjoy it and control the press exercise at least reasonable judgment and accept the responsibility that goes with the great power of the press.

Therefore, while we will fight to the last for the established principle that a newsman cannot be forced to reveal the source of his news, we believe that if he is guilty of revealing security information to the detriment of this Government, information which he obtained under shady circumstances, he should be made to accept the responsibility.

In these days, security is a vital concern of every American and no group of citizens can be given an unlimited right to sneak, steal or obtain whatever information they can, and publish it in the newspaper. Therefore, some sort of control over security and some law enforcing the control is necessary.

Further Record of Arab Border Violence and Robbery

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following listing of Arab incursions upon the Israeli border, as recorded in the May 20, 1957, issue of Israel Digest:

FURTHER RECORD OF ARAB BORDER VIOLENCE AND ROBBERY

In spite of the presence of UNEF on the Gaza border, in spite of the existence of armistice agreements with Syria and other Arab States, the daily border violations, infiltrations, robberies, and other incursions continue, sometimes at the rate of three a day.

April 27: The guards of Gvulot opened fire on infiltrators from the Gaza strip and caused them to flee.

Four infiltrators from the Gaza strip stole 17 irrigation pipes from the village of Kissufim. The tracks of the four led into the strip in the direction of Dir el-Balah.

April 28: Five Syrian soldiers opened rifle and machinegun fire on Kfar Szold. There was an exchange of fire but no casualties were reported.

April 29: A Syrian outpost opened rifle fire on Ashmurah. The fire was not returned.

The guards of Gvulot caused four infiltrators to flee. They had tried to enter the settlement's area.

An Israel patrol chased off two infiltrators who entered with their herds into Israel territory past the barrier at Erez.

The guards at Mivtachim chased off infiltrators who attempted to penetrate into the settlement. The raiders fled to the Gaza strip.

April 30: Rifle shots were fired on the bridge of Benot Ya'acov from Syrian territory. Members of the settlement of Mishmar HaYarden were specifically attacked. There were no casualties.

May 2: The guards of Nir Yitzhak chased off infiltrators from the Gaza strip who tried to penetrate into their settlement.

May 3. The guards of Gvulot chased off three infiltrators from the Gaza strip who had penetrated into their settlement.

May 4: A Syrian post opened automatic fire on fishing boats which were about 150 kilometers from the northeast shore of the Sea of Galilee. Four of the fishermen were wounded. An Israel police patrol boat which came in to evacuate the wounded, was itself attacked by fire for about 5 minutes.

Two hundred irrigation pipes were stolen from the village of Beit Re'im. The foot tracks of nine thieves led to the Gaza strip.

Cattle was stolen from the villages of Tkumah and Moshav Shovalim. The tracks of two men led to the Gaza strip.

May 8: An Israel patrol chased off three infiltrators from a settlement near Ein Hashloshim. Foot tracks led to the Gaza strip.

May 10: Irrigation pipes were stolen from the village of Kissufim. The foot tracks of five thieves led to the Gaza strip.

May 11: An Israeli guard chased off 20 armed Jordanians who penetrated into Israel territory in the Gilboa, south of Hephtzi-Bah.

May 12: Ten armed Jordanians who infiltrated into Israel territory south of Zichalg opened fire on an Israel guard. The guard returned the fire and chased off the marauders. The guard was then again attacked by automatic fire from across the Jordan frontier. The shooting continued for 3 hours.

Max Abelman's 70th Birthday Party

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House, I include with these remarks the following transcript of the proceedings had upon the occasion of the 70th birthday of Brooklyn's ambassador of good will, Max Abelman

SEVENTIETH BIRTHDAY PARTY FOR MAX ABELMAN

Dr. LASKY. Friends, it is our great pleasure to welcome you to our home to help us honor Max Abelman, Brooklyn's ambassador of good will, on the occasion of his 70th birthday. We are all delighted to greet the distinguished members of the Philippines to the United Nations headquarters. The Honorable and Mas. Abe Stark, president of the City Council, City of New York, are also present to help us honor Max Abelman.

We hope that you will all enjoy to the utmost the cordiality and good fellowship that enriches our home on this happy occasion. Shortly we hope to be able to have a few words from each of the dignitaries present on behalf of Max Abelman's 70th birthday anniversary. Mr. Abe Stark, president of the City Council of New York City, would like to say a few words at this moment. Mr. Stark.

Mr. STARK. Dr. Lasky, it's awfully good being here with you at your home, with your lovely wife and your many friends, celebrating the 70th anniversary of our very dear friend, Max Abelman. Seventy years sounds like a long amount of years. Well, that might have been some years ago but 70 years ago today, due to the study of geriatrics by doctors such as Dr. Lasky and others, we've overcome that. It's not old any more, it's young.

And here's a man that really deserves to be young for the things he has done all his life. I've known Mr. Max Abelman for a period of at least 30 years, always actively interested in every worthwhile cause on behalf of humanity, one of the inspirations and founders of the Federation of Jewish Philanthropies, has done much on behalf of the Jewish Hospital of Brooklyn, and so many other things that I can go on enumerating.

However, I'm happy to be able to be here a little while to spend at the home of Dr. Lasky and Mrs. Mortimer I. Lasky. And I want to wish you, Dr. Lasky, and your dear wife, the very best of everything because I know how fine a gesture you have done. Nothing that could have made Max Abelman happier than having all his dear friends here with you this afternoon. God bless you.

Dr. LASKY. Thank you; that's wonderful.

Mr. ABELMAN. Doctor and Mrs. Lasky, His Excellency Felixberto Serrano, my dear friends:

Now after being joshed and kidded today at the party here by "70 years young," and I'll tell you what kept me young all my life. I always said to myself, and I read a poem and I repeat it wherever I go: "I shall go through this world but once. Any kindness or good that I can do, let me do it now. I may not pass this way again."

And I've been doing that all my life—money was not my goal in life. I had money. I lost a great deal of money.. I lost—more than money, my companion of my life. I'll say this, that today the Laskys have made me very happy.

I didn't want to have an extensive party; any number of people wanted to give me a 70th anniversary dinner and what not, but the Laskys are so sweet. When we went to the United Nations where we were invited by His Excellency Ambassador Serrano, permanent delegate to the United Nations, we enjoyed it so much and we felt that the ties of the Philippines and America, the United States, are closer. And I hope that it will be continued as life goes on that we shall be real and great friends to the Philippines. They are warm people, they're sincere people, and I want to thank them, and also through myself thank them for the Laskys who are very happy to have them with us. And I'm very happy to be with you. Thank you very much for being here.

Before I call on Mr. Nick Young, my friend, I want to pay official thanks and tribute to a man who had to leave, who has been working with me for many years in trying to help make possible for 600 doctors in America to practice. I have reference to the Honorable Abe Stark, the president of the city council. He and I worked shoulder to shoulder and we've accomplished much.

I've also tried to help the Philippines, but now I'd like to see and I've written to His Excellency, the President of the Philippines, the Honorable Ramon Magsaysay, asking him to try and establish a course of nursing in the Philippines. And I'm going to Washington on some other mission. I'd like to say—we have a shortage of doctors and nurses in this country, and not only a shortage of doctors; we have a shortage of medical schools. And I should like to see our Government establish medical schools in larger important cities wherever there are veteran hospitals in the country.

And I hope that this will be accomplished.

I notice in the room there's another gentleman, also a dear friend of mine. He—Nick Yang. He's known by the Filipinos as the executive of the Filipino community. I wonder if my dear friend, Nick, would say a word.

Mr. YANG. Dr. Lasky, Mrs. Lasky, His Excellency the Ambassador, fellow Americans and my Filipino compatriots. When Max asked me to say a few words, I was laughing because I realized the funny position that I'm going to put you in. I said—I used the word "you" advisedly for the simple reason that you are not receiving a newcomer in New York. I've been here a good number of years. As a matter of fact I live in Brooklyn. I have a family of my own, and those in Brooklyn who don't know my nation of origin, I happen to have the distinction of being the only Chinaman in Brooklyn that sells Israel bonds.

The truth of the matter, however, I am a Filipino by national origin. I'm really very happy as the chairman of the Filipino Community of Greater New York and New Jersey to be able to participate, and together with His Excellency, our Ambassador to the United Nations, to express my personal appreciation in behalf of our community for the great humanitarian work and activities that Max has been doing in behalf of all people—besides the fact that he has also seen fit to help many Filipino doctors.

I believe that Max would be bothered, especially by Nick Yang, so I don't know if he's doing himself a favor by having me around. We happen to have launched a counterpart of the Philippine Science Foundation that was enacted in the Philippines, I think in 1952, if I am not mistaken. And it is now known as the Filipino-American—or American-Filipino Science Foundation. The leaders of this group are composed of many prominent businessmen, scientists, and many other Americans of all walks of life. And the president of this group is our other distinguished diplomat, Gen. Carlos P. Romulo, also Max's friend.

I'm not trying to lose sight of the fact that this is a celebration of Max's birthday. I'm only trying to show to you the vital factor that the Filipino life and Filipino achievements and contributions has been and will continue to be to the American-Filipino relationship. Max, to us, is not merely a friend. I'm happy, of course, to see that Max has reached half way of his life, because I expect him to live as long as 140.

So, joining our people in thanking—in saying thank you very, very much to Dr. and Mrs. Lasky and to many—to all of you folks for receiving us with such beautiful hospitality. And to Max, of course, with the best wishes I'm sure of all Filipinos, both here and in the Philippines, that may he live so long that we would forget that at one time we celebrated his 70th birthday. Thank you very much.

Mr. ABELMAN. Thank you, Nick.

Surrogate Di Falco Urges Nationwide Legislation for Protection of Public

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. FARBSTEIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Surrogate S. Samuel Di Falco, of New York, given at the National Conference of the American Society of Appraisers:

Mr. Chairman, ladies, and gentlemen, I am indeed privileged to be your guest speaker.

Usually, I am obliged to sit quietly and listen to appraisers—reciting the value of property, real or personal—the basis for their appraisal and justifying the conclusion they have reached. Presiding over a trial, I am a so-called captive audience. Tonight, however, I am getting even with all you appraisers—because tonight you are my captive audience.

Bearing in mind the story of the young boy who, when asked: "What different forms of punishment we have in this country" replied: "In the United States many people are put to death annually by elocution." I will try, therefore, to have my beginning and my conclusion placed not too far apart.

You know, great men differ on different subjects—lawyers differ about the law, judges differ about the interpretation of statutes and jurors on quality of the testimony, but of them all, the greatest differences exist in the nature and amount of appraisals which are offered in courtrooms. I know they are offered in the well-intended spirit of sincere and honest belief—yet they are misinterpreted—misunderstood and confusing to the layman. The vast variances in the value of property can sometimes pose a serious problem. One appraiser with a different background may see a far greater extrinsic or intrinsic value in an object than does another. This is especially so in the appraising of antiques, objects of art, real estate rather than in commercial and industrial appraisals.

I respect your talent and ability. You men have studied, done research, and intensively and minutely analyzed many varied shapes, forms, and types of properties. You have developed a highly technical and skillful knowledge on a multitude of subjects. Your appraisals in my courtrooms, in the Supreme Court, and now in the surrogate's court have dealt with real estate, jewelry, antiques, the arts and even the value of a racehorse. I might add that, where there was only one appraisal offered—and no jury—I have had to study the art of appraising so that I could make up my mind and fix my own value in my decision, naturally guided by your testimony.

While talking about the courts and testimony, may I suggest to you appraisers, who testify as experts in your respective fields, to bear in mind a very important factor: The judges and jury are not technical experts on values. Whenever you testify before a judge or a jury, it is not only for you to know your subject matter, but it is equally as important that you testify in such a manner so that the explanations and details whereby you arrive at your opinion will be made in simple language—and be clear, cogent, and understandable to the judge and jury. I say this because, in my experience as a practicing lawyer and now as a trial judge, I have seen top experts in their respective fields fail to communicate their superior knowledge to the judge or jury because of persistant use of technical language not clear to either the judge or the jury.

So I urge you appraisers, when you testify, do so in such a manner so that any person can readily understand and appreciate each and every part of your testimony.

You appraisers are to be commended for policing your own industry. You have cleaned out the charlatans, the fakers, the imposters, the unqualified and inexperienced. You have sought to maintain a high degree of responsibility and integrity both in your conduct and in the nature and quality of your testimony in court. The difference between the dispensing of justice and committing an irreparable injustice is oftentimes dependent only upon the quality and nature of an appraiser's testimony. The court draws heavily upon your experience, knowledge, and testimony for guidance and direction on the facts concerning appraisals and values. If you mislead the court, you have ill reflected not only upon yourself and your organization but upon the court and our entire system of jurisprudence as well.

Your responsibility to society is a grave and serious one—to be fulfilled in the same lofty traditions of the great curators upon whose word royalty invested their fortunes and staked the futures of their empires. You must educate the public and the businessman to depend on your opinion and advice. I might suggest that—for the protection of the honest appraisers, and for the prevention of any possible injustice—your organization should strive to obtain legislation in every State in the Union whereby those seeking to hold themselves out as appraisers will be only those who have been properly tested, apprenticed, experienced, and then licensed. Of course, men who have been in this industry with the wide variety of experience and background which your members have, should not only be automatically licensed, but should serve as the examiners of the potential applicant for appraiser. As a matter of fact, I strongly feel that an appraiser should not be privileged to be called such, or even be permitted to testify in any court proceeding as an expert, unless and until he has been thoroughly and properly tested, qualified, and licensed by the State to practice the profession of an appraiser.

Antiques and fine art, because of widespread travel today, have come to the fore as commodities. The word of the appraiser may be the difference between a man investing his fortune fortuitously, or buying a "lemon." It seems to me that with such responsibility resting on his shoulder, the appraiser should be a man in whom the basic elements of background, experience, and integrity have been examined, passed upon, approved, and licensed. What recourse does the innocent public have today against an inexperienced appraiser who may have caused irreparable harm? Absolutely nothing, or at most perhaps some insignificant lawsuit which might result in a noncollectible judgment. However, if a man were licensed, then action could be taken to recover in a proceeding before the licensing agency which could then, if proven guilty, bar an unscrupulous appraiser from practicing his profession or in the alternative order restitution to an aggrieved person.

I find that I must advocate this course of conduct concerning appraisers because of my newly assumed duties as surrogate wherein the amount of legacy, the amount of property sale price, the amount of transfer tax, inheritance tax, commissions and fees depend mainly upon the opinion of the appraiser.

Unfortunately anyone who so decides can hold himself out to be an appraiser. So of what value is the best law, the best judges, or the best legal procedure when all that can be wiped out by the well-intended testimony of an inept or unqualified appraiser in court.

I would be remiss in my duty as Surrogate if I did not tell you that I am most seriously concerned with the degree and nature of the testimony of the appraiser.

Whatever protective action you pursue, whatever high standards you establish, whatever close security is adopted for appraisers will be most welcome to the courts, will relieve the conscience of the judges and jury, and will promote better justice and the best interests of the public.

At any rate I want to conclude by saying that the appraiser has emerged to the forefront and has contributed as an unchallenged expert in his field comparable to the scientific and technical contributions rendered by the doctor, lawyer, dentist, engineer, insurance or real-estate consultant.

That, ladies and gentlemen, is my appraisal of the appraisers.

Thank you.

Memorandum by the 35th Congress of the Slovak League of America

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following memorandum by the 35th congress of the Slovak League of America, Cleveland, Ohio, May 28, 1957:

MEMORANDUM TO THE PRESIDENT OF THE UNITED STATES OF AMERICA, THE HONORABLE SECRETARY OF STATE OF THE UNITED STATES OF AMERICA, AND THE HONORABLE AMBASSADOR OF THE UNITED STATES OF AMERICA TO THE UNITED NATIONS BY THE THIRTY-FIFTH CONGRESS OF THE SLOVAK LEAGUE OF AMERICA, CLEVELAND, OHIO, MAY 28, 1957

Greetings:

Solemnly assembled in the regular 35th congress on the occasion of the golden jubilee of the founding of the Slovak League of America here in the great Slovak center of Cleveland, Ohio, the officers and delegates of the Slovak League of America hereby declare that:

1. We rededicate ourselves to the preservation of the basic moral principles set forth in the Declaration of Independence, the Constitution, and the Bill of Rights of the United States of America.

2. We condemn all forms of tyranny and totalitarian political systems, especially repudiating the atheistic philosophy of materialistic communism as the most ruthless conspiracy against free humanity.

3. We commend our Government for every effort expended to resist and to resolutely counteract the aggressive policies of Soviet imperialism with all the spiritual and material forces at its command and we heartily endorse every action of our Government to expose, demobilize, and outlaw the evil forces of brutal communism in the United States of America, these forces which are dedicated to the destruction of our country and the western civilization.

4. We respectfully request that—in accordance with the basic principle that every political formation and form of government imposed on any people by the force of an alien power should be refused recognition—our Government should no longer recognize the Czecho-Communist regime in Slovakia, the land of our ancestors.

5. We respectfully submit that a reexamination be undertaken by the United States of America of the question of the validity of the Slovak independent nation, which, we hasten to recall, was recognized by 27 countries of the family of nations, large and small, but, unfortunately, not by the United States of America, with whose support Slovakia would continue today and for many future years as a great force for peace in the powder keg of Europe.

6. We strongly denounce the intervention of the Union of Soviet Socialist Republics in the internal affairs of other countries, particularly in the affairs of the land of our fathers, Slovakia, and we urge that our Government insist on the withdrawal of all Soviet forces from non-Soviet territories, including Slovakia, as rapidly and as expeditiously as will be in keeping with the best interest of the United States of America.

7. As stated so often in the past, we, individually and as representatives of the 300,000 organized Americans of Slovak descent—having rejoiced on so many occasions when the various nations of the world attained their freedom and independence—submit that in all justice and fairness the nation we have descended from should likewise enjoy the blessings of true freedom and independence.

In support of the above outlined principles, all of which are in keeping with the basic fundamental truths of our American way of life, we have prepared and make available the research and historic proof which justify our legitimate claims and aspirations.

Therefore, on the solemn occasion of our golden jubilee, as representatives of the vast majority of the Slovak ethnic group, we deem it our moral right and obligation to respectfully request, seek, and, if the need arises, to insist that our Government through its executive branch, in its various sections and divisions, not excluding our able ambassador to the United Nations, take all legitimate avenues of action in keeping with the sacred moral law of God and the law of nations to make certain that a true and lasting independent Slovakia may again take its rightful place in the community of nations which seek to preserve peace and promulgate the brotherhood of man and the fatherhood of God.

In pursuance of these privileges and duties which we honorably accept and carry out, we seek, Mr. President, Mr. Secretary, and Mr. Ambassador, your personal as well as official support.

As loyal sons and daughters of this great Republic, we beseech God's blessings upon you and your efforts to bring about His greater honor and glory, and we convey to each of you our sincerest and warmest personal regards.

In witness whereof, we have unanimously adopted the above sentiments at this historic 35th congress at Cleveland, Ohio, on May 26, 1957, the 50th anniversary of the first enunciation of these principles by our predecessors of happy memory, our founding fathers, and the organizers of the Slovak League of America.

The memorandum committee of the Slovak League:

JOHN J. SIROTNAK,
Pennsylvania
JOHN J. LESKOVJANSKY,
Ohio
EDWARD J. BEHUNCIK,
Connecticut
JOHN B. HASSAY, *Ohio*
ELIZABETH ANDREJKO,
Pennsylvania
PHILIP A. HROBAK,
President, the Slovak League of America.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Algerian Question

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of recent editorials and two articles commenting on the Algerian question which has been raised in the Senate. The volume and intensity of newspaper commentary on this problem indicate that the Algerian crisis has become a matter of more general public concern. These editorials and articles represent a selection from the many recent ones which comment on the position I took, and which are in general agreement that this matter is of vital concern to the American people.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 14, 1957]

SOLOMON WANTED

Just to show that no one can win, Radio Moscow has managed to blast both Senator KENNEDY for his recent speech advocating American support of Algerian independence, and Secretary Dulles for disagreeing with it. The Communists as usual are busy working both sides of the street in an effort to capitalize on the controversy stirred by Mr. KENNEDY's remarks. The last thing they really want is a solution to the harrowing dilemma of France's relations with Algeria.

Whether what Senator KENNEDY has proposed would facilitate a solution is the great question. This newspaper respects his motives as well as much of his analysis of the French record. Too little and too late is the unhappy epitaph for the proposals of reform, and there are altogether too many parallels with the Fernch performance in Indochina. The demonstrable effects of the Algerian situation on NATO and the free world make it far more than a concern of France alone. The United States unquestionably does have a deep interest in retaining the sympathy of African nationalism and in preventing the capture of this nationalism by the Communists and fanatics.

Yet it is easy to oversimplify the problem. The issue in Algeria is not merely one of independence versus colonialism. For one thing, a not inconsiderable part of Algeria's population is European with roots going back a century or more, and it is violently opposed to the sort of independence that might jeopardize its position. For another thing, the waves of independence sometimes wash toward shoals. There is no certainty that an Algeria abruptly cast adrift would be a boon to the Moslem population which is in need of understanding and help. The hope of our fragmented world is more recognition of interdependence; and, slogans apart, the question in Algeria is as much one of genuinely equal rights as of sovereignty.

There is the further consideration that France herself must make the decision. Many leaders are anguishing for a solution that would end the drain on French blood and francs. The Mendes-France, Faure, and Mollet governments all had broad reforms in mind. The trouble is that no government has had the strength to carry through a program against the combined resistance of the conservative diehards at home and the colons abroad, and the new government of M. Bourges-Maunoury seems scarcely less paralyzed.

Possibly, in the end, radical surgery will be the only course. It will be a long time, however, before French opinion will agree to this, for Algeria is far nearer and dearer to the hearts of Frenchmen than was Indochina. American efforts at this point might better be channelized away from public resolutions into vigorous encouragement for practical reforms that still might prove mutually acceptable to Algeria and France.

For example, M. Mollet often talked of a cantonal system for Algeria that would permit diverse groups to live side by side with equal rights. It remains for a French government to implement such a program. Paris maintains that Algeria is an integral part of Metropolitan France, and that Algerians are French citizens with Frenchmen's rights. It remains for France to face up to this concept by proposing an equal basis for representation in the French Assembly, even though this would mean a large Algerian bloc. France could end the unrealistic insistense on pacification as a prerequisite to negotiation, as Mr. KENNEDY has suggested, and could repudiate the notion that it is impossible to talk with rebels. As a further token of conciliation she could replace the stern Resident Minister, M. Lacoste, who is the symbol of bloody measures that promote bloody reprisals.

The United States could encourage such steps without directly affronting the Paris government. Most of all, it could encourage renewed cooperation with Premier Bourguiba, of Tunisia, and the Sultan of Morocco, who are the best friends of the West in promoting a moderate settlement that would respect French as well as Algerian rights. It may be that such steps would come too late, but they are at least worth trying. It is premature to conclude that the people and Government of France who have offered so much to the world and who have within days faced up to the great challenge of Euratom and the common market, are incapable of applying similar vision to Algeria.

[From the Berkshire Eagle, Pittsfield, Mass., of July 6, 1957]

SENATOR KENNEDY ON ALGERIA

In his forceful declaration in favor of the Algerian nationalists, Senator JOHN F. KENNEDY raised an issue that the western allies have consistently ignored, and to their peril.

By his speech on the Senate floor and the accompanying resolution, Senator KENNEDY has come out for international negotiation leading to Algerian independence. In so doing he has placed himself flatly against the administration's policy of support for the French Government against the insurgents.

That policy is faulty, he says, because it merely marks time while allowing anti-colonial pressure to build up in north Africa. It strips NATO "to the bone" by requiring 400,000 French troops in Algeria. It damages our prestige with anti-imperialist countries throughout the world. It weakens the influence of the Eisenhower doctrine in the Middle East. It lends ammunition to the cause of anti-Western propaganda in Asia and the Middle East. And it drains the power and wealth of one of our most important allies.

The points strike us as well taken, even though they do not seem so to Secretary Dulles. The State Department's consistent view on the matter has been that Algeria is an internal French problem which other countries should not be concerned with. The United States has long abetted the French in their refusal to have the dispute aired in the United Nations.

The policy has seemed necessary to maintain a cooperative relationship with the French Government. As a price of cooperation, we have consented to a French colonial policy that not only runs counter to our own avowed principles but weakens our stand for freedom from Soviet domination in other parts of the globe.

Granted that the special political, military and economic intermingling of France and Algeria makes this something less than an outright case of French imperialism, it still seems to be another case where the United States has much to gain and little to lose by espousing the principle of self-rule for young countries before they gain it themselves.

Secretary Dulles perhaps is too encumbered by pledges and compromises to put the issue in its true perspective. But Senator KENNEDY can afford to take a stand on this intricate and controversial Algerian problem, and he has done it well.

[From the Pilot, Boston, Mass., of July 13, 1957]

THE PROUD AND THE COMPLEX

Algeria was once a word that meant no more to most people than a far-away, exotic land of turrets and veils and Arab mystery. Today it means trouble, violence, bloodshed and grave international distress. Senator KENNEDY last week entered this strange world with strong words questioning American policy on Algeria and at least by implication suggesting that France reevaluate its present strategy there. It was a forthright and deliberate speech and the Senator, we can be sure, was aware of the storm that would follow upon its delivery.

The President and the Secretary of State in public statements quite understandably soft-pedaled the whole business, but it is likely that they will give the Senator's suggestions some serious consideration. The issue which centers about the matter of Algerian independence is full of complexity. It is not simply a question of French intransigence or one side, nor of nationalistic local autonomy on the other. There are many issues involved which are so mutually conflicting that one almost despairs of a solution without large compromises all around. Senator KENNEDY plainly understands all this but he argues forcefully that the present hands-off attitude of our own country is costing us dearly in the world opinion of the newer peoples. These nations just now moving toward national self-determination, and often prematurely, should feel friendly toward America with its long record of anti-colonialism but they are distressed by our policy of silence and inaction on Algeria.

It is convenient of course to say that this is primarily a French question and that it

can be best solved by France, so long familiar with north African complexities as in Tunisia and Morocco. While French opinion is surely not unanimous on the wisdom of present French policy in Africa, President Coty has just announced that full Algerian independence will never be granted. Certainly no solution will be acceptable that does not give consideration to the Communist influence in Algeria, the unreliable character of the rebels and the presence of more than a million Europeans there. There just is no easy solution for Algeria, as indeed everyone admits.

At the same time Senator KENNEDY's basic concern is a legitimate one and also one to which Americans must give immediate attention. Without judging the French position, we know that it is interpreted in Asia and Africa as an imperialistic one, since there Algerian rebel action is seen as totally legitimate and French retaliation as fully vindicative and repressive. This is a ridiculous over-simplification but like all such it sells easily among simple people and it allies us with those who are classified as the enemies of freedom. This is actually both unhappy and unnecessary.

We can sympathize with the incredible difficulties facing the French policymakers in Algeria and we can also show an understanding of the legitimate aspirations of the Algerians for self-determination. Up until now we have emphasized the first at the expense of the second and we have as a consequence lost the confidence of those vast areas of the world in ferment for the future. We are judged as a people ready to sacrifice our traditional principles rather than embarrass our allies, as opportunists shifting to suit the wind in the changing world.

Senator KENNEDY does well to call this to the attention of America and the administration, for we neglect it at a very real peril indeed. It is appropriate too that true friends of France make the point plain for it is one that should not be misunderstood. None of us meanwhile forgets that in modern times it is to France that we may look in the Western World for the most resounding declaration of the ideals of free men and free nations.

[From the Boston Traveler of July 8, 1957]

NO. 1 CAUSE: KENNEDY TAKES UP ARMS FOR ALGERIA

(By Peter Edson)

WASHINGTON.—Senator JOHN FITZGERALD KENNEDY of Massachusetts has seized on the Algerian struggle for independence from France as his No. 1 cause.

Later on, he said in what he obviously intended to be a major foreign policy speech in the Senate, he will take up the cause of more aid for Poland.

The Algerian revolution has been going on for the better part of 10 years. It is a fight about which most Americans know little and care less. Vaguely, there is some knowledge that the United States maintains an air base in Algiers—or some place in north Africa. But that's about all.

The official American policy under both the Truman and Eisenhower administrations has encouraged this indifference. The line has been that Algiers was a part of France and therefore trouble there was an internal matter for the French to settle.

But now along comes the junior Senator from Massachusetts to demand that the United States change this policy. Senator KENNEDY even introduced a resolution authorizing the President and Secretary of State to achieve a solution which will recognize the independent personality of Algeria and establish a basis for a settlement interdependent with France.

This marks Senator KENNEDY as a courageous, original thinker on foreign policy. It also throws a tough challenge to President Eisenhower and Secretary Dulles. It is not an endorsement of bipartisan policy.

The Senator likewise has a few criticisms for other bigwigs in the Republican administration for their stands.

He criticizes Ambassador Henry Cabot Lodge for having opposed United Nations' consideration of the Algerian question three times in the past.

He criticizes Douglas Dillon, former United States Ambassador to France, now Under Secretary of State, for having declared, "The United States stands solemnly behind France in her search for a liberal, equitable solution of the problems in Algeria."

And he criticizes Vice President NIXON for having "failed even to mention this sensitive area in his report," on his special mission to Africa this year. NIXON was urged in both Tunisia and Libya to help stop the fighting in Algeria.

In May the Ambassadors from all the Arab countries represented in Washington called on Secretary Dulles. They asked that the United States aid in solving the Algerian crisis and stop supplying arms to France for use in Africa.

This appeal was rejected on the same old grounds. But now Senator KENNEDY has revived the issue in more embarrassing form.

The effects of this Kennedy speech will be far reaching. It will be hailed and made much of in the Arab world.

Just as certainly, it will be condemned in France. Having lost Indochina, Tunisia, and Morocco, France is desperately trying to hold on to Algeria. One of the principal French defenses is that the rights of a million Europeans in Algeria cannot be sacrificed. Eight million Moslems look at it otherwise.

"The essential first step," says KENNEDY, "is the independence of Algeria along the lines of Tunisia and Morocco.

"Unfortunately," he adds later, "the Tunisians and Moroccans also know they owe little, if anything, to the United States for their new-found freedom."

Again he says, "No matter how complex the problems posed by the Algerian issue may be, the record of the United States in this case is, as elsewhere, a retreat from the principles on independence and anticolonialism."

[From the Christian Science Monitor of July 15, 1957]

SHOWDOWN IN ALGERIA?—AN INTIMATE MESSAGE FROM THE UNITED NATIONS

(By Mary Hornaday)

NEW YORK.—The milkman in Omaha may not at this moment be too interested in the issue of independence for Algeria raised in the United States Senate by the young Democratic Senator from Massachusetts, JOHN F. KENNEDY, but if he understands the "whys" and the "wherefores" he may become deeply interested.

If you were to sit in the press club of that tall, glass building beside the East River and hear news correspondents from all over the world mulling over the Senator's pronouncement that he is about to begin a lengthy examination of the role of the United States in the struggle that has kept North Africa in turmoil for many months, you would see how important this issue is destined to become.

Outside of the East-West struggle on disarmament, Algeria is the most crucial political issue on the United Nations docket—which is the reason all eyes here have turned inquiringly and interestedly on the Massachusetts Senator's move.

No one who sat through the tumultuous session of the U. N. Political Committee last February when it considered the Algerian issue can doubt that there is a deep rift in the world today between those nations which believe that international concern with Algeria, for 100 years an integral part of France, is interfering with French domestic affairs and those which see France as standing in the way of U. N.-guaranteed self-determination of peoples.

The Senator's aim, as seen here, is to force the formulation of a firm American policy that will put this powerful country on the independence side of this so-called colonialism issue.

The Algerian story at the U. N. goes back to the winter of 1955 when the General Assembly first decided to debate the question and then dropped the matter after the French delegation had walked out.

At that time the United States joined leading European powers and members of the British Commonwealth in opposing U. N. consideration of the problem, which was put temporarily on the agenda by just one vote.

With bloodshed continuing and France trying to keep order with approximately 400,000 troops, it was natural that the so-called Bandung nations would not let the issue drop. They did not even wait for the next General Assembly but tried unsuccessfully in June 1956 to get the Security Council to take up the question. The United States voted with the majority not to consider it.

By the time the 1956 Assembly started much had happened. The United States State Department found itself squarely between France, with whom its relations had been strained as a result of the Suez crisis, and the Asia-Arab bloc, with which it had been in a somewhat more favorable position since the intervention in Suez.

Instead of walking out as they had done the year before, the French sent a strong delegation to New York to present their case, but they were extremely worried. French officials were heard to express the view that French-United States friendship could not survive a hostile vote by the United States. They said a dangerous wave of nationalism would be set up that might damage NATO. Dr. Albert Schweitzer sent a letter to President Eisenhower urging him to support France.

In the end the United States decided to oppose the 18-nation Arab-Asian resolution which would have called on the U. N. Secretary General to assist France and Algeria in negotiations looking toward a cessation of hostilities in Algeria. Instead, the General Assembly merely expressed its hope that a peaceful and democratic solution of this question will be found.

The situation in Algeria has not improved. Establishment of friendly relations between France and its former protectorates of Morocco and Tunisia, both interested in a free Algeria, has not been accomplished. In May, the Arab-Asian bloc called the U. N.'s attention to the slaying of 303 Algerian villagers in the single mountain village of Melouza. The issue is bound to come up again in next fall's General Assembly.

The United States position on the Algerian question has been interpreted throughout the Asian-African world as an American stand on the side of colonialism.

This is where Senator KENNEDY enters the picture. The issue, if he can get it over to the American people, is bound to be one that will touch their emotions. On the other hand, the State Department has maintained that Algeria was an internal affair and under the charter not properly a subject for U. N. debate.

The American political battle over Algeria has been joined. The consensus at the U. N. is that it is bound to have far-reaching ramifications.

[From the Dayton Daily News of July 7, 1957]

FACING THE FACTS IN ALGERIA

Senator JOHN F. KENNEDY is leading a movement to persuade the State Department

to stop temporizing over the Algerian struggle for independence. He is author of a resolution under which President Eisenhower and Secretary Dulles would be authorized and strongly encouraged to strike out for a mediated solution of the civil war there.

The Algerian problem admittedly is complicated. Legal intricacies and divisions among the Algerians themselves add to the difficulties of bringing the state into independent status to match that recently achieved by Tunisia and Morocco.

For the United States there is the diplomatic embarrassment of seeming to take sides against France.

Senator KENNEDY, however, is right in pointing out that the Algerian situation has deteriorated to the point at which quibbles are overswept by the inexorable tide of history. In a speech delivered in the Senate just before the holiday he quoted Turgot, the farseeing 18th century French statesman who said that "colonies are like friut which cling to the tree only till they ripen."

Submerged peoples everywhere are on the march to fulfillment of nationalist aspirations. In Algeria these have been dammed back so long that compromises and palliatives that once might have worked no longer are feasible. Algeria is on the way to becoming another Indochina.

As Senator KENNEDY points out, helping France hold the line in Algeria does her no favor but a long-term disservice. It prolongs a military and economic drain that cannot indefinitely delay Algerian freedom. Meanwhile, it gives Moslem extremists more leeway and invites Communist infiltration. It places the United States in a false light throughout the Moslem world and in the eyes of peoples who resent all vestiges of colonialism.

It is time for the United States to face facts in Algeria. It is time to take the lead in cutting through to the heart of a problem which France claims is of purely domestic concern but which, in truth, vitally affects the fortunes of the entire free world.

Broadening of Educational Horizons To Include Alien Cultures

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. MANSFIELD. Mr. President, in the Chicago American of July 14 there is a noteworthy editorial entitled "We Should Know Our World." This editorial brings out the fact that one of the outstanding citizens of the Midwest, Robert Sargeant Shriver, Jr., has just been reelected to the presidency of the Chicago Board of Education. The editorial deals with his philosophy that education in high schools and colleges should broaden its horizons to include the study of alien cultures, such as Moslem, Latin, Sino-Japanese, and Hindu civilizations. Such a broadening is necessary, Mr. Shriver says, because of the effect it would have in widening and broadening the culture of individual Americans as a whole. Our understanding would become better, and our tolerance of other people would thereby become more understandable.

I point out also that the last paragraph in the editorial in the Chicago American reads as follows—and I think it is something we all should take to heart:

Willingly or not, the United States is now the leader and spokesman of the free world—and good intentions are no longer good enough. As a leader, this country must train its citizens for leadership; in the great debate between communism and democracy, we must have able spokesmen.

I wish to compliment the Chicago American for this fine editorial, and also to congratulate Mr. Robert Sargent Shriver, Jr., upon his reelection to a third term, as president of the Chicago Board of Education. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE SHOULD KNOW OUR WORLD

Robert Sargent Shriver, Jr., just reelected president of the Chicago Board of Education, has started his third term by offering a challenging idea.

Shriver declared that education in high schools and colleges should broaden its horizons to include alien cultures, such as Moslem, Latin, Sino-Japanese and Hindu civilizations. Such a broadening is necessary, he told an education conference at Northwestern University, because distances are dwindling to nothing in the age of jet travel; as the world shrinks and its population grows, understanding becomes more necessary for peace than bombs or radar.

His ideas set a course between sullen mistrust of everything foreign on one hand, and wild-eyed visions of "one-world" conformity on the other.

Said Shriver: "He who knows only one language doesn't even know that one well"—and the same is true, he pointed out, of one culture. Studies limited to English and American literature or history cannot give a student the needed understanding of other world cultures, or even a profound knowledge of his own.

Shriver's idea would help provide those leaders and spokesmen. We salute him for presenting it.

Shriver's idea would include greater concentration on teaching foreign languages, an area in which Americans as a Nation are woefully weak. Language is the most important tool of thought; as the embodiment of a nation's character and culture, it is indispensable to any student of that nation. Yet Americans, as a whole, show a deep unwillingness—or inability—to learn any language but their own. Compared to the average European, the average American is a linguistic boob.

Such provincialism is a luxury we can no longer afford.

A thorough understanding of American civilization as it stands, for example, is impossible without some knowledge of the civilizations and ideas that produced it. America is the product of a millenniums-long process—a filtering through historical layers of one basic idea, the responsibility and worth of the individual. Our traditions are built on those of ancient Israel, Greece, Rome, European Christendom.

Ignorant of our own background, how can we defend it? How can we persuade other cultures of the value of our own, if we understand neither ours nor theirs?

The general blindness of Americans to the languages, traditions, and history of other countries has hampered us in the past. It has contributed to the world's image of us as a blundering giant, whose good intentions cause as much trouble as a lesser nation's bad ones.

Willingly or not, the United States is now the leader and spokesman of the free world—and good intentions are no longer good enough. As a leader, this country must train its citizens for leadership; in the great debate between communism and democracy, we must have able spokesmen.

The Rights Bill Controversy

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Rights Bill Controversy," written by David Lawrence, and published in the Washington Star of July 18, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RIGHTS BILL CONTROVERSY—QUESTION OF POSSIBLE USE OF POLICE FORCE IN ELECTIONS VIEWED AS A MAIN ISSUE

(By David Lawrence)

The whole business of the Congress—including many a vital measure desired by the executive branch of the Government—is stagnated because of the efforts of a few politicians to gain some votes in the next election by enacting now a so-called civil rights bill. Weeks and weeks of debate are ahead, and the really important civil rights that ought to be protected are being ignored.

Communists can openly preach overthrow of the Government, and subversives can plot against the security of the United States and infiltrate the Government itself, but not a single law of prevention is being pressed for passage.

All the Senate's time is being spent to pass a bill to punish, without jury trial, officials of State or local governments for offenses they have not committed but theoretically may commit in ruling on the eligibility of voters. This could mean eventual intrusion into the direct supervision of the manner in which State and city elections are conducted everywhere in the United States. It could mean investigations into alleged impairment of voting rights by the use of undue influences before election day.

The whole controversy is centered on how to police the States of the Union, which have always had full authority to make their own vote eligibility laws. There is talk of using troops to coerce the States.

President Eisenhower says he can't imagine any circumstances under which Federal troops would be used to enforce school integration or other provisions of the pending civil rights bill. But the natural question which this in turn propounds is why any such statutes should remain on the books or any new measures be proposed that could be used to invoke military force.

The truly liberal point of view abhors military intimidation in any form in a democracy. Only in a Fascist or Communist state is the military threat held over the heads of the people in order to get them to conform to a centralized government's edicts.

Every day that passes widens the gap between those in Congress who understand and those who do not understand the problems of the South. The debate in the Senate has brought out some significant information. It has revealed, for instance, that white

juries generally do convict white persons accused of harming Negroes.

Basic is the misconception of the South's true position on the matter of mixing the races. It is often remarked in the South that the southerner dislikes the Negro race but likes the individual Negro, whereas the northerner likes the Negro race but dislikes the individual Negro.

During the current debate in the Senate a characteristic comment was made by Senator SCOTT, Democrat, former Governor of North Carolina, who said:

"My father had a considerable farming operation in the South. I worked under Negro foremen until I was 21 years of age. I got along with them all right. When I was only a little tot I would slip away from home, and when my mother could not find me she knew exactly where I was. I was in one of the colored homes, eating dinner or breakfast. I enjoyed it. I enjoyed their company, and I think they enjoyed mine. I have always helped them, and will help them again. They are my friends.

"Modern-day carpetbaggers, if you please, are not interested in the welfare of either the white or the Negro people in the South, but are interested only in the political advantages they can gain on election day."

Day after day, charges are being made in the Senate debate that the southern people cannot be trusted to give fair trials by jury to Negroes. This is the justification claimed for passing a law making it possible to try, through the device of contempt proceedings, those persons accused of offenses growing out of disputes over voting eligibility. And, of course, in contempt cases trial by jury is automatically denied.

As to the fairness of southern juries to Negroes accused of crime, Senator MCCLELLAN, Democrat of Arkansas, said this to the Senate:

"In the South, if a white jury gets the impression that someone has imposed upon a helpless Negro, they will immediately find the Negro not guilty. I have seen that happen many times.

"If we are going into these matters a little, I have said that I have no prejudice against the Negro race. When I was a prosecuting attorney, I defended a number of Negroes who were not able to employ a lawyer. I defended them without pay, because I believed they were innocent."

The debate on civil rights indicates that the proponents of civil-rights legislation have been persuaded, as were the radicals of reconstruction days, that the end justifies the means. This certainly is not liberalism.

Permanent Drought

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial which was published in the Fort Worth Star-Telegram, one of the leading daily newspapers of the Southwest. The editorial is entitled "Permanent Drought," and reviews the reports of the United States Geological Survey to the effect that, despite the heavy rainfall in the Southwest, the underground water tables have not risen, and there is a constantly declining reservoir of water—our most valuable resource.

I should like to add that the 13 percent of the land in Texas which is irrigated, produces more than 40 percent of all the money earned by farmers there, and the most valuable source of water has been our underground water supply.

We believe the committee's recommendation for appropriations for the building of dams is most vital in the interest of the welfare of the Nation; and we hope that when that bill comes before the Senate, those particular appropriations will receive the full support of the Senate of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PERMANENT DROUGHT

With all the rains we had this spring, with the lakes so full we've had to open spillways and send water tumbling down to the gulf, you'd think some of it seeped through the topsoil into the deep sands and added to the ground-water supply.

You would if you were a layman. The engineers have found different. R. W. Sundstrom, United States Geological Survey district engineer at Austin, reported that while the spring rains and floods substantially helped shallow underground reservoirs and streamflow, the effect was nil on the deep sands.

"The pumper is faced with an underground drought forever," Bob Littleton, chief ground-water engineer for the State board of water engineers, agreed. "Although there's still billions and billions of gallons of water under Texas surfaces, more water is being taken out of the ground annually than goes into the surface."

In this situation, it would seem obvious that increasing attention should be given to long-range planning for reservoir systems that will provide storage even for unusually abundant rains such as we experienced this spring. Conservation of all possible water, rather than permitting it to run off into the gulf, appears to make plain commonsense.

The Right To Vote

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "The Right To Vote," which was published in this morning's New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RIGHT TO VOTE

The primary objective of the civil-rights bill now before the Senate is, in the words of President Eisenhower's most recent formal statement, "to protect the constitutional rights of all citizens to vote regardless of race or color."

Basic to all the other civil rights that are talked about by those seeking fair and equal opportunity for the Negro and other minorities is this right to vote. As PAUL DOUGLAS, of Illinois, intellectual leader of the civil-rights forces in the Senate, repeatedly says, "nothing is more important to the progress of our country and to economic and political justice." Other things can and will come later. The right of free access to the ballot box is elemental in a democracy.

In order to achieve this objective the pending bill would allow enforcement of this right to vote through the injunctive process, and without jury trial. The President points out that "we seek to uphold the traditional authority of the Federal courts to enforce their orders" and that "this means that a jury trial should not be interposed in contempt-of-court cases growing out of violations of such orders." Note the word "traditional," which is a reminder that there is nothing new about lack of jury trial in contempt proceedings.

In fact, a provision for jury trial would in some if not all Southern States destroy the effectiveness of the bill. Senator DOUGLAS notes that jury lists in the South are composed "by law in five States and by practice in many others of those who are on the voting lists." Therefore those to whom the vote is denied would be automatically excluded from the jury. As Senator DOUGLAS says: "The great proportion of Negroes are denied the right to vote. Because they are denied the right to vote they are ineligible to serve on juries. Because they are ineligible to serve on juries * * * they would be unable to protect their right to vote by jury action."

How do we know they are denied the right to vote in the first place? Senator DOUGLAS has supplied the figures that tell the story. Let us look at these figures for a few of the 9 Southern States whose 18 Senators vainly voted against taking up the administration's civil rights bill this week. Alabama: The number of Negroes registered was 10.3 percent of those entitled to vote. In at least 9 Alabama counties, each of which according to the 1950 census contains from a few hundred to a few thousand eligible Negroes, not one was registered to vote. Arkansas: Only 16.5 percent of the eligible Negroes are registered. Mississippi: 4 percent. South Carolina: 25.3 percent, including a county or two without a single Negro registered. Virginia: 20 percent. And of course the figures for registration are greater than those for actual voters.

Interference with the right to vote has occurred at times in the North as well as in the South. Property ownership has been a prerequisite; and poll taxes have existed above as well as below the Mason-Dixon line, in Pennsylvania as late as 1933. It was a mere 40 years ago that New York granted women the suffrage. But the disabilities have been falling away until now only the southern Negro citizen is denied the ballot in significant numbers. Impairment of this constitutional right cannot and must not last much longer.

Mrs. Charles E. Ford, President of League of Women Voters of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. NEUBERGER. Mr. President, one of the most useful organizations in the United States is the League of Women Voters. It helps to alert our female population, now larger than the male population of the United States, to the need for good government and for progressive and humanitarian public policies.

We in the State of Oregon are particularly proud of the League of Women Voters of Oregon, which has maintained

high ideals and high standards for many years.

Mrs. Charles E. Ford, the new president of the League of Women Voters of Oregon, measures up to this caliber and quality. Both Mrs. Neuberger and I value highly the advice and counsel of this capable leader of Oregon women. As a member of the League of Women Voters herself, Mrs. Neuberger frequently consults with Mrs. Ford on various public issues.

I would like my colleagues to read this sketch of Mrs. Charles E. Ford which appears in the June 1957 issue of the News Bulletin of the League of Women Voters of Oregon.

Let me add that Mrs. Ford is the successor to a previous president of the League of Women Voters of Oregon, who likewise has been an outstanding leader in public affairs in our State, Mrs. Ronald K. Campbell, of Corvallis, Oreg.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEW PRESIDENT

Mrs. Charles E. Ford, newly elected president of the League of Women Voters of Oregon, has had lots of experience in league work. She started out in 1949 as a unit leader in the Eugene league, then became finance chairman. She was vice president with finance portfolio in 1951–52 and elected president for 1953–55. She has served on almost every committee that local league has had so has a good understanding of all league problems. She has been active on voter's service, was chairman of continuing responsibilities, election procedures, speakers bureau and still assists with the finance drive. She has made innumerable appearances before groups in Lane County and has been on many radio and TV programs. On the State board 1955–57 she has served as chairman of continuing responsibilities, legislative chairman and advisor for the Salem league.

Her family consists of her husband and two teen-age daughters. One just graduated from high school and the other entering high school this fall. Mr. Ford is a league husband par excellence. Mrs. Ford just never got around to getting a driving license, he has ferried her all over during her league career. He calls for her, no matter what the hour, delivers league material, mails her letters, takes messages ad infinitum. And keeps smiling and still likes the league. The daughters deserve a word of praise, too, for their cheerful lending of their mother for these busy years.

We in Eugene are very proud of Mrs. Ford and grateful for all she has done through her personal influence to increase the stature of the league in our area.

Effects of the Drought on Massachusetts Farmers

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter I addressed on July 17 to the Honorable Ezra Taft Benson, Secretary of Agriculture, calling attention to the drought which now is affecting the farmers of Massachusetts.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 17, 1957.

Hon. EZRA TAFT BENSON,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. BENSON: I wish to call to your attention the severe drought which has hit the State of Massachusetts as well as other east coast areas and to urge you to invoke Public Law 38 granting emergency credit to farmers.

I am aware that the area cannot be declared a drought disaster area except by request of the governor of the State. However, I urge you to use the powers invested in you by the emergency credit law to extend 3 percent 1-year loans for operational purposes after determining that local credit sources have been exhausted.

I am informed that the coastal areas of Massachusetts, particularly the counties of Plymouth, Bristol, Norfolk, and Barnstable, have had no sustained rain since the middle of April. Plymouth County, for instance, has had only 6½ inches of rain since April 1 compared with 11 inches for the same period last year and less than 1 inch of rain during the entire month of June.

I have been told by Harold F. Thompson, State Administrator of the Agriculture Stabilization and Conservation Committee, that dairymen have been particularly hard hit because pastures are drying up. The second crop of hay has not yet started and farmers are now using hay that was intended for use next winter. Mr. Thompson informs me that vegetable farmers who do not have irrigation are down and out and that even farmers with the benefits of irrigation have suffered crop losses of about one-third.

The farmer is always hit hard by circumstances over which he has no control. It is my view that the Federal Government should do everything within its powers to ease the economic hardships wrought by the drought.

Thanking you for your prompt consideration in this matter, and with every good wish.

Sincerely yours,

JOHN F. KENNEDY.

New Concord Flier Sets New Record

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. HENDERSON. Mr. Speaker, residents of Ohio's 15th Congressional District are proud, indeed, that Maj. John Glenn, Jr., of the United States Marine Corps, has succeded in establishing a new speed record for transcontinental flight. Reducing the time for the flight to 3 hours, 23 minutes, and 8.1 seconds, Major Glenn takes his place among the pioneers of the 20th century who have contributed so much to the security of our Nation and to the progress of mankind in surmounting the barriers of time and space.

This young man's feat, as reported by all of our news media, quickens the spirit of adventure in all Americans and makes us realize again that the progress we are charting in this midcentury decade is in the finest tradition of those leaders who since our earliest history have challenged our physical and intellectual frontiers.

Major Glenn is a native son of New Concord, Ohio, in my congressional district. Although he has served in the Marine Corps since 1942, his family home remains in this community which has produced so many other distinguished Americans. It is most natural that his family and all southeastern Ohioans should share with him the satisfaction of what he has accomplished.

The following is the press account of his flight and the story about him which appeared in the Zanesville, Ohio, Signal for Tuesday of this week:

NEW CONCORD FLIER SETS NEW RECORD—NATION SPANNED AT BULLET SPEED—FLIGHT LASTS 3 HOURS 23 MINUTES—SECOND PILOT FORCED TO DROP OUT

NEW YORK.—The Navy, represented by Marine Maj. John Glenn, Jr., of New Concord, beat the Air Force's transcontinental speed record today by flying 2,460 miles coast to coast in 3 hours 23 minutes 8.1 seconds.

The previous record, set by an F–84–F on March 9, 1955, was 3 hours 44 minutes and 53.88 seconds.

Major Glenn piloted a F–8–U–1 Chance-Vought Crusader from Los Alamitos, Calif., Naval Air Station to Floyd Bennett Field here to set a record.

A second Crusader, which took off at dawn with Glenn, had to land at Albuquerque when it ran into refueling in the air trouble. It was piloted by Lt. Comdr. Charles Demmler, 33, of Hastings on Hudson, N. Y.

Major Glenn, 36, is stationed in Washington with the Navy Bureau of Aeronautics.

The cross-country flight was officially billed as a test of the Crusader's "sustained capability * * * at near-maximum power over long distance."

Last month two Crusaders flew from a carrier off California to a carrier off Florida to demonstrate the Navy's flexibility for President Eisenhower and defense officials.

On the flight, Glenn slowed for descents to refuel in the air and for the letdown over New York.

A Crusader flew 1,015 miles per hour in the 1956 Thompson trophy race.

MAJOR GLENN'S FAMILY CONFIDENT HE WOULD SET NEW SPEED MARK

"Johnny was hoping he could make it in 3 hours."

So said Mrs. John Glenn, Sr., of New Concord Tuesday morning as she followed the progress of her son by television and radio as he sped across the country in an F–8–FU Crusader Jet.

But the Glenns weren't able to remain at home. Their television set went on the blink, and they hurried to the home of neighbors to keep tab on the flight.

"Johnny told us," Mrs. Glenn said, "that his route would take him between Coshocton and Otsego."

Of course, his plane would have been too high to see although a vapor trail may have been visible. According to the CAA station at the municipal airport, Major Glenn notified the Columbus airport at 10:33 a. m. that he was north of Columbus and expected to be over Johnstown, Pa., in 20 minutes.

Glenn's wife, Anna Margaret, and two children, Carolyn 9, and David 11, today occupied the presidential suit in the Roosevelt Hotel, New York, and Major Glenn was to join them after he landed.

During the morning, Mrs. Glenn and the children were interviewed on the nationwide television program, Home, conducted by Arlene Francis.

Mr. and Mrs. Glenn, Sr., as well as Mrs. Glenn's parents, Dr. and Mrs. Homer Castor, also of New Concord, were not concerned over the major's safety. However, all followed progress of the flight closely, hoping he would break the record.

Major Glenn earned the title of "Mig-Mad Marine" in the Korean war by bagging three Chinese Communist planes in the last 9 days of fighting there.

He has been stationed with the Office of Design and Procurement in Washington but was given leave to make the test.

He was graduated from New Concord High School in 1939 and was a junior at Muskingum College when Pearl Harbor plunged the United States into war. He entered the Marine Corps in the spring of 1942 and was commissioned in March the following year.

Assigned to the Marshall Islands, he flew 59 missions in propeller-driven Corsairs, after which he was awarded the Distinguished Flying Cross and two air medals.

After the war, he was stationed at the Naval Air Station, Corpus Christi, Tex., where he served as flying instructor. He was then transferred to Quantico, Va., air station.

He arrived in Korea in February 1955 and flew 63 bombing attack and strafing missions with a jet squadron before being assigned temporarily to the Air Force as a marine exchange pilot.

He later became a jet test pilot at the Naval Air Test Center, Pautuxent River, Md., where he remained until assigned to Washington.

Spiraling Living Costs

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Productivity Shaping Up as a Key Factor as Labor, Industry Argue Blame for Spiraling Living Costs," written by George H. Hall, and published in the St. Louis Post-Dispatch of June 30, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRODUCTIVITY SHAPING UP AS A KEY FACTOR AS LABOR, INDUSTRY ARGUE BLAME FOR SPIRALING LIVING COSTS—UNIONS ASSAIL PRICE INCREASES ACCOMPANYING WAGE RISES AS "IRRESPONSIBLE"—MANAGEMENT SAYS LABOR COSTS HAVE RISEN FASTER THAN REAL OUTPUT

(By George H. Hall)

WASHINGTON, June 29.—The persistent rise in the cost of living, up three-tenths of 1 percent in May to the ninth consecutive record high point, has increased the concern of economists over changing wage-price-productivity relations.

The new living cost rise, announced Tuesday by the Department of Labor, brought the consumer price index to 119.6 percent of the 1947–49 average, or 3.6 points above a year ago. Because of it, nearly 1 million workers will receive wage increases under contracts equating pay scales with living costs.

There is no indication that the rises in wages and prices will end soon. On Monday, compensation to workers in the steel industry will go up about 17.1 cents an hour because of various provisions in a contract signed last year. About the same time, steel prices will be advanced by $6 a ton. There is a comparable situation in automobiles, railroads, and many other big industries.

UNION ACCUSES STEEL INDUSTRY

Pinning down responsibility for the so-called wage-price spiral, is a subjective matter. Earlier this month David J. McDonald, president of the United Steelworkers of America, said, "Steel management leads the field in the irresponsibility of its pricing policies which have contributed to the rising trend of prices for more than a decade."

The net profits of the United States Steel Corp. so far this year, McDonald said, are running at an annual rate of $461,900,000. He said the increased labor charges to be incurred this year under last year's 3-year contract would cost the company $51,500,000 and that after tax adjustments the corporation would have an indicated 1957 net profit of $437 million. McDonald used these statistics to argue that the new price increase was not necessitated by rising labor costs.

Opposed to the union argument that wage increases can be taken out of profits is the management position that profits are not high enough to meet industry's need for new capital and to pay investors a reasonable return. Higher prices must follow if pay increases cannot be met out of increased efficiency of production, employers say.

STEEL EXECUTIVE'S VIEW

In a recent interview in the magazine U. S. News & World Report, President Joseph L. Block, of the Inland Steel Co., was asked:

"Where is this spiral going to end? If labor keeps adding and you keep adding to prices, what is going to be the end result?"

"I wish I knew," Block said. "I'm not as concerned about the spiral per se as about the relationship. If you had everything in proper perspective—which you don't—if everything was in nice proper balance, then you could say that labor advances could go on directly in proportion to productivity without ever raising the price again, but you haven't got that. Your labor costs have gone up substantially more than your steel prices."

The key to an important aspect of the question of wages, prices, and inflation is productivity, a complex subject about which not too much is known. Productivity crops up endlessly in labor-management negotiations. In his state of the Union message last January 10 President Eisenhower took note of the subject by stating:

"If our economy is to remain healthy, increases in wages and other labor benefits, negotiated by labor and management, must be reasonably related to improvement in productivity. Such increases are beneficial, for they provide wage earners with greater purchasing power. Except where necessary to correct obvious injustices, wage increases that outrun productivity, however, are an inflationary factor."

PLEA BY EISENHOWER

At his press conference Wednesday Mr. Eisenhower repeated his thought. In pleading for statesmanlike action by business and labor, the President said business should approve a price rise only when it is absolutely necessary in order to continue to get the kind of money they need for the expansion demanded in this country and at the same time labor should demand wage increases that conform roughly to the increase in productivity of the individual.

The Department of Labor concedes the need for additional studies of productivity, which is the relation of units of output to units of input, but complains that it does not have enough money to do the needed work. It has published only one major specific industry study in recent years, on the basic steel industry between 1939 and 1955.

Unions find productvity analyses difficult. The United Auto Workers, for example, has an unusually expert economic and statistical staff, but has not published a productivity study, asserting the manufacturers will not give the union adequate figures. One of the few nontechnical handbooks available for public distribution is a 48-page treatise prepared in 1952 by the National Association of Manufacturers.

LABOR DEPARTMENT REPORT

The subject is a technical one and in a recent report titled "Productivity, Earnings, Costs, and Prices in Private Nonagricultural Sector of the Economy From 1947 to 1956" the Labor Department went out of its way to warn readers that the data could be interpreted "and possibly misinterpreted" in various ways.

Despite this caveat, a considerable controversy was stirred up by publication in the New York Times of an article which Ewan Clague, Labor Department Commissioner of Statistics, said misinterpreted the data and which the executive council of the AFL–CIO charged "manipulated" the report.

The Times article said the report "strongly implied" that wages had been "a key cause" of recent price increases, though the article pointed out the report did not reach a cause-and-effect conclusion. The report specifically advised caution in determining the cause of price increases.

WHAT THE REPORT SAID

The report said this:

"Between 1947 and 1956, average hourly earnings of all employees (wages and salaries) increased by about 59 percent. If one adds to earnings the contributions of employers for social security, private health and insurance funds and similar supplemental payments, then total compensation per hour increased by slightly more than 61 percent.

"During the same period the consumer price index—reflecting the prices of goods and services purchased with the income received by labor—increased by about 22 percent. If an adjustment is made to earnings for the increase in the consumer price index, in order to convert money earnings to real earnings with constant purchasing power, then the increase in real earnings per hour was about 30 percent, including employer contributions, close to 33 percent.

"At this point a comparison can be made between productivity and either of the two earnings estimates. From the viewpoint of labor's share in the real gains in productivity achieved during the postwar period, the more appropriate comparison would be with earnings adjusted to reflect real purchasing power. On questions of changes in labor costs and other costs of production, the actual payments to labor in the current dollars of the given year should be used.

TABLE SHOWS VARIANCE

"An accompanying table indicates that the increase in output per employee man-hour between 1947 and 1956 was about 26 percent, less than the increase in real earnings during the same period, regardless of the inclusion or exclusion of the supplements to wages and salaries.

"It is important to note, however, that between 1947 and 1952 real product per man-hour increased more than real hourly earnings (excluding supplements).

"By 1953 real earnings had about caught up with the increase in productivity; they remained in line through 1955, and it was not until 1956 that real earnings definitely exceeded productivity. Real earnings, including supplements, overtook productivity somewhat earlier and have remained ahead since 1954.

"The increase in average hourly compensation in current dollars represents an increase in labor costs only to the extent that it exceeds the increase in productivity (real

product per man-hour). This is true because unit-labor costs are affected not only by the increase in compensation per hour, but also by the number of man-hour required per unit.

"It is in this sense that productivity is a crucial element in the wage-cost-price relationship. It represents the margin within which wage increases can be granted without increasing production costs or curtailing the amount available for other income payments.

"With this relationship as a background, the figures indicate that average hourly compensation in current dollars increased much more than productivity during the postwar period. The former increased by about 61 percent, the latter by 26 percent, leading to an increase in employee compensation per dollar of real product of about 28 percent."

FINDINGS IN NAM STUDY

From another angle, a recent report of the National Industrial Conference Board states that rising wages have been an important factor in inflationary trends in recent years. Martin R. Gainsbrugh, chief economist of the board, said that "wage costs in current dollars, including fringe benefits of all forms, have outstripped the gains in productivity since World War II."

Wage-price movements were sharply affected by the last war. During the war, price controls were somewhat tighter than controls on wages. After the war, prices outran wages for several years. Lately wages have gone up faster than prices. These factors vary a great deal from industry to industry.

The BLS study shows that in the steel industry output per man-hour (productivity) increased at a rate of 2.9 percent a year between 1947 and 1955. Other figures show that since 1950 in the steel industry productivity has increased about 15 percent, hourly pay 59 percent, and prices 47 percent.

Fumbling Foreign Policy

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. ZABLOCKI. Mr. Speaker, while foreign aid remains a vital part of our foreign policy in order to stem the tide of communism, our foreign policy on a whole has been sadly lacking in imagination and vision. The Communists have suffered 3 distinct violent shakeups in the past 4 years; Stalin's death, the Hungarian revolt, and the recent purge of a number of the top Reds in the Moscow regime. The Eisenhower administration has unfortunately failed to take advantage of these excellent opportunities in the field of foreign policy. These facts are ably pointed out in the following editorial published in the Milwaukee Journal, July 15, 1957:

FUMBLING FOREIGN POLICY

The Communist world has suffered 3 severe shocks since the Eisenhower administration took office in 1953; the death of Stalin, the revolt in Hungary, and this month's purge of Malenkov, Molotov, and other top Reds.

In each instance, the United States was apparently not prepared to take advantage of these crises in communism. After Stalin's death and the Hungarian revolt, certainly, we did nothing effective to prevent the Reds from rallying, regrouping and resuming their drive for world domination. There is no evidence that we have any program to profit from Moscow's present headaches.

Here is another part of the same picture. During these years, Soviet policy has undergone at least a tactical shift. Stalin's frown has been replaced by Khrushchev's grin. "Peaceful coexistence" is today's slogan. Khrushchev and Bulganin flit over Europe and Asia trying to sell themselves as missionaries of moderation, good will, and peace.

These policies are harder in some ways to counter than the cold war of Stalin, with its emphasis on military preparation, threats, and intransigence. They call for new attitudes, policies, and plans on the part of the United States. Most of all, they demand free world leadership that is imaginative, courageous, vigorous, and decisive.

The Eisenhower administration has not provided such leadership. It has not developed the political, economic, and cultural programs essential to keeping the free world safely out front in a fluid and dangerous contest.

Most of the time the administration has improvised in foreign policy, reacted to Communist moves, or acted belatedly to salvage something from a situation which shouldn't have been permitted to develop in the first place.

Communists din into the world ears (Khrushchev is doing it again, now that his coup has succeeded) that the United States can't make up its mind about disarmament, blocks peaceful coexistence, wants world war, prevents international trade and rejects cultural exchanges between East and West.

Most of these charges are based on distortion or falsehood and are easily disproved. But no one in top places acts to answer them. President Eisenhower, who enjoys the hearing and respect of the world, could puncture them, but he has not made a comprehensive statement about American foreign policy since before his reelection last November.

All this is not to say that the Communists are winning. Thanks in large part to their own blunders, dissensions and inherent weaknesses they are not. One can say, however, that this country has missed, and continues to miss, tremendous opportunities to push imperialistic, Soviet communism further on the way to decline.

History may note it as one of the misfortunes of this crucial period that the free world was led by a well intentioned President who did not have the necessary interest in and vigor for his job. It may also note that he had an unimaginative Secretary of State who was great with slogans and pious platitudes, and had lost the confidence of just about everyone except the President himself.

Employment of American Musicians and Service Employees in the Hotel Industry Should Be Our Guide in Reducing the Unjust Cabaret Tax

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, steps are being taken at last to reduce the unjust and discriminatory so-called cabaret tax which was first imposed as a temporary, emergency measure during the First World War. This is the only excise tax remaining at the high wartime rate of 20 percent.

The harmful effects of this tax on employment of American musicians and employees in the hotel service trades is well known. Former Congressman Andrew J. Biemiller, AFL–CIO, director of legislation, has estimated that about 50,000 jobs could be created for musicians and others by the repeal of this unfair tax. Also, he points out, this tax hurts the average man's recreation haunts more than the big, expensive night clubs where spending runs high.

Mr. Biemiller says:

These 50,000 jobs need protection and the country should help, not hurt, a leisure occupation that many Americans need and enjoy.

The current lack of employment of American musicians is so pronounced as to threaten the very existence of music in our society. When we permit a fallacious Federal tax policy to strike at the vitals of a basic culture we are indeed surrendering the main redoubts of our free world to the enemies of our way of life.

On January 30, 80 Democratic Members of this House signed a statement which said, among other things:

We favor a revision of the tax law to close the loopholes in the 1954 act to eliminate unwarranted privileges and to provide tax adjustment for small-business men.

I would like to take this occasion to commend my colleagues on the House Ways and Means Subcommittee and the subcommittee chairman, the able and distinguished gentleman from Rhode Island [Mr. FORAND], for overriding administration opposition and approving a bill to cut the 20-percent Federal tax on night club and cabaret checks to 10 percent.

The gentleman from Rhode Island [Mr. FORAND] has stated publicly that he expected opposition to the reduction in the cabaret tax from "do-gooders who think cabarets mean honky-tonks." And he said this infamous and discriminatory tax should be reduced to give our great hotel industry some much-needed relief.

I agree, and I believe a majority of the Members of Congress agree, with the representatives of the Music Educators National Conference, the National Federation of Music Clubs, and other great national organizations that:

No impediments of a financial nature, taxwise, should be a deterrent to the future of the United States artist. Further, no deterrents of a financial nature, taxwise, should be continued which stand between the millions of people in the United States, all of whom have come through the United States school systems, and the right of these millions of people to enjoy and participate in music whenever and wherever they find it, whether as performers or audience.

It was a matter of widespread comment that Secretary of Labor James P. Mitchell, in a recent radio interview, said he favored repeal of the cabaret tax. This put him at loggerheads with the Treasury Department which has all along recommended against enactment of any remedial legislation to reduce or repeal this unjust and discriminatory tax.

This so-called cabaret tax has many ramifications and has led to unfortunate and unwise decisions by Federal officials which result in further hampering our small-business men in the restaurant and hotel industry.

I desire to call attention of my colleagues in the House to a recent ruling of the Internal Revenue Service concerning the application of the so-called cabaret tax to vending machines. Reference is made to Revenue Ruling 57-263, Internal Revenue Bulletin, June 17, 1957, page 48.

The ruling holds generally that amounts received for food, refreshments, or merchandise dispensed by means of vending machines in an establishment which qualifies as a cabaret under section 4231 of the Internal Revenue Code of 1954 are subject to the tax imposed by that section—cabaret tax. The person receiving such payments is liable for the return and payment of the tax, whether he is the owner of the cabaret or a concessionaire.

While the ruling specifically discusses amounts paid for food, refreshment, or merchandise, there is a distinct inference that amounts paid for service would be taxable also.

Your attention is invited to the following language in the ruling:

Under the provisions of section 4231 (6) of the Code, a tax is imposed upon all amounts paid for admission, refreshment, service, or merchandise, at any roof garden, cabaret, or other similar place furnishing a public performance for profit, by or for any patron or guest who is entitled to be present during any portion of such performance. That section also provides that the tax shall be returned and paid by the person receiving such payments.

The statute imposes the tax upon all amounts paid for admission, refreshment, service, or merchandise, at a cabaret, and there is no qualification with respect to how the serving or selling of food, refreshment, or merchandise must be accomplished. The law also provides that the person receiving such payments at a cabaret is liable for the tax thereon, and there is no provision that liability shall be limited to the owner or operator of the cabaret. Nor is there any statutory requirement that, where a concessionaire receives such payments, the concession must constitute a cabaret in and of itself for the payments to be subject to tax. The determination of who receives the payments must be based upon the facts of each particular case.

Likewise, it appears from a reading of the statute that there is no qualification with respect to how the selling of a service must be accomplished. It is, therefore, submitted that amounts paid for telephone service—a pay telephone is a vending machine for selling a service—in an establishment furnishing a public performance, would be subject to the cabaret tax. Furthermore, the poor hat-check girl would obviously come under this ruling. So I suppose when we are out for dinner at a place furnishing entertainment we will have to add a nickel to the quarter for the hat-check girl, so she can take care of the cabaret tax on her little fee.

This ruling accomplishes the ridiculous in arbitrary, literal interpretation of the law with no regard whatsoever for the reasonableness of its application. Most establishments subject to the cabaret tax are open for business from 16 to 20 hours per day. During that period, there is entertainment for not more than 3 or 4 hours. The only income taxable is that derived from patrons who are entitled to be present during any portion of the entertainment. There is no possible way in which the proprietor or the concessionaire can determine what proportion of the income from vending machines is attributable to patrons entitled to be present during the entertainment. Let us say a package of cigarettes is obtained from a vending machine in an establishment where there is public entertainment. When receipts of the machine are checked for tax purposes there is no possible way to determine whether that package of cigarettes was purchased by a patron entitled to be present for the entertainment, or by a person who dropped in the establishment simply to get a package of cigarettes. And since it is the practice of the Internal Revenue Service to send agents into an establishment to determine from on-the-spot observation the proportion of gross revenue attributable to patrons entitled to be present during the entertainment and then to apply retroactively that proportion to the gross income of the establishment for a 3-year period, we can assume that revenues from vending machines will be included in the tax base for future assessments of this tax.

Under the theory of this ruling, a telephone company which places a pay telephone booth in the establishment; retains control over it; receives the proceeds from it; pays the operating expenses; and provides the necessary maintenance and service, would be liable for the return and the payment of the tax on the receipts from the telephone. Further, telephone companies throughout the United States would be liable for the tax over the past 3 years together with the interest and penalties.

Obviously, such a result is ridiculous but it does illustrate the fact that this burdensome tax which was originally intended to be a wartime tax on luxury entertainment has now become a 20-percent income tax on the gross income derived in or about any restaurant, tavern, hotel or other establishment serving the public by selling food and beverage for consumption on the premises where, practically, any entertainment is provided.

Thus, it would appear that this tax on entertainment, which has already put thousands of musicians out of work and which has long since become a serious deterrent to the advancement of one of our basic cultural arts—namely music, is now spreading out under rulings of the Bureau of Internal Revenue like the tentacles of an octopus to grab income from other fields.

The complete text of the ruling to which I refer is as follows:

SECTION 4231.—IMPOSITION OF TAX (ADMISSIONS)—REVENUE RULING 57-263

(Reference: Internal Revenue Bulletin, June 17, 1957, p. 48)

Amounts received as payments for food, refreshment, or merchandise dispensed by means of vending machines in an establishment which qualifies as a cabaret under section 4231 of the Internal Revenue Code of 1954, are subject to the tax imposed by that section. Amounts received for photographic or checking services are also taxable. The person receiving such payments is liable for the return and payment of the tax, whether he is the owner of the cabaret or a concessionaire.

Advice has been requested whether amounts paid for food, refreshment, or merchandise dispensed by means of vending machines in an establishment which qualifies as a cabaret are subject to cabaret tax; if so, it has been requested that a determination be made as to the person liable for the return and payment of the tax in the situations described below.

1. A cabaret owner or operator rents certain vending machines which he places in his cabaret for the dispensing of food, refreshment, and cigarettes to patrons. The cabaret owner or operator has control over the machines, pays the operating expenses, maintains them, and receives all the proceeds therefrom. Under the rental agreement, the owner of the machines receives either a flat rate each month or an amount equal to a percentage of the gross receipts from the machines.

2. A cabaret owner or operator grants to another person rights to concessions in the cabaret. The concessions include the operation of food, refreshment, and cigarette-vending machines, the photographing of customers, and the maintenance of checking facilities. Under the terms of the agreement between the parties, the concessionaire receives the proceeds from the concessions, pays the operating expenses, provides necessary maintenance and service, and has control over the vending machines and the photographic and checking facilities. The concessionaire pays the cabaret owner a flat rate for the concessions rights or an amount equal to a percentage of the gross receipts derived from the concessions.

Under the provisions of section 4231 (6) of the code, a tax is imposed upon all amounts paid for admission, refreshment, service, or merchandise, at any roof garden, cabaret, or other similar place furnishing a public performance for profit, by or for any patron or guest who is entitled to be present during any portion of such performance. That section also provides that the tax shall be returned and paid by the person receiving such payments.

The statute imposes the tax upon all amounts paid for admission, refreshment, service, or merchandise, at a cabaret, and there is no qualification with respect to how the serving or selling of food, refreshment, or merchandise must be accomplished. The law also provides that the person receiving such payments at a cabaret is liable for the tax thereon, and there is no provision that liability shall be limited to the owner or operator of the cabaret. Nor is there any statutory requirement that, where a concessionaire receives such payments, the concession must constitute a cabaret in and of itself for the payments to be subject to tax. The determination of who receives the payments must be based upon the facts of each particular case.

It is held that amounts paid for food, refreshment, or merchandise at a cabaret are subject to tax even though such items are dispensed by means of vending machines. It is further held that, under the circumstances described in (1) above, the cabaret owner or operator who rents and operates the vending machines is the person receiving the payments for the food, refreshment, or merchandise within the meaning of section 4231 (6) of the code, and he is liable for the return and payment of the tax on the total receipts from the machines. Under such circumstances, the owner of the machines is not liable for rental of the machines, regardless of the basis upon which the rental payments are made.

On the other hand, it is held, that under the circumstances described in (2) above, the concessionaire is the person receiving the payments for the food, refreshment, or merchandise, and he is liable for the return and payment of the tax on the total receipts from the machines. A photographic or checking concession is considered to provide a service within the meaning of the statute and fixed amounts paid by patrons of the cabaret for such service are subject to the cabaret tax. Under these circumstances, the cabaret owner or operator is not liable for tax on amounts paid to him for the concessions rights regardless of the basis upon which payments are made."

Industry Moves to the Indian Country

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, July 18, 1957

Mr. GOLDWATER. Mr. President, when Mr. Glenn L. Emmons became Commissioner of Indian Affairs, one of the first things he evidenced as being the basis of his attitude regarding the Indians was his belief in the importance of the full development of industry on the Indian reservations, wherever possible. Mr. Emmons has diligently pursued this goal; and I believe that today one of the great accomplishments of the Eisenhower administration can be found in the attention paid to the Indians, particularly in bringing industry and jobs to the reservations, or, where that is not possible, in taking the Indians to where the jobs exist.

We in Arizona are particulraly proud of this work, because the man who has headed this particular division of the Indian Bureau is Carl Beck, a man who came from Springerville, Ariz., a long-time resident of the State, who grew up among the Navaho and Hopi Indians, and who has a real feeling for the Indians.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Industry Moves to Indian Country," written by Mr. Glenn Emmons, and published in the Conway publication Industrial Development for June 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDUSTRY MOVES TO INDIAN COUNTRY

(By Glenn L. Emmons, Commissioner, Bureau of Indian Affairs)

For years we heard so much about the vanishing American that many people today assume that our Indian population is steadily growing smaller. Quite the contrary is true. The vanishing American is no longer vanishing. Thanks to a high birthrate and a declining deathrate, the Indian is now increasing in number faster than the population of the United States as a whole. But his land base—two-hundred-odd reservations scattered mainly west of the Mississippi—remains fixed in size.

Therein lies the crux of the Indian problem. Surveys made in recent years show that even if the natural resources of the reservations were developed to their maximum potential, through improved methods of farming, grazing, lumbering, and mining—and this is a goal we in the Bureau of Indian Affairs are constantly striving toward—it is doubtful if the reservations would provide a decent standard of living for the more than 300,000 Indians now living on them.

Let me give you just one example. The Oglala Sioux live on Pine Ridge Reservation in South Dakota. If that fairly large reservation were divided up into economic livestock units, cattle-raising would provide a good living to about 500 families. Unfortunately, there are 1,800 families living on that reservation right now, and they are having more children almost every day.

That is why we in the Bureau have been emphasizing industrial development in our three-point program to provide more education, better health facilities, and wider economic opportunities for the first Americans. Thousands of healthy, young Indian men and women are growing up on the reservations yearly.

I've known many of them personally in New Mexico before coming to Washington in August 1953. They need jobs—interesting jobs, rewarding jobs—badly. Only a few of them want to become farmers or stockraisers.

Many of them would like to go into industry, and Indians, as a group, seem to have a special talent for work requiring skill with the hands. They are teachable and patient. Yet industrial jobs near the reservations have for years been almost totally lacking.

As for the newer plants, the production manager who opened the furniture factory at Gallup, N. Mex., got to know Indians through those who came to work for him in his main plant in Los Angeles. "Indians are not strangers to us," he said recently. "A number of them have been, or are now, regularly employed by our firm. Some were skilled workers when they joined the company and others proved their ability. It has been this exceptionally fine experience with Indian workers in the Los Angeles plant that first influenced company officials to negotiate with the Bureau of Indian Affairs and the Navaho tribe for the branch factory in Gallup." Possibly I should explain that the Indians he spoke of as being in Los Angeles came to that city through the voluntary relocation service, another phase of our effort to help Indians to improve their economic status.

At Flagstaff, Ariz., where Lear, Inc., of Santa Monica, Calif., has established a small branch, Navahos skilled in weaving and silver craft are now being trained in the intricate assembly of electronic components. Navaho women have already demonstrated their aptitude for this work, according to the plant manager. "We're here to stay," he said, "and we'll continue to expand to the limit of our ability to sell and to produce."

Fly-by-night outfits are not desired. They bring dislocation and social problems. Healthy industrial development, on the other hand, secures benefit to all Americans. The businessman finds new vistas in opening a new labor market and in helping to develop a new sales market.

Americans-at-large benefit by having an Indian population which has become more selfsupporting. But the Indians benefit the most. Not only does industrial development in their areas give them more economic freedom and larger purchasing power, but it enables them to participate in and share more fully both the activities and rewards of modern American life.

For many years my belief has been that if we give the Indians education and economic opportunity, the socalled "Indian problem" will do the vanishing—not the Indian. Indians are now getting an educational opportunity. With the intelligent aid of all concerned, we shall continue to help them find economic opportunity.

The reasons why such jobs have been so scarce are fairly obvious. Few Indian reservations are situated near large consumer markets or main lines of transportation. Most of them, let us face it, are hidden away in isolated parts of States like Montana, Idaho, Minnesota, the Dakotas, Wyoming, New Mexico, Arizona and Oklahoma. That is why an industrial development program might seem to have two strikes on it before it started.

But within the past year, thanks to the Indian Bureau's industrial development program, seven small industries employing Indians, exclusively or to a very large extent, have opened their doors in New Mexico, Arizona, Montana, South Dakota and North Carolina. It has not been easy to get these pilot industries underway.

It has required hard work and protracted cooperation on the part of the factory owners, townspeople, Indians, and the Bureau in Washington. Nor is it all clear sailing ahead. But the fact is over 500 Indian men and women will have jobs who did not have jobs before. And, despite what you may have heard, they are arriving for work on time. They are sticking to the job.

Some of the new factories are making what you might expect them to make. The First Americans, Inc., at Lame Deer, Mont., for instance, is manufacturing plastics and wood products, and Cherokee Leathercraft, Inc., at Cherokee, N. C., is turning out moccasins. But the Indians employed by Lear Navaho at Flagstaff, Ariz., are engaged in producing electronic components, and Navaho Furniture Industries, Inc., at Gallup, N. Mex., a branch of the Baby Line Furniture Co., has just shipped its first carload of tiny tots' furniture to Sears, Roebuck.

Nor should we overlook an older, defense-sponsored, jewel-bearing factory in Rolla, N. Dak., operated by the Bulova Watch Co., which has been in successful operation since 1953, and the even older plant of the Simpson Electric Co., at Lac du Flambeau, Wis., which has been providing steady employment for local Chippewa Indians for approximately a decade.

Perhaps I should point out here that the Bureau of Indian Affairs definitely does not subsidize these plants. Its role is confined to stimulating and encouraging their establishment by acting as liaison among the several parties concerned.

A very few of the Indian tribes, like the Navahos who have earmarked $600,000 of their income from oil and gas leases for industrial development, have money of their own to invest. In such cases our job is pretty much to see that the Indians get a fair deal. Most tribes, however, have little capital to invest, and here the Bureau has recently made a helpful move by liberalizing its regulations for loans to the tribes to permit the financing of industry-attraction programs.

For it is the tribe which actually offers the inducement to the businessman. In return for his agreement to employ its members, the tribe may provide facilities such as a rent-free building for an initial period. The employer must also agree to pay prevailing wage rates.

Last year Congress gave the program a big boost by authorizing the Bureau to undertake a vocational-training program for adult Indians. Part of the funds appropriated under the new act will be used for on-the-job training.

This means that, beginning probably July 1, industries cooperating in the program may be approved as training facilities. Industries so approved will be paid directly by the Government for the training of Indians during limited periods, which will be determined according to the degree of skill to be achieved by the Indian. This new arrangement will operate very much along the lines of the GI on-the-job training program after

World War II. Its advantages to both the Indians and the infant industries should be apparent.

Solid evidence of Indian capabilities is found at the Bulova plant at Rolla, N. Dak. This plant, which turns out precision ordnance products, employs over a hundred Chippewa Indians from the nearby Turtle Mountain Reservation. Precision work demanded of Indian workers involves ruby bearings with a diameter of 0.0394 of an inch and a drill with a diameter of 0.00177 of an inch.

Plant officials with whom I have talked say they cannot praise too highly the ability of their Indian workers to meet these minute requirements. Besides dexterity, the work demands better-than-average eyesight and infinite patience. The Indians have all three. Absenteeism and the turnover rate are each about 3 percent; the national norm, I understand, is almost twice that.

PLANTS ESTABLISHED RECENTLY AT INDIAN SITES

As of April 1, 1957, achievements of the Bureau's industrial development program were as follows:

Name and home office of company	Name and location of new plant	Type of plant	Approximate opening date	Anticipated employment of Indians and tribe involved
Saddlecraft, Inc., Knoxville, Tenn.	Cherokee Leathercraft Co., Cherokee Reservation, N. C.	Leather goods (moccasins, etc.)	May 1956	40 eastern Cherokee (North Carolina).
Baby Line Furniture Co., Los Angeles, Calif.	Navajo Furniture Industries, Inc., Gallup, N. Mex.	Juvenile furniture, shutters	November 1956	100 Navaho (New Mexico).
Lear, Inc., Santa Monica, Calif.	Lear Navajo, Flagstaff, Ariz.	Electronics	do	100 Navaho (Arizona).
Parsons & Baker Manufacturing Co., Phoenixville, Pa.	Casa Grande Mills, Inc., Casa Grande, Ariz.	Garments	March 1957	125 (immediately); 700 (ultimately); Pima and Papago (Arizona).
The First Americans, Inc.	The First Americans, Inc., Lame Deer, Mont.	Fishing tackle, plastics and wood products.	January 1957	75 to 100 northern Cheyenne (Montana).
New Moon Homes, Inc., Alma, Mich.	New Moon Homes, Inc., Rapid City, S. Dak.	Manufacturing of house trailers	March 1957	75 to 100 Sioux groups (South Dakota).
Martin S. Meyers & Associates, Los Angeles, Calif.	Zuni Industries, Zuni Reservation, N. Mex.	Ceramics (mosaic table tops, etc.)	April 1957	100 Zuni (New Mexico).

Declaration of Corfu of July 20, 1917

EXTENSION OF REMARKS
OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. ZABLOCKI. Mr. Speaker, July 20 will mark 40 years since the Declaration of Corfu was signed.

During the First World War, the seat of the Serbian Government in exile was the island of Corfu in Greece. The Yugoslav Committee, the representation of the Yugoslavs of Austria-Hungary in exile—with their seat in London—decided at the end of May 1917 that an invitation from the Serbian Government to participate in a conference should be accepted.

The Yugoslav Committee nominated as delegates: The President of the committee, Ante Trumbic, Hinko Hinkovic, Dusan Vasiljevic, and Bogumil Vosnjak. Also participating in the discussions were the following Serbian Ministers: Premier Nikola Pasic, Stojan Protic, Momcilo Nincic, Vojislav Marinkovic, Marko Djuricic, and Milorad Draskovic.

The Declaration of Corfu was a solemn manifest of the Serbian Government and the Yugoslav Committee, as the representatives of the Yugoslavs of Austria-Hungary, which proclaimed that all Serbians, Croatians, and Slovenes have to be united in one state. The declaration had the character of a state program which laid the foundation of Yugoslavia.

Dr. Bogumil Vosnjak is the sole survivor of the committee. He lives in Washington and is presently vice president of the National Committee for Slovenia.

The Declaration of Corfu has been enthusiastically hailed, not only by the whole Yugoslav emigration, but also by the Serbian Army, the Yugoslav Volunteers, and by public opinion of the allies. Lord Cecil declared in the House of Commons on November 28, 1917, that "the ideas of the Corfu Declaration enjoy the full sympathies of the Government of Great Britain." Even the Yugoslav press in Austria-Hungary published the text of the declaration without commentary, and that was characteristic enough.

DECLARATION OF CORFU OF JULY 20, 1917

At the conference of the members of the late Coalition Cabinet and those of the present Cabinet, and also the representatives of the Yugoslav Committee in London, all of whom have hitherto been working on parallel lines, views have been exchanged in collaboration with the President of the Skupstina, on all questions concerning the life of the Serbs, Croats, and Slovenes in their joint future state.

We are happy in being able once more on this occasion to point to the complete unanimity of all parties concerned.

In the first place the representatives of the Serbs, Croats, and Slovenes declare anew and most categorically that our people constitutes but one nation, and that it is one in blood, one by the spoken and written language, by the continuity and unity of the territory in which it lives, and finally, in virtue of the common and vital interests of its national existence and the general development of its moral and material life.

The idea of its national unity has never suffered extinction, although all the intellectual forces of its enemy were directed against its unification, its liberty, and its national existence. Divided between several states, our nation is in Austria-Hungary alone split up into 11 provincial administrations coming under 13 legislative bodies. The feeling of national unity, together with the spirit of liberty and independence, have supported it in the never-ending struggles of centuries against the Turks in the East and against the Magyars in the West.

Being numerically inferior to its enemies in the East and West, it was impossible for it to safeguard its unity as a nation and a state, its liberty and its independence against the brutal maxim of might goes before right militating against it both East and West.

But the moment has come when our people is no longer isolated. The war imposed by German militarism upon Russia, upon France, and upon England for the defense of their honor as well as for the liberty and independence of small nations, has developed into a struggle for the liberty of the world and the triumph of right over might. All nations which love liberty and independence have allied themselves together for their common defense, to save civilization and liberty at the cost of every sacrifice, to establish a new international order based upon justice and upon the right of every nation to dispose of itself and so organize its independent life; finally to establish a durable peace consecrated to the progress and development of humanity and to secure the world against a catastrophe similar to that which the conquering lust of German imperialism had provoked.

To noble France, who has proclaimed the liberty of nations, and to England, the hearth of liberty, the great American Republic and the new, free and democratic Russia have joined themselves in proclaiming as their principal war aim the triumph of liberty and democracy and as basis of the new international order the right of free self-determination for every nation.

Our nation of the three names, which has been the greatest sufferer under brute force and injustice and which has made the greatest sacrifices to preserve its right of self-determination, has with enthusiasm accepted this sublime principle put forward as the chief aim of this atrocious war, provoked by the violation of this very principle.

The authorized representatives of the Serbs, Croats, and Slovenes, in declaring that it is the desire of our people to free itself from every foreign yoke and to constitute itself a free, national, and independent state, a desire based on the principle that every nation has the right to decide its own destiny, are agreed in judging that this state should be founded on the following modern and democratic principles:

1. The state of the Serbs, Croats, and Slovenes, who are also known as the southern Slavs or Yugoslavs, will be a free and independent kingdom, with indivisible territory and unity of allegiance. It will be a constitutional, democratic, and parliamentary monarchy under the Karageorgevitch dynasty, which has always shared the ideas and the feelings of the nation, placing liberty and the national will above all else.

2. This state will be named "the Kingdom of the Serbs, Croats, and Slovenes." And the title of the sovereign will be "King of the Serbs, Croats, and Slovenes."

3. The state will have a single coat of arms, a single flag, and a single crown. These emblems will be composed of the present existing emblems. The unity of the state will be symbolized by the coat of arms and the flag of the Kingdom.

4. The special Serb, Croat, and Slovene flags rank equally and may be freely hoisted on all occasions. The special coat of arms may be used with equal freedom.

5. The three national designations—Serbs, Croats, and Slovenes—are equal before the law throughout the territory of the Kingdom, and everyone may use them freely upon all occasions of public life and in dealing with the authorities.

6. The two alphabets, the Cyrillic and the Latin, also rank equally, and everyone may use them freely throughout the territory of the Kingdom. The royal authorities and the local self-governing authorities have both the right and the duty to employ both alphabets in accordance with the wishes of the citizens.

7. All recognized religions may be freely and publicly exercised. The Orthodox, Roman Catholic, and Mussulman faiths, which are those chiefly professed by our nation, shall rank equally and enjoy equal rights with regard to the state.

In consideration of these principles the legislative will take special care to safeguard religious concord in conformity with the spirit and tradition of our whole nation.

8. The calendar will be unified as soon as possible.

9. The territory of the Kingdom of the Serbs, Croats, and Slovenes will include all the territory inhabited compactly and in territorial continuity by our nation of the three names. It cannot be mutilated without detriment to the vital interests of the community.

Our nation demands nothing that belongs to others. It demands only what is its own. It desires to free itself and to achieve its unity. Therefore it consciously and firmly refuses every partial solution of the problem of its national liberation and unification. It puts forward the proposition of its deliverance from Austro-Hungarian domination and its union with Serbia and Montenegro in a single state forming an indivisible whole.

In accordance with the right of self-determination of peoples, no part of this territorial totality may without infringement of justice be detached and incorporated with some other state without the consent of the nation itself.

10. In the interests of freedom and of the equal rights of all nations, the Adriatic shall be free and open to each and all.

11. All citizens through the territory of the kingdom shall be equal and enjoy the same rights with regard to the state and before the law.

12. The election of the deputies to the national representative body shall be by universal suffrage, with equal, direct and secret ballot. The same shall apply to the elections in the communes and other administrative units. Elections will take place in each commune.

13. The constitution to be established after the conclusion of peace by a cofistituent assembly elected by universal suffrage, with direct and secret ballot, will be the basis of the entire life of the state; it will be the source and the consummation of all authority and of all rights by which the entire life of the nation will be regulated.

The constitution will provide the nation with the possibility of exercising its special energies in local autonomies delimited by natural, social, and economic conditions.

The constitution must be passed in its entirety by a numerically defined majority in the constituent assembly.

The constitution, like all other laws passed by the constituent assembly, will only come into force after having received the royal sanction.

The nation of the Serbs, Croats, and Slovenes, thus unified, will form a state of about 12 million inhabitants. This state will be the guaranty for their independence and national development and their national and intellectual progress in general, a mighty bulwark against the German thrust, an inseparable ally of all the civilized nations and states which have proclaimed the principle of right and liberty and that of international justice. It will be a worthy member of the new community of nations.

Why Not Investigate the Court?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. James Burnham, a well-known writer, which appeared in the July 20 issue of the National Review. Mr. Burnham is an editor of that magazine and argues that Congress should undertake an investigation of the working of the judiciary in order to determine to answer its recent encroachments.

The article follows:

WHY NOT INVESTIGATE THE COURT?

(By James Burnham)

(In the article that here follows I seek to motivate the following conclusion: A congressional investigation of the judiciary is the present reply to the Supreme Court.)

HOW POWERFUL IS THE COURT?

In a footnote to Federalist No. 78, Alexander Hamilton quoted Montesquieu: "Of all three powers above mentioned, the judiciary is next to nothing." Amplifying, Hamilton wrote: "The judiciary, from the nature of its functions, will always be the least dangerous to the political rights of the Constitution; because it will be least in a capacity to annoy or injure them. The judiciary * * * has no influence over either the sword or the purse; no direction either of the strength or of the wealth of the society; and can take no active resolution whatever. It may truly be said to have neither force nor will, but merely judgment; and must ultimately depend upon the aid of the executive arm even for the efficacy of its judgments. It is beyond comparison the weakest of the 3 departments of power; [and] can never attack with success either of the other 2."

Chief Justice John Marshall was repeating the same essential conclusion when he declared in 1824: "Judicial power, as contradistinguished from the power of the laws, has no existence. Courts * * * can will nothing." And Justice Owen Roberts echoed in 1936: "All the court does, can do, is to announce its considered judgment upon the question. The only power it has, if such it may be called, is the power of judgment."

Reflecting on the decisions of the Earl Warren Court in re Slochower, Steve Nelson, Watkins, Du Pont, Jencks, Sweezy, Girard College, the Smith Act defendants, what are we to make of this traditional estimate? Were Montesquieu, Hamilton, Marshall, and Roberts ignorant as analysts and false as prophets? Have changed conditions made their words irrelevant? Or have we on our side failed to make necessary distinctions?

The answer is suggested in the same Federalist paper: "Though individual oppression may now and then proceed from the courts of justice, the general liberty of the people can never be endangered from that quarter; I mean so long as the judiciary remains truly distinct from both the legislative and executive powers. * * * Liberty can have nothing to fear from the judiciary alone, but would have everything to fear from its union with either [or both] of the other departments."

And is this not really obvious? The act of a court is a judgment, and this can be rendered only on an individual complaint that is brought—after the event—before it. The court cannot directly compel anyone to initiate the complaint or to accept its findings. Police and army—the means of coercion—are under command of the executive, not the judiciary. The courts cannot even assure the material conditions of their own existence; the taxing and appropriating powers belong to the legislature.

The judiciary can usurp undue power only with the support of compliance of the other 2 branches, only in a united front with 1 or both of them. In the long run the judiciary must inevitably lose in a direct conflict with the executive and legislature—if, let us add, they choose to fight.

Not merely in theory but in historical practice, our system provides an arsenal of weapons—too many, perhaps—for checking judicial encroachment.

THE HISTORICAL RECORD

In 1849 the Supreme Court ordered the Wheeling & Belmont Bridge Co. to destroy its bridge over the Ohio River as an unlawful obstruction to navigation. The company, disregarding the decision and a subsequent injunction, turned to Congress, which in 1852 passed a statute declaring the bridge to be a lawful structure. The Court, accepting, noted that although the bridge may still be an obstruction in fact, it is not so in the contemplation of law.

In 1868, when Ex parte McCardle—an action that implied a challenge to the constitutionality of the Reconstruction Acts—was actually before the Court, Congress passed (over President Johnson's veto) a rider repealing the Supreme Court's jurisdiction in all cases arising out of the relevant statute. The Court then dismissed the case. The Franklin Roosevelt administration similarly exempted from Supreme Court scrutiny the workings of the wartime Price Control Act.

Numerous States have simply refused to carry out Supreme Court writs, or to obey Federal court injunctions, and at least a dozen States have released Federal prisoners from jail. Throughout our history, judgments of the Federal judiciary have frequently been softened, bypassed, or negated by many kinds of State interposition: As in the South today, in resistance to court orders for racial integration.

Congress' act of March 1, 1863, prohibiting slavery in the territories, flatly contradicted the Dred Scott decision.

In drawn-out conflict with the Court, the "political departments" have threatened to use, and have a number of times actually used, their power to alter the number of its members. Under the original Judiciary Act (1789) there were six Justices of the Supreme Court. As episodes in Jefferson's struggle to control the Court, the number was changed to 5 in 1801 and back to 6 in 1802. It was raised to 9 in 1837 (to water down the influence of John Marshall), and to 10 in 1863 (to give the North a safer

majority); dropped to 7 in 1866 (to prevent Andrew Johnson from appointing new members), and rose back to 9 in 1869, when Grant could name the new Justices—who, as expected, brought a reversal of the Court's previous finding against the Legal Tender Act. Frankin Roosevelt's 1937 "Court packing" proposal was never adopted; but its threat, combined with his manipulation of public opinion and Willis Van Devanter's forced resignation, brought the Court around to acceptance of the New Deal measures.

The Court can always be corrected by constitutional amendment: amendments XI XIII, and XV were specifically adopted in order to overrule Court decisions. Impeachment is also always a formal possibility, although it has not been attempted for Supreme Court Justices since the Jeffersonians failed against Salmon Chase. Still, even the latent possibility of impeachment serves as a psychological curb on the judiciary. And what finally settled the constitutional problems of slavery and secession was the bloody arbiter that has always been the court of last appeal.

CONGRESSIONAL CONTROLS

The Constitution provides for only the barest minimum of our judicial system; all the rest is for Congress to determine. The Constitution decrees "one Supreme Court" (composition unspecified), but only "such inferior courts as the Congress may from time to time ordain and establish." These inferior courts—their numbers, kinds, jurisdiction, funds, duties, rules, their rights to issue writs and injunctions and orders—exist only by virtue of congressional statute.

But the Supreme Court itself—though existing by constitutional and not statutory fiat—is not exempt from congressional control. The number of its members, its budget, even where and when it meets, are subject to the legislative will.[1] The Constitution assigns the Supreme Court "original jurisdiction" only "in all cases affecting ambassadors, only public ministers and consuls, and those in which a State shall be party." This paragraph (in Art. III, Sec. 2) then concludes: "In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make."

Let us also note that the justices do not grow topsy-like from the bench. They are selected by the Chief Executive and confirmed by one House of the legislature. Though by virtue of permanent appointment and human mutability, they, like other men, change through the years, they and their court usually reflect the basic opinions and values of those who have chosen them. The members of the present Court were appointed by Franklin Roosevelt, Harry Truman and Dwight Eisenhower, and in each case confirmed by a legislative chamber tending toward subservience to the executive power. The Court is a product of new dealism, fair dealism, modern republicanism—in short of the egalitarian, demagogic, welfare-statist ideology of contemporary liberalism. It behaves as we should expect it to behave.

TO ACT OR NOT TO ACT

The Court decided that the Du Pont holding of 23 percent of General Motors common stock is illegal under section 7 of the Clayton Act. It is naive for those who object to the ruling to blame only the Court. The executive arm, not the Court, brought the suit against Du Pont. Congress could overturn the decision in a day by a bill repudiating the Court's interpretation of section 7, but there is no reason to think that a majority in Congress or in the Nation wants it overturned.

In the Steve Nelson decision the Court declared that Congress had pre-empted the field of subversion for the Federal Government, and thus superseded all State laws thereon. (Nelson himself, having been convicted under a Pennsylvania law, was set free.) This decision, like others of the Earl Warren Court, is simultaneously a blow at States rights, an encroachment on the legislature and a setback to domestic security. But here too an easy method of correction is at hand: Congress need only repudiate the Court's dicta, and declare that the national laws on subversion supplement, without supplanting, the State laws. The last and the present Congress have failed to do so. It is to be noted in this instance that the executive, in practice if not always in words, agrees with the centralizing tendency expressed by the Court. Congress is too lethargic or too divided to take the initiative on its own.

The immediate response to the Jencks decision on opening confidential files is an instructive contrast. Here the executive (spurred no doubt by Mr. J. Edgar Hoover) as well as Congress realizes that the Court's ruling might make a shambles out of law enforcement. Within a couple of days the administration came up with a proposed bill to plug the gap, and Congress prepared to act on it.[2]

The recent decision freeing a number of California Communists convicted under the Smith Act was based partly on technicalities, partly on a constitutional interpretation of the first (free speech) amendment, and partly on a criticism of the evidence adduced at the trial as insufficient. The Court's criteria would make it hard to convict anyone of any kind of subversion unless he were caught throwing a bomb. But under its constitutional powers Congress could remove all questions of fact in these cases (including the question whether the Communist Party is a conspiracy or a debating club) from the appellate jurisdiction of the Court; and could without too much difficulty revise the rather sloppy wording of the Smith Act.

Even the Court's decisions on school integration would not have much practical meaning if they were not correlated with already existing political trends. *Brown* v. *Board of Education*, in the 3 years since it was rendered, would not have had wide repercussions if the Executive and Congress had been sharply opposed to it, and if it had been wholly out of line with national sentiment. The truth is that the executive establishment agrees with it: both with the policy of school integration, and with the use of national power to coerce the States to carry out that policy.

As on many of the other issues, congressional opinion is divided. If it were firmly opposed, Congress would by now have taken away the power of the circuit courts to issue the orders by which they are implementing *Brown* v. *Board of Education*, and would have made a stab at removing the entire field of education from Federal jurisdiction.

Instead, the House has just passed and the Senate is now considering a Civil Rights Act that would not diminish but vastly extend the power of the Federal courts to coerce individuals, local communities, and States in these racial matters. For the present it is only State interposition that is offering any serious resistance to the integration rulings.

THE GENERAL TREND

Some of the problems raised by specific decisions of the Earl Warren Court can be handled, and in some cases even will be, by specific legislation. But there is also the more general problem of the Court's fundamental trends, to wit: (1) its assault on States rights; (2) its legal sabotage of security measures; (3) its encroachments on the other two branches of Government, especially on the legislature, reaching a climax in the Watkins decision, which presumed to tell Congress how to go about its sovereign business of legislating.

Is there any action, politically feasible at present, that would in some measure counter these trends, and pull the Court back toward judicial continuity and restraint?

Impeachment or any of several constitutional amendments could, of course, do so, but these means (even if desirable) are for the time being excluded in practice. Nor would a Court-packing bill make much sense. In the unlikely event that Congress would vote it, what point would there be in having President Eisenhower name another half-dozen Earl Warren's?

There remains, however, a traditional but hitherto unmentioned alternative: a congressional investigation of the Federal judiciary, in particular the Supreme Court.

Whatever its collective attitude on States rights, Congress is overwhelmingly opposed to the Court's dilettante treatment of security; and Congress' own political existence is threatened by the Court's tendency to transform itself into a supreme legislature. Very practical motives thus prompt Congress to some sort of broad counteraction. A thorough investigation would be both effective in itself and the best way of determining exactly what further steps are needed.

Instituted under Congress' constitutional mandate to "ordain and establish" the inferior courts, to regulate the appellate jurisdiction of the Supreme Court, and to provide the funds for the maintenance of the judiciary establishment, the propriety of such an investigation could not be challenged even under the provocative reasoning of the Watkins decision. The legislative objective would be clear cut: to determine, by examining the workings of the judiciary, what changes, if any, should be made in the Judiciary Act and other statutes regulating the judiciary in order to insure its efficiency and effectiveness in fulfilling its assigned role under the laws and Constitution of the Nation.

As directly relevant to such an inquiry the investigative committee would presumably wish to discover the way in which the staffs of the Supreme Court and the inferior courts are selected, the functions of "law secretaries" and other aids of the judges, the exact manner in which decisions are being prepared and written—and by whom.

During the past two decades, comparable congressional research has turned up some remarkable facts concerning many executive agencies and certain of Congress' own committees. Congress found, for example, that though some of its committee orders and reports had been signed by a Gerald Nye, a Harley Kilgore, a Claude Pepper, James Murray or Robert La Follette, they had been written largely by an Alger Hiss, John Abt, Henry Collins or other Communist or fellow traveler. (Come to think of it, before going to work for Congress Alger Hiss had started his career as law secretary to a member of the Supreme Court.) It would be of more than idle interest to learn just how books by fellow travelers were cited among the "authorities" of *Brown* v. *Board of Education*, and how the Smith Act decision's amazing comments on the nature of the Communist Party were arrived at. And a study of the recent swelling of the Federal injunctive power would be worth while from every point of view.

---

[1] Not in respect to a salary cut applicable to sitting members, however. In his suggestion that this would be an effective way to discipline the Justices (National Review, July 6), Mr. Forrest Davis overlooked the constitutional injunction (art. III, sec. 1) that their compensation "shall not be diminished during their continuance in office."

[2] Though, as Mr. Bozell explains in this issue, the bill itself is faulty.

In a republic there is nothing sacrosanct about the judiciary to exempt it from scrutiny by the legislative representatives of the people. If the judiciary has nothing to hide—as we must presume—it should welcome a serious and public inquiry. If the judges have been inching beyond their due role in a republican system, an open investigation by the sovereign legislature is an ideal means to remind them of the traditional duties and restraints that bind the true judicial conscience.

Is Congress—are Congressmen—afraid of the Court? Under the Court's galling crossfire Tom Walsh or Pat McCarran would not have waited this long, we can be sure, to propose such an inquiry. And how quickly either one of those tough, fighting Americans would have jumped for the chance to head it.

Serviceman Overseas Loses His Rights

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. GROSS. Mr. Speaker, no proponent of status of forces agreements has ever refuted the charge that an American serviceman who is subjected to trial in a foreign court loses certain rights supposedly guaranteed to all citizens of this country under our Constitution.

As the Waterloo (Iowa) Daily Courier properly points out in an editorial which appeared in the July 12 edition of that newspaper, he becomes a kind of seminational. As one who has fought for more than 2 years to seek revision of these agreements, I commend the Courier for its stand in opposition to trial of our servicemen in foreign courts.

Now that the Supreme Court has handed down its ruling in the William S. Girard case, the only way to correct this situation is through legislation, and once again I urge the Rules Committee to clear H. J. Res. 16 to the floor of the House. Author of the resolution is the distinguished gentleman from Ohio [Mr. Bow], and I am proud to be associated with him in this fight.

Mr. Speaker, as part of my remarks I desire to include the excellent Courier editorial mentioned above:

The United States Supreme Court, which has presumed to instruct Congress as to how it can conduct its business and which has been most careful of the constitutional rights of Communists, now says it has no jurisdiction in protecting the constitutional rights of American servicemen overseas.

By its unanimous decision in the controversial case of William Girard, accused of killing a Japanese woman while on duty at a firing range, the Court establishes that an American who is drafted and sent overseas loses all rights to the protection supposedly granted by the American Constitution. He becomes a kind of seminational, subject to trial in courts where:

1. A language is spoken which he cannot understand.
2. Trial by jury is not guaranteed.
3. The prosecution can appeal a verdict of not guilty.
4. Cruel and unusual punishments are not prohibited.
5. He can be sent to prisons where appallingly inhumane and unsanitary conditions exist.

This is not to say that Girard or any other American serviceman would not receive a fair trial in Japan. The agreements under which the United States yields jurisdiction attempt to provide protections for the accused. But once the accused has been turned over to Japanese custody, there is no guaranty that the agreement will be observed.

Congress should seek to correct this situation by legislation.

Federal Timber-Sales Policies

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. CHUDOFF. Mr. Speaker, on July 15 I introduced H. R. 8718, a bill to repeal the act of March 29, 1944. The Subcommittee of Public Works and Resources, in cooperation with a subcommittee of the Senate Interior and Insular Affairs Committee, held extensive field hearings in the fall of 1955 on Federal timber-sales policies. These hearings revealed that there was considerable difference of opinion among the people in the lumber industry and in the Government agencies as to the effectiveness of a 1944 act of Congress which allowed the Secretaries of Agriculture and Interior to award timber to particular companies without the use of competitive bidding or with limitations on who could compete for the timber.

Our committee found out that in Oregon the Bureau of Land Management had created marketing areas under another act rather than through the use of this 1944 act. Communities were petitioning that these marketing restrictions either be eliminated or that they be changed so that certain areas that could not now bid for O. and C. timber would be permitted to do so. We also found that, in this same area where there is twice as much national forest timber as there is O. and C. timber, the Forest Service had not set up any restrictions on who could bid for their timber.

When we got into the State of Washington, we heard about the 1 cooperative agreement under which over 4 billion feet of national forest timber and 1 billion feet of timber owned by a single company were pooled, and that company was permitted to buy the national forest timber at its appraised price. This agreement runs until the year 2046 and is in the nature of a contract. We listened to petitions from other groups, some of whom wished to have national forest timber made available especially to them, and others who opposed the idea.

When we issued our report, we called upon the Secretaries of Agriculture and Interior to review the operation of this act and report their findings to us. The Secretary of the Interior had a consultant study the marketing areas in the O. and C. lands, held a separate public hearings, and then revoked the marketing areas. The Secretary of Agriculture made a separate study and reported to our committee that he would not object to the repeal of this law. Senator MURRAY, the chairman of the Senate Interior and Insular Affairs Committee, requested the Secretary of Agriculture to prepare such repealing legislation, and the bill I introduced on July 15 is a response to that request. The bill has been cleared with the Bureau of the Budget, and there is no objection to the repeal of this act. This repeal amendment would permit the continuation of existing Federal units and the one cooperative agreement. It would be my hope that the committee considering this legislation would review whether or not it would be desirable to terminate these agreements at a specified date in the near future, rather than to let them run on.

I would like to emphasize, for the benefit of my colleagues who may have a question, that the repeal of the act of March 29, 1944, will in no way jeopardize, influence, or affect the management of the national forests or any other of the forest lands operated by the Government for sustained-yield forestry purposes. The repeal of this act will remove the discretionary authority to grant Federal timber to individual companies or to companies in certain selected areas. The principles of sustained-yield forest management are well imbedded in the basic statutes which govern the operation of the various Federal forests. This law has as its popular title "The Sustained Yield Act of 1944," but the title is a misnomer. The agreements made under it never caused 1 more tree to be grown on Federal land, and there is doubt in my mind that it caused trees to grow on the lands of the 1 company that was favored by a cooperative agreement.

DEPARTMENT OF AGRICULTURE,
Washington, D. C., June 24, 1957.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs,
United States Senate.

DEAR SENATOR MURRAY: Reference is made to your letter of June 4 requesting a draft of legislation which would revoke the Federal unit and cooperative sustained-yield unit authority of the act of March 29, 1944.

Attached is a draft bill which would repeal those authorities but would not affect the sustained-yield units heretofore established under the act.

You inquired as to authority for cooperative agreements between Federal departments. The draft bill makes no exception with respect to the authority under section 4 of the act (16 U. S. C. 583c) regarding interagency agreements. This is because (a) the interagency authority under section 4 pertains only to land-management plans authorized by the March 29, 1944, act and (b) other authority to cooperate with Federal agencies is considered to be ample.

We would have no objection to the enactment of this bill.

The Bureau of the Budget advises that there is no objection to the submission of this draft bill.

Sincerely yours,

E. T. BENSON,
Secretary.

Hawaiian Statehood

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. BURNS of Hawaii. Mr. Speaker, mounting evidence of overwhelming support for Alaska-Hawaii statehood by the Congress and the people of the United States continues to be evidenced.

For the information of the Members of Congress, I include herewith editorials further supporting this fact.

The editorials follow:

[From a Myrtle Creek, Oreg., newspaper of June 13, 1957]

STATEHOOD FOR HAWAII, ALASKA

There are times when this newspaper and Senator RICHARD NEUBERGER are on common ground. One of these concerns the granting of statehood to the Territory of Hawaii and that of Alaska. It seems ridiculous to this writer that these two dependencies should be kept at arm's length concerning the matter of statehood. They have both demonstrated that they are well aware of both the privileges and responsibilities of statehood.

Senator NEUBERGER, in a recent address, said that the approval of the two Territories for statehood would have a strong effect regarding our foreign policy—in that it would demonstrate our willingness to include peoples of other races into our national scheme of things. Perhaps this is so. However, we like to think that there are more practical and justifiable reasons than this for their inclusion into the Union of States.

Critics of statehood have pointed out that both Territories are hard to defend against aggression and therefore they should not be included within the Union. This is silly, too. We all well know that any act of aggression against either would be looked upon as an act of war (as in the case of World War II) and that we should be in the thick of the fight. So they are removed from our mainland? What of it? And who needs to worry more about a residency vulnerable to attack more than the resident himself?

There are a few drawbacks to statehood in either case, it is true, but they are minor ones, and certainly many of our own State Territories which were granted admittance to the Union were received on occasion with greater handicaps to the Federal organization than either of these offer today.

[From the Albany (N. Y.) Times-Union of July 8, 1957]

TIME FOR A DECISION

The Alaskan and Hawaiian statehood project took a necessary step toward final approval by Congress the other day when the Territories Subcommittee of the United States Senate gave an affirmative vote to separate bills designed to admit the two Pacific outposts into the American family of States.

But in keeping with the discouraging record that has attended this vital matter in past years, the action is once more up against the heavy handicap of needing a decision in the middle of the summer. With adjournment in the offing, the end-of-session rush of bills always leaves many important matters caught in the jam, and this has been the fate of the statehood bills in many previous sessions.

It is not to the credit of the Congress that statehood has so long been withheld from Alaska and Hawaii. The objections have reflected the prejudices of opponents far more than their wisdom, and their partnership much more than their understanding of national interest.

It should never have been pertinent to the issue whether Alaska and Hawaii would be Republican or Democratic, and it has been a sad thing that so many votes against statehood have been swayed by the civil-rights issue.

The real case for statehood, and it is a strong one, is that Alaska and Hawaii properly belong in the American Union, that their people are entitled to something better than second-class American citizenship, and that the American people as a whole would be safer, stronger, and more prosperous with the additional safeguards against aggression and invasion.

The statehood issue has been too long kicked around and muddled by politicians and partisans. It is time for a higher quality of American statesmanship to take over and make the needed favorable decision in this important matter.

[From the White Plains (N. Y.) Reporter Dispatch of June 11, 1957]

WILL THERE BE ANY MORE STARS IN OUR FLAG?

It has been 45 years now since our flag makers were called on to sew more stars into the upper left hand corner. That was when New Mexico and Arizona became States in 1912, and pushed the number up to 48.

That 45-year span sets a record. Previously the longest period between admission of States was 15 years. That interlude came between admission of Missouri in 1821 and Arkansas in 1836.

Going back still further into the history of the stars and stripes, it was in 1794 that Congress ordered 15 stars and 15 stripes into the flag. Vermont and Kentucky, you remember, had been added to the Original Thirteen States.

Then in 1818 Congress remade the flag, reducing the number of stripes to 13 again in honor of the Original Thirteen States, and providing for 20 stars, with 1 to be added for each new State. That brings us up to our present flag of the 13 stripes, with the 48 stars in 6 rows of 8 stars each.

Now there's a chance that Flag Day on Friday may be the last in which we'll have 48 stars in Old Glory. Hawaii and Alaska are again knocking at the door. In 1950 the House of Representatives voted for statehood for both Hawaii and Alaska. In 1954 the Senate voted for statehood for both. Now there is a good chance both the House and Senate may approve in the same congressional session. That would mean a new arrangement of stars alongside the stripes.

Our flag manufacturers probably would prefer admission of one or the other of the Territories, but not both. For, on admission of only 1, the present arrangement of 6 rows of 8 stars each could be easily changed to 7 rows of 7 stars. But if both Hawaii and Alaska come in, how can 50 stars be presented symmetrically?

At any rate, that little problem won't be the determining factor. Whether we are to remain a commonwealth of 48 units, or become one of 49 or 50, will be decided on other points. And this may be the year of decision.

Jaycees for Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. BARTLETT. Mr. Speaker, I am happy to report to the House that once again the United States Junior Chamber of Commerce has gone on record for Alaska statehood. Meeting at Milwaukee, the Jaycees unanimously adopted this strong resolution:

Whereas in view of the fact that immediate statehood for Alaska and Hawaii is supported by both major political parties and the national administration and hence is nonpartisan; and

Whereas the people of both Territories have demonstrated their readiness and ability to assume and discharge the obligations of statehood; and

Whereas the people of these Territories have upon their own initiative and expense adopted by more than a 2 to 1 majority a State constitution in conformity with the principles of American government; and

Whereas the legislatures of these Territories have year after year passed memorials urging Congress to enact enabling legislation; and

Whereas the people of these Territories as United States citizens are denied the right to vote for the President and Vice President of the United States and have no voting representation in Congress; and

Whereas Territorial status in view of its temporary nature discourages investment capital and thereby hinders the economic development of the Territories; and

Whereas statehood for these Territories would result in a decrease of Federal expenditures for the operation of government in Alaska and Hawaii; and

Whereas Territorial status contributes to an indifferent and slothful attitude toward government while statehood encourages an active interest and participation in government; and

Whereas it is in accord with cherished principles of American Government to grant the responsibility and privileges of local government to American citizens who have suffered the hardships of frontier areas and developed the same: Now, therefore, be it

Resolved by the United States Junior Chamber of Commerce in annual convention assembled in Milwaukee, Wis., this 26th day of June 1957, That the President, the Congress, the Secretary of Interior, the delegates from Alaska and Hawaii be urged to support immediate statehood for the only two remaining incorporated Territories under the American flag, Alaska and Hawaii; be it further

Resolved, That a copy of this resolution be sent to the President of the United States, each Member of Congress, the Secretary of Interior and the Delegates from Alaska and Hawaii.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mrs. KEE. Mr. Speaker, what has become of the Nation's farm problem? During the 1956 political campaigns—just about this time 1 year ago—the plight of the country's more than a million low-income farm families commanded daily, front-page headlines in the national press as both political parties vied with each other in promises and programs to bring the farmer's economic status up to the level of prosperity enjoyed generally by the rest of the country. Is it possible—now that the votes

have been counted—that both Congress and the administration need to be reminded that his problem is still with us?

Today, despite the very commendable efforts of the Committees on Agriculture of both the House and the Senate, the circumstances of these farm families remain relatively unimproved and it would seem to me that we are very little further advanced toward solving this one among the Nation's most vexing and worrisome problems.

A glance at the figures on net farm income over the past few years is enough to convince the most skeptical that the farmers of America have been experiencing a real recession, if not an actual depression, in the last 6 years. Since 1951 when net farm income was $16.1 million, this income has consistently declined to the estimated figure of $11.6 million in 1956. During this same period, it is worthy of note, prices received by farmers dropped from 112.2, compared with 112.6 for retail food prices in 1951, to 87.4 and 111.7, respectively, in 1956. And with the cost of living rising ever higher, while there are no immediate figures available, I have little doubt that this disparity between the prices farmers receive and what they have to pay is even greater.

In West Virginia, where the net income of farmers has decreased from $95 million in 1951 to $60 million in 1955—the last year for which this data is available—our farmers have fared even worse than have those of the country at large. Throughout the State there are some 21,000 commercial farm operators—more than 10 percent of West Virginia's total population. Seven out of every ten of these operators have gross sales of less than $2,500 a year.

In the fifth congressional district, the situation is even worse. Half of our commercial farm operators have gross sales of less than $1,200 a year. Compare this figure with the 1955 median income of $4,400 for all the Nation's families and you will have some idea of the want and deprivation, the hardship and human misery endured by the great majority of West Virginia's farm population.

According to the United States Bureau of the Census 1954 census of agriculture, based upon the value of products sold, there are six classes of commercial farms operated in the United States. In class I are those farms with a value of products sold at $25,000 and over; in class II are those at $10,000 to $24,999; class III, $5,000 to $9,999; class IV $2,500 to $4,999; class V, $1,200 to $2,499; and class VI, $250 to $1,199.

The following table, also from the 1954 census of agriculture, reveals that a staggering 48.5 percent of the commercial farms operated in the Fifth District of West Virginia fall within the lowest income group:

	Total	Class I	Class II	Class III	Class IV	Class V	Class VI
State	21,479	350	1,158	2,264	3,137	5,737	8,833
5th District	2,428	34	106	241	283	586	1,178
Greenbrier	751	12	72	126	138	162	221
McDowell	35					10	25
Mercer	388	10	5	10	51	86	226
Mingo	11					6	5
Monroe	767	12	28	94	72	191	370
Summers	408		1	11	21	85	290
Wyoming	68				1	26	41

These figures add up to one indisputable fact—that the majority of the farm population in the Fifth District of West Virginia lives in meager circumstances, and, in contrast to the rest of the Nation, exists in a depression second only to that one of harrowing memory, the great depression of the 1930's.

To be sure, we now have numerous farm programs—but are these really geared to help our low-income farmer? I fear not. The low-income farmer has little to sell, and, therefore, farm price supports on basic crops do not aid him very much. Indeed, it is debatable whether they do not hurt more than they help him for they tend to keep feed prices high while the price of the livestock he takes to market has declined. Nor is the soil-conservation program of any great benefit to the low-income farmer, for he has little land to put into such a program.

The rural development program is, therefore, the only farm program now in effect which is aimed at alleviating the problems resulting from the restricted opportunities and limited resources of our low-income farm families. Unhappily, it would seem to be a program which is more loaded with good intentions, noble sentiments and fine-sounding speeches than with the concrete assistance these people really need.

During the past fiscal year the total amount of money allocated to the rural development program was less than $2 million, or $1.60 per farm family for the total year. This year the administration has recommended a slight increase in the rural development program, but commendable as the program's intentions may be, it is not expected to offer any real solution to the needs of more than a million American families.

The result of their misfortune serves as a depressant upon our whole economy. I submit that if small business and industry were in a similar plight, we in this country would now be moving heaven and earth to find both the immediate and the long-range answers to this problem. Indeed, only recently, Congress moved to increase the lending powers and resources of the Small Business Administration, established for the specific purpose of providing credit for the small-business man when private sources of credit are not available to him.

We need urgently a similar positive and comprehensive program of assistance for our low-income rural families. I might point out here that in his book, Farmers at the Crossroads, Secretary of Agriculture Benson remarks that it takes an average investment in equipment of about $20,000 per worker to operate the average commercial family-run farm. Many a small business undertaking has been launched and successfully established on far less capital.

Clearly, therefore, an expansion of credit facilities for low-income farm families, and a point 4 program of technical assistance for the underprivileged at home as well as abroad, are immediate and long overdue necessities and should be enacted at soon as possible.

As a further step and one which would serve to stabilize and benefit our entire economy, we must continue to work to bring new industry into our depressed low-income rural areas in order to diversify their economic base and to allow our farmers to supplement their too-low agricultural income with wages from industry. Several bills to accomplish this, to aid these depressed rural areas—one of which, H. R. 1949, the area redevelopment bill, I introduced in the opening days of this session—are now before the House Committee on Banking and Currency.

Last year this committee approved a bill to aid the depressed industrial and rural areas of the country. This bill died with the 84th Congress. I earnestly urge the committee to consider the bills now before it and to report a comprehensive program of aid to depressed areas to the House before the close of this session of the Congress.

In the pressure of world events, it is my most fervent hope that the fundamental needs of our own people shall not be overlooked or cast into the background of unfinished business.

Future "Pearl Harbors": National Policy in Treatment of our Commanders in Chief

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the evaluation of military and naval policies of great nations has often followed a tortuous course featured by heroism and tragedy, at times requiring many years to crystallize. One of the elements in this policy that transcends all questions of personal consideration is the treatment of our military and naval commanders, particularly those holding positions of grave responsibility just prior to the outbreak of war, as well illustrated by the case of Adm. Husband E. Kimmel, the Commander in Chief of the United States Pacific Fleet, at the Battle of Pearl Harbor.

The story of that tragic event, as admirably summarized by Vice Adm. John F. Shafroth, was included in my remarks in the Appendix of the CONGRESSIONAL RECORD of June 3, 1957. The treatment

of Admiral Kimmel and his retirement in the reduced rank of rear admiral has roused the vitally important issue of what should be our national policy in such cases, for with our Armed Forces stationed in critical areas in various parts of the world there may well be new Pearl Harbors.

It is obvious that the minds of our responsible commanders should not be burdened with concerns over their personal rank after supreme tests, particularly at the outbreak of war. They have enough to worry about without adding avoidable cares.

In this regard, we can learn much from the history of nations that have had prolonged experience in warfare. Rome, one of the greatest military powers in history, was one such nation that had a calculated policy of honoring all commanders regardless of their fortune on the assumption that this was the wisest course to follow. The restoration of the rank of full admiral to Rear Admiral Kimmel would be the precedent for such policy by the United States.

A summary of the Roman policy as presented in chapter XXXI in the Discourses on the First Ten Books of Titus Livius, by Niccolo Machiavelli, gives a deeper insight into the nature of this problem and the remedy adopted by the ancient power.

In order that this chapter on Roman military history may be more widely known, under leave to extend, I include its text:

EXCERPT FROM THE PRINCE AND THE DISCOURSES, BY NICCOLO MACHIAVELLI

CHAPTER XXXI—SHOWING THAT THE ROMAN GENERALS WERE NEVER SEVERELY PUNISHED FOR ANY FAULTS THEY COMMITTED, NOT EVEN WHEN BY THEIR IGNORANCE AND UNFORTUNATE OPERATIONS THEY OCCASIONED SERIOUS LOSSES TO THE REPUBLIC

The Romans (as we have shown above) were not only less ungrateful than other republics, but were also more lenient and considerate in the punishment of the generals of their armies. For if their misconduct was intentional, they punished them humanely; and if it was caused by ignorance, they not only did not punish them, but rewarded and honored them nevertheless. This mode of proceedings had been well considered by them; for they judged that it was of the greatest importance for those who commanded their armies to have their minds entirely free and unembarrassed by any anxiety other than how best to perform their duty, and therefore they did not wish to add fresh difficulties and dangers to a task in itself so difficult and perilous, being convinced that, if this were done, it would prevent any general from operating vigorously. Suppose, for instance, that they had sent an army into Greece against Philip of Macedon, or into Italy against such tribes as had at first gained some victories over them. Now, the commander of such an expedition would naturally feel the weight of all the cares attendant on such enterprises, and which are very great. But if in addition to these anxieties the mind of the general had been disturbed by the examples of other generals who had been crucified, or otherwise put to death, for having lost battles, it would have been impossible for him, under the influence of such apprehensions, to have proceeded vigorously. Judging, therefore, that the ignominy of defeat would be sufficient punishment for such a commander, they did not wish to terrify him with other penalties.

The following is an instance of how they punished intentional faults. Sergius and Virginius were encamped before Veii, each commanding a seperate division of the army; Sergius being placed on the side where the Tuscans could make an attack, and Virginius on the opposite side. It happened that, Sergius being attacked by the Faliscans and other tribes, he preferred being beaten by them and put to flight rather than apply to Virginius for assistance; and, on the other hand, Virginius, waiting for his colleague to humble himself, was willing rather to see his country dishonored, and the army of Sergius routed, than march unsolicited to his succor. Certainly a very bad case and worthy of note, and well calculated to cause unfavorable conjectures as to the Roman republic, if both these generals had not been punished. It is true that, while any other republic would have inflicted capital punishment upon them, they were subjected by Rome only to a pecuniary fine. Not but what their misconduct merited severer punishment, but because the Romans, for the reasons above explained, would not vary from their established custom.

As regards faults committed from ignorance, there is not a more striking example than that of Varro, whose temerity caused the defeat of the Romans by Hannibal at Cannae, which exposed the republic to the loss of her liberty. Nevertheless, as it was from ignorance, and not from evil intention, they not only did not punish him, but actually rendered him honors; and on his return, the whole order of senators went to meet him, and unable to congratulate him on the result of the battle, they thanked him for having returned to Rome, and for not having despaired of the cause of the republic.

When Papirious Cursor wanted to have Fabius put to death for having, contrary to his orders, given battle to the Samnites, among the other reasons which the father of Fabius opposed to the obstinancy of the dictator was this: that after the most bloody defeats the Roman people had never treated their generals as Papirius Cursor wanted to treat his victorious son.

H. R. 6630

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. HENDERSON. Mr. Speaker, a significant segment of the industry of southeastern Ohio and a very important part of the economy of some of its counties is being adversely affected by the low tariff policies. Specifically, the pottery, ceramic tile, and handmade glass industries are seriously and substantially affected by a program of reduced protection.

Considerable concern is being expressed in my congressional district over the proposal to adopt H. R. 6630.

Herewith is a resolution of the Kiwanis Club of Cambridge, Ohio, which is self-explanatory:

Whereas wage costs in countries abroad are greatly below those in the United States for many like or competitive products;

Whereas imports reflecting those lower wage costs are capturing an increasing share of our domestic market, with resultant harm to employment, investment, and domestic prosperity here;

Whereas our Government is inhibited in its use of tariffs and quotas to remedy or prevent this worsening situation, due to United States participation in the General Agreement on Tariffs and Trade (GATT), which the State Department entered into without the approval of Congress; and

Whereas to strengthen GATT, the Organization for Trade Cooperation (OTC) has been proposed as GATT's continuing, policing arm, and Congress has been asked to endorse OTC through enactment of H. R. 6630, the effect of which also would be an endorsement of GATT: Now, therefore, be it

Resolved, That:

1. Congress reject H. R. 6630, and any other proposal to authorize the United States to join OTC or GATT;

2. Congress reassert its constitutional prime responsibility for regulating the foreign commerce of the United States, the determining of tariff policy and, where necessary, the setting or changing of individual rates or duty.

3. Congress uphold and strengthen the United States Tariff Commission in its work of determining facts as to the impact of imports on domestic industries and of recommending such tarriff changes and other regulatory action as will prevent or remedy injury to such industries.

4. Copies of this resolution are being sent to our Congressman, Senators, and the President of the United States.

H. CLARK ARMSTRONG,
President, Kiwanis Club of Cambridge, Cambridge, Ohio.

Tennessee Paper Supports Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. BARTLETT. Mr. Speaker, along with all Alaska and Hawaii statehood advocates, I want to thank those of the Nashville Banner for the gratifying editorial which appeared in the July 6 issue of that very fine Tennessee newspaper supporting statehood for Alaska and Hawaii. Under leave to extend my remarks, that editorial is reproduced.

ENACT THIS STATEHOOD NOW

There is reason to believe—and hope—that the bill for Alaskan statehood will be introduced in Congress this month; and at least to hope that it is enacted. A companion measure should grant this same full commonwealth status to Hawaii.

The proposals have been kicking around long enough.

Not only do these two Territories want statehood; they are prepared for it, fully capable of discharging their responsibilities of state government and to the Nation, and as vital security outposts need that tie of official relationship with the mainland.

The House Committee on Interior and Insular Affairs has favorably voted out the bill for Alaska's statehood. That is a good augury, up to this point. But 10 years ago when a similar bill was passed for Hawaii in the House, it failed of passage in the Senate. Now is the time, therefore, for all to go to work on behalf of this legislation. It has hung fire too long already.

Alaska has demonstrated its readiness, and complete good faith. It has followed the so-

called Tennessee plan (the approach by which Tennessee prepared itself for admission) having elected its 2 Senators, and 1 Representative, adopted a constitution, and organized the machinery of State government.

The House committee reports states that "The committee is convinced that statehood for Alaska at the earliest possible date will promote the best interest of the Nation as well as those of the Territory," and adds that "by historical standards, Alaska is ready and qualified for statehood now." Those standards it lists:

1. Belief by the inhabitants in the principles of democracy as exemplified by the United States of America.
2. Wish for statehood.
3. Sufficient population and resources to support State government, and at the same time carry a fair share of the cost of Federal Government.

Admission to the Union is not lightly to be bestowed. Of course that is true. But from a valid point of view, including that of national welfare and interest, the appeals of Alaska and Hawaii make an adequate case.

To the far Northwest, Alaska stands as a bastion related to American security. Its development is essential, and the status sought would advance that.

Outward in the Pacific, Hawaii stands as an outpost and security stronghold; today the headquarters of our whole defense team in that ocean and to the Far East.

The Government has recognized that—a bipartisan acknowledgement; yea, a pledge.

Most of the Tennessee delegation in Congress are on record approving Alaskan statehood—and presumably for Hawaii. The Banner believes all of them should be.

In the interest of justice to the people of these Territories, it should be enacted now. The action is consistent with the best national interest, too.

Fairness to Verrazano

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of a letter sent to the Governor of New York, the Honorable Averell Harriman, in which the Italian Historical Society of America through its director, John N. La Corte, points out an historical fact apparently overlook by the committee planning the 350th anniversary celebration of Henry Hudson's voyage up the Hudson River. The society calls to the Governor's attention the fact that New York Bay was discovered by Giovanni de Verrazano, whose name to date has not been included in the anniversary programing.

The letter follows:

ITALIAN HISTORICAL SOCIETY
OF AMERICA,
Brooklyn, N. Y., July 17, 1957.

Hon. AVERELL HARRIMAN,
Governor, State of New York,
Albany, N. Y.

DEAR GOVERNOR HARRIMAN: We have learned, through newspapers, that you have appointed Mr. Carl Carmer as chairman of a committee to plan the 350th anniversary celebrations of Henry Hudson's voyage up the Hudson and the discovery of Lake Champlain.

It is learned, with great surprise, by many citizens of New York State, who know of the discovery of New York Bay by the great discover and navigator, Giovanni de Verrazano (which event has been noted by a proclamation issued by Your Excellency and which event has been and will be marked by the Italian Historical Society of America annually, that no mention of Verrazano has been made in connection with the 1959 celebration.

Verrazano was the first European to cross the uncharted waters of the Atlantic, and he arrived in New York Bay in April, 1524—85 years before Henry Hudson. According to historians, Hudson used maps prepared by Verrazano when he, Hudson, crossed the Atlantic, years later.

In all fairness and justice to history, and to Verrazano, the feat of Giovanni de Verrazano should be made an integral part of the 1959 plans and celebration. We do believe that this letter should receive due consideration by you and the committee involved in the plans.

With best wishes, I remain,
Yours very truly,
JOHN N. LA CORTE,
Director.

Status-of-Forces Treaties Essential

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Galesburg Register-Mail, Monday, July 15, 1957:

STATUS-OF-FORCES TREATIES ESSENTIAL

Proposals in Congress for nullifying all status-of-forces treaties seem ill advised. Naturally Americans are concerned that justice be accorded their sons in military service on foreign soil when they are charged with civil or criminal offenses. Nevertheless, the position held by United States forces stationed abroad still seems to give rise to some misconceptions—in official circles as well as among the general public.

Foreign courts that try our soldiers for certain types of offenses are not doing so as a special privilege they enjoy under dispensation from this country. It's just the other way around, in fact. Like ourselves, these are sovereign countries with full authority over the territory within their borders.

If we did not have so-called status-of-forces agreements with these nations which convey to us the right to try our servicemen for various offenses committed under certain conditions, then the host lands would automatically have the power to mete out justice.

Stirred largely by the William Girard case in Japan, some lawmakers in Congress now are proposing that all status-of-forces pacts be nullified. The effect of such a move, obviously, would be to leave the United States military without any control whatsoever in this field. This is not to say that there are no flaws in the status-of-forces treaty plan, because there are some serious counts against the system. Yet the proper solution hardly seems to lie in such a sweeping act as to eliminate this useful arrangement altogether. Secretary of Defense Wilson, speaking for the administration, says the canceling of these agreements would compel the United States to withdraw its forces from all foreign overseas posts. The reason is that our military would not wish to abandon all judicial authority in criminal cases to the host nations.

Under the existing agreements, foreign courts have jurisdiction over servicemen for offenses committed against local inhabitants while off duty. They also act against the most serious on-duty crimes. Other on-duty offenses come under the sway of our own courts-martial.

We have troops abroad under the NATO treaty and other obligations. Having them there is indeed a favor to our foreign friends, but it is also a favor to ourselves, since our military experts believe it is a vital part of an effective defense for America and the free world.

But in all fairness we can hardly demand as a price for this defensive assistance the abandonment by our friends of their sovereign right to adjudicate crimes committed on their soil. We would not do this for them.

Reasonable concessions already made to us by the foreign nations in this field make it plain that a satisfactory quality of justice is meted out to United States servicemen by their courts. Agitators for abrogation of the treaties should be rebuffed by realization of the facts.

Do We Mean It?—Chapter 2

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. HIESTAND. Mr. Speaker, the following article, clipped from the Washington report of the United States Chamber of Commerce, hits at a very sensitive spot. Most Members of Congress have publicly expressed themselves in favor of cutting out waste and unnecessary Federal expenditures, especially as recommended by the Hoover Bipartisan Commission.

Of the more than 140 recommendations of the Commission which require legislation, only a handful have passed.

Do we mean what we say?

Barring a last-minute surge of unexpected activity, the 1st session of the 85th Congress will adjourn with a shameful record of inaction on the recommendations of the second Hoover Commission.

Grassroots pressure for thrift in Government was unprecedented during most of this session. Despite this citizen mandate, the congressional committees that must initiate the action needed to put the Commission's legislative proposals into effect haven't even bothered to hold hearings on 80 percent of the more than 170 pending bills.

Instead, for a variety of reasons, ranging from lack of political courage to belief in paternalistic Government, the economy drive has been restricted to nibbling at appropriation requests.

This approach ignored the plainest of facts—that it is impossible to cut the cost of Government significantly unless the size and scope of Federal activity is reduced.

The task forces of the second Hoover Commission not only documented the accuracy of this age-old truth but pointed out literally hundreds of ways and places to reduce the size and cost of Government without impairing our national security or eliminat-

ing truly essential Federal programs or services.

A special national chamber analysis and comparison of the 1958 budget and the Hoover Commission proposals identified 24 places where the adoption of specific recommendations would make possible a cut of at least $1 billion.

Instead of leaping at this magnificent opportunity, the 85th Congress has virtually ignored it. Worse yet, it has taken at least a dozen actions that are in direct conflict with Commission proposals.

With 7 months of the session already gone, Congress has sent only two minor Hoover Commission bills to the White House. Indications are that not more than five such measures will be acted upon favorably prior to adjournment. Only 3 pending bills have passed either the House or Senate, and only 3 additional measures have won committee approval.

The Hoover Commission completed its painstaking Government audit on June 30, 1955. The plausible alibi for congressional inaction that year was: "We got the recommendations too late in the session and must study them."

In 1956, 32 laws implementing 39 relatively minor recommendations were enacted. But the major dollar-saving proposals were ignored because they were too controversial to take up in a presidential election year.

"Wait till next year," we were told. "The results of our studies will be in, it's a nonelection year, and real headway can be expected."

This—1957—is that next year and the record of apathy and indifference speaks for itself.

An examination of the legislative history of the law that established the second Hoover Commission reveals that it had unanimous, bipartisan House and Senate support.

That law declared it to be the policy of Congress "to promote economy, efficiency, and improved service in the transaction of the public business."

It directed the Commission to examine the wisdom of the policies of Government, as well as the appropriateness of its structure, and to submit to Congress its recommendations regarding any changes that are necessary to achieve the above policy objectives.

The Commission completed its assignment 2 years ago and immediately won nationwide bipartisan praise.

But Congress has failed miserably to recognize and discharge its moral obligation to evaluate the Commission's proposals; to translate those having merit into dollar savings, and thereby expedite the achievement of long-overdue debt and tax reductions.

The great danger of the prevailing congressional attitude does not lie in the possibility that the Commission's proposals will go down the legislative drain. The real danger is that no review of Government—such as that made by the Hoover Commission—will again be made. The size and difficulty of Government operation make such periodic reviews imperative.

Airlines Protest

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oakland (Calif.) Tribune of June 29, 1957:

AIRLINES PROTEST

Recent decisions of the Department of State to approve applications of Australian and Dutch airlines for extended routes across the United States have brought a voluble protest from American airlines.

The protest, we believe, is justified. Even though the agreements with Australia and the Netherlands were on a reciprocal basis, on paper, in reality there is discrimination against United States carriers.

In return for privileges to the foreign airlines by which they will be allowed to compete with American lines, rights for domestic carriers to extend their operations in the other countries were also granted.

But by comparison, the domestic lines were seriously short changed. It is not difficult to fathom the temper of the Air Transport Association of America when it contemplates the difference between distances and potential travelers in the United States and Holland; or the additional traffic they can expect from Australian rights to fly into and over the bush country.

The State Department, of course, is anxious to foster goodwill wherever it can and by whatever means. But it seems incongruous to make American lines suffer as the result of this specific phase of goodwill promotion.

Talk to Plenary Meeting of the Assembly of Captive European Nations, Friday, June 28, 1957, on the Anniversary of the Poznan Uprising and on the United Nations Report on Hungary, by Christopher Emmet, Chairman, American Friends of the Captive Nations

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following text of a speech made by Mr. Christopher Emmet, chairman of the American Friends of the Captive Nations, before a meeting of the Assembly of Captive European Nations on June 28, 1957:

I am deeply honored to address this plenary session of the Assembly of Captive European Nations. I bring you the greetings of the American Friends of the Captive Nations, and I am especially happy to be here today with one of our most distinguished members, one who has done so much for the cause of your countries' freedom, Congressman BENTLEY.

All of our members feel closely linked with you. You blazed the trail and created the conditions which made possible the formation of our young committee only a little over a year ago. In fact, the inspiration for the formation of the American Friends came from a discussion in this very room.

Busy as most of our members are, and with very limited financial resources, we never could have attempted the task without the example and the inspiration which the success of your assembly had given us. You lifted the cause of your captive countries out of the obscurity and confusion of divided refugee groups into an institution which has played an increasingly important role in the war between freedom and communism. What you have done has not only helped the cause of your own countries, and you did not do it only for the sake of your own countries. You have given all of us the benefit of your special knowledge, expressed in your statements with a dignity and a clarity in the English language which has clarified the thinking of the American people and the people of Western Europe.

As far as the American friends of the captive nations are concerned, it is you who have helped us, not we who have helped you. But I do want to pay tribute here to some other Americans who by their work for the Free Europe Committee, had the wisdom to encourage and help you in the great work you have performed. I am thinking of Joseph Grew, C. D. Jackson, John Hughes, Adolf Berle, and their colleagues.

One of the sources of defeatism in America, which produced the myth about the finality of the Communist enslavement of Eastern Europe, was the impression that the countries of Eastern Europe were hopelessly divided by nationalist rivalries. It was commonplace to hear the remark among Americans that the exiled leaders could not even unite in the face of the overwhelming disaster which had overtaken their countries. The formation of this assembly has refuted that impression. The fact that you showed what you could do to help yourselves made it possible for us to help you.

The other common charge against you was the claim that, as refugees, you were out of touch and unrepresentative of your countries. Poznan and Budapest have given the lie to that. The increasing recognition you have received from the council of Europe and from the press of Europe, as well as of this country, has proved the measure of your success.

Another sign of your success is the decision of the 24 nations who sponsored the Special United Nations Committee Report on Hungary to call for the reconvening of the General Assembly. Incidentally, I am proud of the modest part which the American Friends of the Captive Nations also played in that achievement. We began in April to enlist the support of great national organizations to this end, and it was actively led by our distinguished Members in the Senate and House, including Congressman BENTLEY.

Of course, this is only a first step and we are only at the beginning of the tremendous task we have set ourselves. The honor and recognition you have earned abroad mean little to you personally as long as your countries remain occupied by Communist armies. It must be almost unbearable for you to witness the mistakes of the free nations, knowing as you do not only the wickedness but the weakness of communism, and knowing as you do that the West does not yet fully understand either that weakness or that wickedness. For the Hungarians among you, especially, nothing that has happened can relieve the terrible sense of tragedy.

Nevertheless, you must try to remember that the success you have had is all the more remarkable and meaningful because it has been achieved in the face of a dangerous trend of world politics, ever since Stalin's death. The people of Hungary and Poland proved with their blood the truth of many of the facts and judgments first revealed in the publications of this Assembly. As a result Soviet crimes in Hungary remain a living issue at the top of the agenda of the world organization, and the story of Hungary remains the most vivid foreign policy issue in the minds and hearts of the American people.

There was a period in recent months when it seemed that Hungary had been forgotten

despite the immortal glory the Freedom Fighters won last November. For months there was a virtual blackout of news and comment. But now the United Nations report, and the world agitation to do something about that report, show that the peoples' memories are not so short as cynics believed.

The appearance that Hungary was forgotten was wholly deceptive. It was based entirely on the technical problems of news dissemination. News value is supposed to involve novelty, and in recent months there was nothing new about the Kadar tyranny in Hungary. It was the same continuing ghastly story that has been going on in all the captive countries, like a prolonged nightmare. Poland is the only exception. But the unanimous United Nations report signed by neutral nations is a great news event in itself, and its text makes the tremendous events of last November live again.

It will be asked what a new session of the General Assembly will accomplish for Hungary now, since it failed to act when the events in Budapest shook the world. The answer is that even though a new session of the Assembly will probably fail as before to secure compliance with U. N. resolutions, it will again focus the spotlight of world opinion on Hungary. That in itself will be a blow for freedom. It will prove to the Hungarian people that their bravery and their sufferings are not forgotten. It will prove to the Soviet Union that their crimes will never be forgotten as long as their troops remain in Hungary.

In November, world public opinion, as expressed in the U. N. General Assembly, was temporarily able to check the deportations which were then reported by so many refugees. When the U. N. turned away from Hungary the deportations were resumed. This indicates that even the Soviet dictatorship cannot wholly ignore the pressure of world opinion. They do care what the world thinks and says, otherwise the Kremlin would never spend the billions of dollars it does on propaganda abroad. Measured in terms of public relations or advertising values alone, a new meeting of the U. N. Assembly to discuss the Special Committee's report on Hungary could not be purchased by any amount of money spent in a publicity or propaganda campaign.

EXPULSION OF THE KADAR DELEGATES

However, there is a real chance of achieving some definite action if the U. N. meets. In its leading editorial today the New York Times not only rightly urges the reconvening of the Assembly before September, it specifically demands that the Assembly can and must take the minimal and long overdue action of kicking out of the U. N. the delegates of the Kadar government, which has been murdering and torturing the leaders of Hungary's fight for freedom at the behest of its Soviet masters. In view of the strong and justified language which Ambassador Wadsworth used to this Assembly today when he referred to members of that government as murderers, it would seem impossible in all decency for them to be allowed to sit as members of the very Assembly which has indicted them for these crimes through the Committee's report.

ECONOMIC SANCTIONS?

While rightly calling for the expulsion of the Kadar delegates, the Times editorial mentions in passing that sanctions against the Soviet Union are impossible. If that is true, it is only because so many intelligent people, like the editors of the New York Times, assume it to be true. All the evidence from the captive countries, from Communist China, and from the Soviet itself, indicate that the various degrees of unrest and incipient revolt from Poland and Hungary to North Vietnam, are mainly due to economic causes. The Soviet economy which must carry the main burden of production for this whole vast area is overextended, while at the same time the U. S. S. R. is trying to subvert various African and Asian countries by economic aid. Why should we help them to meet these difficult economic problems, at this of all moments, by relaxing trade restrictions as the West is doing?

How could it fail to increase the economic cost of the Soviet suppression of Eastern Europe if we impose sanctions, however mild? If the United States would even propose sanctions at the U. N., whether they were voted or not, it would certainly reduce the present trend toward increased trade by arousing the conscience of public opinion in the countries now promoting such trade, and by indicating that their action was estranging the American people.

Of course, the trade restrictions would involve some sacrifice for the Western nations and businessmen concerned, but the West as a whole is enjoying unprecedented prosperity. We need the increased trade less than the Soviets. If necessary the few free countries where the restrictions in the East-West trade are a real burden, could be compensated. Are we unwilling to make even this small sacrifice to encourage the withdrawal of Soviet troops from Eastern Europe, not only for the sake of the hundred million people it would liberate but because it would be the greatest step toward peace?

One reason the Soviets are anxious to make some "first step" toward disarmament, which would offer no real security from their future aggression, is because it would reduce the economic burden of the competitive arms race, which lies even more heavily on them than on us. Also by arousing optimistic reports on disarmament deals the Soviets encourage unilateral arms cuts, including those voted by Congress. Why should the Soviets pay any price for trade relaxation to reduce the economic tensions in their empire if the West agrees to ease their arms burden and ease the trade restrictions without asking any Soviet political concessions in return? The British have removed some 400 items of China trade from the banned list, goods which formerly had to be produced or at least transshiped by Soviet Russia for China.

But even assuming that these arguments are invalid and that economic sanctions would be wholly ineffective, a United States effort to impose them would serve a very real political, psychological, and moral purpose. Even at this late date it would help the unity of the American people, the morale of the Western World, and the prestige of the United Nations if the United States would propose economic and diplomatic sanctions in the U. N. to end Soviet intervention in Hungary. This is true whether or not the U. N. majority votes for sanctions, and whether or not, if voted, they would prove effective. It is better to try and fail than not to try.

What power the United Nations has is moral power which must appeal to the conscience and sense of justice of the member nations for its implementation. The U. N.'s influence may survive failure to enforce justice against the defiance of great states, but it cannot survive failure to seek equal justice for all its members. Above all, it cannot survive if it proposes one law for the strong and another for the weak. But that is precisely what both the U. N. and the United States did when they threatened Israel with sanctions while ignoring the aggression of the Soviet Union.

CONCLUSION

However, let me end by reminding you again that no matter when it meets or what action it takes, a new meeting of the U. N. Assembly on the Hungary report will in itself be a victory for our cause. The Communists thought they had buried the revolt. Order has been restored, the Iron Curtain rebuilt, and a blackout of silence imposed on Hungary. But the U. N. report, and the worldwide response to it, have shattered those Communist illusions. The memory of the freedom fighters has risen from the ashes to haunt the Soviets. Their deeds still live, and the remembrance of those great November days in Budapest will rise again and again until Hungary is free.

With the freedom of Hungary will come, inevitably, the freedom of all your countries, and when that day comes you will be honored there as well as here for the part you played in winning the victory.

You will return to play parts in rebuilding your countries, as so many German and Italian exiles returned to build the miracle of postwar Germany and Italy. My message to you is: Be proud of what you have done; be confident of what we will do together in the future.

Gun Duel in Palestine

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of July 11, 1957:

GUN DUEL IN PALESTINE

With United Nations troops maintaining an uneasy truce along the Egyptian-Israeli border, violence is beginning to erupt along another frontier around Lake Hula. Since the middle of last month border incidents have been taking place in that area, culminating in a 10-hour gun duel between Syrian and Israeli forces on Tuesday.

As usual, each side blames the other for starting the trouble. But there are some fundamental considerations which should help in determining where the responsibility lies. The fact is that, despite the seeming onerousness of its terms and the occasional ruthlessness of its retaliatory actions, Israel has been pleading for peace and for peace negotiations. As tokens of its earnestness it has, privately at least, offered territorial readjustments; it has eased the lot of its Arab inhabitants; it has released the blocked funds of Arab refugees, and it has been negotiating in Rome with private refugee representatives to solve the problem on the basis of compensation, some repatriation and resettlement of the rest.

But the Arab States continue to proclaim their determination to destroy Israel, a state created under United Nations auspices, and so insist on maintaining a state of war with Israel enforced by guerrilla warfare and blockade. They are doing so in defiance of the armistice agreements which call for permanent peace, in violation of a security council decision denying them any belligerent rights, and in repudiation of their own declarations affirming the international character of both the Suez Canal and the Aqaba Gulf.

Recent events have clearly revealed that this policy is both futile and dangerous. It has brought the Arabs nothing except Communist penetration and Nasser's imperialistic ambitions, which combine to produce plots for the overthrow of established governments. Furthermore, since United Nations pressure was able to compel even Britain and France to stop their military intervention and withdraw, it should surely be

able to stop any new aggression by Israel or the Arabs.

This reduces the Arab state of war to an absurdity and leaves as the only alternative the road to peace. Some Arab rulers have recognized this and have dissociated themselves from Nasser and his Syrian helpers, at least on the Communist issue. One can only hope that they will also find the strength to embark on a policy that will at last bring peace to themselves and the whole Middle East.

Address by Brig. Gen. J. P. Berkeley, USMC, to Reserve Senior and Junior Courses Graduation Exercises, Quantico, Va., June 28, 1957

EXTENSION OF REMARKS
OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. THOMPSON of Texas. Mr. Speaker, my attention has just been directed to an address made by Brig. Gen. J. P. Berkeley, United States Marine Corps, to Reserve senior and junior graduation exercises at Quantico, Va., on June 28 of this year.

The address appealed to me as an old marine, and one who has always believed that the secret of success of the corps lies more in men than in the machinery they use to make war.

General Berkeley's remarks are especially timely in these days of emphasis on awesome weapons and a very probable public misconception of what can or cannot be accomplished by pushbutton warfare. They are worthy of study by Members of Congress, and by the general public:

Members of the Reserve junior and senior courses, I am particularly grateful for this opportunity to be with you today. Although your number is small, nonetheless, because of what you represent and who you are, I consider this a most worthwhile occasion.

You represent a great organization—the Marine Corps Reserve. It is the Marine Corps body in time of war, of which the Regular Marine Corps is the sinew and bone. As the Reserve's representatives here today, you not only do honor to your organization, but, in my mind, to yourselves. Your presence here today is indicative of your interest both in bettering yourselves professionally and in making the Reserve a better organization.

I understand that during your brief sojourn here at Quantico you have had the opportunity of listening to several selected lectures which are illustrative of some of the things we are teaching in the Marine Corps schools. I am sure you have already concluded that we are bending every effort to maintain a high type of professionalism in the Marine Corps of today.

But it is not my purpose to elaborate on any of the subjects you have already heard, or to talk of the place of the Marine Corps in the national defense effort, or anything along that line. I would like to depart from the usual type of talk you might expect to hear upon completing a course of military instruction and talk with you about some random thoughts that have occupied a prominent place in my mind for some time.

As you know, the papers have been filled with much talk—pro and con—about the President's budget, and there has been considerable emphasis on the defense portion of that budget. This isn't new, of course, and in some ways defense spending sometimes seems to be a barometer. When there appears to be reason for people to think that the danger of war is receding you always hear of proposed cuts in defense spending. And when war is imminent, or there are threatening indications, then the Congress, the administration, and the people say little about defense spending and are inclined to look for an out more in the line of pork-barrel legislation costs.

Of course this defense spending barometer hasn't always worked well. It was predicting some pretty fair weather in 1949 and in June of 1950 we had to do a quick about-face. The Commies in Korea evidently had been watching a different kind of barometer. But defense spending has always seemed to be something tangible, although the amount of money involved is almost beyond human comprehension. Perhaps its tangibility arises from the things it represents—men, arms, planes, ships, and so on. It isn't hard to get accustomed to thinking in terms of the largest navy in the world—and the only one with nuclear-powered submarines; or of total forces amounting to almost 3 million men; or of an Air Force with its Strategic Air Command with the capability of flying around the globe. All of these things are tangible enough to accept as sort of working terms in our mental and oral vocabulary.

This is as it should be. Evolution and growth go on every day. I remember when the abbreviated term "IBM" used to provoke a second glance. Now IBM is as much of a household word as automatic coffeemaker. ICBM is the new word—the intercontinental ballistics missile. It not only suggests evolution, it implies a veritable shrinking of the globe.

All around us are signs of change. As I mentioned before, we have nuclear-powered submarines; at Norfolk recently we displayed one of our supercarriers, in the over 60,000-ton class; the next largest carrier present from a friendly foreign nation was in the 38,000-ton class. In the years since World War II the Marine Corps has developed its vertical envelopment tactics, adding new techniques based on a new dimension. The Army has come up with its pentomic division concept. The Air Force has its SAC and a horde of restless monster planes, and interceptors who think as little of passing the sound barrier as a Pentagon secretary thinks of taking a coffee break.

All of this is wonderful and astonishing. We must be forever grateful that it is our Nation, so richly blessed in wealth, resources, and talented and industrious people that leads the world in this, as in so many ways.

But I would like to suggest that the defense dollar and what it represents—in numbers of men under arms, in planes, in ships, or in any other tangible method of expression—only provides a part of the whole picture when we talk about the military posture of our country. As you well know, machines at best are simply an integrated organization of a lot of otherwise inanimate parts. Somebody has to design them and build them. Somebody has to learn to use them, and to turn them on and off. Machines do not think. Machines do not reproduce.

An intercontinental ballistics missile is an inert thing that must be aimed and set properly and controlled until it eventually destroys its target—and itself.

Our superships of today can only be super when manned by the proper crews. The same is true of our superplanes. The jet age has not placed a lower premium on men; conversely, it demands more of the men who are involved in building, flying, and maintaining its supersonic planes than ever has been required before.

It might appear that qualitative manpower, then, is another important part of the whole defense picture—and it certainly is. The Cordiner Committee has emphasized to the Nation that one of the greatest single problems facing the armed services today is the training and retention of adequate numbers of highly skilled men to meet the many and complex technological requirements we are faced with today.

But there is another part of the defense picture which, I believe, exceeds and transcends the other parts. It is not as tangible or as visible or as easy to understand. Its requirements are many and perplexing.

I refer to something more qualitative and demanding than manpower requirements as we usually think of them. I refer specifically to the spiritual and moral qualities which must characterize not only our fighting men but the citizens of this country behind them. The new dimensions of war, if and when it ever comes, probably will be all encompassing. ICMB, the nuclear age, and the jet age have rendered almost all of our oldtime and space factors obsolete. The war of the future will not be from continent to continent or sea to sea; it will go past the battlelines wherever they are drawn to the family hearth, wherever it may be.

In order to prepare for such a war, we must be reminded of the principles that made our country great. We must reinculcate in ourselves and in others these principles. Our belief in them and our understanding of them are necessary if we are to insure the quality in our manpower—not only in the military establishment but in the citizenry of our country as a whole—that we will need so badly if a future war starts.

We must never let any kind of barometer lull us into a false sense of security where these principles are concerned. I am not going to try to state these principles to you in high-sounding terms or phrases. I intend to say them in common terms.

There is no reason why the word "duty" should be outmoded today. A sense of duty cannot be separated from a person's conscience. Nor should the word "honor" be obsolete. A reputation for honesty, forthrightness, and fairness must be just as prized today as it used to be.

Patriotism becomes an overpowering emotion when our country is threatened with war. But must it take the threat of war to make us feel love of country? It would seem, rather, that the constant threat of communism and the dismal lot of the people who are under its shadow should serve as a daily reminder of how wonderful our country is and a thousand reasons for feeling proud and grateful.

Although you don't hear it as much now as before, you still hear people talk of their sons "having to go in the service," or being obligated because of the draft. They seem to forget that serving our country is a privilege; that because they wanted such a country, American fighting men deemed it a privilege to die at Lexington and Concord, to freeze at Valley Forge, to face the raking musketry at Gettysburg, the machinegun bullets at Belleau Wood, the almost wholesale exposure to death all over the world in World War II and, most recently, the relentless onslaught of the Communists in Korea.

Oh, we have obligations all right. We have an obligation from birth to be a man in the eyes of God and our fellow men. Such a man cannot close his eyes to the many privileges that are his birthright. Patriotism, love of country, willingness to serve, to carry a fair share of the load—these are the words that describe the principles I am talking about.

An Army psychiatrist who has become an expert on the Communist methods of brainwashing prisoners in Korea was asked what effect this brainwashing had on the Americans captured there. He replied that his studies indicated that brainwashing revealed

certain weaknesses and shortcomings in the character and education of our military personnel. In his own words, he said:

"In my opinion, the behavior of too many of our people fell short of the historical American standards of honor, character, loyalty, courage, and personal integrity."

Let me repeat those key words: Honor, character, loyalty, courage, and personal integrity.

With them I can define for you our outstanding personnel requirement in the armed services today. This is the real qualitative requirement we must meet. And this requirement goes further than just the Military Establishment. It goes back to every home in our country. For in the war of the future, the citizen back home, comparatively speaking, will very probably be only one platoon back from the fighting man.

Today we need a rededication—or a new dedication, where necessary—to the old principles that made our country great. We must direct more attention to the spiritual values that support a desire to fight for liberty.

We need to instill new spirits—or revive the old spirits that made Americans fight in the past—into each new generation and into those of the older generations who have lost sight of them.

All of the money in the world will not buy the personal armor we need. We can manufacture planes and tanks and ships; personal integrity is another matter.

Can the personal traits and qualities we have always taken for granted be assumed tomorrow, if war should come, from the people who must defend our country and fight for its liberty?

As a first step, all our citizens might respond with an individual code, a part of which might read as follows:

"I will never forget that I am an American citizen, responsible for my actions, and dedicated to the principles which made my country free. I trust in God and the United States of America."

I hope this hasn't sounded like a lecture to you, but I feel very strongly about the things I have talked about. I feel that each of us, in his own way, has a real duty in furthering an understanding of what our privileges are, what our real obligations are, and what we must do to be a man in the eyes of God and our fellow men.

I ask that, in addition to what you are doing to serve your country by helping to maintain a better Marine Corps Reserve, you seriously consider what you can do to help insure that the new generation grows up with a full understanding of all these things you and I have known for so long and prize so highly.

Ex-Representative Earl C. Michener: A Life That Was Dedicated to Public Service

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. LANE. Mr. Speaker, on Friday, July 5, in Adrian, Mich., our former colleague, ex-Representative Earl C. Michener, passed away.

For 30 faithful and fruitful years he had served the people of Michigan's Second District, and the people of the United States.

It was an honor, and an education, to serve with a man like Earl Michener.

No one had a higher standard of his responsibilities as a public servant. To measure up to this standard he applied himself with diligence and devotion. In the process he acquired a remarkable knowledge of our Federal Government and he was determined, to the extent of his power, to make that Government the very best on earth.

He brought prestige to this House by his long and exceptional service as chairman of the Rules Committee.

It was as a member of the Judiciary Committee that I came to know and admire him. The members of that committee were greatly indebted to his ability and his integrity. The clear and painstaking manner in which he explained legislaiton, left no room for misunderstanding or error. It was a pleasure to work with him, and be helped by him.

In spite of the tensions and the pressures to which lesser men succumb, he never lost the dignity of spirit which was his outstanding characteristic.

He was always kind and considerate to those he met along the way of life, treating the exalted and the humble with equal courtesy.

Earl C. Michener was an exceptionally able Congressman, and a good man through and through.

Fourth of July Speech by Hon. William T. Corbett, Acting Governor of Guam

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. FULTON. Mr. Speaker, I am placing in the CONGRESSIONAL RECORD the Fourth of July speech, 1957, by William T.—Ted—Corbett, Acting Governor of Guam, so that we people in America remember and keep in mind the fine people of this United States outpost, our United States officials, and our United States servicemen and their families who are stationed there:

Reverend clergy, Your Excellency the Consul of the Philippines, Admiral Ammon, General Schott, distinguished guests, citizens of the Philippines, and citizens of America, I welcome you today to the commemoration ceremonies of American and Philippine independence.

It is unfortunate at this time that Governor Lowe is not with us; he being detained on official business in the city of Washington. I wish to read a telegram received from our Governor:

"Congratulations and best wishes to the Filipino community of Guam as you celebrate the 11th anniversary of the independence of the Republic of the Philippines and we celebrate the 181st anniversary of the independence of the United States. The common bonds of friendship which link our peoples together in democratic government is a source of pride and satisfaction to all of us."

"RICHARD BARRETT LOWE,
"Governor of Guam."

This is the second year we have met together in a joint Filipino-American celebration of our independence, the Philippines' 11th anniversary and America's 181st anniversary. As I said to you a year ago in our first joint observance, it is fitting that we should bring together the citizens of America and the citizens of the Philippines to jointly consider what Independence Day means to the people of each country.

I am reminded that just 1 year ago the President of the Philippines, Ramon Magsaysay, shared the platform with Vice President RICHARD NIXON, and each pledged the continued friendship of our countries. They pledged themselves further to continue together the fight to keep men free, for each recognized that we have much in common. President Magsaysay in his entire political life believed in liberty and freedom of man, and his whole endeavor was to keep the Filipino free and independent, and he joined with America and all free nations of the world in this effort. Today, before making further remarks, I would like all to stand and bow their heads in a minute of silent prayer for the beloved late President of the Philippines, Ramon Magsaysay.

Thank you, ladies and gentlemen.

In the life of a nation 181 years is a comparatively short space of time. But in just that period, the American Republic has been transformed beyond the imagination of its founders. From 13 small agricultural colonies we have built a unified nation of 48 States and are at the present time the leading industrial power of all the world. From a newly born nation of 3 million people we have grown to 165 million people. The American Revolution was fought and won under a banner of liberty, justice, and freedom, and we have never deviated from the pledges of that day. The Declaration of Independence, which we commemorate today, appeals to the laws of nature and of nature's God, and we held then and still hold today a belief in natural law, in the inalienable rights which man possesses independently of government and in which no government may lawfully withhold or deny, and lastly in the existence of a divine providence that guides the affairs of men. These are the foundation stones of the American conception of liberty and freedom. Nowhere in our Declaration of Independence, Constitution, or the Federal newspapers is there any support for the conception of a government that gives the people who live under it all the good things of life, but one does find a good many specific injunctions as to what government may not do in interfering with the life and the liberty and the freedom of the citizen. The American Revolution was directed against tyranny, against bureaucratic arbitrariness, against artificial class lines based on privilege and snobbishness. It did not seek universal leveling but did seek the equality of opportunity. In the extensive literature of the Revolutionary Days we find no hint of socialism, no effort to discourage the right lawfully to earn and acquire property and the right to own that property and use it to our own use and raise our families and build our homes, schools, and churches, and raise our boys and girls to be good, solid, self-supporting American citizens. We must always remember that the minute property rights are no longer sacred, freedom and liberty is no longer ours, and we have tyranny and rule by man and not by law. America believes in natural law and in the inalienable human rights, intense distrust in any concentration of power in government, firm rejection of tyranny, whether by a monarch, a dictator, or a mob, and faith in equality of opportunity. Because of the respect for these principles America has prospered and grown great.

But we must pause on this 181th anniversary of the Declaration of Independence and realize that American civilization has not produced cultural values to match its amazing wealth in material values. Not all of the problems created by modern industrialism

have been solved. America's crime rate remains disgracefully high and the quantitative gains in education have been to some extent offset by the qualitative failures in our educational system.

All in all, America has been a success, and America's prestige among the people of all the lands of this world stands high, higher than that of any other country in all the world. On this joint celebration of the Filipino independence, I want to say to you that we welcome you as our friends, and we want to continue yours. We believe that we have much in common, and believe as did your late President that in the friendship of our two Nations much good will come to keep our people free and happy.

In the airplane crash that cut short the life of President Ramon Magsaysay, the people of the Philippines were robbed of a great leader who well deserved all of the confidence and affection they reposed in him. A man of great integrity, he labored tirelessly in their behalf for their material well-being and the strengthening of their free institutions, and to that end, among other things, he had liberated them from the terrorism of Communist-led Huks and proceeded from there to promote their economic progress and insure their security as a nation, allied with the United States and the Asiatic Treaty Organization. In the international field there never was any doubt where President Magsaysay stood, and under his leadership was the overwhelming backing of his fellow men. The policy of the Philippines was stanchly pro-America, proliberty, and anti-Red. Accordingly, since Filipino politics are volatile, and since his firm guidance will be sorely missed, there must never arise a fear that the opposition elements, those against America, may be able to stage a comeback or change the excellent programs he had set in motion in domestic and foreign affairs. And I trust, on this memorable occasion, that whoever comes into power in the Philippines will remember his predecessor and remember the things he stood for—liberty and freedom and justice, side by side with America, in an endeavor to keep all men free and independent. And so it is great to be here today in this joint celebration. It is great to know that there are people many, many miles away from America who think and feel and love as we do, and so I join with you in this happy expression today, with a hope that other days such as this will find us again standing on the same platform, and thinking the same thoughts, and doing the same acts in the interests of our fellow men.

Lead-Zinc Mines Soon Out of Business Unless National Legislation Is Speeded

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. DIXON. Mr. Speaker, hardly a week goes by that does not find in the CONGRESSIONAL RECORD an account of the closing or retrenchment of some important lead-zinc mine. These mines, so essential to national security, will be put completely out of business unless Congress enacts the administration's long-range minerals program at this session.

The lead-zinc mines cannot be turned on and off like a faucet. When once closed they are likely to remain closed because of filling with water and deterioration.

As a result of discontinuance of national stockpiling and barter of these minerals and competition of the low-priced labor abroad, zinc has dropped from 13½ cents a pound to 10 cents a pound since May 6, a price far below the cost of production in most of our mines.

The following clipping taken from the Wall Street Journal, July 18, is only one of an almost continuous list of disasters:

UNITED STATES STEEL UNIT CUTS WORKWEEK TO 4 DAYS AT TENNESSEE ZINC MINE

JEFFERSON CITY, TENN.—Tennessee Coal & Iron division of United States Steel Corp., cut the workweek in its zinc mines here to 4 days from 5.

The curtailment of zinc production was attributed to a decreasing market by Arthur V. Wiebel, TCI president. At his headquarters in Birmingham, Ala., Mr. Wiebel said, "the industry is not presently able to absorb the output of zinc concentrate."

Mr. Wiebel noted that since May 6 zinc concentrate prices have dropped five times, from 13½ cents a pound to 10 cents a pound. He said he could not predict how long the curtailment would last. About 300 workers were affected by the curtailment.

New Jersey Zinc Co., which also operates mines here, previously had announced reduction of output at its smelters in Palmerton, Pa., and Depue, Ill. A company spokesman said, "further production curtailments in zinc mining and smelting are bound to occur unless the Government adopts some means of controlling exploitation of the domestic market by foreign producers."

Random Thoughts on Germany

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

WEST GERMANY ANENT ISRAEL

Mr. CELLER. Mr. Speaker, tribute should be paid to West Germany for her endeavor to reestablish the good name of Germany amidst the family of nations. She has tried to expiate the crimes of the insane paperhanger, Hitler. He vowed to make Germany Judenrein, and well nigh carried out his horrendous vow. Six million dead—untold suffering, were the price.

Chancellor Adenauer, his cabinet, and his people wisely seek to wipe the slate clean and have imposed reparations upon themselves. West Germany has indemnified many thousands of lives ruthlessly snuffed out and for properties confiscated or destroyed. The tragically dead cannot be helped, but little Israel, which has afforded asylum for many of the victims of Nazi persecution, has received from West Germany thus far upward of $830 million. These restitution payments take the form of industrial goods which have helped Israel keep its head above water—helped her take unto her thousands of the helpless and homeless. The Bonn Government has undertaken to shoulder this financial burden, but more than that, it has had the courage to ignore threats that such aid to Israel would destroy all chances of German trade with Arab nations.

West Germany thus far is obviously entitled to genuine praise. She seeks to establish herself for fair dealing and desires, above all, to wipe out the Hitler stains. In this way West Germany cushions the memories of the Gestapo herding Jews to Poland; memories of S. S. thugs smashing and burning shops and synagogues; memories of the treachery and the sadism of Goebbels and his torchlight buffoonery in the jammed Olympic Stadium.

HARD-WORKING GERMANS

I have been to West Germany several times since the cessation of World War II. Each time I have visited her cities and countryside, I was more and more amazed at the energy, vitality, and industry of the German people. They pulled in their belts and made the most of the little they had. Hours of work, back-bending chores meant little. There was so much work to be done. Germany was literally rebuilt. The ruins were leveled, new structures erected, new fields plowed, old factories were refurbished, and new ones were set up. No job was too burdensome. There was ever present the will to work—the will to achieve.

I have traveled in many parts of the world. Nowhere have I seen such feverish activity to rebuild upon the spoils of war. We salute the ingenuity, the prowess, and the disciplined industry of the German people.

When I say "German people," I refer to the inhabitants of West Germany, not East Germany, to the inhabitants of West Berlin, not East Berlin. In East Germany and in East Berlin the dead hand of communism holds back progress. Indeed, going from East into West Berlin is like going from melancholy drabness into the happiness and dignity of work well performed. Yea, it is like going from the 18th century into the 20th century.

Although the Germans in the past were stable and sturdy people under the then rigid authority, I think they have already shown stability and sturdiness to an even greater degree under liberal democracy. Under excellent leadership, they are determined to throw off the shackles of the past and set for themselves new and better standards of behavior.

LITTLE EUROPE AND EURATOM

It is well to know that West Germany has played no little part in the creation of what is known as Little Europe. As the New York Times says:

Taken singly, the West European nations measure against Russia or the United States as pygmies to giants. But spurred by the menace of Russia, and with encouragement from the United States, six of the states have been striving to create a European community that might some day rank with the Big Two. The European 6—France, West Germany, Italy, Belgium, the Netherlands, and Luxembourg—cover an area of 450,000 square miles and contain a population of 173.4 million people.

The creation of Little Europe, as the community of the six is called, has run into great difficulties. But they have

been overcome, due to great statesmanship shown by Germany and France. I refer to the difficulty of the ancient animosity between those two countries. The Schuman plan led the way. It pooled the coal and steel industries of the six countries. The coal and steel community has been in business for 4 years. It has an executive, called the high authority; a legislature, called the council of ministers, and a court of justice. Now an additional step has been taken toward European economic union. I refer to the approval of the treaty for the establishment of the so-called Euratom project and for a European common market. The West German Parliament has already passed these two pacts. I am sure other countries will follow suit. Under Euratom, West Germany, France, Italy, Belgium, the Netherlands, and Luxembourg will pool their nuclear skills and resources, research and development programs under a single agency. This agency will own all Europe's fissionable material. The agency will have institutions patterned after those of the coal and steel community. The United States Atomic Energy Commission has promised to make available to Euratom nuclear materials and technical assistance. With the common European market, all customs barriers between the six states will eventually be scrapped. The six countries will maintain a common tariff toward the outside world. There will be a series of permanent institutions controlling this common market, also modeled on the coal and steel community structure.

In all these projects, West Germany has played an important part. It is making history. These movements all tend toward a more highly coordinated Europe. Many conquerors have dreamed of European unity; among them were Caesar, Napoleon, Bismarck, Kaiser Wilhelm. Intelligent thinkers likewise advocated European union. The great Dutch advocate of peace, Grotius, had this in mind, as did Aristide Briand.

ANTICARTEL

I look forward to a great future for the new European community in which West Germany will play an important part. Furthermore, it is interesting to note that the West German Bundestag recently passed an anticartel or antitrust law. Germany, and most of Europe, has been ruled for decades by cartels. We in this country have shunned and abhorred cartels and monopolies. I believe that we have attained our great industrial supremacy and our high standards of living primarily because of our desire for free enterprise, for free and open competition. Our laws preclude and punish monopolistic practices and undue restraints of trade. Apparently West Germany is now taking a leaf out of our book. The passage of the anticartel law, to my mind, puts Germany upon a sound, healthy track. Its economy will now move forward with greater and more telling safety and speed.

I am informed that Germany, as of 1925, had over 2,000 cartels. Later, Hitler and the Nazis streamlined these cartels in aid of their totalitarian control. The American occupation helped break up these cartels. Now they have a statute that will point the way to anticartel policies. It is a victory and a vindication for free enterprise. It is not a perfect bill. It contains compromises and loopholes. Economics Minister Ludwig Ehrhard said of the bill a short time ago:

This new spirit of freedom and competition will certainly have its effect beyond the borders of Germany.

GERMAN "NEW LOOK"

Indeed, Germany is assuming a new look. I have noticed small reactions which nonetheless portend much. For example, as was stated by Richard C. Hottelot recently:

Liszt's Les Preludes will probably not be heard in Germany's concert halls for a generation because Goebbels used it to herald his victory announcements. The war burned out the roots of totalitarianism. The chauvinistic overtones which colored German behavior before the First World War, and which Hitler heightened to the point of insanity, have been discarded. A recent survey showed that the university professor ranked first in popular respect, followed by the bishop, the business executive, the Cabinet minister and the prince, with the army general a poor sixth. The old days, when flags, uniforms, and warlike glory were essential to self-respect, seem to have been buried. The old Fuehrer has received short shrift. The name Adolf has been registered on few birth certificates in the past 12 years. The big Nazi anniversaries are forgotten.

I find that Germans today are very receptive to foreign ideas—more so than they ever have been in the past. They are borrowing much from the United States. The industrialists lean heavily on American experience. "Public relations" is being imported in wholesale manner. In fact, Germany not only borrowed the technique, but borrowed the name as well. I suppose there was no German term that described public relations. Market research and public opinion polls are now quite common in Germany. They have even copied the American installment plan, and salesmen go from door to door persuading the housewives that a new iron, vacuum cleaner, or electric refrigerator is necessary to modern living. You pay so much down and the balance weekly or monthly.

EMERGING GERMAN WOMEN

Even more significant is the position now held by German women. There is a complete change of attitude. The German woman now uses lipstick, rouge, nail polish, and perfume. I am speaking of the average German woman, not only the so-called lady of elegance and so-called genteelness. Not only has her outer appearance changed; so has her social position. She is no longer confined to the home and kitchen. She wants to know about politics and business. She is getting more self-assurance. There are more women in the Bundestag than in any other western European parliament. While the men were in the army or in prison camps, it was the women who kept the home fires burning, kept the family together, and fended for themselves and their broods. It was the woman who bore the brunt of the bombing raids and experienced the horrors of Soviet occupation. When her husband came back, she was no longer his mere hand servant or his mere cook. She became a partner. She now has equal political rights with men. She now has the legal right to own and dispose of property.

Concomitantly, the idea of the old tyrannical father image is gradually fading. There no longer is the stern father who demands total submission—the stern father who was followed by the equally stern teacher and by the stern sergeant major, and followed by the stern boss of the business, on top of all of which was the dictator. A public opinion survey recently showed that the father is now considered the stern overlord in less than 20 percent of all families. The youngsters are becoming more independent, although they are not as free in their manner as American children. Yet they are not tonguetied in the presence of their elders.

CIVIL AUTHORITY

In the Bonn Republic civil authority is supreme. It was never so before, not even in the Weimar Republic. The legislative branch of the Government presently has unprecedented influence. Organized labor is well on guard against any threat to civil liberty. Both the press and the radio are independent of the state and jealously watch over independent freedom.

The present constitution is a basis for one of the most stable governments in Europe. The citizens of West Germany are very jealous of their rights and take their duties seriously. Eighty-six percent of the voters cast their ballots at the last general election. This is far greater than the standard maintained in American elections. The West Germans loathe Russia and all its works. They have observed in the Eastern Zone, the horrible examples of Russian economy—the horrible example of a partnership with Russia. Although the Soviets have repeatedly offered unification of East and West Germany on Russian terms, the Bonn government has consistently refused.

Perhaps the most important change that has come over Germany is the decline of nationalism. I believe the people are now realizing that Germany cannot again become the power that it was under the Kaiser. Their experiences have been too brutal and harsh and tragic. It is for that reason that they joined the Western Alliance and have become part of the European union.

I believe, finally, that West Germany will go forward boldly and courageously from strength to strength.

I say all this despite the fact that we warred against Germany and that we suffered because of German mistakes under Hitler. But look at the map and you see the strategic importance of Germany. The West can neither forsake her nor disregard her. She must be a partner of the West. She is one of the Western bastions against Russian aggression. It is necessary to buckle Germany securely to ourselves in any war against Russia—cold or hot. We need Germany as much as Germany needs us.

The Presidency; a Residual Power

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. UDALL. Mr. Speaker, I have received one final communication which rounds out my survey of scholarly opinion on the 22d amendment. The author of this letter, Dr. Harry V. Jaffa, of the Department of Political Science, University of Chicago, has presented a somewhat novel idea concerning a residual power which any President has—if he cares to use it—to preserve some of his strength during a second term.

I present herewith Dr. Jaffa's letter of opinion on this important question:

THE UNIVERSITY OF CHICAGO,
DEPARTMENT OF POLITICAL SCIENCE,
Chicago, Ill., June 14, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN UDALL: The unprecedented weakness of presidential leadership we are currently witnessing must, I think, be attributed in increasing measure to the impact of the 22d amendment, now operative for the first time. No mere lack of skill in presenting and defending his budget could account for the open repudiation of the President by the congressional leaders of his own party, nor his desertion by the numbers of Democrats who, by and large, accepted his guidance in the last Congress, when they believed or feared he would again be a candidate.

A continuance of such powerlessness could be disastrous, not only because of the substantive importance of budgetary items, but because of the lack of firm direction of the free world coalition. The only enduring remedy is to repeal the no-third-term-amendment. But there is a stopgap which, I think, could do much to alleviate the present situation. This is not so much a recommendation for action, as for recognition of a constitutional device, available to the President, which might offset the drastic weakening of his office. The President, in short, might deliberately use the power of resignation, in place of the power to run again, to compel support of his policies.

Traditionally, it has been felt that when a President stands for reelection, he pledges his faith to serve out his term, and to resign would be a deception of voters who believed they were putting him, and not the vice presidential candidate, in office. But a President who is a lame duck from the day of his inauguration, and who, moreover, being in his second term, has less patronage than a first-term President, must be capable somehow of taking the political initiative. If he did resign, he would kill off the aspirations of members of his own party (e. g., the Knowlands), because an incumbent President (i. e., NIXON) is almost certain of the next nomination, if he wants it. If the new President had more than 2 years in prospect, he would have sufficient time to grasp firmly the reins of party control; if he had less than 2 years, the fact that he could be elected twice, and serve nearly 10 years, would almost inevitably start a rush for preferred places on his bandwagon. Since it is extremely difficult (it has happened only twice in this century) to defeat an incumbent President standing for reelection, the prospect facing the opposition party is scarcely less appealing. The Democrats would not contemplate Mr. NIXON'S candidacy with such confidence, were he in such a position.

I am not here suggesting Mr. Eisenhower's actual resignation. Mr. Roosevelt apparently did not make up his mind to run for a third term until late in his second. Yet the fact of his ability to run was exploited by infinitely varied and subtle appeals for group and personal support. His pledges, quasi-pledges, implied pledges, and anticipated pledges to the ambitions of other men were dependent upon the control of party machinery, a control dependent in turn upon the possibility of his own candidacy. Mr. Eisenhower seems to be losing all semblance of such control. A threat of resignation might restore many errant affections.

Mr. Eisenhower has already warned the people who voted for him that he would, in the event of failing health, resign; and Mr. NIXON'S qualification to step into his place was a major campaign issue. Finally, I would point out that a threat of resignation, to enforce congressional acquiesence in his policies, is not unprecedented. Abraham Lincoln once warned that, if Congress made it the President's legal duty to enslave any man set free by the Emancipation Proclamation, someone else would have to execute that law.

Very truly yours,

HARRY V. JAFFA.

Robert Briscoe

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a very timely editorial which appeared in the Chelsea Record, of Chelsea, Mass., on July 16, 1957:

GOOD WILL AMBASSADOR

Robert Briscoe, Dublin's first Jewish lord mayor, has finished his first term of office. But for the luck of the draw he might have had a second 1-year term. Members of the Dublin City Council, who ballot yearly to select the lord mayor, gave Briscoe and an independent opponent 21 votes each. By custom the names of both men were drawn from a hat, and Briscoe lost.

Lord Mayor Briscoe was one of the most popular figures ever to visit the United States. He was welcomed as a symbol of something that all the world is always anxious to see, the recognition of a man for his own merits. Mayor Briscoe is a Jew, yet he has won high political honors in a country where the vast majority of the electorate are stanch Roman Catholic. He was elected because of his political astuteness and his long record of service to the Irish people.

Yet Mayor Briscoe's welcome in this country was more than a tribute to Irish religious tolerance. It was a sincere feeling of kinship with a warm, wise, and courageous man who has always been willing to stand up for what he believed to be right, even when his beliefs were unpopular or dangerous to his own career and safety. Lord Mayor Briscoe was more than lord mayor of Dublin, he was one of the most effective good-will ambassadors ever sent forth by the Emerald Isle.

Cussing the Court

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. MULTER. Mr. Speaker, the following article by Gerald W. Johnson, which appeared in the New Republic of July 15, 1957, makes most interesting reading:

THE SUPERFICIAL ASPECT—CUSSING THE COURT
(By Gerald W. Johnson)

More than 50 years ago a North Carolina jurist, his name lamentably lost to fame, uttered an obiter dictum memorable for its recognition of substantive justice. "Every defeated litigant," he said, "has a right to proceed from the courthouse, take his stand in the middle of the big road, and cuss the court."

This right, as was to be expected, has been exercised, with great energy since last month's batch of Supreme Court decisions, but some of the wrathful have not been content to stand on the highway, which is no trespass. Presumably sane men have promised an effort to impeach the whole Court, and certain Members of Congress hitherto conspicuous for their rationality are drafting legislation which they openly avow is designed to vacate the decisions.

Such reactions transcend the disapproval with which men normally look upon what they consider fallacious reasoning. Fury so extreme is provoked only by a sense of personal injury and loss. Yet the trend of the decisions was not toward any deprivation but, on the contrary, toward the restoration to certain persons of rights which had been unjustly denied. This invites speculation. If the individual litigants gained, who lost and exactly what did he lose?

The answer to that should be indicated by considering who is enraged—not merely critical, but enraged. Some careful students of the law—Prof. Bernard Schwartz, of New York University, for example—finding no legal flaw in the decisions themselves, are yet critical of the obiter dicta accompanying them, especially those of Chief Justice Warren; but such critics feel no great emotional disturbance. The angry men are Members of Congress, of the FBI, and of other administrative agencies—holders of political office.

The decisions mean more and harder work for the law enforcement agencies, so their indignation needs no gloss. But in a less obvious way, they also mean more and harder work for the politicians. The decisions mean that what has been a political bonanza is just about worked out. Not since the Bloody Shirt of John J. Ingalls' day have the politicians had an issue as safe, yet effective, as the Red scare.

Its universality is attested by the fact that it was used to drive from the Senate men as diametrically opposite as the liberal Frank P. Graham of North Carolina, and the conservative Millard E. Tydings of Maryland. Its fraudulence is attested by the same record. When the self-same argument is used against opposite types it is bound to be fraudulent in one case or the other. As a matter of fact is was faked in both cases.

Ingalls stayed in the Senate 18 years on the one issue of keeping Jeff Davis out of the White House. There are men in Congress today who are clinging to their seats on the one issue of keeping Stalin out of the White House. Davis and Stalin both died while the campaign was on, but that did not mat-

ter to Ingalls, nor to the modern floggers of a dead horse.

What finished the Bloody Shirt soon after 1890 was the fact that the people began to yawn whenever it was waved. But the Supreme Court has, if not finished, at least damaged the Red scare before the people's yawns had become widely prevalent. Of course, the politicians are outraged. If they are deprived of this issue they will have to look around for another, at imminent risk of picking a live one; and no politician ever forgets the poetaster's mournful quatrain:

"Beneath this mossy stone there lies
A politician who
Touched a live issue without gloves,
And never did come to."

Nevertheless, while their high dudgeon is understandable, in this particular case it may not be justified. It is possible that instead of impeaching the Supreme Court they ought to give it a vote of thanks. For if Mr. Dooley was correct in his observation that the Supreme Court follows the election returns, it is obvious that there may be occasions on which the Supreme Court is a step and a half ahead of the election returns; in which case, instead of sustaining the verdict of the polls, the Court is sustained by it.

In politics nothing is more certain than that the man who begins to bore his constituents is finished, not merely defeated, but obliterated, never to rise again. No other form of disaster is as final, as irretrievable. Being run over by the Supreme Court is nothing, by comparison, with being run over by election returns. If, as many people believe, the Red scare was wearing out anyhow, the tub thumper who is prevented from sticking to it too long has been done a favor. For he can cuss the Court with impunity, but if he is caught in the campaign with a wornout issue, he is a gone gosling.

The Department of State and the United States Merchant Marine

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable Robert C. Hill, formerly the Assistant Secretary of State for Congressional Relations and now the Ambassador to Mexico, on the occasion of Maritime Day.

The address follows:

THE DEPARTMENT OF STATE AND THE UNITED STATES MERCHANT MARINE

(Address by the Honorable Robert C. Hill, Assistant Secretary of State for Congressional Relations, at the Maritime Day Dinner of the Maritime Association of the Greater Boston Chamber of Commerce, at the Sheraton Plaza Hotel, Boston, Mass., May 22, 1957)

In celebrating Maritime Day throughout the United States, we are not only paying tribute to our merchant marine, the largest in the world, we are not only calling attention to the fact that it earned $2.8 billion for the national economy in 1956 in helping to move abroad $23 billion in American goods and services and in assuring the import of materials and products necessary to our record peacetime prosperity. We are also recalling that shipping is a great American tradition.

It was not by accident that the first American-built vessel was launched in the same year as the founding of Jamestown. As you all know, we are now celebrating the 350th anniversary of Jamestown. Our virgin forests and fine natural harbors assured a booming production and use of American-flag ships from colonial days, when our struggling Nation was largely dependent upon shipping its products and importing manufactured goods.

Shortly after we attained our independence came the Napoleonic wars—with consequent high freight rates, destruction of the merchant tonnage of other nations, and booming neutral trade. This assured us a mighty merchant marine. By 1815, the label "U. S. built," which usually meant New England built, assured a premium in setting the value of vessels for sale.

Those beautiful vessels known as the clipper-ships, set world records for the expeditious and safe delivery of cargo, and Yankee seamanship and ingenuity were esteemed by maritime nations the world around. Just before the Civil War, United States bottoms carried no less than 90 percent of United States commerce.

You are all aware of the sad story of what happened thereafter. You know that the Civil War destroyed 110,000 gross tons of private shipping and that panicky shipowners sold another 752,000 abroad, cutting our merchant marine in half. At first, we could not compete on iron hulls and steam. From 1900 to 1905, only 9.9 percent of American cargoes were carried in United States bottoms.

That the American flag flies over the biggest merchant fleet in the world once again is primarily the result of two factors: Its enormous, amazing, and forced expansion during World War II and our determination, as a national need and because of the strained world situation, to keep it that way. We must be assured of our own bottoms to make certain that under any circumstances we can import what we need and export our products, upon which the survival and betterment of much of the free world depends.

Congress is to be congratulated, in my opinion, for its deep concern with keeping the American flag paramount on the seas.

The Merchant Marine Act of 1936 remains the declared maritime policy of the United States and Congress has done everything in its power to implement its declaration that:

"It is necessary for the national defense and the development of its foreign and domestic commerce that the United States shall have a merchant marine:

"A. Sufficient to carry its domestic waterborne commerce and a substantial portion of the waterborne export and import commerce of the United States and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign waterborne commerce at all times.

"B. Capable of serving as a naval and military auxiliary in time of war or national emergency.

"C. Owned and operated under the United States flag by citizens of the United States insofar as may be practicable, and

"D. Composed of the best-equipped, safest and most suitable types of vessels, constructed by the United States and manned with trained and efficient personnel."

My own interest in this is a heartfelt one. As a youngster, one of my first jobs was that of a laborer working on the first Liberty ships at the Todd-Bath Shipbuilding Corp. at South Portland, Maine. Later, I became an assistant vice president of W. R. Grace & Co., which operates the Grace Lines. As you can see, shipping is in my blood.

Today, I can state to you in this regard that the United States has insisted upon the maintenance in foreign affairs of two primary policies—that the greatest freedom of movement be accorded its vessels and that its flag have equal opportunity in, and access to, all ports of the world.

This represents the basis of United States shipping policy. It is a result of historical growth and experience, having its roots in our earliest history as a Nation.

Secretary Dulles has asked me today to extend to you, as representatives of our great fleet of ships today sailing the seven seas and discharging cargoes in ports of every continent, his warmest greetings. He has requested me to thank you for your voluntary cooperation during the Suez crisis. He has asked me to commend the industry for the complex and difficult task it has performed of getting essential oil to Great Britain and Europe while the Suez Canal, intended to serve always as a great international waterway for use of all nations, has been blocked.

In the period between November 1, 1956, and May 8 this year, a total of 93,300,000 barrels of oil, of which 51,300,000 were crude oil, were carried to Europe. This represented almost exactly the 500,000 barrels a day planned and was a tremendous achievement. In this our tanker fleet played its full part.

May I add that we in your Government are all proud of the almost unnoticed part you have played in making certain that Europe was not crippled by the temporary cutting off of oil from the Middle East where two-thirds of the free world's oil reserves are located. International communism was struck a bitter blow when you proved that you could rise to the occasion and move enough of the deficit to save the situation.

Because some of you are not aware of it, or have been inclined to be critical, I should like to tell you of the role of the Department of State today in maritime matters of concern to you. The different functions in the Federal Government with regard to shipping are reasonably clear.

The Maritime Commission is primarily concerned with the interests of domestic shipping companies, builders and the labor organizations; the Defense Department with the security and military defense aspects of shipping, and the Treasury Department, through the Coast Guard, is interested in the design and construction of ships, their safety, and the enforcement of United States regulations.

Only the Department of State is qualified properly to assess the foreign policy implications of proposals regarding maritime shipping. And only the Department of State has the authority to consider or recommend proposed action on grounds of foreign policy. Its Shipping Division performs the valuable function of contributing to this decision-making process.

The responsibility for reconciling domestic and international conflicts of interest must be properly discharged to the end that both the merchant marine and United States foreign policy are benefited.

State's Shipping Division, for instance, performs important functions with regard to legislation requiring that at least 50 percent of Government-generated cargoes must be carried on American-flag ships. It has had to explain to the world that this applies only to lend-lease, mutual aid, and other United States Government—and not to commercial—cargoes. The Department of State is now thoroughly behind this 50–50 policy. You will recall that the Department at first opposed enactment of S. 3233, a bill which ultimately became Public Law 664. But, in 1956, during hearings on S. 2584 on shipment of Public Law 480 (surplus disposal) cargoes, the Department altered its position. It did so after it had become clear that an element of the merchant marine, particularly

tramp shipping, could not survive without the 50–50 policy.

It is fairly apparent now that the effect upon world shipping of this policy is very small indeed, and I assure you that the Department is not only formally, but vigorously, behind this policy.

The Department of State, moreover, is working actively, day by day, to eliminate discrimination against shipping. Our files reveal that we have, in recent years, worked on bases of discrimination in no less than 41 countries.

These discriminations have fallen into three general types: preferential treatment in ports, exchange controls and bilateral trade agreements specifying that cargo shipments be made in ships of the two countries involved, to the exclusion of United States and other third-country ships. Of these, preferential treatment in ports represents the most direct type.

This category includes higher port dues and charges for pilotage, berthing, and light dues, preferential berthing and use of storage and handling facilities. Many less-developed countries, seeking to create their own merchant marines, have neglected to expand their port facilities adequately. Local pressures sometimes, therefore, cause national ships to be berthed, bunkered, and cargoed first.

The Department of State, through its representatives abroad, seeks constantly to eliminate such discriminations, as discriminatory exchange controls, and to encourage measures designed to facilitate the free flow of goods and of international payments.

The Department also feels that restrictive cabotage regulations are undesirable, such as those which include farflung colonies in the domestic trade of a country and require landing in the mother country of goods for transshipment in national bottoms.

United States foreign economic policy is concerned with the elimination of discriminations because of their adverse economic effects. Discriminations provoke reprisal and retaliation. Discriminations usually result in the uneconomic employment of the factors of production, leading to overcapacity in the world shipping market, diversion of traffic from low- to high-cost shipping, and interference with the world level of freight rates normally established by the law of supply and demand. They thus increase restraints on international trade.

Not only has State's Shipping Division been active, making effective repersentations and setting forth the United States position in many specific cases, but it has participated in the extension of FCN treaties providing for reciprocal most-favored-nation treatment. A persuasive device exists in the Department's ability to recommend that waivers under PR–17 be refused to a discriminating country until such time as discriminations are removed. We have tried to correct situations without resort to direct reprisals or measures of retaliation because of the wider considerations always involved, and we have been criticized by the industry for this. The fact that we could do so if necessary is known abroad, however. Because of vital political considerations and the extensive system of cooperation with our allies, the Department of State prefers to utilize diplomatic negotiation as a method of remedy. This has often achieved more satisfactory results than reprisals could.

What I do want to emphasize to my friends of the industry is that today the Department of State is thoroughly aware of your problems and that they are not being submerged in a mass of other matters with which the Department must deal on a day-to-day basis.

Let me note in this connection that the Department of State participates in conferences or meetings, coordinates United States positions, instructs United States delegations, or closely follows the work of some 15 international organizations active in world maritime shipping matters.

In a world where economic development, trade and full employment are pressing requirements for political stability and, thus, for checking the attempts of international communism to obtain world sway, maritime shipping will continue to be a vital interest of all governments.

I say bluntly that the United States intends to maintain its place in world maritime activity and that it will take its full share of responsibility for the increased cooperation, freedom of choice, and economic health of the United States shipping industry.

The Department of State will continue to play its role in this, well aware that the freedom of movement of cargoes and an enlightened economic policy are essential to survival of the free world.

Our great superiority, with our reserve shipping, over 12th-place Soviet Russia in merchant shipping gives us a tremendous advantage in the worldwide struggle between the free-enterprise system and international communism. For our shipping provides an important trade link between the free nations of the world on a day-to-day basis which the Soviets cannot hope to meet. This, I feel, is well worth stressing on this day when we pay tribute to our merchant fleet and its officers and men. It is more important today than ever to keep our merchant marine strong.

It was my pleasure last weekend to participate in the inaugural cruise of the *Matsonia* of the Matson Lines which carries the flag to Hawaii, Tahiti, Samoa, the Fijis, New Zealand, Australia, and other Pacific points. It was a fine occasion. Friends of American shipping from all over the United States made the run from Newport News to New York.

It made me feel good to have the sea beneath me on a fine and well-manned ship with the American flag flying at her gaff. I am sure all Americans are equally proud of our ships plowing the sealanes of the world.

USDA Egg Price Figures Don't Agree With Farmers' Egg Receipts

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mrs. KNUTSON. Mr. Speaker, the Department of Agriculture made a release July 17 entitled "Poultry and Egg Situation." Although optimistically stated, it does not reflect the low egg prices my farmer constituents have been receiving. For example, it states that "during the first half of 1957, average of 31 cents per dozen" was received by farmers. My farmers report a range of 16 cents to 24 cents, with the 24-cent figure being received only for 1 or 2 weeks during this same period.

The release states that "average prices received by farmers was 20 percent less than in the same period of 1956." Three recent egg receipts from Mr. Willie Linstrom of Orleans, Minn., indicate an average of 20 cents. In other words, Mr. Linstrom now receives on average about 48 percent less than the already low of last year. Even if prices increase, as the USDA release happily predicts, the prices will have a long way to climb if they are to reach last year's low.

Under leave to extend my remarks, I request permission to insert in the RECORD the receipts for Mr. Linstrom's eggs as well as the portion of the USDA release which deals with eggs.

The matters follow:

Egg prices, first half of 1957

May 6:

[From the U. S. Department of Agriculture daily summary of July 17, 1957]

POULTRY AND EGG SITUATION

Seasonal increase in farmers' prices for eggs in next few months is likely to be more pronounced than in other recent years; and, after late summer, prices are likely to be higher than year earlier. Hatchery reports indicate almost 20 percent fewer replacement pullets are being raised than last year. Egg production in second half of 1957 is likely to decline more than usual. Egg production during June continued little ahead of year earlier, as it has in other recent months. Number of layers on farms July 1 was almost equal to 281 million of year earlier and rate of production per bird continued at new record levels. Because of increased output so far this year, egg production for 1957 as whole probably will total close to 1956 record of 170 million cases. Prices for year are likely to average little under 1956. During first half of 1957, average of 31 cents per dozen received by farmers was 20 percent less than in same period of 1956. Consumption of eggs per person this year has not changed appreciably from 1956 despite sharply lower prices and record consumer incomes. Stor-

age of shell eggs increased this spring. Stocks on July 1 were second largest for date since 1952 though well below prewar levels. Total stocks of frozen eggs are about same as last year, while so far this year hatcheries have taken fewer eggs than in 1956.

Panama Canal: Transit Delays Possible

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. THOMPSON of Texas. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD for June 4 and July 1, 1957, I commented at some length on the possibility of the capacity of the Panama Canal being reduced because of a threatened shortage of water for Gatun Lake during the recent prolonged dry season.

A special dispatch from Balboa, C. Z., published in the New York Times of July 11, 1957, gives the latest information regarding that situation.

The indicated dispatch follows:

CANAL DELAYS SEEN—AGENTS IN PANAMA FEAR LOW WATER MAY SLOW TRANSITS

BALBOA, C. Z., July 10.—Shipping agents foresee that delays of a day in transiting the Panama Canal may become necessary if the present low-water level in Gatun Lake continues along with heavy traffic.

Thirty oceangoing ships transited yesterday.

Agents predict that with slower lock procedures going into effect starting Monday to conserve the falling water level of Gatun Lake, delays to large vessels seemed certain.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

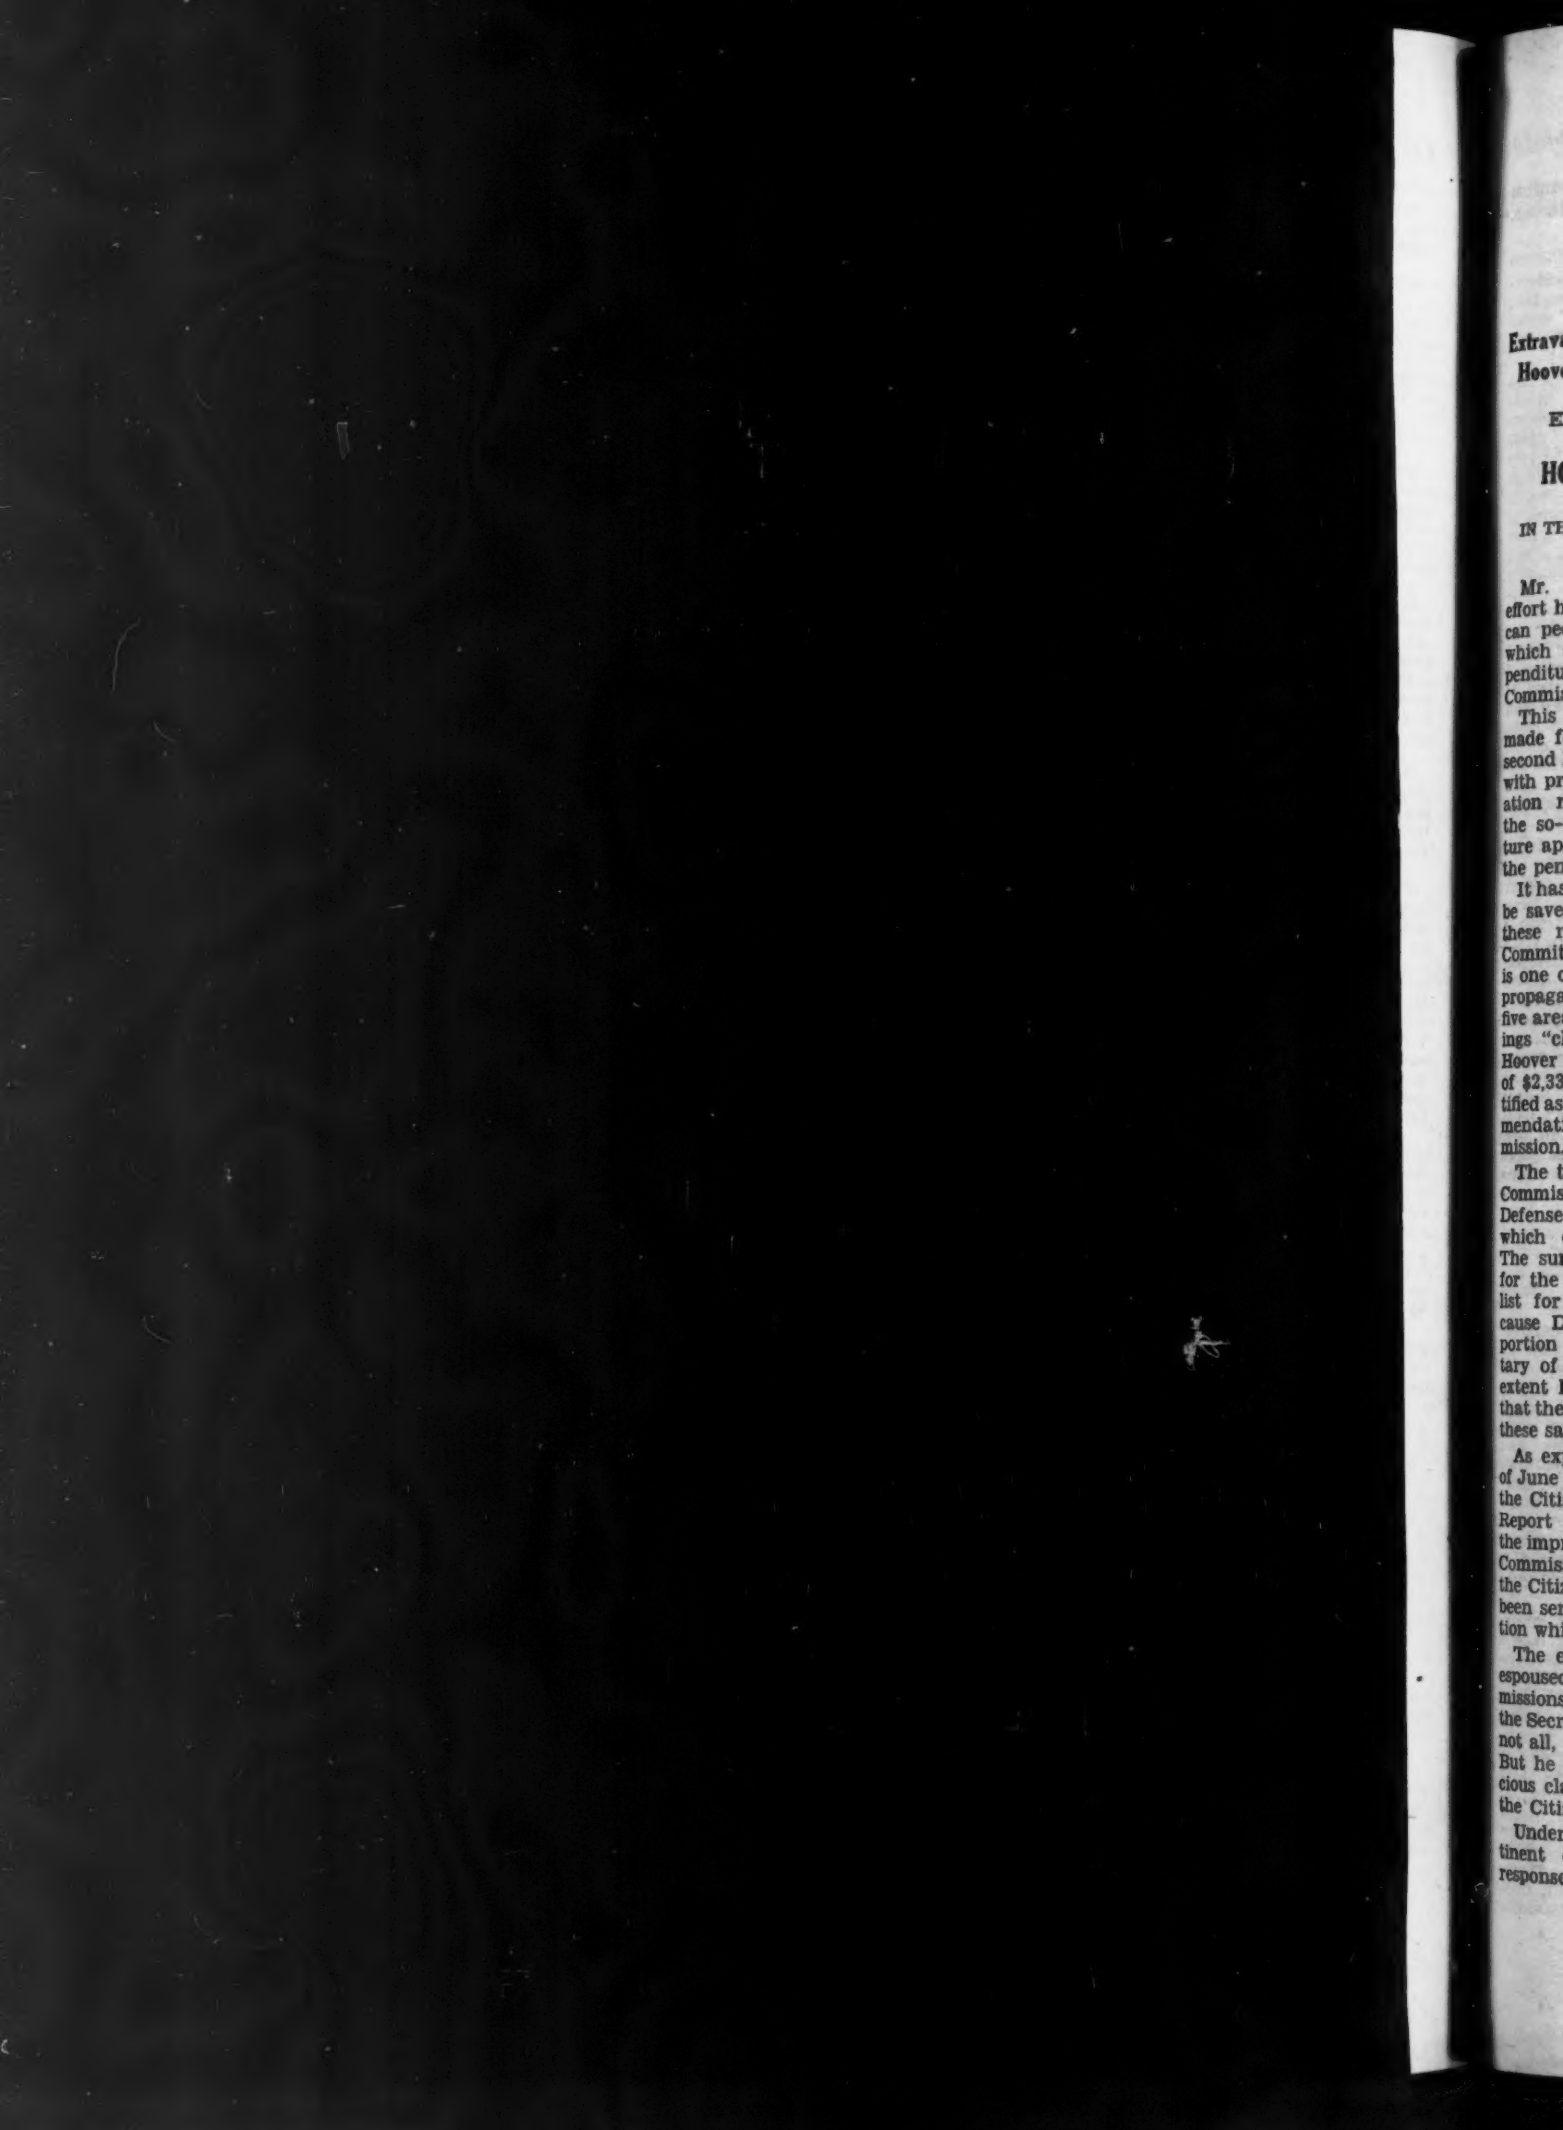
8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.



Appendix

Extravagant Claims of Savings From Hoover Commission Recommendations

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. CANNON. Mr. Speaker, every effort has been made to sell the American people a bill of goods on savings which could be made in national expenditures by adoption of the Hoover Commission recommendations.

This is especially true of the claims made for the recommendations of the second Hoover Commission having to do with proposed budgetary and appropriation reforms, and more particularly the so-called annual accrued expenditure appropriation scheme embodied in the pending bill H. R. 8002.

It has been insisted that billions would be saved if Congress would just adopt these recommendations. The Citizens Committee for the Hoover Report, which is one of the leading dispensers of this propaganda, recently claimed that in five areas studied, it could pinpoint savings "clearly attributable" to the first Hoover Commission in the total amount of $2,337,900,000 and $480,100,000 identified as savings thus far from the recommendations of the second Hoover Commission.

The total thus attributed to the first Commission included $569,500,000 in the Defense Department, first inspection of which discloses some amazing items. The sum of $235,900,000 was included for the Department of Defense in the list for the second Commission. Because Defense accounted for a sizable portion of the totals, I asked the Secretary of Defense to corroborate, to the extent he could, the validity of claims that the two Commissions brought about these savings.

As expected, the Secretary's response of June 28, 1957, conclusively shows that the Citizens Committee for the Hoover Report is without basis for imputing the impressive savings to the two Hoover Commissions. It is proof positive that the Citizens Committee and others have been sending out preposterous information which has misled many people.

The executive branch has vigorously espoused the work of the Hoover Commissions. Understandably, therefore, the Secretary warmly endorses some, but not all, of the work of the Commission. But he will have no part of the fallacious claims of savings disseminated by the Citizens Committee.

Under leave to extend, I include pertinent excerpts from the Secretary's response:

It must be recognized that the Hoover Commission recommendations, which have been wholly or partially implemented, generally had application to qualitative improvements in Department of Defense operations. Accordingly, it is not feasible to place specific price tags on the associated savings. There has been an apparent tendency for overzealous supporters of the Hoover Commission to make unsupportable claims of great monetary savings allegedly resulting from the Commission's recommendations.

* * * * *

At no time did the first Hoover Commission concern itself with specific Department of Defense programs or recommend specific changes in such programs. Nevertheless, the Citizens Committee for the Hoover Report has cited specific savings totaling $569,675,000 for the 1949–50 period as "stemming in whole or in part from the Commission and its task force."

No basis exists to demonstrate any direct relationship between the specific savings cited and specific recommendations of the Hoover Commission or its task forces. Assertion that an indirect relationship exists is apparently based on the following line of reasoning:

(a) These savings and program adjustments were directed or approved by the Secretary of Defense, whose authority was strengthened by the National Security Act Amendments of 1949; (b) these amendments incorporated a number of the recommendations of the Hoover Commission; (c) therefore, the Hoover Commission can be considered to be indirectly responsible for all subsequent budgetary and organizational actions of the Secretary of Defense using the authority of the National Security Act Amendments of 1949.

Such a line of reasoning would, of course, be wholy specious. Thus no basis whatever exists to support the claim of savings.

Continuing to quote the Secretary:

With respect to the specific question as to whether the items listed in the report of the Citizens Committee for the Hoover Report represent savings resulting directly from recommendations of the Hoover Commission, the answer is necessarily in the negative. The reports of the second Hoover Commission and the associated task force reports pertaining directly to the Department of Defense were issued in May and June 1955. It is obvious, therefore, that none of the savings listed for fiscal year 1955 can be attributed directly to the recommendations of the second Hoover Commission, since those recommendations were not available in time to affect operations during fiscal year 1955.

Similarly, so far as the savings cited for fiscal year 1956 are concerned, it is clear from the record that efforts to effect savings and economies, similar to those cited in the "Eighth Annual Progress Report Under the Joint Program To Improve Accounting in the Federal Government, 1956, by the Comptroller General of the United States" were underway in the Department of Defense and publicly reported prior to release of the Hoover Commission recommendations. There is no precise way of identifying, however, to what extent the investigations and discussions of the various task forces may have indirectly affected some of the actions taken.

* * * * *

It should be noted that a sizable arithmetic error has been made in the tabulation prepared by the Citizens Committee from the material contained in the Comptroller General's report. The Comptroller General's report lists various savings applicable to the Department of Defense for the period January 1–September 30, 1956, which collectively add to $205.9 million. In its report, the Citizens Committee rounded this figure to $202 million and then listed individual items accounting for $172.5 million of this total. However, in arriving at the figure of $2,359,000,000, which represents the gross reported savings against which the 10 percent "Hoover Commission" factor was applied, the Citizens Committee staff included both the $202 million total and the $172.5 million of individual items already included in this total. Accordingly, the $2,359 "gross savings" figure appears to be overstated by $172.5 million.

These are official statements by the Secretary of Defense under date of June 28, 1957.

Exaggerated claims of savings have characterized propaganda campaigns attendant upon recommendations of both Hoover Commissions. The original caim for the scheme embodied in the pending bill H. R. 8002 was $4 billion. More recent estimates, varying with each source, range from "over $3 billion" down to "several millions of dollars."

The truth is that the scheme, if adopted, would actually cost the Treasury money. It would not save a dollar. It would actually cost the Treasury vast sums because the bill H. R. 8002 requires return to use of contract authority which hard experience over the years proved to be so expensive a device, that it was generally abandoned in appropriation bills in 1951.

The Cold War Today

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. HUMPHREY. Mr. President, Mr. Walter Lippmann in his column of the 16th addressed himself to the subject of the future of the cold war.

As usual, his thoughts on this subject deserve the most careful consideration by Members of Congress.

I ask unanimous consent that the text of this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COLD WAR TODAY
(By Walter Lippmann)

The Soviet Government very much wants the outer world to understand that Malenkov, Molotov, and the others have been

purged but are not being exterminated. As of now, we know definitely only about Malenkov, the chief offender, Khrushchev's most serious rival.

He is being sent far enough away from Moscow to be in political exile, and there he is to live with the charge hanging over his head that he has committed capital crimes. It is a kind of parole before trial or conviction. This, as compared with Stalin's purges, is lenient treatment, and presumably Molotov and Kaganovich, who are too old to be dangerous, will get off at least as well.

All the evidence we have, which now includes Khrushchev's story, but not Malenkov's, supports the view that the object of the purge is to get rid of the main opposition to what might be called a more modernized communism. The Soviet economy has grown too big and too complicated to be run without normal economic incentives and to be managed by a highly centralized oligarchy, relying principally upon the secret police. The Communist world, what with the growing strength of China and the increasing nationalism of the European satellites, can no longer be held together, as in Stalin's day, by imperial fiat from Moscow.

Khrushchev, who was a good Stalinist when Stalinism was the vogue, is not much of an ideologue. He is very much of a pragmatist. Insofar as he has turned against Stalinism, it is because, being a practical politician with an acute sense of the Russian realities, he knows that Stalinism will no longer work. The purpose of his reforms is to make the Communist system work, to consolidate the regime within Russia and to hold together the alliances with China and with the satellites.

There is in high places in Washington some wishful thinking which supposes that we are witnessing the beginning of the breakup of the Communist system. There is, it seems to me, no public evidence to support this notion, and even if, by some change, it turned out that the Soviet problems at home and abroad are insoluble, it would still be a great mistake to make such an assumption now. We are least likely to mislead ourselves if we make the contrary assumption, which is that the Khrushchev reforms are likely to make stronger both the Russian state and the Russian system of alliances.

There are no indications that the internal problems are so severe that the Russian ruling class is becoming desperate and may become violent. Nor is there any indication that out of internal weakness the Government will now make substantial concessions to the West about Gormany, Korea, Formosa, the Middle East, or disarmament.

On the contrary, with Marshal Zhukov and the army playing a larger role, we shall be dealing with a government which can be expected to be firmly opposed for military and national reasons to any strategic retreat. We must bear in mind that while it has been the Communists who have pushed forward the Russian sphere of influence to the lines of the Iron Curtain, those lines have been for more than a century the objective, or let us say the great dream of Russian imperial strategy.

We must suppose that there will be no substantial retreat, nothing, for example, which brings the whole of Germany within the sphere of NATO, or takes Poland outside the military system over which Marshal Zhukov presides. What about an advance? Is it likely that a modernized Communist regime will try to expand—to absorb West Germany, South Korea, Formosa, South Vietnam, or to make a physical lodgment say in Syria or in Egypt?

There can be no certain answer to these crucial questions. We are dealing not in certainties but in probabilities.

The most probably correct answer is, it seems to me, that Russia and China will try to expand by all means short of overt, organized, military action. It is highly probable that with the balance of power in nuclear weapons as even as it is, any organized warfare which could involve Russia or the United States would be an incalculable risk for both of us. There is not likely, therefore, to be another limited war as in Korea. For even if the biggest weapons were not used, the weapons that would be used would not only be enormous by the old standards, but the tendency to raise the anto would probably be irresistible.

Without undue risk, we can assume that the deterrent strategy will prevent war above the level of propaganda, insurrection, subversion, infiltration, and intrigue. Considering the State Department's rather expert performance in Jordan and elsewhere in the Middle East during the past few months, there is no longer reason to think that in a cold war, we are hopelessly outclassed.

Tomorrow's Aircraft and Airports

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, July 19, 1957

Mr. MONRONEY. Mr. President, the foremost manufacturer of commercial aircraft in the world, whose ships at one time carried 90 percent of the world's passenger traffic and whose firm has built more than half of the civil air transports now flying, is Donald W. Douglas, president and board chairman of the Douglas Aircraft Co. at Santa Monica, Calif.

His forecast of tomorrow's aviation, with particular reference to the jet age, thus should be as interesting to Members of Congress as it was to the American Society of Newspaper Editors to whom he spoke last week in California. I ask unanimous consent to have the speech printed in the Appendix of the RECORD.

Of particular note is his forecast regarding flying freighters in which his company has pioneered. Also very provocative is his discussion of air traffic control since traffic has grown from 406 million passenger-miles per year in 1933 to the present rate of 40 billion passenger-miles per year, and is expected to reach 60 billion passenger-miles per year in 1960 and 90 billion in 1970.

The attention of the Douglas Co. and other aircraft manufacturers in increasing speed and comfort in air travel is now being turned toward lowering operating costs of carrying freight by air and to the use of shorter runways than originally expected for jet takeoffs and landings. It is heartening indeed to hear from this ace aircraft manufacturer than even the noise element that has caused fear of creating a jet air age nuisance is being overcome in the civil jet aircraft of the future.

I commend these remarks to the attention of my colleagues and newspaper editors throughout the country.

I am informed by the Public Printer that the address is estimated to make 2⅔ pages of the CONGRESSIONAL RECORD at a cost of $205.34.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TOMORROW'S AIRPLANES AND YOUR AIRPORTS

(Address by Donald W. Douglas, president-board chairman, Douglas Aircraft Co., Inc., Santa Monica, Calif., American Society of Newspaper Editors, Fairmont Hotel, San Francisco, Calif., July 12, 1957

Thank you, Mr. Chairman. It is a rare privilege indeed for me to be invited to address so distinguished a group as the American Society of Newspaper Editors. There is the added opportunity, which I deeply appreciate, of being able to speak through you to millions of newspaper readers throughout America. For I know that if there is any merit or message in what I have to say today, my thoughts in due time will be transmitted to your readers. This may be accomplished directly in the news columns, in editorial comment, or as background information which may help you determine editorial policy or news play. I have the greatest respect for the integrity of the American press and for its ability to maintain a free flow of information and opinion. Given this, the people can make their own decisions as to the proper course of action in any given situation. This applies to issues which may arise in the world of aviation just as it does to other spheres of our national interests and activity.

The press has been generous to aviation and deserves much of the credit for the tremendous progress we have made in the air since the early days of this century. I can think of only one dereliction and I bring it up today only by way of contrast. An event of considerable importance to aviation occurred one December day in 1903 on the bleak sands of Kitty Hawk in North Carolina. But for days after this event readers of most newspapers were oblivious of the fact that the long-sought goal of powered flight had been attained. Most editors either hadn't heard about it, didn't believe it, or failed to understand its significance. It is true that the residents of Dayton were at least informed by the local newspaper that the Wright boys were going to be home for Christmas after completing their experiments at Kitty Hawk. It has been recorded that one of the first scientific accounts of the flights appeared in a magazine called Gleanings in Bee Culture. Perhaps the Wright brothers could have used a public-relations man.

I mention this historic oversight only for emphasis. It probably is the last time on record that the American press ever failed to give a significant aviation event its just due. The diligent coverage and consistent support of the American press have made it aviation's most powerful champion. And now, in asking me to discuss Tomorrow's Airplanes and Your Airpgrts you have demonstrated once again your awareness of the trends, accomplishments, and problems in our industry. It is typical that you should want to be fully informed well ahead of time about developments which will profoundly affect the cities you serve.

Before we peer into the future at tomorrow's airplanes and airports let us take a brief look at the status of commercial aviation as we have known it up until now. There is no need to hark back this time to the days of the Wright brothers. Air transportation as we know it today is a comparatively recent development, even though it is the direct outgrowth of pioneering effort by many people through many decades. In some of these efforts I have been privileged to play a part, and must necessarily draw upon some of my own experiences and those of my company in this discussion. Therefore, I hope you will be forbearing if from time to time the name of Douglas unavoid-

ably pops up in my remarks. Perhaps you will be charitable and put it down not so much to vanity or salesmanship as to the fact that this happens to be the company with which I am best acquainted. Of course there is no escaping the fact—and being only human I am proud of it—that slightly more than 50 percent of all the aircraft operated by airlines throughout the world are Douglas-built. Our views and conclusions, therefore, have a broad basis of experience and information.

Our first significant entry into the transport field dates from August 2, 1932. Many aviation historians regard the events set in motion on that date as marking the real beginnings of practical air transportation. That was the day on which my friend Jack Frye, then vice president in charge of operations for Transcontinental and Western Air, happened to write me a letter. He wanted to know if we would be interested in building a new type of airline transport for the newly developing transcontinental routes. We were interested and we did build one. It was the DC–1, first of the Douglas commercial series.

This was followed immediately by the DC–2 and then the DC–3. Including military versions, we ultimately built more than 11,000 DC–3's. Thousands of them are still in service. Over the years people all over the world have told us that without question the DC–3 is the best-known and most beloved of all airplanes. In giving our company the Exceptional Service Award, the Air Force said the DC–3 ranks as "the best single airplane ever built."

The thing about all this that is pertinent to my talk today is the fact that the DC–3 largely shaped 1 of the 3 important periods of air transportation growth. Since the DC–3 at one time carried 90 percent of the world's passenger traffic, airline route patterns were developed between 1933 and 1941 to conform to the capabilities of this airplane. Traffic during this period expanded by a factor of 5—from 406 million to over 2 billion passenger-miles.

The next significant period came during the war. The four-engined DC–4 made overwater flights a routine experience for thousands of operational crews and passengers. New routes were established everywhere because a new airplane made them feasible. This is a pattern that keeps recurring and will do so in the future.

The third important period, from the end of the war to the present, was made possible by the manufacture of greatly improved, pressurized 300-mile-per-hour airplanes such as the DC–6 series and the Constellation. In the last 3½ years cruising speeds have been stepped up to 365 miles per hour in our DC–7 and DC–7C series of aircraft. These postwar land-based planes have enabled the airlines to establish a worldwide network of commercial trunk routes for efficient overland and overwater operations.

As a result, world air traffic has increased from nine and a half billion passenger-miles in 1946 to more than 40 billion today. And the end is not yet in sight, as I shall tell you a little later. Before going further, however, let us examine some of the factors which have brought about this amazing growth in air travel. I think you will find that most of them are linked to the performance characteristics and other features of the airplanes themselves, together with ground facilities necessary to their operation. This is an extremely important point to keep in mind in the light of the revolution in airline equipment which the various types of jet aircraft will bring to pass in the next 2 or 3 years.

The advantage of speed, of course, is one of the most obvious reasons for the remarkable increase in travel by air. But it is far from being the only one. Economy is another important factor. Even though the value of the dollar today is a little less than half that of 1934, airline fare actually has declined from 5.9 cents per mile to 5.3 cents. If dollar values were equal, the fare today would be 2.6 cents per mile as compared to 5.9 in 1934.

Any of you who traveled by air before the war should be well aware of the advances in another aspect—that of comfort. Pressurized cabins now make it possible for you to fly at high altitudes where gust frequency, or bumpiness, is greatly reduced or completely eliminated. There is air conditioning, room to move around, and a reduction in the noise level, among numerous other refinements.

Reliability has been vastly improved. Now you can make appointments dependent upon arrival by air and expect to keep them. The old slogan, "If you've time to spare—go by air," no longer applies. Ranges have been extended greatly so that nonstop flights across both continents and oceans have become routine. Since introduction of the DC–7 in 1953, nonstop flights in either direction between the Pacific coast and New York have played their part in stepping up airline traffic. The DC–7C has performed the same function across the North Atlantic in providing nonstop service in both directions between New York and major cities of Europe beginning a little over a year ago. The Lockheed 1649–H, now going into service, also is capable of similar long-range overwater flights. A few weeks ago a DC–7C delivery flight carried a group of notables and extra crews from Long Beach, Calif., to Paris nonstop for a journey of more than 6,000 miles, arriving on a prearranged schedule in time for a preview of the Spirit of St. Louis motion picture in a Paris theater.

In addition to range, we have seen a great improvement in what we may call the factor of destination. Now the passenger can schedule a trip to any section of our country or to any country of the free world and plan to get there by air.

All of this has been accomplished in a little more than 20 years principally by a process of evolution in which reciprocating engines of the same basic type, with periodic improvements, have been used.

Now we are about to take the big leap into an entirely different type of propulsion. Let me point out one way to grasp the significance of the change to jet-propelled aircraft. In the 20-year period between the DC–3 and the DC–7, which I have been discussing, cruising speeds were gradually increased in the amount of about 200 miles per hour. The DC–8 jet transport, which will begin its test flights next year, in one step will accomplish the same speed gain which took us 20 years to achieve previously. It will cruise at 550 miles per hour and will be capable of top speeds approaching 600 miles per hour. Transcontinental trips will require 4½ hours. Gains in comfort and quietness fully comparable to the advances in speed also will be accomplished.

What effect then will jet aircraft have in generating new airline traffic? This obviously will be an important consideration in determining the requirements for future airport facilities. First of all, we must bear in mind that even during the balance of this decade, before the jets go into wide use, there will be substantial increases in passenger traffic. We anticipate that by 1960 air travel will increase from the present worldwide figure of somewhat more than 40 billion passenger miles to a total of 60 billion. By 1970, after a decade of jet operation, world-passenger traffic should increase to a total of at least 90 billion passenger miles. We believe this estimate to be well on the conservative side since no attempt is made to project any increase in the rate of growth during this decade. Even so, what I am saying boils down to the fact that traffic will double at the very least in a little more than 10 years.

My discussion so far has dealt only with passenger traffic. I have pointed out how the new type powerplants have made possible the increased speed, dependability and economy so essential to the growth of air travel. I also want to emphasize that these same engine developments, both turbojet and turboprop, offer great new opportunities in the field of commercial air cargo.

Turboprop airplanes now in existence as well as those which may easily be flying late next year can carry products never before dreamed to be within the capability of aircraft. They can do this at much greater speeds and at an actual saving of 40 percent in direct operating costs.

These airplanes can help us achieve the goal of freer and more expanded world trade which President Eisenhower recently advocated.

Flying freighters of this type promise to change our whole concept of domestic and international trade. They will be the means of establishing a new, more healthy business relationship with our friends all over the world. In this way we can help those countries which the President spoke of as "having a hard time making a living."

Furthermore, and in line with our subject today, these new aircraft will present no new problems where ground facilities are concerned.

In discussing airport facilities, we must remember that they are actually as much a part of this expanded passenger and cargo traffic which we anticipate as are the new airplanes themselves.

The interrelation of many factors in governing the progress of air travel has been well described by Lt. Gen. Joe Smith, who had much experience in this field as commander of the Military Air Transport Service. General Smith said this:

"In the satisfaction and enthusiasm of developing new and revolutionary aircraft, we all too often lose sight of one very major point. Air transportation depends upon more than just transport aircraft. Air transportation depends upon an integrated air transportation system composed of aircraft, personnel, airfields, weather forecasting, communications, navigation facilities, ground handling, air traffic control facilities, logistic support, maintenance standards and procedure, rules and regulations and, above all, good judgment. The whole system must develop and grow with the aircraft. The potentiality of an aircraft out of phase with the rest of the system is never fully realized."

Perhaps no one in our company ever expressed this thought quite as succinctly as General Smith but you can be sure that we have been aware of this interrelationship for many years. And I am sure we are not unique in the industry in that respect. In other words, airplanes are not designed by dreamers in ivory towers. At all times we must and do take into consideration the environment in which the aircraft must operate. The jet airplane must be capable of an orderly integration into existing airport facilities or those already in process of planning and development. I am convinced there has been an undue amount of concern about our readiness for the jet age. Continuing improvement of our airports is a matter of national policy which usually receives strong support at the community level, and which, in general, is proceeding very well. It is erroneous to say that we must initiate a crash program in order to beat some arbitrary deadline associated with the advent of jet aircraft. I think generally it is correct to say that the cities which are scheduled to have jet service initially will be ready when the time comes. Extension to other cities will come in a gradual and orderly manner.

If you think I am unduly optimistic about this, I would like to cite the recently ex-

pressed opinion of James T. Pyle, CAA Administrator, a man who is very much concerned with this matter. Speaking to the jet age airport conference of the American Society of Engineers, Mr. Pyle listed some of the more pressing problems facing the Civil Aeronautics Administration. He then said:

"Because I feel that we have a reasonably good national system of airports and have been enjoying the benefits of a program of Federal aid for many years, I would place airports as the final problem of the jet age."

It is significant that he listed the CAA's primary problems as those of meeting the existing and long-range needs of air-traffic control. I think all of us in the industry, or associated with it, are conscious of the need for improvement in this area. Many of you have commented on it editorially in recent months. I am confident of our ability to solve this airspace problem, just as we have solved other technical problems in the past, but it must be attacked promptly and vigorously on a national and international scale. The publications you direct can and undoubtedly will do a good job on this.

In discussing airport requirements, I realize that you gentlemen would like for me to get down to specifics. You would like to take something back with you of a concrete nature which could be applied to your own community. There are so many variables involved, however, that no such blanket approach is possible. Each airport must be studied individually and appropriate action taken from the points of view of the airline operator, the airport management, and the traveling public.

A few general principles can be expressed, however, which might be of value to you. Runway lengths are a subject of frequent concern because of the cost of acquiring additional land, if indeed there is any available at all in many cities. It should be remembered in this connection that the most critical factor where long ranges are involved is the takeoff requirement because the airplane is heavily loaded with fuel at this point. The amount of fuel carried is determined by the length of the flight. This in turn is governed by the volume of traffic, which, in turn, depends upon population.

Therefore, nonstop transcontinental and intercontinental flights originate at major terminals, most of which already have adequate runways. Intermediate point airports, where flights of shorter lengths originate, also are presently equipped to handle DC-8's with the lighter fuel requirement.

In general, airports with 7,000- to 9,000-foot runways can expect to handle the DC-8 adequately. The higher limit of this bracket will be needed only in cities where the longest flights originate. These cities already have or soon will have runways of this length, or greater.

Extreme lengths, you may have heard mentioned, ranging up to 13,000 or 14,000 feet are required only where there is a combination of maximum range, high airport elevation and high temperatures. No cities in the United States combine high elevation with high temperatures such as we find in places like Johannesburg or Mexico City.

One point to keep in mind about the big jet transports, both the DC-8 and the Boeing 707, is that they will be used initially only over routes that generate a large volume of traffic. The DC-8, for example, will carry anywhere from 118 to 179 persons depending on its seating arrangement. A high load factor will be sought to justify the large investment which each jet aircraft represents. This brings me to another phase of the airport situation.

Economic operation of the big jets will require that ground time be kept to a minimum. Therefore, there will be a definite need for improved aircraft servicing and passenger handling facilities at our major airports if maximum utilization of the airplanes is to be achieved. Some of these requirements can be met by the airline operators themselves. In other cases changes in fixed installations probably will be necessary. Some refinements can come later, after the jets are in operation.

Studies conducted by the Douglas company indicate that a complete turnaround of the DC-8 can be accomplished in 30 minutes. This survey covered operational practices at several airports. It was followed by experimental tests in the airplane mockup constructed at our Santa Monica plant. The servicing operation has been expedited by the inclusion in our jet transport of 2 passenger doors, 2 buffet service doors, 4 cargo compartment doors and underwing pressure refueling. Fueling may be accomplished through 4 connections at the rate of 1,500 gallons per minute.

To provide all this simultaneous servicing, however, wou id require 19 pieces of mobile equipment, our survey showed. This has been a problem even with current aircraft. The cost of the equipment and the space it occupies are steadily mounting. Damage as the result of collision with such equipment has reached the sum of $1 million annually in the case of one airline. Obviously, extreme caution will be a necessity.

Some of this mobile equipment has been eliminated at new airports by such fixed installations as fueling hydrants, ground electrical power supply, and air conditioning. A further major reduction can be made by providing a water supply, sewage lines for servicing lavatories, and an air source for pneumatic power to start the jet engines.

Our studies show that new airport facilities could include one feature that I am sure passengers would welcome. The door at the forward end of the cabin in the new airplanes will make it possible to keep the passengers out of the weather if airport designers take advantage of this feature.

A nose dock, which incidentally could be added to existing structures, will make it possible for passengers to walk directly into the terminal at door level, without passenger stairs. We believe unloading at the same level can be accomplished as quickly through 1 door as it can through 2 when stairs are required. Another welcome feature of such installations will be a conveyor which will carry luggage to the claim area before the passengers arrive there.

Taxiing in to the passenger ramp is simplified in the case of the DC-8 by having the aft wheels of the bogie landing gear castered. This means that in a 180-degree turn the wing tip will swing on a radius of about 90 feet. This is only a little more than the 81-foot requirement for the DC-7C.

Landing gear design also takes care of any possible problems associated with the weight of a fully loaded jet airplane, which will be twice as great as that of the largest current transports. In the case of the DC-8, there are four main wheels on each side and a dual nose wheel. The use of so many wheels has the effect of reducing runway bearing pressures per square inch to a level comparable to or less than those of present aircraft. In other words, there need be no change in runway thickness requirements. At comparable range-weight values the DC-8 actually requires less runway strength than the DC-7C.

Some concern has been expressed that jet aircraft will not be able to take their place in the holding and landing traffic control patterns. Such fears are unfounded because in this respect, also, environmental factors have been taken into consideration in the design of the airplane. The fuel capacity is such that the jets can join the parade of other aircraft. Despite the high cruising speeds of these airplanes, wing and flap design make it possible to reduce holding and landing speeds to conform to those of present-day aircraft.

Another feature of the jets is the use of thrust reverser installations. These will be used on jet aircraft to reduce landing roll but we have not included their effect in establishing runway requirements. This provides an added margin of safety. For example, with 40 percent reverse thrust on four engines and no braking, the DC-8 can be stopped in a 4,450-foot ground-run at maximum landing weight of 190,500 pounds. This at at sea level and with zero wind conditions.

Any discussion of jet aircraft inevitably leads to the subject of external noise, which may well be the greatest problem we have to face. There are two types of noise associated with jet engines. One is the high-pitched whine of the compressor, coming from the nose of the engine, which is heard only in taxiing operations. The other is the roar of the exhaust, most noticeable during the takeoff run. One noise which happily is not associated with commercial jet aircraft is the roar of the afterburner used on military jets. I am convinced that most of the alarm in the public mind over jet aircraft noise is related to these military aircraft. Few people in this country have heard the sound of a commercial jet transport and no one, except those concerned with the development, has heard jet engines with sound-suppression devices.

When the jet aircraft go into operation, they very definitely will have sound suppressors. This problem of noise is being given high priority by Douglas and Boeing; the engine manufacturers, Pratt and Whitney and Rolls-Royce, and many other manufacturers and Government research agencies.

I can assure you substantial progress already has been made. Our test program, and those of others, have been advancing on schedule—and I am confident that the sound will be reduced to a level acceptable to the public by the time the jets go into operation.

In summary, I would like to say that the technical problems associated with the operation of jet aircraft, while not to be minimized, can and will be surmounted. Many of the fears that have been expressed are based on invalid assumptions, as I have tried to point out. The problems that do exist are being vigorously attacked by many companies and many agencies. I am sure that with faith and patience we shall achieve success in solving them.

Far overshadowing the problems, in my opinion, are the tremendous gains which the jet age of commercial aircraft will bring to the world. The swift movement of people throughout our country and to all parts of the globe are important in themselves. But this in fact is only a means toward an end. That end is a new era of international understanding and world peace, which may very well receive tremendous impetus from the increasing mobility we are about to experience and pass on to the world. At least those of us in the business of manufacturing aircraft can fervently hope that at long-last the full potential of the airplane as an agency of peace and progress, instead of war and destruction, will be realized.

The American press can play a deciding role in making this dream a reality.

Civil Rights—Fallacies in the President's Views

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Shreveport Times of June 30, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FALLACIES IN THE PRESIDENT'S VIEWS

President Eisenhower said in a press conference that nonlawyers, like himself, may have "very great trouble" understanding some of the recent Supreme Court decisions, but that "I still believe that the United States respects the Supreme Court and looks to it as one of the great stabilizing influences in this country. * * *"

Mr. Eisenhower also declared that the civil-rights bill now pending in Congress is intended to "educate rather than to persecute people" and that he regarded it as "a very moderate, decent thing." He added that he thought it was only simple justice that a person could be punished without trial by jury for disobeying the orders of a Federal court.

These statements indicate that the President may have, of late, lost contact with the people—with public opinion and public reaction.

There are other indications of this.

It was brought out recently in Washington that the President personally sees—as a rule—only 3 daily newspapers, 2 of them published in New York and 1 in Washington. All three are of the extreme liberal type which repeatedly have taken sides against anti-Communists, particularly in congressional investigations, and frequently stand up for organizations and individuals who attack anti-Communists. All three are vigorously—at times unfairly—opposed to segregation.

Two of these three newspapers have been revealed—concededly and without denial—to have had former active Communists on their staffs, and even in a policy-making position in at least one instance, with only the word of the former active Communists as to when they quit being active and became former.

The President thus personally does not see with any regularity either news accounts or editorial opinion in any way representative of the whole Nation and the whole people.

The same thing seems true as to civil-rights legislation. The President has set up Max Rabb as a sort of personal secretary of race relations in the White House. Mr. Rabb is from Connecticut. His vocational and political life has centered in New England. He was, before taking his present race relations position in the White House—and still is—an ardent foe of segregation, a vigorous supporter of integration, a firm believer in trial without jury in Federal civil-rights cases.

Prominent southern political and civic leaders, including Members of Congress, have complained that it is impossible to get any information to the President in person in support of segregation or other phases of the general race situation stemming from the Supreme Court antisegregation decision. They say that if they write to the President the letters never get beyond Mr. Rabb. The only replies received are from Mr. Rabb.

They must deal with the enemy in their quest for justice.

President Eisenhower has been beloved and respected by both foes and political friends as a man of the highest honor, character, personal integrity, and determination to be fair to all. But he cannot be fair when he receives information on only one side of an issue, and when an iron curtain is drawn between himself and the other side.

The President also stated that he believed integration is primarily an educational program which cannot be decided summarily by laws or (court) decisions. At the same time he upheld the Supreme Court's antisegregation decision, particularly on the grounds that it was unanimous.

These two statements do not fully jibe.

The Supreme Court has called for integration by Federal judicial edict regardless of State laws or dispute over meaning of parts of the Federal Constitution. It has done this, somewhat admittedly, on sociological grounds rather than on statutory or constitutional grounds. It has based its sociological opinions in part on writings of persons of known communistic or socialistic advocacies or leanings.

If integration had been attempted, under judicial edict or otherwise, through an educational program the Nation would not today be in its present dangerous and tragic racial mess. How can President Eisenhower contend that integration should be achieved by an educational program and uphold the Supreme Court decision which seeks to impose it through judicial tyranny?

In his contention that the American people still hold the Supreme Court in high esteem and respect, the President seemingly has failed to grasp the difference between the Supreme Court system and the personnel of the present Supreme Court.

The Supreme Court system, as part of a triple-headed Government, perhaps cannot be improved upon if held within the intent of those creating it. The system was established in the expectation that all Presidents would be of the highest political as well as personal integrity and would select, for the Court, only persons of maximum judicial qualifications and of deep humility in recognition of their responsibility to preserve the Federal Government structure of which they themselves are such an integral part.

It also was established in the expectation that the Senate diligently would exercise its constitutional responsibility to reject as well as confirm Presidential nominations to the Court.

All Presidents have not been of the highest political integrity. In most instances, the Senate has confirmed Presidential nominations to the Supreme Court as mere routine. The Supreme Court system has been sabotaged through politicalizing of appointments to it.

When President Eisenhower says that the Supreme Court has been handing down decisions of late which nonlawyers like himself do not understand, he shows a lack of understanding of the whole situation. Many of the strongest attacks on the Supreme Court as bypassing or rewriting the Constitution, as usurping the authority and responsibility of both the executive and legislative branches of the Government, and as legislating instead of adjudicating, have come from lawyers and their organizations.

The most recent—only a few days before the President made these statements—came from the president of the National Association of State Attorneys General who, at that organization's convention, vigorously denounced the Supreme Court. The two strongest Senate critics of the Supreme Court are men of recognized legal background—Senators ERVIN, of North Carolina, and MCCLELLAN, of Arkansas.

Senator ERVIN stated a few days ago that he could not recall any decision of the Supreme Court, as constituted now or in recent years, against Communists or communism. Senator MCCLELLAN said that what the United States needs most right now is a Supreme Court of lawyers with a reasonable amount of commonsense.

As a nonlawyer, the President would do well to read and study and heed the criticism of the Supreme Court by some of the outstanding attorneys of the Nation.

More than 40 years ago a learned scholar, the late Dean Walter Williams, of the University of Missouri School of Journalism, made a statement to a class which seemed startling at that time but now is becoming somewhat self-evident. He said:

"In the final analysis the Supreme Court is, or can be, the Government of the United States. Because there are no specific restraints upon it in the Constitution, it can establish a judicial tyranny or despotism if at any time its personnel is willing to assume this cloak."

With or without intent, various Supreme Court decisions of recent years cumulatively are in the direction of judicial tyranny.

Congress does have some power to remedy much of what so many people consider the evils of decisions of the present Supreme Court.

It can move to submit Court-curbing constitutional amendments to the people.

It holds sole authority to determine, by legislation, procedures of all Federal courts below the Supreme.

A majority of the present Supreme Court Justices—sometimes all nine—in recent decisions treat communism as a debatable and possibly acceptable political belief, perhaps even a religion in some senses, instead of as a world conspiracy to destroy freedom by violence, including murder in individual or mass form.

These Justices apparently hold to the threadbare fallacy dragged forth so often by pompous and pious dupes of communism during the McCarthy hearings of the early 1950's—especially in the ministry: "Better a thousand guilty Communists should go free than one innocent person should suffer."

On the contrary, better a thousand innocents should suffer than 160 million Americans—and the free world itself—should be hogtied by judicial tyranny in efforts at physical self-preservation and at moral protection of their inherent liberties.

Humanity and civilization of today were built on the suffering of the innocent few that many might gain.

The outstanding example is Jesus Christ.

Electoral College Reform—Resolution of Catholic War Veterans of America

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. JAVITS. Mr. President, recently I received a copy of a resolution adopted by the Catholic War Veterans of America. The resolution pertains to the apportionment of the electoral college vote according to popular division. I think the Catholic war veterans are to be commended for giving attention to the pressing problem of election law reform. Of course, the popular vote must reflect accurately the voting potential, and this

it fails to do in the Southern States. I look forward to the elimination of such unequal voting opportunity in the South, and then we can better proceed to electoral college reform.

I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE CATHOLIC WAR VETERANS OF AMERICA, IN ANNUAL NATIONAL CONVENTION ASSEMBLED, AUGUST 1956

Whereas the present system of selection of the President of the United States can permit a President to be designated by the electoral college without receiving the majority of the votes cast; and

Whereas such a division of the electoral college vote in each State would assure the election of the people's choice for President, and would eliminate the inequity of the present system of a majority vote of the State carrying the full electoral vote of that State; and

Whereas it is fitting for a democratic republic to insure the election of their President by mandate of the voters: Now, therefore, be it

Resolved, That Catholic War Veterans of the United States of America support in principle and in fact legislation to have the electorial college vote, cast in each State by proportional vote of the electoral votes, based upon the popular vote division; and that we urge Congress to enact the necessary legislation to permit this system of voting by the electoral college in presidential elections.

What Is Montana?

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. MANSFIELD. Mr. President, in the Montana Standard of Butte, Mont., and the magazine Dude Rancher, there appeared two interesting articles on Montana. One is entitled "What Is Montana?" The other is entitled "Montana Is Doing Just Fine, Thank You." Both the articles were written by George McVey, the chief editorial writer of the Montana Standard, of Butte, Mont.

Mr. President, if anyone wishes to find out just what Montana is, what it has been, and what it will be, and to have that stated in a very few words, he should read these two fine articles, because the whole story is told there, for all to see. I ask unanimous consent that the articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Dude Rancher]

WHAT IS MONTANA?

(By George McVey)

(Reprinted from Montana Standard, Butte, Mont.)

We have been asked to define Montana. What is it? we are asked. What does it mean? Where did it come from? Who owns it? Where is it going? Who runs it?

Those are tough questions, when you attempt to answer them.

You might say: Montana is one of the biggest wheat piles in the world. It's one of the biggest copper piles. It's one of the biggest lumber piles. It's a million sacks of sugar.

It's potentially the biggest hydroelectric powerhouse in the world. It's a silver dollar. It's one State west of the divide and one State east of the divide. There's enough waste material left over to make a third State.

Montana is Robbers' Roost. It's the vigilantes hanging Henry Plummer. It's a million Christmas trees. It's Custer's last stand.

Montana is Lewis and Clark and Sacajawea. It's the world's largest giant spring from which flows the mighty Missouri and the turbulent Columbia.

Montana is Fort Peck Dam, the largest earthfill dam in the world. It's a cattle ranch with the front gate 30 miles from the front porch. It's a rodeo. It's a dude ranch. It's Old Faithful. It's Gunsight Peak. It's Going-to-the-Sun Highway.

Montana is Charlie Russell. It's the Richest Hill on Earth. It's Last Chance Gulch. It's a 50,000-mile trout stream.

Montana is Marcus Daly looking into the earth and seeing billions of dollars worth of copper.

Montana is Big Hole Basin with 10,000 haystacks.

Montana is a jewel-like mountain lake.

Montana is a miner, a cowboy, a lumberjack, a farmer, a dude rancher, an Indian, a cattle baron, a vigilante, a road agent, a fur trapper, a banker, an oil driller, an engineer, an artist, a writer, a soldier, a millionarie.

Montana is a pine forest.

Montana is a fat steer.

Montana is a gold mine, a silver mine, a copper mine, a zinc mine, a manganese mine, a lead mine. Montana is a ghost town. It's a Grasshopper Glacier. It's Yellowstone Park. It's Glacier Park.

Montana is a church spire. It's a school. It's a boy with a dog and a fishing rod.

Montana is a scenic wonder. It's a volcano. It's a geyser. It's hell cooled off.

It's a cherry tree, an apple tree, a potato, a mustard seed, an alfalfa patch, a lovely flower.

Montana is all these things and millions more.

It's home to some 600,000 people.

Some 2 million visitors come annually to drink in its beauty, enjoy its built-in air-conditioning system, mingle with its friendly people.

These visitors spent some $90 million last year, according to Jack Hallowell, State advertising director.

Mr. Hallowell states that if more people knew about Montana the annual tourist crop would be considerably greater.

There isn't any doubt about Mr. Hallowell's being right. When you try to add up the total of what Montana is, the column is simply too long. It can't be added.

When you attempt to define Montana you have to say it's everything and then some. Who owns it? It belongs to the ages. Who runs it? It has 600,000 operators, and there's room for 600,000 more. And it's the greatest State in the Union, if anyone asks. Any more questions?

[From the Montana Standard, Butte, Mont., of July 13, 1957]

MONTANA IS DOING JUST FINE, THANK YOU

Montana is doing fine. Yes, sir, just fine.

The crops are coming along. The moisture is adequate or abundant. The cattle are in good shape and their condition is improving.

The forecast is that Montana will harvest is fifth largest wheat crop, almost 93 million bushels.

Its largest barley crop in history is coming up, about 43½ million bushels. The previous record was set in 1955 with 40 million bushels.

There is only one thing wrong with the picture. The price of many of the commodities Montana produces is down.

Wheat, for instance, is going at $1.91 a bushel at the farm. Wheat is usually Montana's most valuable cash crop. Montana's high protein wheat usually brings a premium on the market.

However, it is anticipated that the price may rise, for some of the other wheat producing States are falling behind in production.

Kansas, for instance, usually produces over 200 million bushels of wheat. The crop there this year may fall below that of Montana.

The Kansas crop has been drowned out and hailed out.

The harvesters have been unable to get into some of the fields with their machines because of mud.

It is a change from recent years. For the past 5 years Kansas has been in the drought area.

Montana is in a good position in relation to livestock.

With plenty of feed available, Montana ranchers are holding their cattle in anticipation of better markets in the fall.

Stock feed prices have been declining, another favorable factor for the Montana grower.

On a hundredweight basis, according to Montana crop and livestock reporting service, laying mash and mixed dairy feeds declined 10 cents each from mid-May to mid-June.

Corn decreased 15 cents and oats 5 cents. Baled alfalfa hay was off $2.50 per ton and all other baled hay was down $3.

Feed prices were also down on a national basis. This would mean that it would be more profitable to market the hay and grain in the form of beef or pork.

And with a plentiful supply of feed, the livestock grower could hold his product off the market until such time as the price seemed better. Under such a condition, the market would be almost sure to improve.

Montana's third ranking source of income, the tourist industry, is booming. Recent checks at entrance stations indicate that travel is better than last year, a record year.

And Montana's vistors are seeing the Treasure State decked out in inexhaustible splendor.

Yes, sir, Montana is doing fine. Just fine. Thank you, sir.

Importance of Completion of the McGee Bend Dam, on the Angelina River

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "On With the Dam," which was published in the Beaumont Journal of Saturday, July 13, 1957. The editorial deals with the McGee Bend Dam, on the Angelina River, in eastern Texas, which ultimately will be a $50 million project, and which the Army Corps of Engineers has stated is one of the nine most critical and most needed dams in the United States.

The committee has recommended an appropriation of $500,000 in order to pro-

ceed with the preliminary work on the dam. I submit the editorial as further evidence of the importance of this great project; and I hope the Congress will, when the time comes, make the small appropriation; namely, one-half a million dollars, for this project, which the Army engineers have stated is one of the nine most needed in the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Beaumont Journal of Saturday, July 13, 1957]

ON WITH THE DAM

Unusually heavy rains earlier this year should help rather than hinder the completion of the Congress-approved full-sized McGee Bend Dam on the Angelina River.

They should help because, now that the floodwaters have been swallowed up in the Gulf of Mexico, authorities on such matters have found that the excess rainfall didn't penetrate deeply enough to break the drought in the deepwater sands of the State.

Farm tanks were filled, as were most lakes throughout Texas, and the water soaked the ground sufficiently to solve a serious problem for thousands of farmers and ranchers. But the United States Geological Survey district engineer in Austin is quoted as saying the rains didn't reach down to the deep sands, the fountainhead of billions of gallons of water pumped up for surface use each year.

Since it is unlikely that Texas will soon have so much rainfall in such a short period, the problem of a plentiful supply of water for present and future use becomes more serious. Clearly, if such whopping rains as we had last spring don't add to the deepwater sands and the underground water supply, there is great need for storing more and more water on the surface.

People in other sections of the State are looking out for themselves in the matter of storing surface water. The people of southeast Texas should do likewise. Their answer to a full supply of water, now and in the immediate future, is the full-sized McGee Bend Dam. They ought to get together, stick together, and pull together for its completion.

Jobs for Older Workers

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 19, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Jobs for Older Workers," which was published in the Buffalo Evening News of July 9. The resolution deals with a report on a pilot project of the New York State Employment Service, which investigated the employment impediments in the case of persons over 45 years of age. It was the encouraging conclusion of this experiment that discrimination is nullified when employers hire on the basis of individual skills and personalities, rather than age.

I join the Buffalo Evening News in urging that practical steps be taken to assist older workers to find jobs, especially in the light of the ever-increasing proportion of our population in the age group over 45.

I also invite the attention of my colleagues to the bill I have introduced on this subject, the National Act Against Age Discrimination in Employment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOBS FOR OLDER WORKERS

A report on a pilot project of the State employment service offers encouraging evidence of what can be accomplished in overcoming the employment barrier for people over 45. Two special older worker counselors were assigned to the Hempstead, Long Island, employment office to find out what could be done for older job seekers if sufficient staff were available to help them.

In 11 months, the counselors interviewed 581 unemployed, and found jobs for 158, or better than 1 out of 4. Others later found jobs for themselves. Although the proportion of those over 65 who were helped was less than that of the 45–65 group, the experiment showed that headway could be made in finding work for even the oldest workers.

The conclusion to be drawn is that most of the arguments against hiring older workers vanished when employers consider them as individuals, with special skills and unique personalities. As the study observes, "the employer who sees and acts on this homely truth will hire a man on the basis of his abilities * * * knowing full well that a good worker is a good worker, regardless of the number of candles on his birthday cake. Unfortunately such employers are in the minority. Most react to age as they would to a stop sign on the highway. In this sense, businessmen hold the master key to the older worker problem."

Even as generalizations, most of the arguments against older workers just don't accord with the facts. A State labor department publication points out that with respect to productivity, absenteeism, accidents, sickness, and work attitudes, older workers generally have a better record than those below 45.

Arbitrary age limitations represent an injustice to individual workers and an incalculable loss to the economy of skilled, reliable labor. The rate at which the over-45 age group is increasing in the Nation makes it urgent that States and localities take practical steps to help older workers find jobs.

The Economic Cost of Discrimination

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 19, 1957

Mr. HUMPHREY. Mr. President, the distinguished Representative from South Dakota, Mr. GEORGE S. MCGOVERN, recently addressed the IUE–AFL–CIO civil-rights conference in Chicago, Ill., on the topic of the Economic Cost of Discrimination.

Today, at a time when we are discussing a related matter of basic civil rights, it is important for us to remember that in the industrial and economic areas of our national life discrimination is as costly as anywhere else. Discrimination there, as elsewhere, cannot be prolonged forever.

I ask unanimous consent that the text of Congressman MCGOVERN's excellent address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ECONOMIC COST OF DISCRIMINATION

More than a century and three-quarters ago, Thomas Jefferson penned the words that have stirred Americans from that day to the present: "We hold these truths to be self-evident, that all men are created equal."

The doctrine of equality as enunciated by Jefferson and other philosophers of the American Revolution has never been confined to America. It has from the very first fanned the flames of freedom and stirred the hearts and minds of human beings in every quarter of the globe.

Today, with vast portions of the world searching for better, more satisfying, standards of life, the philosophy of the Declaration of Independence is particularly appropriate.

The words of Jefferson and Lincoln have genuine meaning to the millions of Africa and Asia who have caught glimpses of what life can be under conditions of comparative freedom and equality. I have no doubt that the strongest weapon in our struggle with communism is our long tradition of respect for basic human rights.

That is why everyone who hopes and prays for the triumph of freedom over tyranny is troubled by the tragic and costly remnants of discrimination which persist in the America of Jefferson and Lincoln.

It is hard to make much sense out of racial and religious discrimination in America at a time when we are called upon to be the leaders of a world in which two-thirds of the inhabitants differ in color from us. Every alert observer of the contest now in progress between the Soviet bloc and the free world knows how grievously we are injured abroad by the discrimination which exists at home.

The uncommitted peoples of the world will not be won permanently by propaganda shows and speeches. They are watching, more closely than we sometimes realize, the actual circumstances of life under our own and competing political systems.

If discrimination in America is indefensible in terms of our position abroad, it is all the more indefensible on the narrower grounds of economy and domestic welfare.

Laying aside all considerations of ethics, discrimination is a costly extravagance that no nation can afford. A true believer in economy can never justify such expensive practices as the building of duplicate public facilities and schools for whites and Negroes, or the infinitely more costly practice of curtailing opportunities for jobs, education, and housing for minority groups. Regardless of how energetically such practices may be defended on the grounds of social niceties and traditions, they can never, for one minute, be defended for reasons of economy.

Your great union, under the inspired leadership of President James Carey, has known for a long time that penalizing a human being because of his color or his religion is literally "bad business."

You have known that discrimination can divide and weaken workers until effective union organization becomes impossible. All those who believe in the brotherhood of man and the necessity of healthy labor organizations are in the debt of President Carey and the IUE–AFL–CIO for courageous recognition of the facts of life in the field of human relations.

There is no way to fully measure the dollar cost of discrimination. Recently, how-

ever, Elmo Roper and his experienced staff analyzed those losses resulting from discrimination which can be estimated in dollar values.

They came up with the startling conclusion that discriminatory practices are costing the American people $30 billion each year.

Said Roper: "If you take into account the amount of purchasing power which is denied minority groups by low wages * * *, if you add the possible contribution to society by workers of minority groups who could move into high-paying vocations where there are manpower shortages, such as medicine, chemistry, engineering, and so on, if you add the costs of crime, delinquency, and social maladjustment which can be traced directly to discrimination and prejudice, and if finally you add the costs of segregation which are the direct results of discriminatory practices, you'll find on calculation that this discrimination comes to roughly $10 out of every $75 paycheck, or in total dollar terms, $30 billion lost every year."

Roper estimates that the cost of maintaining duplicate white and Negro schools and other public facilities because of discrimination is in itself an added expense of from one of five billion dollars a year. The significance of this one item, segregation, as a part of our national discrimination cost is realized when we consider that it is three times the size of the Federal aid for education expenditure now recommended by President Eisenhower.

The $30 billion cost of discrimination estimated by Roper does not include an estimated tax loss to the Federal Treasury of more than $3 billion; nor does it include the sharply increased cost of Government services which the public finds it necessary to sponsor in communities where groups discriminated against are living.

Competent study groups have discovered that public expenditures to deal with such matters as crime, delinquency, and disease are 2½ times greater in minority group areas than elsewhere.

The predominantly segregated slums of Atlanta, Ga., for example, provide the city with only 5½ percent of its real property tax revenue, but these same slums are responsible for 53 percent of the city's police, fire, health, and other public service expenses. In San Francisco, the most depressed minority area with one-third of the city's population contributes only 5 percent of the tax revenues. Yet, this is the area where San Francisco has 60 percent of its tuberculosis; 55 percent of its juvenile delinquency; 50 percent of its arrests; and 45 percent of all the city service costs. Much the same pattern can be found across the Nation.

Discrimination is a many-headed monster and its costs appear in various ways. The basic economic cost of prejudice, however, is the staggering waste of manpower and purchasing power. We all know of groups or individuals whose skills, talents, and energies have gone unused, or only partially used, because of discrimination.

In some cases, jobs are closed entirely to Negroes, Jews, and certain religious and nationality groups. In other instances, promotions are denied for similar reasons. It will be noted that in some plants with large numbers of Negro workers, there are no Negro foremen. The same situation often exists with reference to the granting of supervisory jobs to qualified women.

Julian A. Thomas, industrial relations director of the National Urban League, estimates that in the case of Negroes alone, more than 1 million employed Negro workers are in effect underemployed.

They are confined to jobs below their capabilities and the Nation pays the bill in lost manpower, reduced purchasing power, and poorer standards of living for all our citizens. It is an undisputed economic fact that any practice which depresses the employment level of one group will in the long run lower the economic level of all the rest of us. We need to make use of the full potentiality of our manpower if we are to achieve improved living standards for our people as a whole.

In 1956, our gross national production was $412.4 billion. This is an average of $6,075 of production for each employed worker. That means, in effect, that for each employed worker, a total of $6,075 in purchasing power was required to keep him on the job. It should be obvious that discriminatory practices which depress the purchasing power of minority groups actually are a dagger aimed at the job security of all workers.

Every informed worker knows that his wage scale is dependent upon the purchasing power of his fellow citizens. Yet, in many cases Negroes and other minority groups are not only barred from jobs and professions, but they are paid less for doing the same job as other workers with the same qualifications.

Some years ago it was estimated, for example, that if the salaries of Negro teachers in the South had been raised to the level of their white fellow teachers, $25 million per year would have been added to the income of those teachers. It is obvious that the teachers are not the only ones who are paying the cost of this loss of purchasing power.

Depressed purchasing power resulting from discrimination is a serious threat, not only to workers, but to the Nation's farmers and businessmen. We have heard much of the depressing effect of farm surpluses on farm income. But, we have not given sufficient heed to the relationship of consumer purchasing power and farm income.

A study completed a few years ago by the Department of Agriculture demonstrated that if every American family were consuming as much food as families earning $2,500 a year or more, we would have to increase farm production instead of worrying about surpluses. Discrimination, then, which holds back the economic power of Negroes, Indians, and other minority groups is a serious continuing threat to the American farmer.

Furthermore, discrimination is a burdensome cost to industrial and commercial management. Objective surveys have shown a higher operating cost in businesses that base employment and promotions on grounds other than individual merit. There can be no doubt that businessmen and industrialists who practice discrimination are setting the stage for the kind of frustration and tension that disrupt the morale and the productivity of their employees.

The personal incentive, personality, and usefulness of many a worker have been stunted by the gnawing realization that advancement was hampered by color, religion, or national origin.

It is certainly not sound management for a commercial concern to deny itself the service of qualified personnel because of discrimination, or to encourage interracial friction among its employees.

There is, too, the tragic cost of discrimination in terms of lost professional and scientific manpower. At a time when the Nation is confronted by serious shortages of doctors, technicians, engineers, and scientists—we are still confronted by discriminatory college-quota systems.

Furthermore, professional opportunities are closed or restricted to members of certain minority groups in many business and professional areas. The blight of discrimination continues to rob us of the full potentiality of highly trained personnel at a time when the Soviet Union is going all out to surpass us in the training and utilization of manpower and brainpower.

The greatest cost of discrimination in the field of education is, of course, the lifelong handicap placed on millions of school children who have been given substandard schooling because they did not have white skin or because they belonged to an economically depressed minority group that cannot afford adequate education. There can be no doubt of the fact that depriving millions of Negroes and other minority-group students of adequate educational opportunities limits their earning capacity and purchasing power in later life. Furthermore, it limits their contribution to national security.

The statistics of our Federal Selective Service System tell the tale. These statistics show conclusively that in those States where education is hampered by the expensive luxury of segregated schools and where discrimination depresses the economic level of the people, there is a shockingly high rate of rejection of selectees, both white and Negro.

There is no section of the country any more patriotic than the South. Yet, because of educational deficiencies, 40.4 percent of the Louisiana draft registrants were rejected during the Korean War. In Mississippi, the percentage of rejected registrants was 41.7 percent, and in South Carolina it was 46.8 percent. The average of educational rejections for the Nation as a whole, however, was only 15.4 percent.

To look at the problem from another angle, Louisiana, Mississippi, and South Carolina were short 36, 31, and 27 boys per hundred, respectively, of their draft share based on population. Michigan, on the other hand, in spite of many occupational deferments in defense industries, contributed nine boys per hundred more than its population share. South Dakota contributed 13 boys per hundred more than its share.

Facts such as this led the directors of our Selective Service System to conclude several years ago that: "The question as to whether or not one community, county, or State provides adequate educational opportunities is a matter of concern for all of the citizens in all States. Communities, counties, and States with high educational standards are compelled to absorb the manpower procurement deficiencies of States with poor educational programs. In the final analysis, the former actually pay in lives for the education deficiencies of the latter.

"The safety of the Nation depends in a large measure upon citizens in every State and section having a reasonable minimum of education." (Source: Selective Service System, Special monograph No. 10, vol. 1. Special Groups, 1953, p. 166.)

I have suggested just a few of the many costs that we pay for the luxury of discrimination. Needless to say, discrimination takes an even greater moral and spiritual toll.

I am pleased that through industrial unionism, you have for years been waging an effective and winning fight against the blight of discrimination. While unions have little to say about the employment practices of many employers, once the worker is hired he receives the full protection of union contracts regardless of race, creed, and, increasingly, of sex.

I am sure that you who lead labor appreciate at this critical hour in our history the perennial timeliness of Lincoln's warning: "Those who deny freedom to others deserve it not for themselves, and under a just God, cannot long retain it."

Ike Risks Getting Blame in Civil Rights Retreat

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. SPARKMAN. Mr. President, Mr. Lyle C. Wilson, one of the ablest newsmen in the Nation's Capital, has written some able articles analytical of the pending so-called civil-rights bill. One of these articles appears in today's Washington Daily News. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE RISKS GETTING BLAME IN CIVIL RIGHTS RETREAT

(By Lyle C. Wilson)

The printed record of Senate Judiciary Subcommittee hearings on the administration civil-rights bill spans nearly 1,000 pages.

These hundreds of thousands of words, however, do not include the answers to some questions which have belatedly arisen in Senate discussion of the proposed legislation. The bill upon which the hearings of last February and March were focused never got out of the committee.

The bill now before the Senate is an identical measure already passed by the House and referred to the Senate for disposition. The bill is in serious trouble. The trouble is so serious that President Eisenhower apparently has decided on a major strategic retreat.

If the retreat takes place and the bill is shorn of its guaranty of a great miscellany of civil rights, other than the right to vote, blame may fall heavily on Mr. Eisenhower.

It is possible, also, that the President is retreating because he has obtained, a bit late in the game, the answers to some of the questions which have arisen around his civil-rights bill.

Question No. 1 arises from the fact that the President, Attorney General Herbert Brownell, Jr., and others have repeatedly said that their greatest civil-rights objective was to protest and to guarantee the right to vote.

It is fair to assume that the author of the bill—whoever he or they may have been—did not know that was Mr. Eisenhower's prime objective. That is a fair assumption because when the chips were all down the strongest and most bitterly resented enforcement procedure was withheld from the right to vote. Very emphatically, the bill authorizes the President to use the Army, the Navy, and the militia to enforce such civil rights as the right not to be segregated, the right to inform a Federal officer of a violation of Federal law and so on.

There are 21 specific civil rights protected by the Constitution and laws of the United States, plus the right to vote.

It was this miscellany of rights, including the right of the Negro to be protected against segregation in the schools, to which the bill's authors attached the powerhouse Army and Navy enforcement machinery. Mr. Eisenhower probably knows by now why that was done and by whom. The answer may come in the Senate debate.

Mr. Brownell spent 3 days before the Senate subcommittee last February. When, at last, the questioning touched on the authority to use troops to enforce miscellaneous civil rights in the South, the Attorney General seemed both hurt and surprised and, finally, annoyed.

The Attorney General sharply complained that the questions were not properly respectful of the President of the United States on whose order the troops would march and the Navy would sail in defense of civil rights. Mr. Brownell argued that Mr. Eisenhower never would order the Army to march or the Navy to sail and, therefore, that the subcommittee should not discuss it.

Senator SAM J. ERVIN, JR. (Democrat, of North Carolina), insisted the question was proper, adding:

"It is a matter that ought to be seriously considered by the Congress, whether or not Congress is going to authorize a new type of suit (by injunction) to be brought by the Attorney General, while there is a statute which provides that the President has the power—regardless of whether he intends to exercise it—to call out the Armed Forces of the Nation to enforce those [injunctive] decrees."

The Great Role of American and World Scouting

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. WILEY. Mr. President, I know that my colleagues have read with deep interest, as I have, the reports from Valley Forge, Pa., concerning the great assembly of over 52,000 Boy Scouts of America and their adult leaders at the fourth national jamboree.

It is most appropriate that at this historic location, where American independence was saved through immortal sacrifice, the youngsters who represent the future of this country gather for fun and for rededication to the principles of their fathers and forefathers.

I need hardly describe in detail the marvelous role which has been played by the American scouting movement.

I previously brought to my colleagues' attention the fine work of the present chief Scout executive, Mr. Arthur A. Schuck, in his capacity as chairman of the youth activities committee of the people-to-people program.

The Boy Scouts of America were, as we recall, incorporated on February 8, 1910. They were chartered by Congress on June 15, 1916.

Ever since then, they have rendered superb service in building the youth of this Nation.

The leadership of the Scout movement—nationally and at the grassroots—has comprised the very best type of American.

At the present time, I send to the desk three items:

First, a list of the distinguished men who serve in the national leadership of the American Scout movement.

Second, an article from Jamboree City, written by Mr. Lawrence C. Eklund, of the Washington bureau of the Milwaukee Journal, describing the role of Wisconsin's Scouts at Jamboree City.

The third item is an article from the July 12 issue of the Christian Science Monitor, entitled "Prepared for Friendship." It is based on the meeting on August 1 in England of the Ninth World Scout Jamboree.

With it are two additional articles describing 50 years of international scouting. I ask unanimous consent that these items be printed in the Appendix of the RECORD.

There being no objection, the list and articles were ordered to be printed in the RECORD, as follows:

NATIONAL COUNCIL, BOY SCOUTS OF AMERICA, NEW BRUNSWICK, N. J.

HONORARY OFFICERS

Dwight D. Eisenhower, honorary president; Herbert Hoover, honorary vice president; Harry S. Truman, honorary vice president; Amory Houghton, honorary vice president; John M. Schiff, honorary vice president; William D. Campbell, international commissioner; George J. Fisher, national Scout commissioner; Elbert K. Fretwell, chief Scout.

NATIONAL OFFICERS

Kenneth K. Bechtel, president, San Francisco; Francis W. Hatch, vice president, Boston; Cherry L. Emerson, vice president, Atlanta; Gale F. Johnston, vice president, St. Louis; Ellsworth H. Augustus, vice president, Cleveland; Norton Clapp, vice president, Seattle; Gerald F. Beal, treasurer, New York; Arthur A. Shuck, chief Scout executive; Pliny H. Powers, deputy chief Scout executive.

ADVISORY COUNCIL

Charles E. Cotting, J. M. T. Finney, Jr., Philip L. Reed, Edward V. Rickenbacker, R. Douglas Stuart.

MEMBERS OF THE EXECUTIVE BOARD

Harry M. Addinsell, George E. Allen, Ivan Allen, Jr., Robert B. Anderson, Ellsworth H. Augustus, Alton F. Baker, Gerald F. Beal, Kenneth K. Bechtel, Milo W. Bekins, Daniel W. Bell, Ezra Taft Benson, John M. Bierer, Rex I. Brown, John M. Budd, William D. Campbell, William J. Campbell, Norton Clapp, H. H. Coffield, Howard M. Collier, Hugh M. Comer, Harry J. Delaney, Harmar D. Denny, John R. Donnell, James H. Douglas, Jr., Whitney H. Eastman, Dwight D. Eisenhower, Cherry L. Emerson, William V. M. Fawcett, Irving J. Feist, William Harrison Fetridge, Leonard K. Firestone, Roger S. Firestone, Charles W. Froessel, Robert N. Gibson, Henry B. Grandin, James T. Griffin, Francis W. Hatch, Walter D. Heller, Amory Houghton, Lowell R. Johnson, Gale F. Johnston, Wayne A. Johnston, F. Brittain Kennedy, Edward L. Kohnle, Jeffrey L. Lazarus, Ross L. Leffler, Sol G. Levy, Walter L. Lingle, Jr., Paul W. Litchfield, John N. Lord, Charles F. McCahill, Byrnes MacDonald, Wheeler McMillen, William C. Menninger, Nathan M. Ohrbach, John C. Parish, William H. Pough, Frank C. Rand, Jr., G. Barrett Rich, H. Smith Richardson, Victor F. Ridder, Harry L. Schaeffer, John M. Schiff, Charles L. Sommers, E. J. Thomas, Thomas J. Watson, Jr., Frank L. Weil, J. Frederic Wiese, Frank W. Wozencraft.

[From the Milwaukee Journal of July 14, 1957]

STATE HAS THOUSAND SCOUTS AT JAMBOREE—"ON WISCONSIN," THE PACKERS, BUTTER, AND CHEESE HEADLINED IN SHOW BY BOYS

(By Laurence C. Eklund)

VALLEY FORGE, PA.—More than 1,000 Boy Scouts from Wisconsin are contributing to the color and gaiety of America's newest, youngest, and busiest city.

Jamboree City occupies 2,033 acres here where George Washington and his army camped, lived, and suffered in the bitter

winter of 1777–78. It is inhabited by 52,251 Boy Scouts and adult leaders who are holding their fourth national jamboree. They live in 25,000 tents pitched over the rolling hills of this State park.

HAVE MONKEY BRIDGE

One hundred and eighty Scouts from Milwaukee have erected huge Indian headdress gateways and built a monkey bridge over which boys from all over the camp have been scrambling.

This bridge, a single strand of rope, is supported by poles lashed together and the boys are hoisted onto the bridge by an ingenious frame of poles.

The Madison delegation of 114 and the Racine group of 80 have contributed drum and bugle corps that seem to be constantly on the march. When they aren't performing at campfires or on radio programs, they are practicing on their parade ground.

The Milwaukee Scouts believe that their tents, made to their specifications by a Milwaukee tentmaker, are the best for all-round purposes, but the 84 Waukesha Scouts have the most colorful tents, even though it doesn't seem they would keep out the rain. These Potawatomis are living in big Indian tepees.

PACKERS ADVERTISED

The 60 Scouts from Green Bay advertise the Green Bay Packers at the entrance to their camp. The 41 from Oshkosh favor Wisconsin butter, and Racine boys have strung out a huge "On Wisconsin" sign with the notes of the song placed properly on a long fence.

The Wassau area has a delegation of 80, with Scouts from such towns as Merrill and Tomahawk.

S. G. (Chief) Bowman, an adult leader who carves totem poles in his hometown of Merrill, has attracted attention with his waggish historical museum, showing where Washington slept and displaying logs split by Abraham Lincoln as well as logs not split by Lincoln.

IS PAGEANT NARRATOR

Other Wisconsin Scouts are here from councils with headquarters in Kenosha, Manitowoc, Sheboygan, Beloit, Appleton, La Crosse, Janesville, and Eau Claire, which sent a whopping delegation of 107. Scouts from the Superior and Ashland area are in another village.

Michael Chy, Jr., of 2600 North 50th Street, Milwaukee, was 1 of 2 narrators of a historical pageant. Ray Hammell, of Madison, was selected to appear on a television show because he had saved another boy's life.

Just the statistics of this gathering of Scouts are staggering.

It will take 1,330 steers to supply the needed cuts of top sirloin for the final dinner Thursday. By the time the Scouts break camp they will have consumed frankfurters which, if laid end to end, would extend more than 17 miles.

The daily fresh milk requirements—74,480 quarts—would take the full average production of 7,448 cows. Each camper paid a $50 fee to take part in this self-liquidating enterprise.

It cost $2,500,000 to set up the camp. Congress passed a law authorizing the loan of the equipment, jeeps, trucks, tents, refrigeration units, and cots. Army engineers moved 90,000 cubic feet of Government earth in building a huge amphitheater with a stage the size of a football field. Army officers here marvel at the skill with which 50,000 Scouts move in and out of this amphitheater for special events.

KNOW WHERE TO GO

They come swinging in cadence over the hills from all directions, shouting and singing and blowing their bugles, and everyone seems to find the exact spot of grass reserved for him at just the right time. Young America thus on the march presents a thrilling and colorful spectacle.

The managers of this event—the top brass of the scout movement, which includes some of the country's most important business leaders—figure it is worth all the fuss and bother.

They are convinced the boys are catching the spirit of patriotic service here.

To Chief Scout Executive Arthur A. Schuck, this living together in a spirit of brotherhood and friendship is one of the continuing objectives of the scout movement.

"We cannot live together here this week without catching something of the immortal Valley Forge spirit which won independence for America," said Schuck.

HAS 38 VILLAGES

Jamboree City has 38 villages of about 1,400 campers each. The 1,100 Wisconsin campers, including 85 adults, have pitched their tents on the 15 acres of artillery park where General Knox's artillerymen were billeted.

A number of Congressmen and other public officials have come here to visit boys from their home States. Senator HUMPHREY, Democrat, of Minnesota, was here to have chow with scouts from Rochester, Minn., and other Congressmen have gone so far as to spend a night in a tent.

No such hardy member has as yet shown up from Wisconsin congressional delegation.

Senator WILEY, Republican, of Chippewa Falls, however, did send greetings. He expressed pleasure, in a message delivered here, that the theme of this jamboree is "Onward for God and my country."

"In this world filled with so many problems, it is well for us to recognize and seek to obtain the guidance of God in the interests of our country and the free peoples of the world," WILEY told the scouts.

Governor Thomson, of Wisconsin, expressed gratification over the steady increase in the number of scouts the last 47 years. He said he was confident the scouting movement would keep growing and continue to be an inspiration to all the youth of the world who seek to maintain our precious freedoms.

[From the Christian Science Monitor of July 12, 1957]

PREPARED FOR FRIENDSHIP

(By Ralf Markarian)

SUTTON COLDFIELD, ENGLAND.—Boy Scouts from more than fourscore lands are converging on Sutton Coldfield, Warwickshire, England, for the ninth World Scout Jamboree, which will open here on August 1. Commemorating both the golden jubilee of Scouting and the centenary of its founder, Robert Baden-Powell, it will be the biggest jamboree ever held.

For the first time Scouts (25,000), Rover Scouts (5,000), and Scout leaders (5,000) will hold a jamboree together, although each section will have a separate program of activities and a special camp area within the main jamboree boundary.

SETTING

The jamboree is sited in Sutton Park, only 8 miles from Birmingham, England's second largest city. Once a royal hunting forest, Sutton Park was given by Henry VIII to the people of Sutton Coldfield in 1528. Through it runs an ancient highway, constructed more than 2,000 years ago by the Romans. The park's 2,400 acres of woods and moorlands, with its running streams and lakes, have been preserved as a sanctuary for wildlife.

LAYOUT

Two years of careful planning and preparation by Ken Stevens, the organizing commissioner, and his team of assistants have made the park ready to receive the 35,000 campers of all nations, who will flock there for the opening ceremony on August 1.

New arrivals will pass under the 56-foot-high tubular steel archway bearing the words Jubilee Jamboree into the park, 2½ miles long and 2 miles wide. Somewhere they will be given a small camp site which will be their home for the next 12 days.

If they are Scouts their site will be in one of five centrally located subcamps named after great jamborees of the past: Copenhagen (1924), Arrowe Park (1929), Gödöllö (1933), Vogelenzang (1937), and Moisson (1947).

The Rover subcamp is to the north and is named Bad Ischl after the Austrian jamboree of 1951.

In the west, and named Niagara-on-the-Lake after the 1955 Canadian Jamboree, is the subcamp for the Scout leaders. The remaining subcamp, to be occupied by jamboree headquarters, is called Olympia, after the very first jamboree, held in 1920 at Olympia, London.

The staff of the jamboree will be 1,000 British Scouts who will act as policemen, firemen, runners, typists, drivers, interpreters, etc. Many will be constantly employed on the tremendous task of receiving and distributing 10,000 gallons of milk and 70 tons of food daily.

Quite separate from the subcamps will be a complete canvas town with market place, churches, shopping center, telephone exchange, banks, and post office.

PROGRAM

Scouts, Rovers, and leaders will in the main follow their own special programs of activities. Rovers, for example, will go off for a 2-day adventure hike. But all will be able to see the arena displays each afternoon, the United Kingdom Air Scout display on Saturday, August 3, and the Sea Scout display on August 10. Queen Elizabeth II and Prince Philip will visit the jamboree on August 3. Tuesday, August 6, will be visiting day for the Wolf Cubs.

The camp theater will present twice nightly shows of an international character. Even later at night an open-air cinema, using the largest outdoor screen in Britain, will show films of Scouting and general interest.

Plenty of time has been left for the boys to meet each other informally in accordance with the founder's wish that jamborees should be opportunities for boys to develop friendships.

SPECIAL FEATURES

A 12-page camp newspaper, Jamboree Journal, with features in English and French, will be produced by a Scout editorial staff and sold daily in the camp.

Jamboree commemorative stamps will be issued by the General Post Office with values 2½d., 4d., and ½d. Official first day covers are available bearing all three stamps and canceled with a special cachet to be used exclusively at the camp post office. Costing 6s. 6d. each ($1 in Canada, South America, and the United States) these can be bought from the sole world distributors, the Mayflower Stamp Co., Ltd., (Department J), Polebrook House, 1a Golden Square, London W. 1.

A radio station operated by Scouts and using the call-sign GB 3 SP will broadcast Scout news at regular intervals from Sutton Park, on the amateur wave bands of 160, 80, 40, 20, 15, and 10 meters.

White Strobe Light System, Safety Device

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 19, 1957

Mr. THYE. Mr. President, I had the opportunity to observe and study the new anticollision light, which I believe is a

step forward to aid in the safeguarding against air collisions of planes.

Mr. President, an article appeared in the magazine American Aviation, May 6, 1957, entitled, "New Anticollision Lights Win Pilots' Favor. White Strobe Light System, Invented by H. W. Atkins, Gets General Approval in Washington Demonstration."

Mr. President, there also appeared in Aviation Age of May 1957 an article relating to this safety device, and there appeared in the Montreal Gazette an article referring to the same light.

I was very much impressed by the light, Mr. President, so I ask unanimous consent that these three articles be printed in the Appendix of the RECORD. I hope that the Civil Aeronautics Board and other Federal agencies, such as the Bureau of Standards, will examine the light very carefully, because there is a need for action in this field. If any light can be placed upon aircraft to make them safer not only for the pilots but for those who use them, it seems to me we must proceed to have such lights approved in order that the manufacture of them can be obtained and the plane operators may have the benefit of such protection.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From American Aviation for May 6, 1957]

NEW ANTICOLLISION LIGHTS WIN PILOTS' FAVOR—WHITE STROBE LIGHT SYSTEM, INVENTED BY H. W. ATKINS, GETS GENERAL APPROVAL IN WASHINGTON DEMONSTRATION

(By William O'Donnell)

A new concept in aircraft exterior lighting, formally flight-demonstrated for the first time in Washington, D. C., appears to be gaining favor among air safety officials.

The light, invention of Northwest Airlines Pilot H. William Atkins, is a departure from conventional aircraft relative danger lights in that it is white and gives positive directional indication. Atkins says that it can be adapted for use on all type aircraft from light planes to jet transports.

The group that attended the Washington demonstration included airline and private pilots, military and Civil Aeronautics Administration representatives. All were openly enthusiastic as to the light's potential. Previously, some 160 airline pilots who had observed the device in informal demonstrations were unanimous in their approval, Atkins said.

Basically, the Atkins light uses a combination of three flashing Xenon condenser discharge strobe units. One light flashes forward, another to the side and another to the rear. The forward-facing lamp flashes 160 times a minute, the side 80, and the rear 40.

The differential in flashing time allows a pilot of another aircraft to determine the direction of flight of the plane and its relative position. The blue-white flash is similar in color and intensity to an electric welder or a trolley-wire flash. Each flash is of one thousandth second duration and, despite its intensity, does not spoil the pilot's darkness adaptation nor is halation pronounced.

Atkins explained that the white light was selected purposely. He said the condenser discharge light has a color temperature of 7,100° Kelvin, greater than daylight. The full color spectrum of the light contains the entire rainbow. Whatever color is best for penetration of a particular type fog or haze is available.

"Besides," Atkins said, "white light can be seen off to the side of the eye better than red. Red light is visible through an arc of from 30° on one side to 45° on the other, while the white can be detected from more than 60° on one side of the eye to more than 90° on the other."

Atkins also expressed the opinion that red is used too much and cannot be seen over great distances. He said that the strobe light can be seen three times as far as conventional lights under all conditions.

Models demonstrated at Washington were mounted in two configurations. One system had lights on the top and bottom of the fuselage of a General Mills DC–3 and the other had installations at the wingtips. Each system was operated independently and then together.

The fuselage-mounted units had 4 lamps each, 1 forward, 1 to each side, and 1 aft. The wingtip versions had 3 lights in each unit, forward, 1 side and a rear.

The DC–3 operated the lights over the lights of Washington and nearby Virginia. Other aircraft carrying observers made passes from many angles and compared the flashing lights with city lights, stars, and other aircraft safety lights.

Observers reported that the lights were effective in both configurations but that the wingtip version seemed to give better indication of the aircraft's size. Passengers in the DC–3 also reported a preference for the wing-mounted system because the fuselage lights reflected off the wings and were considered distracting.

The front light was especially effective, according to pilots.

"That flash is light a machinegun and the immediate impulse is to get out of the way," said one pilot. "The slower flashing side and aft lights were effective in that they were attention arresting and alerting and the natural reaction was to watch closely and take appropriate evasive action."

Other mountings suggested by Atkins were:

One light each at the nose and tail of the fuselage and on each side of the vertical fin.

One light each at the nose and tail and one on each side of the fuselage near the nose.

Side and forward flashing units on each wingtip and a rear flashing unit on the tail.

One lamp each at the nose, tail, and wingtips.

The Atkins light has no moving parts, all switching and timing is done electronically. Printed circuits are used. The unit is entirely self-contained, requiring only the aircraft power supply.

Development of the light is being carried out by the Aircraft Danger Light Corp. of Minneapolis with an assist by the mechanical division of General Mills. No production models have yet been built but several airlines have been using or have ordered test models.

SPECIFICATIONS OF ATKINS ANTICOLLISION LIGHT

Voltage required: 115 volts, 400 cycle alternating current, 12–b–24-volt, 450-cycle dynamotor power source.

Power consumed: 60 watts.

Fuse required: 3 amperes.

Effect of altitude: no difficulty to 30,000 feet.

Radio interference: power supply self-contained and shielded.

Size: 6 x 4½ x 32 inches (airliner model).

Approximate weight: 5 pounds.

[From Aviation Age for May 1957]

ATKINS LIGHT DEMONSTRATION AT WASHINGTON, D. C., LAST MONTH WAS CONVINCING ARGUMENT FOR WHITE CONDENSER-DISCHARGE LIGHTS

General Mills' DC–3 equipped with 3 Atkins relative danger light installations flew rectangular patterns in formation with Twin-Beech equipped with normal red anticollision light. At 20 miles and 5,000 feet red beacons were hardly visible, but Atkins light was readily spotted.

Wingtip Atkins lights were installed in temporary rigs. Another unit was mounted on top of fuselage just forward of vertical fin. All units were clearly visible from all quadrants.

Most spectacular was head-on view with 160 flashes per minute. All who took part in the demonstration agreed it gave unmistakable warning.

Some observers thought 40 flashes per minute from tail-on view were too much. NWA Capt. Bill Atkins, inventor of the light, readily agreed.

His original design called for 20 flashes per minute in the tail zone. Change was made at urging of Government lighting experts.

White flashing light cut down on time it took to find DC–3 when you didn't know where it was.

Riding in NACA's Cessna 195, AvAge Operations Editor William G. Osmun took part in demonstration. NACA Pilot W. L. Alford flew a pattern of deliberately losing sight of DC–3, then trying to locate it again. He found he could pick up the Atkins light in 5 seconds every time.

Background of city lights didn't make it harder to pick up flashing light. Haze cut down on visibility of red anticollision lights at 15–20 miles—but blue-white condenser discharge light was unmistakable at these distances.

Remaining question is how white flash will work in clouds. There wasn't a cloud in the sky at Washington.

Capt. R. A. Stone, chairman of ALPA aircraft exterior lighting committee, says, "We want to be sure the flashing reflection from clouds isn't so annoying to a pilot that it will make him turn the light off when he flies into the overcast." Then, when he comes out of the overcast, he won't have the protection the lights are supposed to give him.

Another obstacle is present CAB rule calling for red anticollision lights. If CAB insists on a red filter on the Atkins light before it can be used commercially, this will destroy about all the value of the light's danger warning, Atkins says.

Atkins light now is limited to experimental installations.

Steady-burning position lights will replace flashing types on all future aircraft. Recent CAB action deleted requirement for flashing red taillight and called for steady red and green wingtip lights plus steady white taillight.

Board contends flashing anticollision lights together with steady position lights give the best aircraft lighting arrangement.

[From the Montreal Gazette of April 15, 1957]

FIFTY-MILE LIGHTS SHOW DIRECTION OF AIRCRAFT—DEVICE'S AIM TO PREVENT AIR COLLISION

(By Lauchie Chisholm)

International, national, military, and civilian aviation interests took a look this weekend at a new type safety light for aircraft, said to be one of the best devices yet developed to ward off midair collisions.

The lights, a series of three flashing signals in each tear-drop shaped unit, were demonstrated by the inventor, Bill Atkins, a young Minneapolis pilot and aeronautical engineer, to representatives of the International Civil Aviation Organization, the Department of Transport, RCAF, and Trans-Canada Air Lines, at Montreal airport.

SIGNALS TIMED

The flashing signals in the forward, middle, and rear zone of each unit, are timed so that a pilot may distinguish whether an

aircraft is approaching, flying a parallel course, or flying away.

Normally, the units would be placed on each wing tip, another on the top of the fuselage near the tail, and a fourth attached to the underside of the aircraft.

Called a relative danger light by the inventor, each unit is built of aluminum and plastic, contains a condenser and transformer, an electronic timer and electrical circuits. The power is supplied by the aircraft's electrical system.

Tests have shown that the light has a visibility range of about 50 miles.

Three strobe bulbs, containing a gas known as xenon which has luminous properties, are mounted in the three zones of each unit.

THREE TIMES A SECOND

The light in the forward zone is timed to blink three times a second, a sign to any pilot that an aircraft is approaching. The light in the middle zone blinks once a second, a signal that would be seen by an aircraft on parallel course.

And the light in the rear zone blinks once every 3 seconds, telling the pilot that another aircraft is flying away from him.

Spectators at the demonstration appeared interested and took notes. In anticipation of Canadian interest in the safety device, a Montreal aviation firm is acting as agent for the United States product.

The warning lights have been installed for evaluation on intercontinental bombers of the USAF's Strategic Air Command.

PLANE TESTS ANTICOLLISION LIGHTS

WASHINGTON.—A pilot inventor demonstrated in the skies over the Nation's Capital Thursday night a photo-flash type of airplane anticollision light.

The persistent flashing of the new light aboard a DC-3 airplane, plainly visible in the darkness for more than 30 miles startled airline and military pilots in this congested air traffic area.

Designed by H. William Atkins, a Northwest Orient Airlines pilot, the warning system gives a mild warning flash from wing lights when an approaching airplane is a safe distance away, a furious warning from a nose light when it is dangerously close, and a slow signal from a tail light when going away.

The lights, flashing at different speeds, are of the condenser discharge type known to photographers as strobe lights. They would replace the blinking red, green, and white lights with which planes are now equipped under Government regulations.

Fine Foods From Wheat for Japan

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 19, 1957

Mr. NEUBERGER. Mr. President, the Senate Committee on Agriculture has been hearing this week from various Government officials and leaders among commodity groups who can speak with authority on the operation and results of Public Law 480. It was my privilege as a Senator from Oregon to introduce one of these leaders this morning when he presented, before the committee, a report of compelling interest and significance. Richard K. Baum, secretary-treasurer of the Oregon Wheat League, gave the committee something more than a statistical recital on exports of Oregon wheat to the Japanese. His facts and figures revealed graphically the impact a commodity like wheat may have on the dietary habits of a great people—namely Japan. His report had freshness and authenticity gained by personal observation of a program that has gone far to popularize wheat as a food item among the Japanese. I am sure the Senate Agriculture Committee will make this statement available to all when the hearings are printed.

However, Mr. President, Mr. Baum's report reminded me of something on the subject I had read in the May issue of the GTA Digest, published in St. Paul, Minn., by the Grain Terminal Association. This informative farm journal carried an article that describes the splendid work of the Oregon Wheat League in Japan and the wide acceptance it has found for its commodity. I ask unanimous consent, Mr. President, to have this article, entitled "Fine Foods From Wheat for Japan," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FINE FOODS FROM WHEAT FOR JAPAN

The people of the world are learning how to eat better. They are learning the value of a well-rounded diet, and American farmers are helping them to get the diet they are learning to like.

Japan is an example of the kind of change that is coming about. For centuries that country has been eating a diet that consisted for the most part of domestic rice.

Today, the Japanese are learning the value of other foods—especially the high protein grains. As this happens, Japan is becoming a better American customer.

Since 1951, Japan has become the leading consumer of American farm products. The Japanese buy more American cotton, rice, barley, soybeans, tallow, hides, and skins than any other country. They are our second best customer for wheat.

A well-integrated program is underway at present to show the Japanese man-in-the-street what can be done with wheat products.

The "brainstorm" for the program came from a privte group in America—the Oregon Wheat Growers League. Helping out with program administration are the United States Department of Agriculture, Japanese food scientists and health authorities as well as the Japanese Government. The story is told in USDA's Foreign Agriculture magazine for April 1957.

The first part of the program is to give Japanese citizens, especially in rural areas, a chance to eat American wheat products—bread, doughnuts, crackers, the foods which are the general staples in our own diet.

To get the wheat products to rural Japan (where domestic milled rice composes 81.5 percent of the diet, as compared to a 41.7 percent figure for Tokyo) eight mobile kitchens are touring the nation, giving demonstrations on Japanese main streets and rural roads. As in the American general store or supermarket, after the demonstration the audience samples the product.

The buses, incidentally, were financed in America, but designed by Japanese engineers and built in Japanese factories.

Part 2 of the program is to teach the Japanese baker, housewife, and nutrition expert what vitamins and minerals are in wheat, and how these nutrients can best be integrated into the Japanese diet. It also teaches them techniques of baking—the culinary know how which turns flour into bread.

The Japanese Nutrition Association administered part 2 of the program. For 3,000 American dollars, a thorough exhibition on both theoretical and practical aspects of wheat marketing, sale and cultivation was prepared. The exhibition was seen by the experts of many foreign countries in Tokyo for the Fourth Nutrition Conference of South and East Asia Nutrition Committee sponsored by the World Health Organization and the Farm and Agriculture Organization.

The exhibition included informaton on the world supply and demand for staple foods, methods of improving diets, a display of bulgur (parched, crushed wheat) wheat, a display of wheat cultivation, production and harvest, and a cooking demonstration of doughnuts.

The last part of the program is designed to bring baking information to Japanese commercial breadmakers and home extension workers. The plan was worked out with the Japanese Food Life Improvement Association.

The association arranged for a 3-month training course to be taught at the Japanese Institute of Scientific Baking Research at Shibuya-ku in Tokyo. Forty students have been graduated so far.

Fifteen hundred more home extension students from every prefecture have taken short courses on preparing wheat foods.

The program is financed under United States Public Law 480. This law allows the Japanese to purchase American food products for yen rather than dollars. We, in turn, are reinvesting the yen in Japan through projects such as the one thought up and managed by the Wheat Growing League of Oregon.

The results of these efforts are an ever-increasing market for high quality, high protein United States wheat.

In 1951–55 period, America supplied $1.3 billion in farm goods to our largest food customer, Japan. With our foods, the Japanese are learning about the American way of abundance and good living.

"Liberal" Division on Jury Trial Right

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, July 19, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Arthur Krock column entitled "'Liberal' Division on Jury Trial Right," published in the New York Times of July 19, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBERAL DIVISION ON JURY TRIAL RIGHT

(By Arthur Krock)

WASHINGTON, July 18.—Temporarily obscured by the critical examination of part III that has imperiled this section of the administration's equal rights enforcement bill, the jury trial issue posed by part IV is resuming the prominence it had at the outset of the Senate debate. On this section also there is a division among liberals who generally are champions of equal rights enforcement legislation at this session of Congress.

It has been debated with the dignity compatible with a problem where one established civil right comes into conflict with another. In part IV the first is the voting privilege, for which States may prescribe certain quali-

fications, but none based on race, color, religion, etc. The second concerns the right of trial by jury for offenses of individuals that are punishable by sentence to prison.

NORRIS' DECLARATION

In any group of American citizens the infringement of this right, by statute or by judge, is a disturbing proposition. The late Senator Norris, of Nebraska, ensconced in the liberal pantheon, when achieving jury trial for labor union defendants in contempt cases also declared that "any man charged with contempt in any court of the United States * * * in any case, no matter what it is * * * where there is a dispute of facts * * * ought to have a jury trial"; and "it is no answer * * * that there will sometimes be juries which will not convict." This justification is frequently offered for part IV, which fails to specify jury trials for persons enjoined by Federal courts from carrying out a suspected intent to interfere with voting or tried on charges of actual interference in violation of an injunction. Both sets of defendants are subject to prison sentences for contempt of court findings by the judge.

BLACK'S OPINION

Associate Justice Black of the Supreme Court, another champion of the political philosophy associated with Norris, also is on recent record with a sweeping assertion of the right of trial by jury. He was dealing, in Covert and Krueger, only with high criminal cases—two Army wives had killed their husbands, been convicted by courts-martial, and sent to prison. And he was asserting the right of jury trial after presentment to and indictment by a grand jury. But his words could be read to apply to all individuals in penal jeopardy.

"The concept that the Bill of Rights and other constitutional protections against arbitrary government," he wrote, "are inoperative when they become inconvenient or when expediency dictates otherwise is a dangerous doctrine and if allowed to flourish would destroy the benefit of a written Constitution and undermine the basis of our Government."

KEFAUVER AND O'MAHONEY

"A third member of the liberal group," Senator KEFAUVER, of Tennessee, has moved to amend part IV to provide specifically for jury trials in certain circumstances. His proposal is for juries "in criminal contempt cases arising out of civil actions, but not in civil contempt cases." The former "are used not only to force compliance with the court's orders but also to punish the offender for flaunting [sic] the court's authority." In the latter instances a man "detained" [jailed] by the court if he fails to comply * * * will be released as soon * * * as he can purge himself of contempt."

This does not meet the objection of those who hold that persons in jeopardy of imprisonment under the administration bill have the implicit constitutional right of trial by jury in such cases, where the facts are bound to be disputed. And this group has a spokesman whose entire record is classified in the current political parlance as consistently liberal. This is Senator O'MAHONEY, of Wyoming.

A MENACE TO ALL

"It is clear," he told the Senate, "that this bill goes far beyond voting rights and attempts to place in the hands of the Attorney General * * * the power to try citizens * * * by the injunctive process for crimes for which they are now punishable only when convicted by a jury * * *. The bill is directed not only against the South; the authority proposed * * * could be exercised anywhere. * * * The argument * * * [is that in 28 laws] Congress has authorized government by injunction without a right to trial by jury. But [these statutes] seem to deal * * * with the activities, not of natural persons, but of artificial persons known as corporations. * * * I shall vote for a bill to make voting right secure for all * * * but not take away other sacred rights which belong to the citizens of the United States."

Among those O'MAHONEY has impressed is the Evening Star, of Washington, a sturdy advocate of equal rights. "The procedure to bypass jury trials," it said today, "is being pictured by men in high places as an inocuous application as a frequently used legal device. In reality it is a radical and even highly dangerous departure from one of our most prized traditions and fundamental rights."

Address by Hon. Watkins M. Abbitt, Before Lunenberg County Farm Bureau, July 13, 1957

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. TUCK. Mr. Speaker, my colleague from Virginia, the Honorable WATKINS M. ABBITT, delivered a very able and informative address to the Lunenberg County Farm Bureau on Saturday, July 13, 1957, at the Plymouth Community House in Lunenberg County, Va. The distinguished Virginia Congressman recognizes the dangers confronting the country today and has been outspoken in vigorous opposition to the trends in government which threaten to bring about a complete destruction of our liberty and freedom. Congressman ABBITT enjoys in an unusually high degree the confidence and esteem of the people of our great Commonwealth of Virginia which he has earned by reason of the high caliber of leadership which he has provided during the time he has been in Congress. Since I have become a Member of Congress, I have found him able and alert and ever willing to be of help, and I have leaned upon him for counsel and for guidance.

Under leave heretofore granted me to extend my remarks in the RECORD, I include his address hereinabove referred to, which is as follows:

ADDRESS BY HON. WATKINS M. ABBITT, BEFORE LUNENBERG COUNTY FARM BUREAU, JULY 13, 1957

This year, we have witnessed a revival of interest in our Government by our people. More people appear to be interested in what is happening and going on in the country than they have for a long time. For the past decade, our people have been so interested in making money that they have overlooked the necessity of keeping a close watch over the operation of their Government. They have awakened to find that this country has been almost taken over by a socialistic-minded national government. Apparently when the present administration presented its enormous budget to the Congress early this year, many of our people were shocked into a realization of what was happening. They became aware that unless something was done and done immediately the creeping socialistic trends of the Government would soon blossom out into a socialistic welfare state. The reaction of our people was wholesome. It made the Congress realize that something must be done to stop the octopus-like growth of the Federal Government. As a result of the grass roots sentiment, a real effort was made to stop the expansion of the Government and to cut off at least some of the unnecessary expenditures.

The budget request included funds for numerous new functions, projects, and activities, as well as funds for renewing and expanding old ones. Apparently the budget was made up without any thought or consideration of the burden placed upon the taxpayers of America. It was intended to be a luxury budget. It contemplated at least 33 cents out of every dollar earned by the American people going into taxes. It contemplated at least 10 percent of our taxes to pay the interest on the national debt.

An attempt was made to fool our people into believing that the increase in the budget was due to military needs. This is far from the truth. It actually called for $2 billion less than in fiscal 1957 but asked for approximately $7 billion more in domestic and civilian expenditures.

In view of the above, it is no wonder that the people were aroused. As a result of their action, substantial reductions have been made by the Congress.

Unfortunately, so much has been happening in the past month or 6 weeks to divert the minds of our people that there has been a slowing down or lessening on the part of the grassroots to follow through on the economy drive.

In recent weeks a change has gradually been taking place in the Congress. There is a waning of interest in economy, both on the part of the people back home and the Congress. I am indeed disappointed to see this. The House of Representatives and the Senate have made a real effort to curb spending. The House so far has reduced the request slightly over $5 billion. The Senate has gone along very well indeed with the cuts imposed by the House, although in 1 or 2 appropriation bills, particularly the defense appropriation, the Senate has put back substantial amounts of the House cuts.

It should be noted that even with this substantial reductions have been made in the budget requests. However, for the good of this country we cannot afford to slacken the demand for economy and reduction in expenditures.

There is an allout effort on the part of certain groups to continually enlarge and strengthen the Federal Government. They desire that all power be centralized in Washington. They are endeavoring to centralize the purse strings of the Nation in the Federal Government and to make of this country a socialistic welfare state.

We saw in the early part of this year a real resistance to such philosophy. It was heartening indeed to those of us who have tried to stem the tide of the socialistic-minded groups that have been trying to foist upon our people their philosophy.

Our people must constantly be on the alert. They must constantly press for a continuation of sound economy in Government and a maintenance of the private-enterprise system that has meant so much to the development of our civilization. We must realize that we must ever be alert to the dangers of the Communists but that is not the only danger. There is a real danger that our economy will collapse due to inflation and the expansion of our Government into many fields of private enterprise which is just as much a threat today and just as dangerous as the Communist threat.

If we are to win the fight for economy and stop the constant growth and expansion of the Federal Government the people must continue to demand action by their Representatives in the Congress. Even though we have made progress, we will lose this fight unless continued interest is manifested by our people.

I hope that our people have enough interest in the future of this country and in the maintenance of our way of life to see that

real economy is achieved. I cannot reiterate too strongly that the only hope of achieving it is an aroused people who will continue to demand such action.

Unless substantial action is taken to continue reduction in expenditures the door will be closed to tax reduction in the foreseeable future, inflation will continue its upward spiral, and the spread of socialistic centralized government paternalism will be unchecked.

Our free-enterprise system is the greatest deterrent in the world today to Communist aggression. Our competitive-enterprise system can only exist under a solvent Government. We cannot remain solvent long unless inflation is stopped. Inflation cannot be stopped unless governmental expenditures are checked. Governmental expenditures will not and cannot be checked unless the people of this great Nation continue their allout fight for a reduction in Federal expenditures, a termination of Federal handouts, and a return to sound principles of operation of the Federal Government as intended by our founders. If we are to survive as a free people, we must stop the expansion of Federal handouts. We must retain individual initiative and the will to do for ourselves.

In the next week or 10 days, the House will have before it the administration's proposal for Federal aid to school construction. There are those in this country who are determined that the Federal Government take over the operation of the schools of our Nation. They are using this legislation as a steppingstone toward their goal.

This legislation, if passed, will greatly endanger the future freedom of our people. The question to be decided in passing upon this legislation is very simple. We must decide whether the public schools are to be operated, maintained and controlled by the localities and the States or whether the public schools of the Nation are to be turned over eventually to the Federal Government.

Our schools have been the foundation stone of our democracy. We must know that as the Federal Government gradually takes over the financial burden of the schools so will they take over the control of them. It is impossible to distribute Federal funds for public education without the imposition of a corresponding increasing measure of Federal control. Local control is fundamental and necessary to the continuation of our Republican form of Government. To remove the responsibility of educating our children from the local level will necessarily and unavoidably weaken democracy at the grassroots. The separation of education and the Federal Government is as important as the separation of church and state.

There is now an all-out effort to federalize the schools and nationalize the lives of all American citizens. The vast majority of the proponents of this legislation desire the concentration of power in Washington and the centralization of all Government at the national level. We know that the adequate education of America's youth is essential to the preservation of the Republic and the welfare of the Nation. This can be provided by localities and States more satisfactory and equitably than by the Federal Government.

If we are to remain a free people and desire to retain our way of life, it is necessary that the control of the public schools remain at the local level. There is no such thing as Federal aid without Federal control, nor is there any such thing as a Federal handout.

The localities and the States are more able financially to provide the necessary educational opportunities for our youth. The States are better off financially than is the monstrous Federal Government today. There are those who would have us believe that the States are not able financially to carry on the proper educational program to meet the needs of our youth. They contend that the Federal Government has the financial ability to undertake this great task. Unfortunately, nothing is further from the truth. Sadly enough, the national debt now amounts to more than eight times State and local indebtedness. The Federal Government has a national debt of approximately $275 billion. Apparently, there is no hope in the foreseeable future that this debt will be reduced in any appreciable amount. It is saddening to see on all sides grasping bureaucrats and people who believe in centralized power trying to reach out on behalf of the Federal Government to continue to take over functions and obligations of the States and local communities. We are now at the crossroads. We are about to see this country embark on a gigantic long-time journey into the field of local public education. It is disheartening to me to see this administration sponsor such a program.

Truthfully, the 1958 budget of the Federal Government is such a bizarre combination of fantasy, mystery, and irresponsibility that it alone should convince any individual person of the necessity and urgency of stopping the growth of the Federal octopus. I believe if the people of this country will let their wishes in this matter be known that we will have an excellent chance of defeating this legislation. Its defeat is vitally necessary to the welfare of the freedom-loving people of this great Nation.

Outstanding Scholarship of Barbara Stewart Jenkins at Wayne University School of Medicine

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. THYE. Mr. President, it was with a sense of pride and inspiration that I read this week of a former Minnesota girl who has received recognition for her outstanding scholarship while attending medical school. Barbara Stewart Jenkins, daughter of the Reverend and Mrs. Carlyle F. Stewart, pastor of the People's Community Church in Detroit, has just been graduated from Wayne University School of Medicine with high honors. At the same time, and all during her time in medical school, Mrs. Jenkins was caring for her young son. Because, to me, she typifies the highest type of American womanhood, which should serve as an inspiration to all, I ask unanimous consent that the article referred to, from the Minneapolis Spokesman of July 12, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LONE GIRL, FORMER MINNESOTAN LEADS MEDICAL CLASS

A former Minnesota girl was lauded in an article in the Michigan Chronicle newspaper of Detroit for leading the men in her class in the Wayne University College of Medicine.

She is Mrs. Barbara Jeanne Jenkins, the former Barbara Stewart, daughter of Rev. and Mrs. Carlyle Stewart.

The Chronicle article said:

When Mrs. Barbara Jeanne Stewart Jenkins enrolled in the Wayne State University College of Medicine, the 66 male members of her class thought that because of her sex and race she would not finish.

Last week, Mrs. Jenkins was graduated with highest honors and with the Alexander McKenzie Campbell award for distinction in the field of obstetrics and gynecology.

She was also honored by Omega Alpha, national medical society, in recognition of outstanding scholarship.

However, the most astounding fact is that Mrs. Jenkins led her class in scholarship every year while caring for her son, now 3 years old.

Her parents, Rev. Carlyle F. Stewart, pastor of the People's Community Church, Woodward at Pingree, and Mrs. Alyce Stewart, told the Chronicle reporter: "We are proud of the achievements of our daughter. Our prayers have been answered. We know all things are possible through faith in ourselves and God."

Mrs. Jenkins, now 28, is a graduate of Northern High School and the University of Michigan.

She also attended Howard University Medical School in Washington, D. C., before coming to Wayne State University.

After spending a few days with her parents following graduation, Mrs. Jenkins left for Fort Sheridan, Ill., to join her husband, Dr. Sidney B. Jenkins, captain in the United States Army Corps.—By Jones.

Civil-Rights Maneuvers

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, July 19, 1957

Mr. SPARKMAN. Mr. President, on Tuesday, July 16, there appeared in the Christian Science Monitor an editorial entitled "Civil-Rights Maneuvers." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL-RIGHTS MANEUVERS

For a week the United States Senate has been debating a civil-rights bill in an effort to decide whether to debate it. This is not quite so foolish as it sounds. In the course of discussing whether to take up the Eisenhower civil-rights program the Senate has sifted the proposals and shaped potential amendments. Also the band of Senators who will oppose it, amended or unamended, have blockaded all other legislation without drawing public opprobrium for filibustering.

A majority of the Senate could have cut short this maneuvering by insisting on a vote to take up the bill. But advocates have felt it wiser to refrain from forcing the pace. And opponents have decided they might hurt their cause by further delays. So a vote is scheduled. The motion to begin official consideration requires only a majority and is expected to carry by a good margin. But then the real battle opens. And the size of the margin can well determine what compromises will be offered.

A big margin—enough to indicate that 64 votes will be available to halt a filibuster and bring the legislation to a vote—would suggest a need for only minor concessions. But a small margin would indicate that ad-

vocates must make major changes in order to enlist the necessary support for their program.

So far 4 or 5 main compromises have been most widely discussed. One would limit the legislation to upholding voting rights. A second would provide a jury trial in all cases arising under the new law. A third would require it only in contempt proceedings where questions of fact were not readily determined. A fourth would drop the provision for a Commission to investigate violations of civil rights. A fifth would limit this Commission's operations.

To this newspaper it would appear wise—and more practically effective in advancing civil rights—if advocates centered at this time on obtaining greater freedom for Negroes to vote. We would consider almost any amendment of the Eisenhower program "minor" so long as that objective were gained. For voting rights are the protectors and precursors of other rights. And the essential degree of consent will be far easier to obtain in the South. For voting is more readily recognized as a right, and requires less social mixing than school integration, for example.

It should be clearly understood that the Constitution guaranteed no one a right to vote. It left voting qualifications to the States. But by two amendments it has barred the States from denying the right to vote on account of sex, race, color, or previous condition of servitude. States can still make other requirements. Nineteen demand a certain degree of education. Two-thirds of these are outside the South. But often great latitude is left to officials administering election laws. There have been many complaints that they were being used to bar Negroes. Also there has been intimidation.

Yet educational and economic standards among Negroes in the South have been rising. And there has been a marked increase in the number voting. In 1947 only 440,000 were reported voting in the nine States of the old Confederacy. In 1956 the number was 1,011,000. Continued gain at that rate would soon leave little ground for complaint about voting—and much ground for progress toward other rights. Legislation may be required to support and maintain the pace of this voluntary change. It seems to us that action at this time should be centered on it.

H. R. 4520

SPEECH
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mrs. GREEN of Oregon. Mr. Speaker, H. R. 4520 is legislation in which the city of Portland, Oreg., has been interested for some time. It is legislation, indeed, which is not only important to Portland and other sections of my State of Oregon but to the entire Pacific Northwest as well as to Alaska.

Since the fall of 1951 Portland has had direct air service to Alaska on the Alaska & Pacific Northern Airlines. They have become vital links in the chain of commerce between Portland and Alaska. The growth of trade on this route, particularly in perishables, has been a development of great economic value and importance to our area. Only air service is adequate to serve these markets and maintain this trade.

Mr. Speaker, the people of Portland regard this service as vital to their interests and well being. Unfortunately, temporary certification has been a major handicap to the development of these two airlines. With permanent certification the lines could plan and finance on a long-range basis for better, faster, and more dependable service. By the same token, businessmen could lay their plans on a long-range basis.

The port of Portland International Airport has an investment past and planned of over $18 million, which is directly dependent in part on the future of these airlines.

It is my firm conviction that if the carriers operating between the States and Alaska are to render the service necessary to trade, commerce, and the national defense, they must be relieved of the uncertainties implicit in short-term certificates. The instability inherent in their present temporary status not only handicaps the carriers in obtaining resources to expand and develop their services but also inhibits the public in placing reliance upon these services.

The need, I am convinced, is great and this legislation should have been passed in the last Congress. I, therefore, urge passage of H. R. 4520.

The Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. DORN of New York. Mr. Speaker, under leave granted I want to insert the tribute paid to the late Senator McCarthy by the Long Island General Assembly Fourth Degree Knights of Columbus which was read at the Independence Day memorial service in his honor.

IN MEMORIAM: HON. JOSEPH R. MCCARTHY, UNITED STATES SENATOR

De mortuis, nil nisi bonum: Dean Acheson.

Soldier, patriot, legislator.

Creator of McCarthyism as a symbol of courage, love of God, love of country.

Fighter who stirred strong opposition and keen loyalties.

Man of strong convictions and willing to pay the price for these convictions.

Champion responsible for impressing dramatically on the American people the danger of communism within our Government.

Ceaseless battler for the right as God gave him the power to see the right.

Stalwart advocate of our traditional American concepts.

Courageous warrior against fellow travelers.

Resourceful expert in the art of ferreting out subversives.

Masterful defender of our country's honor.

Dedicated to the battle to protect our Nation from its termitic enemies.

The conscience of the security-in-Government movement.

This was a man.

May his soul rest in peace.

Support for Hells Canyon

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ULLMAN. Mr. Speaker, an editorial which appeared in the July 12, 1957, edition of the Asheville Citizen, Asheville, N. C., is indicative of the great interest in Hells Canyon which exists throughout the country. It is indeed a mistake to consider full development of the Snake River as an issue of only sectional importance. The benefits to be derived from the high dam at Hells Canyon are not limited to the Pacific Northwest, for our natural resources are indeed the heritage of all citizens of the United States.

Mr. Speaker, I think this editorial comment contained in a newspaper published thousands of miles from the Hells Canyon dam site will be of interest to my colleagues, and I ask that it be printed in the Appendix of the RECORD.

The editorial follows:

HELLS CANYON GAINS NEW LEASE

A Democratic maneuver in the House Interior Committee last Wednesday kept alive, though rather uncertainly, the bill passed by the Senate for construction of a high dam in Hells Canyon by the Federal Government. Thus automatically a far-ranging controversy also gained a new lease on its rugged life.

Hells Canyon, located in the course of the Snake River along the Idaho-Oregon border, has been described as "the finest remaining dam site in America."

Advocates of a public-power development of the canyon, including apparently majority of the voters in the Northwest, favor one high dam. They assert that it would produce more power at lower cost than the three dams for which the Government finally granted permit and contract to the Idaho Power Co. These dams would flood some nationally famous scenery.

On larger scale in general, the high dam project would also provide for extensive irrigation, flood control and developments of watersheds.

The opposing contenders for the three dams raise with some force the argument of Federal subsidies to public power projects—after the manner of the Tennessee Valley Authority.

The examiner for the Federal Power Commission filed a report in favor of the Federal high dam. But the FPC, allegedly under the influence of Presidential Assistant Sherman Adams and other administration voices, overruled its examiner, turning the project over to the Idaho Power Co.

The battle at this stage seemed over. And, those who like Ike also being inclined to like his partnership policy with local private power interests, the issue seemed to many persons well settled.

Yet some observers noted that Mr. Eisenhower had hesitantly excepted the Tennessee Valley development from his condemnation of creeping socialism. These persons asked if Hells Canyon was not also in a sort of class by itself.

Then events unfavorable to the Government's decision began to pop off.

The preferences of the northwestern voters were being countered by the claim that the plans of the Idaho Power Co. would save the taxpayers millions of dollars.

Then somebody discovered that Sherman Adams and Defense Mobilization Director Gordon Gray were arranging what is called a fast tax writeoff for the benefit of the Idaho Power Co. The officially stated justification for the writeoff was that the dams were necessary for national defense.

But, in practical terms, the writeoff meant a subsidy, temporary or not, worth about 80 percent of the cost of building the dams.

Even anti-public-power Senator HARRY BYRD denounced the writeoff as utterly indefensible. Secretary of the Interior Seaton had opposed the writeoff, but his letter was a sort of top secret for a while.

Public and congressional clamor now induced the Idaho Power Co. to announce that it would not accept the tax concession. But the fat was in the fire. A surprising Senate vote sidetracked the three dams and left the question up to the House.

And there most of the Democratic members of the Interior Committee are trying to prevent the vote that would shelve the Senate bill, thus saving Mr. Eisenhower from the political embarrassment of his probable veto if the House should concur with the Senate.

The veto would be highly unpopular in a region where the same issue defeated Douglas McKay and a good many other Republican candidates in the 1956 election.

We hope that the $500 million project will be decided on its merits alone. Political considerations should be set aside for the general welfare of our country.

The American Legion Firing Line

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. DAVIS of Georgia. Mr. Speaker, the American Legion is one of the great national organizations of our country, which throughout the years has exerted a strong influence in behalf of good government, military preparedness and the best interests of the American people generally. In the many controversies which arise from time to time the American Legion has not gone to extremes on either side of an issue. It has rather served as a balance wheel to keep our country and our Government on a safe and sane course.

The Legion does not dodge issues. It will always be found in the open, championing constitutional government and supporting those principles which must continue to prevail if America is to maintain its position as the citadel of liberty and the stronghold of freedom.

One of the publications of the American Legion is Firing Line. This publication is prepared and distributed by the Legion's national Americanism commission. In the issue of July 1, 1957, Firing Line deals with recent decisions of the United States Supreme Court. This article is so timely that I believe it should be inserted in the CONGRESSIONAL RECORD and thus be brought to the attention of many who might not have the opportunity to read it otherwise. I concur in the conclusion of the editor that "unless immediate remedial legislation is enacted, irreparable harm will be done the entire security program" of the United States Government.

I insert this article herewith:

RECENT DECISIONS OF THE SUPREME COURT OF THE UNITED STATES

In its December 31, 1956, report to the Senate Committee on the Judiciary, the Internal Security Subcommittee sharply declared certain Supreme Court decisions have "seriously restrained the course and progress of America's struggle against its domestic Communist enemies." While these rulings have created legislative problems in Congress, the American Legion, in a 1956 national convention resolution, stated the Supreme Court "has, in all practical effect, repealed article 10 of the Bill of Rights of our Constitution." For a better understanding of the background of these aforementioned assertions, let us examine 13 of the following more important Supreme Court decisions in the field of internal security:

1956 RULINGS

1. *Commonwealth of Pennsylvania* v. *Steve Nelson* (April 2, 1956): Steve Nelson, "an acknowledged member of the Communist Party, was convicted in the Court of Quarter Sessions of Allegheny County, Pa., of a violation of the Pennsylvania Sedition Act and sentenced to imprisonment for 20 years and to a fine of $10,000 and to costs of prosecution in the sum of $13,000." While State's superior court affirmed the conviction, the Supreme Court of Pennsylvania subsequently reversed the lower court's ruling on the ground that only Federal law applied to such offenses. (See Supreme Court of the United States, No. 10, October term 1955, pp. 1 and 2.)

In affirming the decision of Pennsylvania's high court, the Supreme Court of the United States held that Congress, "in enacting the Smith Act of 1940, the Internal Security Act of 1950, and the Communist Control Act of 1954, had 'intended to occupy the field of a sedition' to the exclusion of State legislation on the same subject, and that, accordingly, the Pennsylvania Sedition Act was unenforcible. As a result of this decision, comparable sedition laws in 41 other States were likewise rendered ineffective and the work of State legislative committees investigating Communist penetration was seriously curtailed." (See Internal Security Subcommittee, report for the year 1956, sec. XII, p. 218.)

Three Supreme Court Justices filed dissenting opinions in this case. They declared "the State and National legislative bodies have legislated within constitutional limits so as to allow the widest participation by the law enforcement officers of the respective governments. The individual States were not told that they are powerless to punish local acts of sedition, nominally directed against the United States. Courts should not interfere. We would reverse the judgment of the Supreme Court of Pennsylvania." (See Supreme Court of the United States, No. 10, October term, minority decision, 1955, p. 9.)

On April 25, 1956, 35 State attorneys general petitioned the Supreme Court for rehearing of decision of April 2, 1956, and warned "it is dangerous to public safety as well as to State security to leave the States impotent to regulate acts of sedition or subversion occurring within State borders." This petition declared "the majority opinion (of the Supreme Court) is believed to be in error in failing to have considered and ruled upon that portion of the record showing separable counts of the indictment against Steve Nelson charging criminal conduct with a view to overthrowing and destroying by force and violence the government of the Commonwealth of Pennsylvania as well as the Government of the United States of America." (See Supreme Court of the United States, No. 10—October term, 1955, petition for rehearing of decision of April 2, 1956, pp. 1, 6, 7, and 8.)

The attorney general of New York, in a separate brief filed with the Supreme Court on May 10, 1956, joined the other 35 State attorneys general in petitioning for a rehearing of the High Court's decision in the Steve Nelson case. In the form of a brief order ignoring the State attorney general's petition, the Supreme Court announced on May 14, 1956, it had refused to reconsider its April 2, 1956, decision invalidating State sedition laws. Fourteen bills have been introduced in the House of Representatives and two in the United States Senate, for remedial action to permit each State to enact anti-sedition legislation within its own limits. (See Daily Worker, May 15, 1956, p. 8.)

2. *Harry Slochower* v. *The Board of Higher Education of The City of New York* (April 9, 1956): Harry Slochower, an associate professor at Brooklyn College, New York City, appeared before the Senate Internal Security Subcommittee and invoked the fifth amendment when asked whether he had been a member of the Communist Party during 1940 and 1941. Shortly after his appearance before this congressional committee, Slochower was notified that he was suspended from his position * * * 3 days later his position was declared vacant pursuant to the provisions of section 903 of the New York City Charter. (See Supreme Court of the United States, No. 23—October term, 1955, pp. 2 and 3.)

In deciding this case, the Supreme Court reversed all lower court rulings and held unconstitutional * * * section 903 of the New York City Charter, which provided for the discharge of any city employee who pleaded the privilege against self-incrimination to avoid answering a question relating to official matters. The Internal Security Subcommittee reported recently, "As a result of the Court's decision in this case, proceedings already have been commenced to compel the reinstatement of more than a dozen teachers in New York City educational institutions." (See Internal Security Subcommittee, report for the year 1956, sec. XII, p. 218.)

Dissenting from the majority opinion, three Supreme Court Justices wrote the "Court finds it a denial of due process to discharge an employee merely because he relied upon the fifth amendment plea of self-incrimination to avoid answering questions which he would be otherwise required to answer. We assert the contrary—the city does have reasonable ground to require its employees either to give evidence regarding facts of official conduct within their knowledge or to give up the positions they hold. * * * Numerous * * * colleges and universities have treated the plea of the fifth amendment as a justification for dismissal of faculty members. When educational institutions themselves feel the impropriety of reserving full disclosure of facts from duly authorized official investigations, can we properly say a city cannot protect itself against such conduct by its teachers?" (See Supreme Court of the United States, No. 23, October term, minority decision, 1955, pp. 2, 5, and 6.)

In another minority opinion, a fourth Supreme Court Justice declared, "dissent because I think the Court has misconceived the nature of (section) 903 as construed and applied by the New York court of appeals, and has unduly circumscribed the power of the State to insure the qualifications of its teachers." Complying with the Supreme Court ruling, Slochower was reinstated as a professor of German with back pay and interest of about $40,000. Upon his reinstatement, he was immediately suspended by Brooklyn College President Harry Gideonse, "on a broader charge of conduct unbecoming a member of the staff." On February

26, 1957, the eve before his scheduled appearance before the New York City Board of Higher Education "on charges of misconduct," Slochower unexpectedly announced his intention to resign from the public-school system. (See Supreme Court of the United States, No. 23, October term, minority decision, 1955, p. 1; the New York Times, February 27, 1957, p. C–14; and the Philadelphia Inquirer, February 27, 1957, p. 14.)

3. *Communist Party, U. S. A.* v. *Subversive Activities Control Board* (Apr. 30, 1956): The Supreme Court "reversed and remanded an order of the Subversive Activities Board directing the Communist Party of the United States to register with the Attorney General as a 'Communist-action' organization, as required by the Subversive Activities Control (internal security) Act of 1950. The majority opinion pointed out that the testimony of three witnesses before the Board may have been 'tainted,' in view of evidence of their possible perjury adduced subsequently to the issuance of the Board's order." (See Internal Security Subcommittee, report for the year 1956, sec. XII, p. 219.)

Three Supreme Court Justices filed a dissenting opinion in this case. They argued that the Supreme Court "refuses to pass on the important questions relating to the constitutionality of the Internal Security Act of 1950, a bulwark of the congressional program to combat the menace of world communism. Believing that the Court here disregards its plain responsibility and duty to decide these important constitutional questions" Justice Tom Clark said "I cannot join in its action." (See Supreme Court of the United States No. 48—October term, minority decision, 1956, p. 3.)

In strong language, Justice Clark's minority opinion declared "I have not found any case in the history of the Court where important constitutional issues have been avoided on such a pretext. * * * In this case the motion itself was wholly inadequate and even if the testimony of all three challenged witnesses were omitted from the record the result could not have been different. There is no reasonable basis on which we could say that the Court of Appeals has abused its discretion. I abhor the use of perjured testimony as much as anyone, but we must recognize that never before have mere allegations of perjury, so flimsily supported, been considered grounds for reopening a proceeding or granting a new trial. The Communist Party makes no claim that the Government knowingly used false testimony, and it is far too realistic to contend that the Board's action will be any different on remand."

Continuing his dissenting opinion, Justice Clark stated "The only purpose of this procedural maneuver is to gain additional time before the order to register can become effective. This proceeding has dragged out for many years now, and the function of the Board remains suspended and the congressional purpose frustrated at a most critical time in world history. Ironically enough, we are returning the case to a Board whose very existence is challenged on constitutional grounds. We are asking the Board to pass on the credibility of witnesses after we have refused to say whether it has the power to do so. The constitutional questions are fairly presented here for our decision. If all or any part of the act is unconstitutional it should be declared so on the record before us. If not, the Nation is entitled to effective operation of the statute deemed to be of vital importance to its well-being at the time it was passed by the Congress." (See Supreme Court of the United States No. 48—October term, minority decision, 1955, pp. 3, 5, and 6.)

The Firing Line of May 15, 1957, page 43, reported the Subversive Activities Control Board, in a reaffirmed order (modified report) dated December 18, 1956, "recommended that the United States Court of Appeals for the District of Columbia Circuit affirm the Board's order entered April 20, 1953, requiring the Communist Party of the United States to register as a Communist-action organization under section 7 of the Subversive Activities Control Act of 1950." The constitutional question of the aforementioned act will undoubtedly be raised again and passed upon by the (Supreme) Court on a future appeal. In a tactic to forestall registration as agents of a foreign power, representatives of the Communist Party on June 6, 1957, used the *Clinton E. Jencks* v. *U. S. A.* case to demand access to confidential Federal Bureau of Investigation reports. (See Internal Security Subcommittee, report for the year 1956, sec. XII, p. 219; and the New York Times, June 8, 1957, p. 10.)

4. *Kendrick M. Cole* v. *Philip Young et al.* (June 11, 1956): Kendrick M. Cole, a food and drug inspector for the New York district of the Food and Drug Administration, Department of Health, Education, and Welfare, was suspended without pay in November 1953 pending investigation to determine whether his employment should be terminated. When confronted with charges of alleged subversive activities, he declined to answer these charges, or request a hearing. Subsequently, the Secretary of the Department of Health, Education, and Welfare, determined that Cole's "continued employment was not clearly consistent with the interests of national security and ordered the termination of his employment." (See Supreme Court of the United States, No. 442–October term, 1955, pp. 2 and 3.)

After Cole's appeal to the Supreme Court, the judicial body upset the Government's decision in this case, and ruled a "Federal employee can be fired as a security risk only if he holds a sensitive position." Cole's position with the Food and Drug Administration was classified as nonsensitive. Speaking before the 38th annual convention of the department of Pennsylvania American Legion in July 1956, the chairman of the House Committee on Un-American Activities, FRANCIS E. WALTER, declared: "The United States Supreme Court's recent decision overturning the law under which Federal employees could be fired for alleged Communist associations has had the effect of opening the entire Government to the infiltration of our mortal enemies." (See the Philadelphia Inquirer, July 21, 1956, p. 1; and Daily Worker, June 12, 1956, p. 1.)

In a dissenting opinion, three Supreme Court Justices clearly remarked: "We believe the Court's order has stricken down the most effective weapon against subversive activity available to the Government * * * (and) might leave the Government honeycombed with subversive employees. * * * It is not realistic to say that the Government can be protected merely by applying the act to sensitive jobs. One never knows just which job is sensitive." (See Supreme Court of the United States, No. 442–October term, minority decision, 1955, pp. 2 and 5.)

5. *Steve Nelson* (*Stephen Mesarosh*) *et al* v. *United States of America* (October 10, 1956): Five Communist Party leaders in western Pennsylvania, namely, Steve Nelson, William Albertson, Benjamin L. Careathers, James H. Dolsen and Irving Weissman, convicted of advocating the overthrow of the United States Government by force and violence, were freed and granted new trials by another Supreme Court ruling. The Court stated that Joseph D. Mazzei, a principal government witness "may have lied" in the defendants' first trial. Two weeks prior to the High Court's decision, the United States Department of Justice asked the Supreme Court "to send the case back for determination as to Mazzei's credibility. It said it believed the testimony he had given was the truth, but statements he made before other tribunals had cast doubt on his credibility." With three dissenters, the Supreme Court denied the Government's motion and vacated a lower court judgment. (See the New York Times, October 11, 1956, p. C–19; and the Washington Post and Times Herald, October 11, 1956, p. 1.)

1957 RULINGS

6. *Ben Gold* v. *United States of America* (January 28, 1957): Ben Gold, former president of the now defunct International Fur and Leather Workers Union, "swore before the National Labor Relations Board on August 30, 1950, that he was not a member of the Communist Party nor affiliated with it. He had announced his resignation a few days previously." The Government subsequently claimed Gold "lied when he made the oath, required by the Taft-Hartley Act, and that the resignation had no real meaning." He was indicted in 1953 and was later convicted of falsifying the non-Communist affidavit. (See the Washington Post and Times Herald, January 29, 1957, p. A–10.)

In a split decision ordering a new trial, the Supreme Court held that when the Federal Bureau of Investigation inadvertently questioned three members of the Gold's jury in the "probing an unrelated case," such action by the FBI was "'official intrusion into the privacy of the jury.' It acknowledged the violation was unintentional but this 'does not remove the effect of the intrusion'." Resulting from this decision, the Government announced on May 9, 1957, its dismissal of the Gold case "since the alleged commission of the crime, and careful reappraisal of the evidence against Gold has led to the conclusion that certain material evidence is not available. 'Considering this loss of testimony in light of the age of the case it was concluded that Gold could not be successfully retried'." (See the Washington Post and Times Herald, May 10, 1957, p. A–12.)

Four Supreme Court Justices filed dissenting opinions. Three charged that the FBI interviewing incident had "no effect upon the jurors adverse to the defendant." In a very strongly worded separate minority opinion, Justice Clark declared: "I am * * * disturbed by the refusal of the Court to decide * * * important questions urged upon us * * *. Among these are the applicability of the perjury rule of evidence to the false statement statute * * * admissibility of evidence of prior activity in the Communist Party to disprove the sincerity of a resignation therefrom, the use of expert witnesses to prove continuing membership and the correctness of the Court's charges as to membership in the party, etc. * * * The refusal of the majority (this Supreme Court decision) today to pass upon them thus deprives the Federal judiciary of this Court's opinion, which renders today's error multifold. It will cause undue hardship in the trial of all of these cases, not only on the Government but on the defendants as well" (See Supreme Court of the U. S., No. 137—October term, minority decision, 1956, p. 2.)

7. *Rudolph Schware* v. *Board of Bar Examiners of the State of New Mexico* (May 6, 1957): In examining Rudolph Schware's application for admission to the New Mexico State Bar, the board of bar examiners denied "Schware the right to take the bar examination" because of his admissions concerning membership in the Communist Party from 1932 to 1940 and other criminal activities. After appealing to the New Mexico Supreme Court, this body concurred with the State in denying Schware's motion. This court stated ("Schware's membership in the Communist Party), together with his other former actions, in the use of aliases and record of arrests, and his present attitude toward those matters, were the considerations upon which (we approved the denial of his application.)" Adversely, claiming "there is nothing in the record which suggests that Schware has engaged in any conduct during the past 15 years which reflects (against) his character," the Supreme Court of the United States concluded that Schware's "past

membership in the Communist Party does not justify an inference that he presently has bad moral character * * * There is no evidence in the record which rationally justifies a finding that Schware was morally unfit to practice law." (See U. S. Supreme Court, No. 92—October term, 1956, pp. 6, 7, 13, and 14.)

8. *Raphael Konigsberg* v. *The State Bar of California and the Committee of Bar Examiners of the State Bar of California* (May 6, 1957): Raphael Konigsberg, in applying for admission to the California State Bar, the "State committee of bar examiners * * * refused to certify him to practice law on the grounds he had failed to prove (1) that he was of good moral character and (2) that he did not advocate overthrow of the Government of the United States or California by unconstitutional means." Like the aforementioned Schware decision, the Supreme Court upset the State's ruling and upheld the right of Konigsberg to practice law. In his dissenting remarks, a Supreme Court Justice claimed "what the (Supreme) Court has really done is simply to impose on California its own notions of public policy and judgment. For me, today's decision represents an unacceptable intrusion into a matter of State concern." (See Supreme Court of the United States, No. 5—October term, minority decision, 1956, pp. 1 and 36.)

9. *United States of America* v. *George I. Witkovich* (April 28, 1957): George I. Witkovich, a former employee of the Slovenian-English language newspaper Prosveta, was ordered deported in 1953 for membership in the Communist Party. When the United States attempted to deport him to Yugoslavia, that country refused to admit Witkovich. Remaining in the United States, he was subject to the supervision of the Attorney General, which was made possible by a statute of the Immigration and Nationality Act of 1952. In October 1955, he was indicted "for having refused to answer questions about his activities, including whether he had attended Communist meetings since the deportation order was issued." When Federal District Court quashed the indictment, the Government appealed directly to the Supreme Court. The Government claimed that if the lower court ruling was upheld, it "would hamper * * * (the Government) efforts to control subversive aliens and would jeopardize internal security." The Government pointed out that "more than 3,000 deportation cases could be affected by the ruling." (See the New York Times, April 30, 1957, p. C–11.)

Ruling against the Government's motion, the Supreme Court said that "an alien awaiting deportation was not compelled to answer questions about Communist activities." In a minority opinion, two Supreme Court Justices claimed that the "majority (Supreme Court) decision stripped the Attorney General of an important power necessary to the protection of internal security." (See the New York Times, April 30, 1957, p. C–11.)

10. *United States of America* v. *Mrs. Antonio Sentner* (May 20, 1957): While under a deportation order in April 1953 "on the ground that she was a member of the Communist Party," Mrs. Antonio Sentner was served an order by the Attorney General to terminate membership in this subversive organization. When a Federal district court criticized the Immigration and Naturalization Service for its handling of the case, the Department of Justice appealed directly to the Supreme Court. Upholding the lower court, the High Court ruled, "the Justice Department lacks authority to ban Communist activity by an alien who has been under a deportation order for 6 months." In a dissenting opinion, two Supreme Court Justices warned that this decision "makes ineffective those clauses of the McCarran-Walter Immigration (Immigration and Nationality) Act of 1952 which are vital to effectuation of the purpose of Congress in controlling subversives whose order of deportation has been forestalled by technical difficulties." (See the Washington Post and Times Herald, May 21, 1957.)

11. *Max Halperin* v. *United States of America* (May 30, 1957): When Max Halperin, a New York lawyer, was called before a Brooklyn, N. Y., grand jury, "investigating corruption in the Bureau of Internal Revenue," he refused to answer certain questions on the grounds that it may tend to incriminate him. Halperin was subsequently indicted. At his trial he repeatedly invoked the fifth amendment when asked the same questions he had refused to answer before the grand jury. Prior to Halperin's conviction, the trial judge instructed the jury "that Mr. Halperin's claim of his constitutional privilege not to be a witness against himself could be considered in determining what weight should be given to his testimony." (See the New York Times, May 31, 1957, pp. 1 and 11.)

In a unanimous ruling, the Supreme Court held in effect "against the popular tendency of assuming that a man must be guilty of some wrongdoing, if he invokes the fifth amendment." The Court held that "under the circumstances of this case it was prejudicial error for the trial judge to permit cross-examination of petitioner (Halperin) on his plea of the fifth amendment privilege before the grand jury, and that Halperin must, therefore, be given a new trial." (See the New York Times, May 31, 1957, p. 11.)

Commenting on the subject of the fifth amendment at a news conference on March 27, 1957, President Dwight D. Eisenhower declared, "that in some instances it is absolutely a basic safeguard of American liberty or it would not have been written as the fifth amendment to the Constitution, although I must say I probably share the common reaction: If a man has to go to the fifth amendment, there must be something he doesn't want to tell." (See the New York Times, May 31, 1957, p. 1.)

12. *Shirley Kremen et al* v. *United States of America* (May 13, 1957): Convicted of harboring fugitive Communist Party national leader, Robert Thompson, three individuals, namely, Shirley Kremen, Samuel Irving Coleman, and Sidney Steinberg, won new trials in a divided Supreme Court decision. The majority ruling declared "the seizure of the entire contents of the house and its removal some 200 miles away to the Federal Bureau of Investigation offices for the purpose of examination is beyond the sanction of any of our cases. While the evidence seized from the persons of the petitioners (Kremen, Coleman, and Steinberg) might have been legally admissible the introduction against each of petitioners of some items seized in the house rendered dence of guilt otherwise." (See Supreme Court of the U. S., No. 162—October term, 1956, p. 2.)

A minority decision claimed "only a fragmentary part of the items listed by the Court as seized was admitted into evidence and if any items were illegally seized their effect should be governed by the rule of harmless error since there was ample evidence of guilt otherwise." (See Supreme Court of the U. S., No. 162—October term, 1956, p. 2.)

13. *Clinton E. Jencks* v. *United States of America* (June 3, 1957): The last Supreme Court decision summarized for Firing Line readers in this compilation, cut a serious gash into our present internal security programs which greatly favored the Communist conspiracy in the United States. Convicted in 1950 for filing a false non-Communist affidavit with the National Labor Relations Board, Clinton E. Jencks, president of the International Union of Mine, Mill, and Smelter Workers, appealed his case to the Supreme Court. Granting Jencks a new trial, the High Court subsequently ruled in effect that the Government must make confidential Federal Bureau of Investigation files "available to defendants in criminal cases or dismiss the charges." (See the Washington Post and Times Herald, June 4, 1957, p. A–1.)

Sharply dissenting from the majority opinion, Supreme Court Justice Clark warned "unless the Congress changes the rule announced by the Court today, those intelligence agencies of our Government engaged in law enforcement may as well close up shop for the Court has opened their files to the criminal and thus afforded him a Roman holiday for rummaging through confidential information as well as vital national secrets." Quoting from FBI Director J. Edgar Hoover's 1950 congressional testimony, Clark said that if confidential investigative files were "spread upon the record, criminals, foreign agents, subversives, and others would be forewarned and would seek methods to carry out their activities by avoiding detection and thus defeat the very purposes for which the FBI was created." (See Supreme Court of the United States, No. 23, October term, minority decision, 1956, pp. 2, 3, and 4.)

This decision resulted in the introduction of legislation in Congress on June 4, 1957, by Representative WALTER, permitting "the Attorney General to refuse disclosure of any information if the disclosure would be prejudicial to 'the public interest, safety, or security of the United States'." "Without its prompt enactment," Representative WALTER said, "we might just as well expect a complete breakdown of our internal security." Also commenting on the Supreme Court's decision, Senator KARL E. MUNDT warned the "ruling must be overcome by legislation." In preparing separate legislation to circumvent this High Court decision, Representative KENNETH B. KEATING said if the Court's ruling is followed, "the Federal Bureau of Investigation and other investigative agencies 'might as well close up shop'." (See New York Herald Tribune, June 5, 1957.)

Unless immediate remedial legislation is enacted, irreparable harm will be done the entire security program.

The Great American Sport

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ULLMAN. Mr. Speaker, as every good westerner knows, rodeo time is now upon us. A recent article which appeared in the June 30 edition of the Herald and News, Klamath Falls, Oreg., included some frequently overlooked facts concerning this great sport.

For example, I doubt if many people realize that last year more Americans attended rodeos than attended college football games. And, while I certainly do not want to precipitate a quarrel with baseball enthusiasts, I cannot restrain myself from pointing out that the rodeo remains as the only great American competition which is restricted almost exclusively to the United States and western Canada and thus perhaps has first claim as the great American sport.

Mr. Speaker, I believe this article will prove interesting not only to my western

colleagues, but also to the city-bred Members of this body. I ask that it be included in the Appendix of the RECORD.

The article follows:

RODEOING HAS GROWN IN NATIONAL POPULARITY

Rodeos, born on the open range as a sport of lonely cowhands in the days after the Civil War, has spread across the Nation as a truly indigenous American sport which today has a draw at the gate comparable to college football.

A news service (United Press) has compiled figures showing that 585 college football games last year drew 13,600,000 spectators. In the same year the nearly 600 rodeos approved by the Rodeo Cowboys' Association drew an estimated 14 million spectators.

If one adds in the spectators who viewed high-school, college, and amateur rodoes during the year, the total may well reach 25 million.

There is no record of the first rodeo. Undoubtedly it began as an outlet for lonely, hardbitten cowhands when they assembled to work together on trail drives and roundups. There was betting on horse races, roping, and bucking contests when the hands of different outfits got together.

In those early days the only spectators were the crews of the various ranches involved and the arena was the open plain. The only prize money was that which was bet on the contests.

From Texas, rodeos moved north and west with the trail herds. In the late 1880's the cowboys began to stage their contests of skill and stamina at the towns where they ended their drives. The cowboy tournaments, as they were called, began to draw crowds of townspeople.

About the time of the First World War an old Spanish word for roundup, rodeo, first was applied to these contests and by 1930 this purely western competition had established some beachheads in big eastern cities after spreading the length and breadth of the western half of the Nation.

As rodeo grew like Topsy, it experienced typical growing pains. There were great variations in the rules from one contest to the next and the purses were not large. The cowboys who tried to earn his living in this rough sport had a difficult time of it.

Each paid his own entry fee—but those fees were not always added to the prize money. In 1936, when the rodeo at the Boston Garden offered a purse so small the winners couldn't even cover their expenses, the cowboys went on strike.

The purse was increased and they went back to rodeoing. But these rugged individualists had learned a lesson: cooperative effort obviously was the way to overcome some of their problems.

They formed the Cowboys' Turtle Association, the first organization of rodeo contestants. The name Turtles and the reason for its choice are forgotten now, although there is one legend that the founding cowboys decided they'd move slowly, like the proverbial turtle, toward collective operations for the good of the sport.

The name came to mean unity among rodeo performers. Today, when a man says "I was a Turtle," he immediately wins the respect of this generation of rodeo cowboys for his part in making rodeo what it is today.

The Turtles became the Rodeo Cowboys' Association in 1945 and 2 years ago the association was incorporated under the Colorado not-for-profit act. Today the RCA is the backbone of professional rodeo.

It has striven to protect not only the rights of its members but of the communities in which rodeos are put on. It has helped eliminate unscrupulous promoters who preyed on unwary city leaders in the old days and it polices its 3,000-member organization to rid the sport of the rodeo bum.

It has established a fair and accurate way to determine the national champions. It has sponsored a group life and accident insurance program for the rodeo cowboy who until a few years ago had been considered an uninsurable risk.

The RCA approves all professional rodeos and nonmembers can appear in no more than three RCA rodeos a year. Members cannot even work one amateur or unapproved contest.

This distinction assures the producers of RCA-approved rodeos of the best professional contestants. It also prevents the experienced pros from winning the purses from beginners at local, amateur rodeos.

The RCA has lifted rodeo to its present stature as an outstanding spectator sport of America. And it has lifted the individual performer to the point where he can make a living—perhaps a very good one, depending on his skill—in the arenas.

Many of the pros average from $5,000 to $10,000 a year, depending on how many rodeos they work. Last year's all-around champion, Casey Tibbs, won more than $42,000, and Bill Linderman, RCA president and all-around winner in 1950 and 1953, has won more than $140,000 in the last 5 years.

Only about half of that is profit even before taxes. Cowboys pay their own expenses and entry fees. They are on the road a great deal of the year. Often the bigtimers shooting at the all-around crown spend up to $3,000 on airline tickets alone as they "commute" from rodeo to rodeo during the busy part of the long season.

The approved rodeos largely are sponsored by groups of citizens, civic or fraternal organizations. More than half of the RCA rodeos are sponsored by committees of local citizens serving with no pay. Another 30 percent are under the aegis of civic or fraternal groups.

Rodeo contestants are professional athletes, so expert in handling horse and rope that the veterans of the open range two generations ago would look like rank amateurs beside them.

While many of the top hands are ranch-born, several skilled pros hail from city streets and college campuses.

The sport remains the only great American competition which has not been adopted abroad, except for the natural spillover into the range country of western Canada. Its steady growth in popularity attests primarily to the fact that Americans are proud of their heritage, a part of which lives on even in big-city arenas when the rodeo is put on.

Hon. James B. Bowler

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. PRICE. Mr. Speaker, I join my colleagues from the Chicago area and the State of Illinois paying tribute to the memory of the Honorable JAMES B. BOWLER, whose death has just been announced to the House.

It was my pleasure to form a close acquaintanceship with Mr. BOWLER since he came to the House in July of 1953 to succeed the late Honorable Adolph J. Sabath.

I am certain that my admiration and respect for this fine public servant is shared by every Member of this body. Few men in American public life have had such a distinguished record of service, which covered a span of over a half century beginning with election in 1906 to the city council of the great city of Chicago.

I extend to Mrs. Bowler my sincere and deepest sympathy.

A View From the Law

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article written by Prof. Harry Kalven, Jr., a professor of law at the University of Chicago. The article appeared in the May 27, 1957, issue of the New Republic:

A VIEW FROM THE LAW

(By Harry Kalven, Jr.)

"May I say that moral scruples, however laudable, do not constitute legal reason for refusing to answer the questions" (Representative DONALD L. JACKSON, of California, hearings before the Committee on Un-American Activities, House of Representatives, June 21, 1956, in the matter of Arthur Miller.)

On June 21, 1956, Mr. Arthur Miller, one of America's major playwrights, appeared before the Committee on Un-American Activities of the House of Representatives. The committee, under Chairman FRANCIS E. WALTER, Democrat, of Pennsylvania, had been engaged in the investigation of the unauthorized use of United States passports. Mr. Miller was accompanied by able counsel, Mr. Joseph Rauh—former national chairman of ADA, and the interrogation was handled with decorum. The inquiry covered a range of topics including Mr. Miller's opinions on Ezra Pound, the repeal of the Smith Act, Elia Kazan, Howard Fast, the Spanish War, the preferred position of the artist, and Red China. It also touched more than once on Mr. Miller's views of congressional committees. There was even discussion of several of his plays.

As might be expected, Mr. Miller is on occasion eloquent and is permitted by the committee to handle himself with dignity and seriousness, as when he says: "I have always been, since my student days, in the thirties, a partisan of Republican Spain. I am quite proud of it. I am not at all ashamed. I think a democracy was destroyed there;" or when he attempts to convey to the committee what the objectives of a serious writer are. He is also at times effectively witty as when counsel asks him about one of his plays being produced by the Communist Party: "I take no more responsibility for who plays my plays than General Motors can take for who rides in their Chevrolets."

Representative HAROLD VELDE, Republican, of Illinois, observes at one point that Mr. Miller has every right to urge publicly the repeal of the Smith Act; at another point Representative CLYDE DOYLE, Democrat, of California, shows genuine concern lest questions about Mr. Miller's relationships with Mr. Kazan intrude improperly into his private affairs. Chairman WALTER acknowledges

that in the past he, too, made a contribution to the Anti-Fascist Committee. There are, of course, the usual questions about Mr. Miller's affiliations with Communist fronts and with the party itself; he answers these candidly and in general without apology and to the apparent satisfaction of the committee.

Then as the hearing is about to conclude he is asked about Arnoud D'Usseau and mentions that he, Miller, was present at meetings of a small group of Communist writers in 1947, 5 or 6 such meetings. Inevitably, he is asked who was present at those meetings, and replies:

"Mr. Chairman, I understand the philosophy behind this question and I want you to understand mine. When I say this I want you to understand that I am not protecting the Communists or the Communist Party. I am trying to and I will protect my sense of myself. I could not use the name of another person and bring trouble on him. Those were writers, poets, as far as I could see, and the life of the writer, despite what it sometimes seems, is pretty tough. I wouldn't make it any tougher for anybody. I ask you not to ask me that question."

He is carefully advised by the committee that his reasons for refusing to answer are not accepted and is formally directed to answer. He declines to change his answer and after a few more questions the hearing adjourns with the chairman expressing the hope he will in the future raise his important voice against the Communist conspiracy.

These then are the relevant facts. Now Mr. Miller is on trial for contempt of Congress, before the District Court in Washington, D. C. The question of law is whether Arthur Miller has committed a crime in refusing to answer. Although the matter is not completely free from doubt and although a relevant case is currently pending before the United States Supreme Court, I think he will quite possibly be adjudged guilty. It is the purpose of this comment to sketch how the law has come to this conclusion and to survey the principal legal issues on which argument still remains in Mr. Miller's case.

THE BASIC ISSUES

Legislative investigations have had a long and a troubled history in the United States as the excellent books by Telford Taylor and Alan Barth document. Whenever used vigorously they have been a center of controversy. Perhaps it will bear repetition that the title for Taylor's book, Grand Inquest, comes from a letter written by Mr. Justice Miller, of the United States Supreme Court, in 1880:

"I think that the public has been much abused, the time of legislative bodies uselessly consumed and the rights of the citizen ruthlessly invaded under the now familiar pretext of legislative investigation and that it is time that it was understood that courts and grand juries are the only inquisitions into crime in this country. I do not recognise the doctrine that Congress is the grand inquest of the Nation, or has any such function to perform, nor that it can by the name of a report slander the citizen so as to protect the newspaper which publishes such slander."

The issues raised by the famous committees investigating communism are not very different from the issues raised when we have Senator KEFAUVER looking into the affairs of Frank Costello or Senator KENNEDY into the affairs of Dave Beck, (or to go back a few years, when we have the Black inquiry into public utilities, the Pecora inquiry into investment banking, or even the Teapot Dome investigation itself). Undoubtedly, the congressional inquiry is a remarkably powerful weapon and a remarkably effective way of getting at certain types of facts and forcing them on public attention. Undoubtedly, too, it can look like the grand inquest running up and down the Nation calling individuals to account without regard to traditional decencies.

History is again instructive. Legal doctrine about the limits of congressional investigative power developed slowly. The first great case, *Kilbourn* v. *Thompson*, did not come before the Supreme Court until 1880. In it the power of Congress was found lacking under the particular circumstances and the Court bequeathed an opinion full of cautions about intrusions by Congress into the private affairs of the citizen. The next 40 years produced little further legal precedent, and as late as 1920 the investigative powers of Congress were in considerable doubt. Then came the Teapot Dome investigation and two major Supreme Court decisions in *McGrain* v. *Daugherty* and *Sinclair* v. *United States* which served decisively to underwrite a broad power to compel testimony. The literature of controversy at this time now seems nicely ironic. For it was the liberals—Prof. Felix Frankfurter in a famous New Republic article, Hands Off Congressional Investigations, and Prof. James Landis in a most influential article in the Harvard Law Review—who were the strong proponents of virtually unlimited legislative power of investigation. And it was the conservative, Frederic Coudert, who entered the debate on the other side with an article in the Virginia Law Review entitled Congressional Inquisitions and Individual Liberty.

The source of this ambivalence toward congressional investigations is not hard to locate. It arises because the investigation both looks a lot like and a lot different from a criminal prosecution and trial. It is best to begin with the differences: All that a congressional committee can do is to compel the individual to testify; if he talks and talks honestly that is the end of the matter. The committee has no power to deal with him further, it is not adjudicating or determining any of his rights or duties; it is simply collecting information for legislative use. If a witness does not answer truthfully under oath, he may expose himself to a perjury prosecution. If he does not answer at all, he may expose himself to a contempt prosecution.

If this were the whole story, which it is not, there would still be some question about the limits of this power to compel testimony in a society where the right to be let alone by government is prized. Realpolitik adds another dimension. For such hearings have been inextricably tied up with publicity; and the publicity, with the prestige of government behind it, invites a public response to the witness in which are found imprecise but additional sanctions. There is thus some merit in the popular phrase that an investigation may become a trial by publicity.

The difficulty cannot be solved, as was thought possible a few years back, by improvements in committee procedures. The procedures can, of course, be somewhat improved as in fact they have been in recent years. But the hearings cannot contain the safeguards of the trial of an individual without in fact becoming a trial.

Let us return to Arthur Miller. The law might have provided 1 of 2 answers to his legal problem, either of which would have been clear. It might have held that a congressional committee never had the power to compel testimony; or it might have held that there was always a power to compel testimony. The law has done neither, however, electing rather to discriminate between situations where the power exists and where it does not. To this detailed legal profile we now turn.

MOTIVES OF THE WITNESSES

Does it matter that Mr. Miller's refusal to give a committee the names of others is keyed to principle and to a genuine doubt that the committee had the legal power to compel an answer? To answer that, we must take note of three steps in the contempt process.

Under the statute, a congressional committee must first itself decide whether it wishes to treat the refusal as contempt and must then submit the question for vote to the house to which it belongs. The first step, therefore, is for the house to certify the contempt to the United States Attorney for prosecution under the statute. The second step is the criminal trial itself which may be held with a jury; and the third step is the sentencing by the trial judge, if the defendant is found guilty. Mr. Miller's motives may have a bearing on any or all of these steps.

We shall begin with the trial. The laws have become abundantly clear that the state of mind of the witness does not matter legally so long as he deliberately and intentionally refused to answer the question. The only criminal intent required is the intent not to answer and the witness will be equally guilty if he was pursuing an erroneous but plausible legal theory or if he was acting out of the highest moral scruples or simply being recalcitrant. Unlike grand jury proceedings, or the special investigative proceedings in New Hampshire involved in the Paul Sweezy case, a witness before a congressional committee challenges the committee's power at his peril, he is not entitled to the advice of a court first.

Let us now go back for a moment to the exercise of discretion by the committee and Congress in voting the contempt citation. Here the Miller case has already made an important and encouraging precedent. In theory the requirement that the full house approve the contempt is an important safeguard and an important device for enabling Congress to review the activities of its investigating committees. But in recent years, with the exception of the Rumely case which did not involve any issue of communism, the ratifying of the contempt citation by the full House has been totally perfunctory. The Miller case differs in two respects. First, the committee itself agreed to withhold its decision for 10 days so that Miller's counsel could submit a memorandum in support of the committee not voting the contempt. With Mr. Lloyd Garrison joining Mr. Rauh as counsel, a thoughtful and forceful statement of the case for Miller was submitted. More important, the citation evoked serious debate on the floor of the House with Representative EMANUEL CELLER, Democrat, of New York, making an impassioned defense for Mr. Miller. "We seriously indict ourselves," he said, "if we pass this bill of indictment." And a bit later, "A Miller is not born every day. A Miller comes rarely. Do we foster talent, the type he has, by way of jail?"

Perhaps even more striking was the contribution of Representative ABRAHAM MULTER, Democrat, of New York. He repeatedly, and to my mind effectively, challenged the committee members to explain what possible relevance the names Miller refused to divulge could have to the legislative purposes of the committee. Representative MULTER was raising a fundamental query: Does Congress need so exact an inventory of individual cases in order to legislate? "Why," he asked the committee members, "do you not proceed to legislate?" The vote was another matter. The contempt was certified by a score of 373 to 9.

Now, a word about the sentencing power. The contempt statute provides for a maximum sentence of 1 year imprisonment and $1,000 fine and a minimum of 1 month and $100. Thus a final avenue for the exercise of common sense as to the gravity of Mr. Miller's offense is left by the law to the trial judge.

SEPARATION OF POWERS

The most interesting and puzzling legal question is whether the Constitution limits in any way the committee's exercise of power. Since under our constitutional theory there is judicial review of the constitutionality of legislation, is there not also judicial review of the constitutionality of legislative inquiry preliminary to legislation?

Unquestionably, in theory and in judicial dicta there is a limit on congressional inquiry. The formula of *Kilbourn* v. *Thompson* that Congress has no power to investigate private affairs has been repeated with respect by all courts since. The inquiry, the courts have repeatedly told us, must be for a legislative purpose. Can Mr. Miller then challenge the committee either on the grounds that the questions were an intrusion into his private affairs or on the grounds that the inquiry itself had no valid legislative purpose?

Since the Teapot Dome cases the courts have neatly avoided the task their own formula would appear to have imposed upon them. In brief the law has virtually reached the point of asserting that only inquiries for a legislative purpose into the affairs of a public interest are constitutionally permitted to Congress; but that any inquiry which Congress authorizes will conclusively be presumed to be for legislative purposes and of public interest—with issues specified in advance, adversary proceedings, active participation by counsel, introduction and cross-examination of witnesses and a final determination of the issues. And the legislature cannot be, and should not be, that interested in the exact truth as to the individual case.

Immediately after the war in a series of cases involving the Un-American Activities Committee, ingenious efforts were made to show that the committee's actual purposes were not legislative. The courts turned a deaf ear, even to statements made by the committee members themselves. Two very recent cases, however, indicate that this argument may still have some life in it. In the Icardi case, decided in April 1956, Federal District Judge Richmond B. Keech directed a verdict of acquittal for the defendant in a prosecution for perjury before a special House committee investigating crimes by our Armed Forces abroad and the death of Major Holloban in particular. The committee had completed its investigation and had the materials for its report ready when Icardi testified. The court, in part influenced by the tone of the subsequent report which in effect found Icardi guilty of murder, held that in questioning him the committee was functioning as "a committing magistrate" and that no legislative purpose was furthered by its questioning him. Judge Keech observed near the end of his opinion:

"Counsel for the Government has suggested that frequently individuals are adjudged guilty of an offense by a congressional committee in the exercise of its functions. This court doubts the accuracy of such statement; but, if it be true, such practice should not be condoned, as it denies to the accused the constitutional safeguards of judicial trial."

This is a remarkable and important decision and suggests that the closer the inquiry comes to a traditional category of crime like murder, the more likely it is the court will be genuinely disturbed by the resemblance to a legislative trial.

The Watkins case, which was decided by the Court of Appeals for the District of Columbia a year ago, is perhaps more directly important to the Miller case, and resembles it very closely on its facts. In the course of an inquiry into labor unions by the Un-American Activities Committee, Watkins answered a series of questions about his own Communist affiliations, denied he had been a Communist, identified certain others as Communists, and then refused to answer as to a list of some 30 additional names. The inquiry referred to a period from 1942 to 1947, and Watkins made an eloquent and careful statement of his reasons. He was willing, he said, to discuss those whom he still believed were active in the party but "I do not believe that any law in this country requires me to testify about persons who may in the past have been Communist Party members or otherwise engaged in Communist Party activity but who to the best of my knowledge and belief have long since removed themselves from the Communist movement."

Watkins was found guilty of contempt by the trial court but the conviction was upset in January 1956, in a 2-to-1 decision of the court of appeals, with Judges Henry W. Edgerton and David L. Bazelon in the majority. A rehearing was ordered before the Court of Appeals en banc and in a 6-to-2 decision the original conviction was affirmed, the momentary majority opinion of Judges Edgerton and Bazelon now being preserved as the dissent. It is this case which may be decided very soon now by the United States Supreme Court and which may largely control Mr. Miller's case.

What is so striking about the Watkins case is the seriousness with which the lack of proper legislative purpose was argued. The majority, speaking through Judge Walter M. Bastian, said that Congress had a power of exposure "if the exposure was incident to the exercise of a legislative function." So long as a legislative purpose could be served by the inquiry any exposure of individuals in the course of it was incidental and did not affect the validity of the inquiry. The dissenters pointed out that the congressional committee did not ask Watkins several questions which were obviously relevant if its purpose was legislative; the period involved was so long ago as to make it difficult to see the utility of the information to a legislative purpose; the chairman in replying to Watkins' challenge totally failed to indicate what the legislative purpose was; the committee appeared to know already what it was asking Watkins; and finally, said the dissenters, a closed session would have served every purpose except exposure.

The question is thus a difficult one for the courts. Undoubtedly the committees investigating subversion have for years been collecting far more information about the details of individual cases than would be reasonably necessary for legislation; undoubtedly too the congressional hearing has functioned as a highly efficient variant on the loyalty program. But it is also true, as the majority of the court of appeals notes, that Congress can certainly legislate on subversion and that facts are useful to that end.

Many years ago Woodrow Wilson in an oft-quoted passage discussed as an important aspect of congressional inquries the function of informing the public. The court cases, however, are interesting in their steady rejection of this rationale. The investigating purpose remains legislative, and that means having some connection with legislation, at least where private individuals and not Government agencies are the subject. It is a safe prediction that however the Supreme Court decides the Watkins case it will repeat the caution that the power to compel testimony exists only in aid of legislation.

THE FIRST AMENDMENT

What of the other constitutional approach to the Miller case—the challenge to the investigating committee's authority under the first amendment: "Congress shall make no law * * * abridging the freedom of speech"? The great day for the first amendment challenge was a decade ago in two court of appeals cases, Josephson and Barsky. Each challenge failed by a 2-to-1 vote, but the strong dissenting opinions of Judge Charles E. Clark in Josephson and of Judge Edgerton in Barsky indicate how vital the point was. Unfortunately, the Supreme Court declined to review either case, or the other cases which soon followed such as Lawson, arising out of the investigation of the movies.

There are several troublesome points in connection with a first amendment claim. First, can mere inquiry constitute a restraint? Second, what is the appropriate standard for testing the restraint on speech since the classic clear-and-present-danger formula is not easy to use in this context? Does the freedom of speech include the freedom of silence? And finally, there is the somewhat technical question of whether only the particular question of the entire scope of inquiry is to be tested; can, that is, the defendant be a vicarious champion against restraints on others?

The matter was brilliantly debated between Judge Elijah Barrett Prettyman and Judge Edgerton in 1948 in the Barsky case. Judge Edgerton, in dissent, viewing the entire scope of inquiry in light of what he takes as the realities of the investigation, concludes:

"The free speech point comes to this. Congressional action that is either intended or likely to restrict expression of opinion that Congress may not prohibit violates the first amendment. Congressional action in the nature of investigation is no exception. Civil liberties may not be abridged in order to determine whether they should be abridged. The House committee's investigation is both intended and likely to restrict expression of opinion that Congress may not prohibit. That it actually does so is clear and undisputed."

And earlier in his opinion he had said: "What Congress may not restrain, Congress may not restrain by exposure and obloquy."

Judge Prettyman's rejoiner for the majority was, however, eloquent in its own right. He takes the issue presented more narrowly than Judge Edgerton and decides only that questions as to direct Communist affiliation are permissible. He acknowledges that the inquiry may realistically be a restraint upon free speech and "that even the most timid and sensitive cannot be unconstitutionally restrained in the freedom of his thought." But this does not for him dispose of the matter, since there still remains the countervalue of public interest in security. He notes that the freedom to remain silent may rest on somewhat different constitutional premises of privacy than the freedom to speak but agrees that there is more than an infringement of privacy involved here. And he finds that clear and present danger is an unsuitable formula for measuring whatever restraint there is since it would involve sheer folly for the Government to refrain from inquiry until the danger to itself was clear and present. The appropriate test therefore is whether the inquiry is dictated by "some reasonable cause for concern." And that in his judgment that test was adequately met in this instance.

In future cases Barsky is cited as the decisive precedent for rejecting first amendment claims. The exception is the Rumely case which was decided by the same court of appeals in 1952 and by the Supreme Court the following year. This time the witness wins and there is a strong first amendment shadow across the proceedings. The facts, however, are very different. Rumely was an officer of a private group which published and distributed widely to Congressmen and others books and pamphlets on public affairs with a conservative emphasis. Rumely was called before a House committee investigating lobbying and requested to furnish the names of major contributors to his organization. He refused. His conviction for contempt was reversed in the court of appeals and the reversal affirmed in a unanimous decision in the Supreme Court. The principal grounds were that Congress, in authorizing the committee to investigate lobbying,

had not authorized it to investigate activities such as these.

But Judge Prettyman also had his second opportunity to speak about the first amendment:

"To publicize or to report to the Congress the names and addresses of purchasers of books, pamphlets, and periodicals is a realistic interference with the publication and sale of those writings. This is another problem which we examined in the Barsky case, and we there held that the public inquiry there involved was an infringement of free speech. We are of the same view here. There can be no doubt in that case or in this one that the realistic effect of public embarrassment is a powerful interference with free expression of views. In that case the tenents of communism and the apparent nature of the Communist Party created a public necessity for congressional inquiry. In the case at bar no such dangerous factors are represented to us. There is no suggestion that the publication or distribution of these books and documents constitutes any public danger, clear or otherwise, present or otherwise."

In the Supreme Court Justice Felix Frankfurter in carefully construing the investigating committee's authorization so as to avoid the grave constitutional question observes that the Court would in Justice William Howard Taft's phrase have to be blind not to see what others can see—"that there is wide concern both in and out of Congress, over some aspects of the exercise of the congressional power of investigation."

Justice William O. Douglas in a separate opinion joined in by Justice Hugo Black thought the committee's authorization did cover the particular investigation and thus came, of necessity, to the constitutional question. The inquiry was unconstitutional, he thought, under the first amendment:

"A requirement that a publisher disclose the identity of those who buy his books, pamphlets, or papers is indeed the beginning of surveillance of the press. True, no legal sanction is involved here. Congress has imposed no tax, established no board of censors, instituted no licensing system. But the potential restraint is equally severe. The finger of Government leveled at the press is ominous. Once the Government can demand of a publisher the names of the purchasers of his publications, the free press as we know it disappears. Then the specter of a Government agent will look over the shoulder of everyone who reads. The purchase of a book or pamphlet today may result in a subpena tomorrow. * * * The subtle, imponderable pressures of the orthodox lay hold."

The box score indicates that in the past decade five able judges—Clark, Edgerton, Prettyman, Black, and Douglas—have taken seriously the first amendment challenge, although no court has as yet squarely limited a congressional inquiry on this ground, and in perhaps a dozen cases it has been rejected by the minority.

What then of Mr. Miller? As a creative writer he will present a strong case in the speech field as could be desired, but this was true of film writer John Howard Lawson in the movie investigation and was not enough. There remain two interesting possibilities. Miller was asked many questions having to do with his opinions in general. One is tempted to suggest that from a legal point of view he answered the wrong questions and refused to answer the right ones. Perhaps if he had declined to debate under oath with Mr. Arens, to discuss Red China, Ezra Pound, and committees, he would have had a powerful case. This suggests the possible first point. It might be argued that the inquiry is to be read as a whole and that so read it is an instance of Government surveillance of a writer far transcending any needs of Congress. The legitimacy of the question he declined to answer, so the argument would run, is in effect forfeited by the total pattern of inquiry. Perhaps, just perhaps, a court might see it this way.

The second point is one suggested by Mr. Taylor in his book. The refusal of the witness to answer arises not from any fear of publicity, but from the fear of being called upon to inform. And as a consequence, free interchange among writers and artists is, to borrow the rhetoric of Justice Douglas, under the shadow of the subpena calling upon one to inform.

One final point. Perhaps the argument about legislative purposes and necessity can combine with the arguments under the first amendment. The resulting argument would be the simple but sensible one that the court should particularly scrutinize the legislative claims of need for the particular information where the request impinges on first amendment freedoms or where it impinges on deeply held notions of privacy.

THE TECHNICAL APPROACH

One last corner of law remains to be examined, although it may not be directly relevant to Arthur Miller's case. In the past year or so several recalcitrant witnesses—Keeney, Lamont, O'Connor, Kamin—have won their cases. The manner of winning represents an interesting example of legal craftsmanship; the courts may choose to express their actual distaste for excesses of congressional investigating bodies not by resort to classic constitutional principles, but by technical examinations of the vagueness of questions or of the exact scope of the committee's authorization. The result will leave the basic balance of power between court and committee unchanged. But the result will be to acquit the present defendants. And the result in the eyes of the public will be to curtail sharply committee power—for now the committee is losing the battle of publicity.

In the O'Connor case, the witness was asked whether he was a member of the "Communist conspiracy." The case bristled with fundamental questions since it was part of the McCarthy inquiry into books in Government libraries abroad. But the court rested its acquittal of O'Connor on the narrow ground that the question thus phrased was too ambiguous to serve as a basis for criminal prosecution for contempt, although the witness in no way suggested that his refusal to answer was keyed to his inability to understand the question. In Lamont, Unger, and Shadowitz, the court found that the McCarthy Committee on Government Operations was authorized to inquire into economy and efficiency and that the prosecution had totally failed to bring the questions asked the witnesses at the hearing within that scope.

Finally in Kamin, Judge Aldrich displayed this technique at its fullest. In an elaborate set of opinions he slowly and painstakingly reviews the authorizations from the subcommittee to the chairman and from the parent committee to the subcommittee as though he were reading a trust indenture and finds one by one that the questions Senator McCarthy had asked Mr. Kamin each fell outside the committee authorization.

The reliance is thus chiefly on the statutory requirement that the question be pertinent, and pertinency is to be tested by the authorization of Congress to the committee. The court can under this technique fully acknowledge the power of Congress to investigate and yet repeatedly find that as agents of Congress the committees have exceeded the exact scope of their authority. Since the House committee was ostensibly investigating passport fraud at the time of the Arthur Miller hearing, the pertinency of its questions may perhaps be tested against that purpose rather than against the very broad congressional authorization to the Un-American Activities Committee as such. If so, it may be relatively easy and quite congenial for a court to hold that the committee utterly failed to establish any connection between a small group of writers meeting in 1947 and passport frauds in 1956. And Judge Charles McLaughlin, who is hearing the Miller case, made it clear at the outset of the trial that the sole issue before the court is the pertinency of the questions Miller refused to answer before the congressional committee.

I indicated at the start that I thought Arthur Miller had the worse of the legal issues involved. But Watkins had a brief moment of triumph in the Court of Appeals in a very similar case; and in any event, the Supreme Court, after carefully avoiding these issues during the past decade, will soon decide the Watkins case. In so doing it will in all probability also cover the issues in the Miller case. I doubt if Mr. Miller will win. But I hope very much I am mistaken.

Communist Invasion of Korea in 1950

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. BRAY. Mr. Speaker, on June 25, many appropriate remarks were made with reference to that being the seventh anniversary of the beginning of the Korean war. Surely the memory of that day is a poignant one to all of us, and all the more so to the leaders of the people who lost so much in that conflict. Here is the text of an address given by Dr. Syngman Rhee, President of the Republic of Korea, at a ceremony in Seoul on June 25, 1957, observing the invasion of Korea by Communist forces on June 25, 1950:

OUR PLEDGE TO THE FUTURE

My fellow countrymen, 7 years ago, on June 25, the world was given stunning evidence of the nature of the enemy who is challenging the right of human beings to live in freedom. The attack that was launched upon our nation was part of a calculated plan announced as long ago as 1922. In that year, Nikolai Lenin set forth the basic political policy of international communism. "First," he said, "we shall take Eastern Europe, then the masses of Asia. After that we shall surround and undermine the United States." This is the goal that has motivated the masters of Communist strategy for the past 35 years. This is the aim which the free world must defeat in order that freedom and democracy may survive.

In this fundamental struggle between liberalism and reactionary totalitarianism, our nation has become a key to the success or failure of the free world alliance.

The part Korea was supposed to have played in this calculated design of global conquest was minor. In 1945, Joseph Stalin thought that he could wipe out our nation with his bland proposal that Korea be placed under trusteeship, just as in 1592 Hideyoshi thought that he could intimidate Korea into becoming an open corridor through which the Japanese Armies of aggression could march to the conquest of the Eastern World.

But twice in modern history we have upset grandiose plans of empire building. In the 16th century our effective weapon was the invention of the world's first ironclad war

vessels, commanded by a superb leader, and manned by patriotic fighters. In this 20th century our great weapon has been the determination of a whole population—men, women, and children—who love freedom enough to die for it and who are supported by a free world alliance that has gradually been awakening to the danger which confronts us all alike.

ONE-THIRD OF HUMAN RACE IN CHAINS

The Communists, by combining threats of total war with deceitful diplomacy, have already engulfed into their slave empire more than one-third of the human race.

Through exploitation of the enforced labor of these captive 900 million, they have been able to devote tremendous resources to their lying propaganda, to the huge armaments which they use for threats and blackmail, and to building a worldwide network of subversion.

Through the guiles of diplomacy, before our independence was reestablished, they gained domination over northern Korea. For 5 years they sought by means of subversion, propaganda, and infiltration to capture the south. With a heavy barrage of skillful lies, emplanted in publications all over the free world, they sought to undermine the support of our allies.

Up to a point, they were successful. They claimed that the Korean people preferred communism, and many neutralists and misty-minded liberals believed them, despite the millions of refugees who poured into southern Korea from the north.

They claimed that they wanted only the peaceful reunification of Korea under a coalition government—and they persuaded our allies this Republic must remain unarmed in order to provide a relaxed atmosphere for possible negotiation. Then, when they calculated that their propaganda had deprived us of friends and had undermined our own patriotic devotion, they struck across our border in what they believed to be unbeatable strength.

Their calculations proved wrong. Our land was devastated, but we fought fiercely rather than surrender into slavery. And our friends were suddenly awakened, as by an alarm bell in the night, to the danger this attack presented, not only to us, but to them as well.

If Communist aggression were conducted like the invasions of Hitler and the Japanese and other conquerors before them, the problem would have been solved long before now. In the face of direct military attack the free world reacts with courage and with overwhelming power.

THE COMMUNIST METHODS OF OPERATION

But the Communist strategists operate with a coldly shrewd intermingling of force and beguilement. When attack fails, they turn to diplomacy. Time and again they have snatched a temporary victory out of defeat by pretending that at last, however reluctantly, they are adopting the methods of democratic negotiation. The Korean truce is an important achievement of their evil deceitfulness.

As we survey the world situation today, 7 years after the attack against our Nation was launched, we find that the onward march of Communist success has not been reversed. But we trust that an understanding of how to deal with it is at last becoming clearer in the minds of our friends.

Here in Korea, our friends are moving at last to reestablish a position of unshakable defensive strength. This move is indispensable, but it is far from enough.

Communist leadership, aware of internal weaknesses and anxious to prevent the gradual swing of the democratic powers toward a policy of liberation, are frantically proclaiming anew the supposed advantages of a status quo agreement on peaceful coexistence. Recently Mr. Khrushchev blandly proposed to the United States the division of the world into two more or less equally divided spheres of influence. Fortunately, this Machiavellian suggestion was spurned by President Eisenhower.

Nevertheless, the idea that our tragically beset world can be stabilized without further struggle and without rectification continues to lure the democracies which are still free and which enjoy an unparalleled high standard of living. In order for them to accept this cunning lure they would have to forget all they know, all they have learned, all that experience teaches about the nature of the Communist conspiracy.

They would have to abandon their own principles of justice in leaving 900 million enslaved victims under Communist tyranny. And they would have to believe that communism has absolutely changed its fundamental policy of world domination.

WHAT THE FREE WORLD STATESMEN MUST DO

The dilemma which confronts statesmanship in our time is how to restore freedom where it has been lost without unleashing an impossibly destructive war.

The solution of this problem, we believe, is less difficult in our complex 20th century society than it would have been in earlier and far simpler civilizations. Technology is a vast consumer, demanding specialized goods and raw materials from every part of the globe. The very success of industrialism makes it vulnerable to blockades and embargoes, to trade restrictions, and restrictive international fiscal arrangements. Highly industrialized nations must have access to the raw material resources of the world. This is a foundation fact upon which statesmanship today must build to achieve a restoration of justice and freedom.

In this situation there is great need for unselfish understanding on the part of entire populations. In nations where governments rely on the democratic ballot box, it is essential that the people realize they must accept limitations and deprivations in order to enforce the economic pressures which alone, without war, can enforce justice against aggressors.

Unfortunately, this realization is developing slowly. Leaders in democratic nations are pressed by their own peoples to relax trade restrictions—at the very time such restrictions should be tightened and extended—and often they are tempted to yield to these demands.

But events are also moving inevitably in the direction of greater and greater pressure upon totalitarian nations that are surrounded with an iron curtain of isolationism. In order to permit the freedom of exchange which their aggresive policies and new technology demand, Communist leaders will have to relax the censorship and police control upon which their power necessarily is based.

THE TEMPTATION TO COMPROMISE

We recognize that tyrannical aggression has achieved tremendous success during the past generation. We know it has been fearfully hard to keep alive the faith of mankind in democracy, liberty, and justice. Many nations have given up the struggle, either to surrender wholly to the aggressors or to try to stand aside from the conflict as neutralists. Even in the very heart and citadel of democratic freedom, the tendency to compromise with the evil of totalitarianism has been too often a temptation too great to resist.

When the history of this period is written, the Republic of Korea will be remembered for the courageous determination our people have shown to stand wholeheartedly against both open aggression and unjust compromise. Our weight has never been great enough to determine the policy of our allies. But nevertheless our example has had an effect. We can be proud of the spirit of resistance which you, our people, have demonstrated in the face of grievous suffering and sadness.

Our message to our powerful allies must be the same now as it has been in the past: To stand firm, to reject compromise, to refuse through blind confidence to bolster up the vulnerable internal weaknesses of the totalitarian Communist empire.

If leadership can rise successfully to the challenges which confront us; if firmness and courage can surmount the temptations to compromise and make concessions, a just and free world society of civilized nations at last will be achieved.

We will do our part and we call on our friends around the world to join firmly together in the greatest crusade for freedom ever waged.

Freedom and justice are our goals. We shall not rest nor falter until these blessings are assured. This is our pledge to the future as we meet to pay homage to those who have died and to dedicate the service of our lives to generations yet unborn. This is the great tradition of our Nation. We, on our part, shall carry it forward to success.

Mr. Speaker, here is a statement made by Dr. You Chan Yang, Korean Ambassador to the United States:

THE COMMUNIST INVASION ANNIVERSARY

Today marks the seventh anniversary of the Communist invasion of the Republic of Korea with its tragic memories of a ruined and devastated land, of more than 2 million casualties, military and civilian, and, next to us, of some 150,000 American dead, wounded, or missing.

It was a stilly Sunday morning, June 25, 1950, and church bells were ringing in Seoul when the Reds, without warning, launched an attack, the purpose of which was to conquer and enslave the people of our young republic. The enemy came in forces with Russian tanks, Russian planes and Russian guns and munitions. Our little army had only the sidearms of a constabulary, but, responding to the inspired leadership of President Syngman Rhee, the entire nation rose up to fight the fight of desperation, truly a struggle for liberty or death.

At the beginning, so rapid was the advance of the Communists, that it looked as if we would be overwhelmed and perish as a free people. That would have been our fate, had not America come to our rescue immediately and later been aided by military units of other United Nations countries. The tide of invasion was stemmed under the magnificent command of Gen. Douglas MacArthur and the Red forces were sent reeling back to our northernmost boundary, the Yalu River.

Then it was that the Communists, in the guise of a million so-called Chinese volunteers, swept out of Manchuria at the order of the evil men in the Kremlin. With General MacArthur forbidden to bomb Red Manchurian bases and to disrupt lines of supplies, the war, instead of ending in victory and a unified Korea, ended in a stalemate and the uneasy armistice in effect today.

But we are grateful that modern planes and arms soon will be furnished us to offset the multitude of violations of the armistice terms by the Reds and their Moscow masters. This step will at least give us an even chance against a ruthless foe and that is all our army of 750,000 men on the very frontier of freedom ask. Koreans are proud that this army has proved itself on the battlefield, and that it is today the largest anti-Communist army of actual warfare experience in the world.

Yet, it and all the other military and civilian forces of the free world now are confronted by an even more dangerous situation than actual open conflict. It is the success of the Communist coexistence campaign. They have already breached our walls of common unity and alert defense. Anything and everything the Free World sells them

will help them meet the necessities of their own home economies, and thus afford them additional manpower and time to increase their production of instruments of slavery and death. And, lest we forget, those instruments—the H-bomb, the atom bomb, the new planes and submarines, to mention just a few—are meant for us.

Challenge Facing Ambassador Smith in Cuba

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Times on July 17, 1957:

TWO AMBASSADORS

Earl E. T. Smith, our new Ambassador to Cuba, has just arrived in Habana to take up his duties. Far to the south, John Moors Cabot, the new Ambassador to Colombia, has just reached Bogotá and started his mission.

The tasks and the men are very different. Of the two, the veteran career officer, Mr. Cabot, with his long knowledge of Latin American affairs, has much the easier mission. Colombians have thrown out their military dictator, Lt. Gen. Rojas Pinilla, and are now democratically preparing a new government. Relations with the United States are friendly and uncomplicated.

Mr. Smith's mission, on the contrary, is just about as difficult and delicate as any post in the world today. He himself is new to diplomacy, having gone from the brokerage business to the Habana Embassy. At the time of his appointment he knew nothing of Cuban affairs and he does not know Spanish. The situation in Cuba is working toward a climax in which the United States has a great stake, thanks to our heavy investments in the island, the sugar exports, the strategic importance of Cuba and our historic links which led us originally to fight a war on behalf of Cuban independence.

Yet, anti-American feeling has never been stronger in Cuba. The policy of the State Department has been friendly to the dictator, President Batista, and the sale of arms to General Batista by the Pentagon has aroused bitterness, since these arms are used against Cubans. The whole atmosphere of Cuban life today is tense and charged with violence.

Every eye in Cuba is going to be on Ambassador Smith. Every move he makes; every word he speaks; and everything he does not do will be watched, evaluated, criticized, or praised. Cubans expect him to represent a new line of policy, one that is neither friendly nor unfriendly to the Batista regime. This can reasonably be asked of the State Department in its relations with Latin American dictators. The criticisms to which the State Department and some of its envoys have rightly been subjected in recent years lie in the unnecessary friendliness so often shown to these dictators.

Ambassador Smith faces a great challenge but also a great opportunity. As he begins his mission he deserves the best wishes and cooperation of all concerned, and not least of the Cubans.

Address by Dr. Frederick Taylor Wilson on the South and the Presidency

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. TUCK. Mr. Speaker, there was delivered at Shepherd College in Shepherdstown, W. Va., on July 17, 1957, by Dr. Frederick Taylor Wilson, widely known historian and authority on the Presidents, an illuminating address on The South and the Presidency. Dr. Wilson was introduced on that occasion by Dr. O. S. Ikenberry, president of Shepherd College. Under leave to extend my remarks in the RECORD, I am including the following excerpts from Dr. Wilson's informative address:

It seems a bit strange that no southerner has gone to the White House as President by election at the hands of the people in more than 100 years. That seems especially so when we recall that one of our major political parties, the Democratic Party, is of southern origin, and that 11, or one-third, of all the men who have thus far been elected President were natives of the South, 8 of that number having been born in Virginia and 3 in North Carolina.

Zachary Taylor, elected as a Whig in 1848, who went to the White House from Baton Rouge, La., was the last President from the South elected by the people and Baton Rouge still remains the most southern home of a former President. Taylor, a Mexican War hero and owner of many slaves was put forward as a candidate for President by northern Whigs who had opposed the war in Mexico and were on record as enemies of human slavery. Taylor, like the present occupant of the White House when he took office, found both Houses of Congress in the hands of the opposing party (Democratic). No President serving between Taylor and Eisenhower has faced such a situation.

It is true that Andrew Johnson who became President when Lincoln died was a southerner but he was not so chosen by the people. Johnson like Jackson and Polk before him was a native North Carolinian who migrated to Tennessee.

Every Whig candidate for President during the 20 years' life of that party was a native Virginian. They were Clay, W. H. Harrison, Taylor and Scott. Only two of that number however were elected, Harrison and Taylor, both of whom had long lived out of Virginia when they became President, the one in Ohio and the other in Kentucky and Louisiana. Harrison was the first President to go from the Middle West.

As fate would have it Harrison and Taylor both died in office, the one 30 days after becoming President and the other 16 months after his inauguration. The bodies of both Harrison and Taylor now rest near the banks of the Ohio River, the one near Cincinnati, Ohio, and the other near Louisville, Ky. Harrison was succeeded by Tyler, a fellow Virginian, and native of the same Virginia county (Charles City County). Taylor was succeeded by Fillmore, a native New Yorker. Neither Tyler nor Fillmore was able to succeed himself in the Presidency.

Van Buren, a New York Democrat and Jackson's handpicked successor as President, was indirectly responsible for both the election of Harrison and Taylor as President. A depression early in the Van Buren administration made certain Harrison's success in his bid for the Presidency in 1840 and 8 years later Van Buren's nomination for President on a third party ticket, the Free Soil Party, took enough New York votes to enable Taylor to carry that State and win the Presidency.

As every schoolboy knows, Virginia is known as the Mother of Presidents with eight of her native sons in the White House. In addition Ohio, the birthplace of seven Presidents and Kentucky, the birthplace of Lincoln, were both once a part of Virginia. So it can be said that one-half of all our Presidents before the present incumbent were born at places once or now a part of old Virginia.

Despite these historical facts it has been 136 years since a native of Virginia (Monroe) went directly to the White House from Virginia by election at the hands of the people. Monroe received all but one electoral vote in his campaign for reelection (1820).

Virginians have proper pride in the fact that 4 of our first 6 Presidents, Washington, Jefferson, Madison, and Monroe, were exactly one-half of all the men who have been President who served for 2 consecutive terms or more in that high office. Wilson, who went to the White House from New Jersey, was also a native Virginian. The last of the 8 who served for 2 terms or more consecutively was F. D. Roosevelt who was in that high office for 12 years and 39 days. F. D. Roosevelt and U. S. Grant the only 2 natives of Northern States who thus far have served 2 consecutive terms or more in the White House, the one a Democrat and the other a Republican.

Let us not forget that it was a Virginian and southerner, Thomas Jefferson, who wrote the Declaration of Independence, and Madison, the friend and neighbor of Jefferson, who is known in history as the Father of the Constitution.

The great division in the Democratic Party, a southern product, came in 1860 when Stephen A. Douglas, of Illinois, was the candidate of the northern wing of the Democratic Party for President, and John C. Breckenridge, of Kentucky, was the candidate of the southern wing of that party. Breckenridge 4 years before at 36 years of age had been elected Vice President on the ticket with the aging Buchanan, of Pennsylvania (66). The issue of human slavery, which then divided the Democratic Party and made Lincoln a minority President, has its counterpart in the unfortunate present day issue of integration in our schools and elsewhere.

It has long been taken for granted that our Southern States would vote Democratic whoever might be the candidate for President. That, however, has been changed in recent years. In both 1952 and 1956, Virginia, the home of Jefferson, and Tennessee, the home of Jackson, both patron Democratic saints, cast their electoral votes for General Eisenhower, the Republican candidate.

It is noteworthy that Georgia in the South, like Vermont in the East, has been consistent in its party loyalty through all the years, the one a Democratic State the other a Republican one.

Though the Republican Party has been in control of the Government for 60 of the past 100 years, no candidate of that party has come from the South.

Perhaps the time has come for the spirits of Jefferson and Jackson to come forth like the spirit of Samuel of old and remind our major political parties of their historic origin and warn them of their possible destiny.

Interventionism Clarified

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. PORTER. Mr. Speaker, the writer of this letter, which appeared in the New York Times July 17, 1957, clarifies the meaning of intervention in connection with the sad situation in Venezuela:

CONDITIONS IN VENEZUELA: DICTATORSHIP IS SAID TO MAINTAIN SITUATION OF TERROR

(EDITOR'S NOTE.—The writer of the following letter, at present an exile in New York, is secretary of the Republican Democratic Union Party (URD). Formerly chargé d'affaires in Habana and Counselor Minister to the Venezuelan Embassy in Chile, he was kept in prison in Caraças for 3 years without trial following the military coup in 1952.)

TO THE EDITOR OF THE NEW YORK TIMES:

I agree with the Venezuelan Ambassador, whose letter you published on July 10, in denying to any foreigner the right to interfere in the political affairs of our country. But at the same time I cannot understand how such a diplomat, whom I know to be versed in and informed about the matter of intervention, can place your editorial of July 5, on our national holiday, among those acts which have to be condemned as interventionist.

Interventionism has been and is intimately connected with dictatorship in the history of our hemisphere. I would say they both are faces of one single reality—here in the United States because its promoters have been those groups who selfishly believed that their investments in our lands are better guaranteed by fuedal despots, and in Latin America because it has been our dictators and their followers, conscious as they were of their unpopularity and weaknesses, who assiduously begged the powerful backing of vested interests and the State Department.

FUTURE SAFEGUARDED

At a moment in which our peoples, and especially the new generations entering upon their political life, are disillusioned and worried by the policy of compromise with dictators which prevailed in the Pan-American system, I find that you, with other outstanding voices of the American press, are safeguarding for the future our common friendship and good neighborliness. For this reason you may be sure of receiving from the noble people of Venezuela not the irate protest of Ambassador Gonzalez but sincere applause and thanks.

Venezuela is today a wealthy country, with a peaceful, cultured, democratic people. But a dictatorship established against the will of the people maintains a situation of terror, with an iron grip upon the press, jails full of prisoners not submitted to due process of law and hundreds of exiles treading the paths of ostracism; with no representative bodies being allowed control of the government functions.

Under these conditions they are preparing a new mockery of the constitution to promote the extension of the presidential term or the election of Pérez Jiménez by means of a congress which the very dictator appointed by decree in 1953. As they know this is a potion very bitter to drink, they are trying to hang a curtain of silence around Venezuela and to sell their formula as the only possible guaranty for the continuance of the present economic boom and the program of public works today underway in Venezuela.

Nothing is more absurd and baseless than this argument. Our present boom, the so-called Venezuela's miracle, is not the work of the dictatorship itself. The present political situation has not the merit of its accomplishments but the guilt of its wrongdoings and failures.

FAILURES CITED

What are these wrongdoings and failures? They are the lack of a plan to make public works serve the requirements of our economic development, instead of the propaganda of the regime; the hideous centralism which invests most of the resources in the metropolitan area of Caracas, while most of our States lie abandoned in misery and backwardness; the shameful traffic of the 5 percenters and the inadequate financing which swallows 20 percent and sometimes as high as 40 percent of the cost of the works; the iniquitous distribution of the oil benefits within the circle of the few privileged while hundreds of thousands live, as Archbishop Arias recently affirmed in his famous letters, amid infrahuman conditions.

Venezuela owes everything to the prodigious wealth of its land and the fine condition of its people. If these two elements were welded together and molded by a democratic government, able to end corruption through a free press and parliamentary control and to substitute for the forced unanimity of terror free discussion of all official initiatives, we are sure that the Venezuelan miracle would become, at last, a true one.

To help spread these truths in the way the New York Times is doing does not mean intervention but friendship and cooperation. And it is also fulfillment of a mission that belongs to the press of every democratic country: To fight for the freeing of men without consideration of frontiers, race, or creed; to try to extend the good everywhere and to attack social and political evils wherever they exist.

REGULO BURELLI RIVAS.

NEW YORK, *July 11, 1957.*

Hon. Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include a resolution on the death of Senator Joseph McCarthy, adopted on May 6, 1957, by the General Assembly of the State of New Jersey:

Resolution adopted May 6, 1957

Whereas the whole Nation was shocked last week at the sudden death of Senator Joseph R. McCarthy, of Wisconsin; and

Whereas Senator McCarthy, while a very controversial figure in the United States history, was deeply loved and respected by many citizens of our State and Nation: Therefore be it

Resolved, That the members of the general assembly express their regret at his untimely passing and extend sincere condolences to his bereaved widow and family; and be it further

Resolved, That a copy of this resolution, signed by the speaker and attested by the clerk, be forwarded to Mrs. McCarthy.

ELLEN MILLS,
Speaker of the General Assembly.

Attest:

WILLIAM J. KOHM,
Clerk of the General Assembly.

Expansion of Alcoa at Davenport, Iowa, Indicates Healthy State of Our Free Economy

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an item from a recent issue of the Christian Science Monitor which indicates the healthy state of our free economy. When companies like the Aluminum Company of America take such forward-looking steps in "gearing for tomorrow" all of us can have renewed faith in the system which has given us the highest standard of living in the world. The article follows:

GEARING FOR TOMORROW

(By Nate White)

DAVENPORT, IOWA.—What is going on here in the American agricultural heartland is going on all over the country.

Beautiful new modern factories are springing up on the prairies and in the New England hills, on the dark dirtland of the South where once only cotton grew, in the green Northwest, and the summer-tanned valleys of California and the Southwest.

Here the Aluminum Company of America has just completed $54 million expansion of its relatively new plant on the banks of the Mississippi River. Ten years ago Riverdale, which is just 10 minutes east of Davenport by car, was just a tiny river town of 500 people.

Today's Alcoa's 72 acres of plant worth about $130 million represents one of the finest and most integrated aluminum sheet and plate mills in the world.

But this is only a tiny spot on the economic map of the United States. Expansion of the Nation's plant and equipment for satisfying the needs of consumers in this country and abroad has grown from a rate of $20 billion in 1947 to an annual rate of $37 billion this year. It is now at a rate for this third quarter of nearly $38 billion.

This is an expansion of 9 percent over last year, and last year saw an expansion of 11 percent over the year before.

What does it all mean?

William Mittman, Alcoa sales manager, put it simply. The rate of expected growth in the numbers of American consumers by the middle 1960's is so great that production plans for today must be geared to the demands of tomorrow.

Of course, there are mixed patterns. Not every industry is experiencing this tremendous growth. Some of them are in the doldrums. But in the main, American industry sees a demand for its products ahead which has forced it to put up plants in every corner of the land to take care of the need.

Many folk, still laboring under the depressed economic fears of the 1930's say that industrialists should be wary of a saturation point. But their sales managers and market research specialists point to the immense growth of the marriageable population of the early 1960's as their signal to get ready.

From housing starts of slightly less than 1 million new homes this year to a mid-1960 rate of 2 million new homes a year is the chart line in William Mittman's view.

So the theme song of industry is Get Ready.

The biggest changes have occurred in the durable goods industries, such as nonferrous metals, iron and steel, chemicals, petroleum and coal, and electrical machinery.

But Department of Commerce reports show what industries have reached a stopping point for the moment: Those which have shown a change downward from the expansion rate of last year.

These stand out: Textiles and motor vehicles.

Even so, the competitive picture in business is becoming more complicated. Today an aluminum company must not only try to outsell its competitors. It must find ways to challenge other industries. The race to find new products and newer ways of producing and distributing them is challenging the master salesmen and the master technicians of the country.

What goes on here in Iowa is but a symbol of this change, this immense stepup in the pace. It is a pace beyond the most enthusiastic dreams of the empire builders of the late 19th century. Modern Americans with their machines, techniques, and their dollars are something to behold.

The West Is Moving To Preserve Its Historical Landmarks

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. PORTER. Mr. Speaker, in the West, where history is still relatively young, it has been difficult for residents to realize the historical value of pioneer landmarks. Daily familiarity with these objects tends to create for a time a lack of interest in saving and restoring homes and other historical items which one day will proudly tell visitors and people of the area part of the story of the West.

I am proud to say that there is an ever-growing interest on the part of Oregonians, for example, in the preservation of these landmarks. In Lincoln County the Yaquina Bay Lighthouse has been saved.

In Portland many citizens and organizations are working to preserve the Old Pioneer Post Office. Throughout the State there are residents who would like to see a museum erected at the site of the former Celilo Falls to commemorate the centuries of fishing activities ended with construction of The Dalles Dam.

In my district, members and friends of the Douglas County Historical Society are working valiantly for a museum site and museum. Their crusade was given a wonderful assist by Congress last year with the approval of Public Law 883 which gave the society the home of the late Lillie Lela Moore. Her pioneer house is situated on a small parcel of land in the heart of Roseburg.

At the request of the society and its many friends, and because I believe that Lillie Moore meant for her home and property to become a museum site, I have introduced legislation (H. R. 6995) which would amend Public Law 883. Senator RICHARD NEUBERGER, a man well aware of the historical import and need for amending legislation, has introduced an identical bill in the Senate.

Miss Moore deeded her home and property to the United States Government many years ago in the belief that it would become a museum. Since that time, the Government has received nearly $100,000 in rental and sales fees from the property which came to it at no cost. Recently, the property remaining, some had been sold to private business firms, was declared surplus Government property.

I believe H. R. 6995 gives the Douglas County Historical Society members deserved help in their fine work.

I should like to insert in the RECORD at this time an article from the July 14, 1957, Portland (Oreg.) Oregonian, written by Oregon historian Lancaster Pollard. The story concerns historic buildings in my State and the author aptly notes that sometimes people are slow to realize the incalculable value of history:

OREGON SLOW TO PRESERVE ITS HISTORIC BUILDINGS

(By Lancaster Pollard)

The abandonment of the Tillamook Lighthouse between Seaside and Cannon Beach, is a reminder that we in Oregon haven't succeeded too well in preserving our historic buildings.

A few successes stand out. The Flavel Mansion in Astoria, itself an architectural period piece, has been converted into a popular museum. The original county courthouse in Jacksonville is another excellent historical museum. Most recently the Yaquina Bay Lighthouse has been saved.

The Yaquina Lighthouse isn't old by New England measure, having been built in 1871, but it is the oldest still standing on the Oregon coast and has much historical interest and importance.

It stands near the first recorded landfall made by white men on the State's shores. That was in 1778, when British Capt. James Cook approached land at a place he named Cape Foulweather, the first English name attached to any part of the Pacific Northwest.

The publication of his voyages a few years later advertised the region's rich fur trade. As soon as ships could be outfitted and the voyage made, traders from a dozen nations were off the northwest coast. A Yankee among them, Robert Gray, discovered the Columbia River, inaugurating the American drive to the Pacific coast.

Another Yankee, John Ledyard who had an irresistible itch to travel, was a member of Cook's crew. When Ledyard later met Thomas Jefferson in Paris he aroused an undying interest in the future President about the far west. Twenty years later the Lewis and Clark expedition was dispatched by Jefferson to add to American claims upon the old Oregon country.

It isn't wholly fanciful to say that Oregon history began when Cook named Cape Foulweather.

Yaquina Bay Lighthouse was in operation only 3 years. It was then abandoned but happily not destroyed. (By an unbelievable mix-up the lighthouse that replaced it was built on the wrong site.) Until 1948 nothing was done about the old structure. Then the newly organized Lincoln County historical society, under the continuous agitation of James M. Howes, moved to preserve the lighthouse as a museum.

Several times State officials were persuaded to postpone plans to raze the building. However, it was 7 years before the State Highway Commission decided to maintain the lighthouse as a historic structure. A small sum, $2,000, was appropriated and needed repairs made.

Although Yaquina Bay lighthouse is not yet a museum or open to the public, it is being preserved and Oregon is richer by another architectural record of our history.

The Late Honorable James B. Bowler, a Representative From the State of Illinois

SPEECH
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. O'BRIEN of Illinois. I yield.

Mr. YATES. Mr. Speaker, I want to join Congressman O'BRIEN, Congressman O'HARA, and my other colleagues from Illinois, in paying tribute to JIM BOWLER. JIM BOWLER was a fine man and a fine Congressman. It was not my good fortune to know him as long or as well as Congressman O'BRIEN and Congressman O'HARA have known him. Theirs is a proud memory to be cherished as a result of their long association with him and their heart-warming close friendship with him. Mine is much more recent, but quite enriching nevertheless.

I came to know JIM BOWLER when he was a member of the city council of the city of Chicago, shortly before he entered the Congress of the United States. He was for many years one of the leaders of the city council. I came to know him better as a result of our close association since he became a Member of Congress, and I know I have benefitted greatly from that fortunate friendship. It was a privilege to share his warm personality, to share in the richness of his experience, to benefit by his knowledge. His has been a long life of helping his fellow man.

There was nothing that anyone wanted that JIM BOWLER was not ready to help him with. To my mind he was the very inspiration for the poem about the man who wanted nothing more than to live in a house by the side of the road and be a friend to man. This was JIM BOWLER. And I think of another famous poem that embodies JIM BOWLER's philosophy, the poem that was written by John Donne in the 16th century. He said:

No man is an island entire of itself.
Every man is part of the continent, a piece of the main.
For every clod that is washed away the continent is the less;
Every man's death diminishes me, for I am a part of mankind.
Therefore do not ask to know for whom the bell tolls; it tolls for thee.

This was JIM BOWLER's philosophy. It epitomizes the love that one has for his fellow man. I, too, will miss him very much and I want to express on behalf of Mrs. Yates and myself our profound sympathy to Mrs. Bowler and JIM's family.

Repeal of the Hatch Act, H. R. 1967

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. MULTER. Mr. Speaker, the following is my statement before the House Administration Committee today in support of my bill, H. R. 1967:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, OF NEW YORK, BEFORE THE HOUSE ADMINISTRATION COMMITTEE JULY 19, 1957

Mr. Chairman and members of this distinguished committee, my presence and purpose here today is to lend the greatest possible emphasis to the importance I feel attaches to the enactment of one of the many bills, similar to the one I introduced in this session of Congress—H. R. 1967. They seek to eradicate the acknowledged evils experience has revealed in the Hatch Act.

The Hatch Political Activities Act, 1939, as amended, and the 1940 amendment to the act, strike at the heart of man's most cherished possession in a free society: his political self-respect, his political freedom, his independence in his citizenship.

The Hatch Act is an act that bluntly proclaims itself as a downright legislative gesture discriminating against the Government employee almost as if he were to be regarded as some kind of political pariah. As the act now stands it puts a gag, a halter and a straightjacket on the political activities of one of the best informed, most articulate, highly educated and civic minded voting groups in the population of the United States.

Surely none of us here can be persuaded that it was ever the intent of Congress or the intent even of the most inflexible sponsors of the Hatch Act to so curtail the interest, enthusiasm, energy, and educational influence of Government employees as to produce as a consequence 2 million ciphers and political nonentities amid the American electorate. The act paralyzes deliberately a vast reservoir of political talent and knowledge capable of a very high order of political progress which should be given full vent and not stifled.

However, in fairness it must be said that the Hatch Act came as a climax and a stopgap to a period of abuse when this country was in the very pit of economic despair. It therefore attracted to itself extreme provisions—which my bill now aims to eliminate—to meet a then possibly extreme situation.

For the record I explain that the Hatch Act struck out in its day—the late 1930's—at actual or alleged political malpractices that misused the WPA for questionable vote-getting ends. Because of this—a fact that no longer exists in a context that has long disappeared from the American scene—the act prohibited Federal officeholders below the policymaking echelon in the executive branch of the Government to participate actively in political campaigns.

My bill eliminates this dead legislative wood from the act. It eliminates also the 1940 amendment to the act extending its provisions to State and local government employees whose salaries are drawn in whole or in part from Federal funds. This politically paralyzed still another solid group of interested and alert Americans into political nonentities.

The legal and ethical values of the Hatch Act that have a genuineness and validity are in no way molested by my proposed bill. Its broad features remain.

The decayed carcass that my bill would cut from the Hatch Act are the second, third, fourth, and fifth sentences of section 9 (a) of the act entitled "An act to prevent pernicious political activities, 1939," approved August 2, 1939, as amended (5 U. S. C. 118i). My bill would also cut away the second, third, and fourth sentences of section 12 (a) of the act (5 U. S. C. 118k), and sections 15, 16, and 18 of the act (5 U. S. C., 118i, 118m, 118n).

The effect would be that the Government employee would have restored to him the full rights of United States citizenship. The effect would be also to free from political bondage the State and local government employees whose salaries are drawn in whole or in part from Federal funds.

This, it seems to me, apart from the other evil features of the measure, represents a gratuitous invasion—and in a sensitive field at that—of a regulatory function that should properly be left to the several States where it definitely belongs.

It is provisions like this, using the Federal Treasury to make applicable to a State employee Federal acts because the payroll is derived from Federal funds, that excites so much suspicion and fear of Federal legislation. The idea, it seems to me, is wrong in principle and the provision is mischievous in its execution.

Another phase of the Hatch Act that is relegated to oblivion should my bill become law, is embodied in sections 15, 16, and 18 which I have already mentioned. These sections concentrate powers in the Civil Service Commission, powers of discretion, that should be removed. Thus the Commission, as in the States of Maryland and Virginia, or in municipalities the majority of whose voters are employed by the Government of the United States, may determine whether in these areas populated mostly by Government employees, the Government worker may participate in political management and political campaigns. The act now provides that the Commission has the right to determine the extent to which the Government employees' participation may go. These and other kindred provisos my bill would nullify.

These, substantially, are the Hatch Act evils of which I have been speaking, and it is these my bill would correct.

It is needless to report to this committee that the agitation for change in the Hatch Act has a considerable history.

There has come to my office here in the Capitol, considerable correspondence, informed, intelligent, honorable, from not merely my own district, but from distant parts of the country: Plymouth, Wis., for instance; St. Paul, Minn.; Portland, Oreg., complaining of the Hatch Act.

In one instance, I find that a post office employee was prevented from holding the position of mayor of his city to which he had been duly elected. There had been in the first instance no objection to his holding the job of alderman. But when he rose to the position of mayor, the postal regulations were suddenly made applicable to all municipal offices prohibiting their occupancy by Federal employees.

I do not think it would be hard to prove that this was a loss to the man himself, to his city which had tried to honor him and to use his dedicated civic spirit and services, and a loss in the end perhaps to his State and his country. It is from these grassroots that our greatest statesmanship and leadership has been derived and will continue to come.

I have received complaints in which alert and active men and women who would like to take part in their political affairs declare that they have been relegated to what is properly labeled second-class citizenship. It certainly seems to me that this is not overstating the case.

Of course, I know that section 9 of the Hatch Act while forbidding political management or political campaigning on the part of Government employees permits them—I quote: "the right to vote as they may choose and to express their opinions on all political subjects and candidates."

Giving the Government employee the right to vote and speak his mind on elections is almost made to seem here like an act of largesse, as if it were a bonus of some kind, instead of the granting of a basic human right.

As I view the situation even this becomes a somewhat sterile gesture in light of the restrictions to which the Government employee is otherwise confined.

He may vote and he may gossip politics but he may not do any of those things that will make his political personality in a free society effective and meaningful. He is forbidden to participate in political management. He cannot pitch into and be a part of the campaigns of politics which give American life vividness and color and excitement and interest. The Hatch Act turns him into a political wallflower, the ugly duckling, who must be isolated from the most vital activity of his country. It deprives him of his political red blood corpuscles.

Gentlemen: The Hatch Act is outmoded, archaic, unjust and unnecessary. The time has come to subject it to the legislative surgery that will keep alive whatever genuine virtue it possesses and radically eliminate the portions that experience have proved unwise and unfair. That surgery, I humbly suggest, can be performed effectively if my bill—H. R. 1967—is enacted into law.

Thank you for the privilege of submitting my views to you.

Belated Applause at Curtain Call

SPEECH
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. LOSER. Mr. Speaker, on Tuesday our esteemed colleague, the Honorable PAUL F. SCHENCK, from the Third District of Ohio, informed the House of the passing of a truly great American, the late Governor James M. Cox, on July 15, and, along with you, Mr. Speaker, and others, paid fitting tribute to the memory of this outstanding statesman.

Under leave previously granted, I desire to insert an editorial which appeared in the Nashville Tennessean on July 17, 1957, eulogizing this distinguished citizen. The editorial follows:

BELATED APPLAUSE AT CURTAIN CALL

Occasionally, in the drama of human history, a tragic figure of might-have-been crosses center stage, utters lines misunderstood by an emotional audience, then passes into the wings amid the hisses and boos.

In calmer reflection, ofttimes, the audience realizes too late that this forgotten

actor was, in truth, the most talented performer in the play. Such, in a sense, was history's role for Mr. James M. Cox, publisher, former Governor of Ohio, and presidential candidate.

World War I had ended in victory for our Nation and severe nationalism flooded this isolationist "fortress America" when Mr. Cox was given his cue. An intelligent man, he was politician enough to be aware of this feeling, but statesman enough to shun its exploitation. A lesser star would have recited the popular lines, but Mr. Cox, disciple of a "warped idealist" named Woodrow Wilson, cried out from the depths of the fortress for a foolhardy experiment called the League of Nations.

His political opponent, Mr. Warren G. Harding, swept him down in humiliating defeat beneath the wave of emotion. Teapot Dome was born of his victory and the dream of President Wilson died of it.

The actor was never called back for his encore, although he went on to wide success in the publishing field. He died Monday, at 87. At this late date, it would be considered disrespectful, perhaps, if we stood and applauded his performance at curtain call. But he deserves it.

Tribute to the Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. VAN PELT. Mr. Speaker, Wisconsin will long mourn the death of Senator Joseph R. McCarthy. On June 2, 1957, the American Legion, Department of Wisconsin, in session at Hurley, Wis., adopted a resolution in his memory. I request permission to insert this resolution in the CONGRESSIONAL RECORD. The resolution follows:

RESOLUTION OF SYMPATHY

Whereas the membership of the 11th district, the American Legion, Department of Wisconsin, has always held most high the principle of a 100-percent Americanism; and

Whereas we have felt most deeply the loss of our late Senator, Joseph R. McCarthy, one of our fellow Legionnaires and outstanding advocate of this principle: Now, therefore, be it

Resolved, That the 11th district, the American Legion, Department of Wisconsin, this 2d day of June 1957 in conference duly assembled at Hurley, Wis., unanimously devote 1 minute of silence in memory and honor of the late Senator Joseph R. McCarthy; and be it further

Resolved, That a letter of sympathy be sent to Mrs. Jean Kerr McCarthy, by the district adjutant, on behalf of the Legionnaires of the 11th district, the American Legion.

Mr. Speaker, I also request at this time, permission to include in the RECORD the text of a resolution adopted by the members of the Republican caucus of the 10th Wisconsin Congressional District expressing the sympathy of the group to Senator McCarthy's widow, Mrs. Jean Kerr McCarthy, and other members of the McCarthy family. The resolution follows:

We, the members of the Republican caucus of the 10th Congressional District of Wisconsin, do hereby resolve:

1. To extend to Jean Kerr McCarthy and the other members of the McCarthy family our heartfelt sympathy in the passing of Senator Joseph Raymond McCarthy.

2. To express our appreciation for the services of Senator McCarthy to the people he represented and to the Nation at large.

3. To express our gratitude for the example set by Senator McCarthy in his allegiance to the principles in which he believed.

There Is Need For Flood Control

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. H. CARL ANDERSEN. Mr. Speaker, a major flood or other such natural disaster creates two significant problems. First, of course, is the need for immediate relief action to prevent suffering and privation of the people involved and assistance in the rehabilitation of homes, businesses, farms, and public facilities. Second, emphasis is given to the need for constructive action where possible to prevent recurrence of such damaging disasters.

A flood is one of the very few natural disasters which can be prevented or, at least, its damaging effects minimized. Flood protection and flood prevention cost money, often lots of money, but these are capital investments and they result in permanent improvement of our Nation. By contrast, floods themselves cost lots of money but they represent total losses—many times losses of topsoil and other property which can never be restored or replaced.

When we weigh the two in the economic balance, there can be no argument about it. As long as it is going to cost us money one way or the other, who is there to say that it is not best to spend the money constructively rather than lose it destructively?

Under leave to extend my remarks, I am including the following editorial from the July 1957, issue of the REA News published at Alexandria, Minn. I commend it to every person interested in the preservation and development of our great national wealth and resources. It is objectively written and worthy of careful reading. The editorial follows:

THERE IS A NEED FOR FLOOD CONTROL

The recent floods in Minnesota which have resulted in millions of dollars worth of damage to cities, towns, farm buildings and crops, are just further proof that Congress should appropriate funds to build large and small dams and to put into effect other necessary flood control measures.

The Nation as a whole has been hard hit by floods this year in Texas, Oklahoma, Connecticut, the Pacific Northwest and in other areas, with total damage costs in the billions, to say nothing of lives lost.

Congress has been trying to get flood control appropriations through, but those supporting such measures have been strongly opposed by people who call these programs "pork barrel" projects. Much of the opposition, no doubt, comes from people who live in the comfort and safety of metropolitan, flood-free areas. We wonder if they would so strongly oppose these appropriations were they to actually see what a flood-stricken area looks like, or if they were to suffer through a flood.

Senator JOHNSON recently said in Senate debate:

"I doubt whether any other single form of appropriation of Federal funds is returned to the American people in such a direct and tangible form as the money we have spent for dams to control our rivers. The cost of these projects is an investment in the future of our country—and not the far distant future, either."

Johnson reported that the Federal Government had invested $65 million in a flood control project in north Texas, and said the Army Corps of Engineers, conservatively, estimated that this project had saved $68 million in damage during this year's floods.

Senator BUSH, of Connecticut, said that had $8 million been appropriated for dams in his State back in 1947, there would have been some $90 million of damage avoided during the floods of 1955, to say nothing of lives saved.

The Tulsa (Okla.) Daily World reported April 29:

"Farmers in the Double Creek Valley here had waited 3 years to see if the Government's network of small upstream dams would hold back the raging waters once it rained enough to send the creek on a rampage.

"The test came last week when more than 6 inches of rain were dumped on the Double Creek watershed in 10 days, and it was still raining Monday. In previous years that much water would have flooded 2,000 acres in the valley, destroying crops on more than 40 farms.

"But this time there was no flood. The dams held back the water.

"Farmer James Little said he believed he would have had 'more than 800 acres on his farm flooded if it hadn't been for the dams.'

"Farmer Floyd Hand was enthusiastic about the dams. 'We can sleep at night now when it rains, since the flood hazard is removed and we don't have to worry about losing our crops.'"

This writer does not pretend to be an expert on flood control * * * that is a job for the Army Corps of Engineers and other experts. But it seems rather senseless to allow these floods to take place if effective measures could be taken to prevent them. It seems senseless to wait for a flood to happen, declare an area a disaster area, and then have to spend Federal and Red Cross funds to help the people. Funds spent before the tragedy occurs are worth much more than funds expended after people have lost their lives and properties.

We need an effective flood-control program, not only in Minnesota, but all over the Nation in affected areas. As the gross national income indicates, we are a wealthy Nation. Certainly, a very small portion of this wealth could be used to protect our people from rivers which turn destructive during heavy rains.

Where Did Big Economy Drive Go?

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. DAVIS of Georgia. Mr. Speaker, the following news item from the Chicago Daily Tribune was forwarded to me by a good American and believer in constitutional government, with this comment:

It is difficult to believe that this could happen in the United States of America.

It is indeed difficult to believe that this sort of thing can be carried on. It is outrageous that the apostles of big spending have now worked out programs under which the taxpayers of America pay the cost of schemes of this kind to brainwash the public. I insert herewith the article by Willard Edwards:

[From the Chicago Daily Tribune of July 15, 1957]

WHERE DID BIG ECONOMY DRIVE GO?—HOW AGENCY REVERSED TIDE OF LETTERS

(By Willard Edwards)

WASHINGTON, July 14.—Congressional investigators are nearing a solution to one of the great mysteries of the 1957 session.

The mystery: What happened to the big economy drive of a few months ago which was sparked by a tremendous flood of mail from indignant taxpayers?

Evidence gathered thus far by House Government Operations Subcommittee, headed by Representative HARDY (Democrat, of Virginia), indicates the following:

The Government used taxpayers' money to launch a propaganda drive in behalf of continued big spending.

The State Department dipped into "emergency funds" to pay for "public opinion polls" which allegedly showed the vast majority of Americans in favor of keeping foreign aid spending at high levels. These were "leaked" to Washington and New York newspapers.

PRESSURE ON CONGRESS

Special letter-writing drives were organized to pressure Senators and Representatives who were outspoken in favor of reducing the Eisenhower foreign spending budget.

This last operation functioned so swiftly, in response to Washington orders, that some legislators were astounded when they received telegrams urging them to support President Eisenhower's radio and television appeals for spending abroad. The wires were sent before Mr. Eisenhower began speaking.

As a result of this organized drive, economy sentiment began to wane in a Congress which, in any event, was conditioned to swollen budgets. Written protests of the hundreds of thousands, who joined last February and March in spontaneous demands for budget reductions, were forgotten. Logrolling (the swapping of votes for pet spending projects) helped keep appropriations large.

HERE IS AN EXAMPLE

The experience of Representative GLENARD P. LIPSCOMB (Republican, of California), a member of the investigating subcommittee, furnished a revealing example of how the administration moved to pressure Congressmen.

LIPSCOMB, 42, was a senior partner in a public accounting firm in Los Angeles before he came to Congress. His professional training gave him a pronounced aversion to huge Government spending.

LIPSCOMB, like other Members of Congress, was overwhelmed by mail from his constituents early this year attacking the President's $71 billion budget and criticizing, in particular, the President's request for more than $4 billion in foreign-aid spending.

ASTONISHED AT POLL

He was, therefore, astonished in February to note a page 1 story in the Washington Star which revealed that public opinion polls taken by the State Department showed the American people 90 percent in favor of continued high spending abroad.

LIPSCOMB wrote John Hollister, head of the International Cooperation Administration which administers the foreign-aid program, asking for information on how these polls were taken and who paid for them. The use of public funds to propagandize the American people in behalf of foreign aid was specifically forbidden by Congress in 1952 under an amendment sponsored by Senator DWORSHAK (Republican, of Idaho).

LIPSCOMB received a reply from a Hollister aid which stated that the requested information could not be supplied—it was for official use only.

CHANGE IN MAIL

Almost immediately LIPSCOMB noted a curious change in his mail. A number of his constituents, who had not previously shown interest in his attitude, began writing urgent appeals that he support the foreign-aid program.

Subcommittee hearings last week pointed to Mrs. Elinor K. Wolf as a key figure in the ICA's propaganda efforts. Mrs. Wolf is an old hand in promoting foreign spending. She was a protege of Paul G. Hoffman, former director of foreign aid when it was known as the Economic Cooperation Administration, and a leader of the committee for the Marshall plan back in the forties.

Mrs. Wolf was hired last January 17 by William J. Caldwell, Director of the Office of Public Reports, ICA, as a $30-a-day consultant.

He testified that her job was to provide information for study groups, labor organizations, and foreign-aid-groups in line with his Department's objective—to put the mutual security program in its proper perspective and correct public misconceptions. Caldwell vigorously denied that his office put out propaganda in violation of the Dworshak amendment.

Mrs. Wolf compiled a long list of organizations to which she forwarded material in behalf of the foreign-aid program. She also, according to reports, stimulated the letter-writing campaigns to Congressmen opposed to foreign spending but Caldwell said he knew nothing about this.

ADMITS HER PART

Mrs. Wolfe's services were abruptly terminated April 18 when ICA Director Hollister discovered the nature of her duties.

Hollister told Caldwell to fire her because her employment was an unjustifiable expense on the taxpayer. Hollister has since announced his resignation.

Mrs. Wolf later admitted that she helped organize the sending of telegrams and letters to Congressmen urging support of President Eisenhower's foreign-aid appeals.

The investigating staff confronted Caldwell with a memo dated February 4 urging release of the public opinion polls which contradicted congressional mail showing popular demands for a cut in foreign spending. Caldwell admitted slipping the poll results to the Washington Star and the New York Times.

The memo mentioned admiringly the educational program which preceded the Marshall plan 10 years ago and advocated a new educational program to counteract a public impression that the foreign-aid program was a giveaway.

"You were putting out propaganda rather than legitimate information," HARDY accused the witness.

The Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include the following resolution recently adopted by the Young Republican Club of Arlington, Va., an outstanding club in my district, in behalf of our late Senator Joseph R. McCarthy:

Whereas death claimed the junior Senator from Wisconsin on May 2, 1957; and

Whereas the junior Senator from Wisconsin helped to awaken the American people to the intrigues of international communism; and

Whereas Senator McCarthy was one of the most tireless workers in the Republican Party; and

Whereas Senator McCarthy was to many Republicans more than the junior Senator from Wisconsin because of his fight against communism and his work for the party: Therefore be it

Resolved, That the Young Republican Club of Arlington, Va. expresses its sympathy at his untimely death; and further

Resolved, That a copy of this resolution be sent to the Senator's widow, Mrs. Jean Kerr McCarthy.

Communism and Courts

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the folowing resolution:

RESOLUTION 41, COMMUNISM AND COURTS

Whereas every Russian Communist leader from the inception of the movement to the present has publicly announced the destruction of the United States of America as a cardinal aim of communism in terms as clear as those of Hitler in Mein Kampf; and

Whereas the evidence of the aims of the Communist Party of the United States of America so clearly establishes that organization as a dedicated member of an international conspiracy, under the absolute control of the U. S. S. R., devoted to the forceful overthrow of the Government of the United States of America, that even the Supreme Court of our Nation has been forced to recognize this fact; and

Whereas public knowledge of the menace is gravely lacking and recent court decisions protect the conspiracy to such an extent that additional publicity and legislation are obviously necessary: Now, therefore be it

Resolved, That the hereinafter listed provisions be accepted as a part of the official position of the Department of Virginia, Veterans of Foreign Wars of the United States on communism and that wherever indicated, such action as is necessary to activiate any provision be taken.

1. We recognize the Communist conspiracy as the threat that it is to the security of our Nation and pledge ourselves to combat it with all legitimate means in our power.

2. (a) We recognize and appreciate the magnificent efforts of the Senate Subcommittee on Internal Security of the Judiciary Committee under Senator JAMES O. EASTLAND and of the House Committee on Un-American Activities under Representative FRANCIS E. WALTER and recommend that the 58th National Encampment of the Veterans of Foreign Wars of the United States adopt a resolution vigorously endorsing the continued existence of these committees and, in view of recent court decisions curtailing their investigative activities, recom-

mending such legislative action as is necessary to enable these committees to function in an unhampered manner including prohibition of the abuse of the fifth amendment.

(b) Sympathetically consider the 1957 recommendations of the aforementioned committees and adopt a resolution recommending that Congress enact legislation covering those recommendations which are approved by the National Encampment.

(c) That copies of this resolution be sent to Senator EASTLAND and Representative WALTER as an expression of our appreciation of their efforts and of the service rendered by their committees.

3. That we endorse the activities of Comrade MCNAMARA and his American sovereignty campaign and recommend the wider dissemination of his publication and if feasible by its regular incorporation in the National magazine.

4. That we recommend a resolution by the 58th National Encampment endorsing the enactment by Congress of the following legislation.

(a) Empowering the various States to legislate against subversive activities within their borders.

(b) Protecting the secrecy of FBI files on subversive activities.

(c) Permitting the expulsion of subversive employees from nonsensitive agencies of the Federal Government.

5. We recommend that the 58th national encampment review all recent Federal court decisions which hamper the investigation and prosecution of communism and formulate a comprehensive resolution or resolutions pressing for such legislation as is necessary to protect the United States against subversion.

6. In addition to our condemnation of communism, we unqualifiedly oppose totalitarianism in any form.

Approved by the 35th annual Department Encampment, Department of Virginia, which convened in Ocean View, Va., June 16–19, 1957.

Indecisive Ike

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ABBITT. Mr. Speaker, it is apparent that very little study was given to the so-called civil rights legislation by the Chief Executive before his bill was introduced. It is also apparent that very little study has been given to this legislation by the Chief Executive since its introduction until now. I hope that in view of the debate in the House and the Senate which brought out so vividly the evils of this bill that the President of the United States, who is the President of all of the people, will give serious thought and study to this legislation so that he will know what his bill contains, the evils it foists upon the American people and at least try to have the legislation amended so as to conform to what he says he wanted in the bill.

Now for the first time during the long controversy over this legislation which has been going on since January, the northern press is beginning to publish accounts of all phases of the legislation. I hope this will continue so that the people in all sections of the country will be fully informed as to just what this legislation permits the Federal Government acting through one official can do to the rights and freedoms of the people of this country.

On Thursday, July 18, 1957, there appeared an editorial in the Richmond News Leader entitled "Indecisive Ike." It is a splendid editorial pointing out facetiously the lack of knowledge of what this legislation contains on the part of the President.

In the hope that it will be read by some of the people in all sections of this country, I am including it with my remarks. The editorial is as follows:

INDECISIVE IKE

It was on July 3 that James Reston of the New York Times addressed a question to Mr. Eisenhower. The President, said Mr. Reston, had twice described his civil rights bill as fair and moderate; now Senator RUSSELL had asserted the bill was not really a measure to protect a right to vote, but actually was a cunning device to enforce school integration. Would the President care to comment on that?

Well, said Mr. Eisenhower, he knew what he was seeking, and that was a law to prevent anybody from illegally interfering with anybody else's right to vote. He wanted a civil rights division in the Department of Justice, and he wanted a commission to investigate these things. It was rather incomprehensible to him that respected men would suddenly make statements that the bill would lead to disorder.

Mr. Reston persisted. In the light of those comments, would the President be willing to see the bill rewritten to deal specifically with the right to vote, and not with school integration?

"Well, I would not want to answer this in detail," said Mr. Eisenhower, "because I was reading part of that bill this morning, and I—there were certain phrases I didn't completely understand."

The President's obvious uncertainty about the bill gave hope to opponents, and caused some consternation among the measure's supporters. Senator KNOWLAND of California, leading Republican advocate of a strong civil rights bill, visited the White House to stiffen the President's spine. He returned—this was on Monday—with a statement that the President approved the bill as it appeared before the Senate; indeed, the President regarded all four sections of the bill as highly desirable.

On Tuesday afternoon, while the President was out playing golf, Press Secretary Hagerty released a still stronger statement of White House support. The President did not intend to retreat or compromise.

Yesterday reporters had another direct go at the President. The first question came from Merriman Smith of the United Press: What about the use of Federal troops to enforce school integration orders? Mr. Eisenhower replied that he couldn't imagine any circumstances that would ever induce him to use troops, and he certainly was not seeking additional authority of that kind.

Later in the conference, Rowland Evans, Jr., of the New York Herald Tribune gained the floor. He asked if the President were convinced "that it would be a wise extension of Federal power at this stage to permit the Attorney General to bring suits on his own motion to enforce school integration in the South."

Mr. Eisenhower seemed to be completely befuddled. The transcript reads:

"Well, no; I have—as a matter of fact, as you state it that way, on his own motion, without any request from local authorities, I suppose that is what you are talking about—

"Yes, sir. I think that is what the bill would do, part III.

"Well, in that we will see what they agree on * * *. I personally believe if you try to go too far too fast in laws in this delicate field, that has involved the emotions of so many millions of Americans, you are making a mistake. I believe we have got to have laws that go along with education and understanding, and I believe if you go beyond that at any one time, you cause trouble rather than benefit."

Is it any wonder that even Senator DOUGLAS of Illinois, a rabid partisan of civil rights legislation, suggested extended debate to educate Mr. Eisenhower? It should be evident to the President by this time, if he reflects on the matter for so much as 5 minutes, that he has been thoroughly victimized by his palace guard.

He wanted a bill relating to the right to vote. Such proponents of the pending bill as Senator JAVITS of New York now are confessing, for the first time, that the measure really is designed to enforce school integration. Voting rights are secondary.

The President was shocked to learn that his bill is cunningly tied to an old reconstruction statute authorizing the use of troops to enforce court orders. Yet that is the status of the bill.

Mr. Eisenhower plainly is not aware that his bill permits his Attorney General to obtain ex parte injunctions—that is, injunctions granted without a hearing to the defendants—compelling school integration. He does not comprehend that the filing of such proceedings does not depend upon any request from local officials; he does not know suits could be brought without even the consent of named plaintiffs.

To this moment, the President of the United States has not the foggiest notion of what his own bill is all about, what it says, what it does, what it would mean. And if a President is so easily misled, so wholly befuddled, what of men in lesser offices? Does the Senate of the United States really propose to act in this disorderly confusion, this morass of misunderstanding?

Mr. Eisenhower's performance is, in a way, pathetic. The Senate's performance is disgraceful.

Tribute to the United States Marines

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of Admiral Arleigh A. Burke, our very able and distinguished Chief of Naval Operations, who recently returned from an inspection of the Mediterranean maneuvers of the Sixth Fleet. His military evaluation of the Marine Corps fighting units is highly significant and very gratifying to those of us who have served in the Marine Corps.

Admiral Burke's report follows:

During our recent visit to Sixth Fleet, I inspected the 1st Battalion, 2d Marines. It is an impressive organization, in fine combat condition, and ready if needed. This battalion is typical of what I see everywhere when visiting Marine Corps units. I continue to be impressed, but certainly not surprised, by the efficiency with which the Marines are doing their job throughout the world. The strategic versatility of our sea-

power was enhanched by the combat-readiness of the Fleet Marine Force units which embarked in Japan and sailed to the Persian Gulf during the Suez crisis. The ready-to-go FMF units with Sixth Fleet gave Cat Brown a powerful and immediately available high card during the Jordanian difficulties. It's the same everywhere—the Marines are ready.

This capability to move instantly and to be combat ready on arrival is not achieved by accident. It is the result of outstanding leadership and a lot of hard work. The leadership of the Marines from their Commandant on down has been and continues to be outstanding. With such leadership, we in the Navy can be confident that the Marines will continue to be ready and able to pitch in and help with any job we undertake.

Legislation by Scare

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. MULTER. Mr. Speaker, the following editorial from the New Republic of July 15, 1957, is most timely:

LEGISLATION BY SCARE

We have heard and will continue hearing, from southerners in particular, that considered deliberation is an essential of democratic government. Legislation, especially legislation concerning civil rights, must not be rushed; all sides must be heard, and at length.

The theory is sound. But it would be more convincing if it were consistently applied. Take the case of one piece of civil rights legislation now before the Congress about which little has been written and on which there has been no debate—S. 2377, a bill designed according to its partisans to protect the FBI's confidential files from indiscriminate public scrutiny. We shall come later to some of the questionable contents of the bill; what concerns us at the moment is the speed with which it shot through the appropriate subcommittees and committees of both branches of Congress.

S. 2377 came up before the Senate Special Subcommittee on Improvement in the Federal Criminal Code on June 28. Two, and only two, witnesses were called to testify. Both spoke for the bill—Attorney General Brownell and Assistant Secretary of the Treasury David W. Kendall. Immediately after their statements, the subcommittee approved and forwarded the bill to the full Judiciary Committee, presided over by that illustrious advocate of unlimited debate, Senator JAMES EASTLAND, of Mississippi. On July 1, the full committee took up the bill, and within a few minutes, it, too, approved it. No further witnesses were called upon, nor were any dissenting statements placed in the RECORD.

Similarly in the House, the bill was endorsed by both the subcommittee (June 27) and the full Judiciary Committee (July 2) on the same days it came before those bodies. The only witnesses were Mr. Brownell, Mr. Kendall, and Representatives Kenneth Keating and Francis Walter.

Why the speed? Because on June 3, in its ruling in the Jencks case, the Supreme Court directed the Government to produce the statements made to the FBI by witness Harvey Matusow, and restated the traditional proposition that Government may not undertake to prosecute someone and then invoke its privileges to deprive the accused of information which might be material to his defense. Nothing radical in that. As the dean of the Harvard Law School put it, the opinion "simply blueprints procedures used right here in Boston and every criminal court."

But that is not the impression of the Jencks ruling one got by reading the newspapers. A front-page story in the New York Herald Tribune signed by Don Whitehead, author of The FBI Story, opened with the dramatic warning that, "the FBI is prepared today to drop out of the prosecution of espionage and criminal cases if such a drastic step should be necessary to protect the confidential nature of its files."

Attorney General Brownell warned of a "grave emergency." Nothing so frightening had been heard in Washington since Postmaster Summerfield threatened to slow up mail deliveries if the Post Office were not given more money, or since Secretary Dulles said communism would take over the Middle East if the Eisenhower doctrine were not approved. There was no time to waste in, say, reading what Brownell's legislation said.

And what it says is worth reading. It would, among other things, deny the defense in criminal trials access to any FBI reports which were not signed or otherwise approved by the witness, thus permitting the FBI in effect to determine itself whether any statements it takes down will ever be disclosed. S. 2377 also would permit the Government to withhold even those portions of FBI reports which the trial judge has ordered turned over to the defense. Under one provision of the Brownell bill, the judge would then have an option: He could declare a mistrial or, and this is new, he could proceed with the trial and merely strike out of the record all testimony of the prosecution witness concerned. In effect, then, the bill invites a relaxation of rules governing mistrials.

Address of Brig. Gen. John L. Person, Assistant Chief of Army Engineers at Dedication Ceremonies Held at Wilkes-Barre, Pa., on Tuesday, July 16, 1957, Upon Completion of the Multi-Million-Dollar Flood Control System for the Wyoming Valley Area

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address:

REMARKS OF BRIG. GEN. JOHN L. PERSON, ASSISTANT CHIEF OF ARMY ENGINEERS, AT GREATER WILKES-BARRE FLOOD CONTROL DEDICATION CEREMONY, WILKES-BARRE, PA., JULY 16, 1957

I am very happy and honored to have been invited to take part in these ceremonies which dedicate the multimillion flood-control works in the greater Wilkes-Barre area.

General Itschner, the Army's Chief of Engineers, has asked me to express his regrets for not being able to attend. Other earlier commitments have made it impossible for him to be present.

I feel that the flood protection which has been completed in the Wyoming Valley places me in an enviable position among my comembers of the Armed Forces. From time to time, all of the military services find themselves called upon to assist a local community in an emergency. When they have finished that job, the soldiers, sailors, airmen, or marines return to their primary task of training for the military defense of America.

We in the Corps of Engineers, however, find ourselves with a twofold assignment. In addition to our combat mission and our military construction responsibilities, we have been charged with another great responsibility—to investigate, plan, design and construct flood-control and navigation improvement projects that enable American citizens to work for the future of our Nation.

Now, I am sure that you, of all people, know that floods are costly. There is damage whenever a river overflows its natural banks. Farmlands and crops are washed away or burdened with undesirable waterborne debris. Homes are flooded and furnishings are quite often ruined. Lives may be lost, people made homeless and health endangered. Industries are forced to shut down during the flood period and usually remain shut down for weeks, or even months, while repairs are being made and flood-borne debris is being cleaned up. This results in loss of production with losses for the owners and loss of wages for the workers. Also of importance is the disruption of transportation and communication. This happens because river valleys offer natural avenues which have been followed by highways, railroads, and communication lines. Floods often wash out these facilities and by so doing have economic effects reaching far beyond the river basins in which the floods occur.

Flood stage at Wilkes-Barre, the river height at which the Susquehanna River used to overflow its natural banks, is 22 feet. There are records of many such overflows. There is, for instance, a detailed account of the famous "pumpkin" flood of 1786 which occurred at harvesttime and which got its name because it brought down a large number of pumpkins bouncing along on the crest of the floodwaters and striking like cannonballs into the sides of houses and barns right here in the Wyoming Valley. But the greatest floods of which we have record were in March 1936 and March 1865. Both reached a stage of 33.1 feet. The 1936 flood alone caused damages of $3,780,000 at Wilkes-Barre and Hanover Township; $3,930,000 at Kingston and Edwardsville; $1,320,000 at Plymouth; and $420,000 at Swoyersville and Forty Fort—a total of $9,450,000. At today's prices, it would, of course, be very much more.

For the people of Luzerne County who were just beginning to make a comeback following this Nation's worst economic depression, the 1936 flood was a serious blow. The flooded area in Kingston extended back for more than a mile and a half from the river, that in Wilkes-Barre and Hanover Township for distances ranging up to a mile. Many were homeless. Industry and commerce were shut down. To say that the communities here in the Wyoming Valley were crippled, and crippled badly, is certainly not exaggerating.

Although some progress in flood protection was made a short time before, the important financial support needed to accomplish the projects we dedicate today came after the first Flood Control Act was passed by Congress and approved by the President on June 22, 1936. With the authority

granted by that act, the United States Army Corps of Engineers undertook flood-control work in the Wyoming Valley. The Baltimore district engineer was assigned the responsibility of doing the job.

In spite of the delays caused by World War II and the Korean emergency, the task in this valley which was initiated by and authorized by the 1936 act, has now been completed.

Lest I mislead you into thinking that only the Federal Government has had an interest in providing flood control for Luzerne County, let me state that you, yourselves, have made a substantial contribution to these projects. Nearly one million dollars in funds, in rights-of-way and in real estate have been contributed by local interests—the Commonwealth of Pennsylvania, Luzerne County, the city of Wilkes-Barre and the various boroughs in this valley receiving this flood protection. In addition, the city of Wilkes-Barre, the boroughs and the county officials have undertaken the maintenance and operation of these completed works. This is a most important job. For these flood-control works will serve you well, will protect you from floods, only if they are property maintained and operated.

To date, the benefits already realized from Wyoming Valley flood control include savings of more than $34 million in flood damages which have been prevented. They already represent 2½ times the cost of the flood-control works which we dedicate today. But the benefits have been much more than that. They include security and safety and the opportunity to build without fear that what you build may be swept away next year by floodwaters.

Now this work is finished, but we should not forget that the reservoirs yet to be built in the watershed of the Susquehanna upstream from here will add still more to the protection of this valley.

Your chamber of commerce is striving to increase the prosperity of this area by inviting more diversified industries to settle here. A recent story in one of the local papers stated that Scranton and Wilkes-Barre are rated 40th among the Nation's retail markets and that they comprise the third marketing area in Pennsylvania. I trust that the work accomplished here by the Corps of Engineers has contributed to and will be instrumental in the growth and progress of your communities. Added to this are my fervent best wishes for your future safety and well-being along the banks of this Susquehanna River.

Comparison of Proposed Hells Canyon Dam With Three-Dam Project Licensed by Federal Power Commission

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following comparison of proposed Hells Canyon Dam with three-dam project licensed by the Federal Power Commission:

Comparison of proposed Hells Canyon Dam with 3-dam project licensed by FPC

[All figures in this tabulation are from Government sources and records]

	FPC 3-dam licensed project	Proposed Government dam at Hells Canyon
1. Power output, dependable capacity (see note on item 1).	767,000 kilowatts (FPC finding No. 32; staff exhibit 375).	785,000 kilowatts (FPC staff exhibit 367).
2. Average annual energy production (see note on item 2).	5,720,000,000 kilowatt-hours (BPA power study, June 15, 1956).	5,185,000,000 kilowatt-hours (BPA memorandum, Aug. 11, 1955, Committee Print 1–A, S. 1333, p. 16).
3. Cost of project (see note on item 3)	FPC estimate $175,766,000	USBR, estimated; letter of Secretary of Interior, July 1, 1957 (House hearings on S. 555, p. 215) $343,000,000
	Company and contractor's estimate 133,000,000	Transmission lines 129,500,000
	Transmission lines 21,000,000	Total cost 472,500,000
	Total cost 154,000,000	
4. Power cost, at market (see note on item 4)	3.15 mills, before taxes (FPC staff exhibit 372); 4.5 to 5 mills, including taxes paid.	3.79 to 4.4 mills (no taxes paid); testimony of USBR witness, S. 555 hearings, p. 89; Army and USBR reports on Hells Canyon estimate power costs at 4 to 4.4 mills.
5. Benefit-to-cost ratios (see note on item 5)	2.5-to-1 (examiner's finding 161)	1.83-to-1 (examiner's finding 160).
6. Availability of power to entire region	Yes; required by FPC license	Yes.
7. Active storage space	1,000,000 acre-feet	3,880,000 acre-feet.
8. Effective storage for flood control	do	2,300,000 acre-feet.
9. Annual flood-control benefits (see note on items 9–11)	$1,000,000	$2,300,000.
10. Navigation benefits	$108,000	$189,000.
11. Recreation benefits	Larger dam might attract more tourists, but "insofar as hunting and fishing are concerned, the 3-dam plan would probably be superior" (FPC decision, p. 11).	
12. Taxes payable (per year)	Federal (per year) $5,790,000	Federal: None.
	State (per year) 3,960,000	State: None.
	Total (per year) 9,750,000 (House hearings on S. 555, p. 276.)	
13. Power revenues to aid reclamation	Yes; if Congress so provides	Yes; if Congress so provides.
14. Development of phosphate fertilizer	No difference. Transmission cost alone for Federal power, 400 miles to phosphate beds, would be 2 mills per kilowatt-hour (testimony of BPA chief engineer, House hearings on Interior Department appropriations for 1955, p. 1211).	
15. Development of electro-process industry	No difference, with cost and losses for transmission to areas where labor and transportation are available for industry location.	
16. Best plan of comprehensive river development	Yes. FPC found (decision, p. 19) that the 3-dam plan is "best adapted to a comprehensive plan of development."	No. FPC recommended (decision, p. 19) that the United States should not undertake the development of Hells Canyon.

NOTES

Item 1. Power output: Government dam proponents compare power output figures of 924,000 kilowatts for the Hells Canyon Dam, as against 505,000 kilowatts for the 3 dams licensed by FPC, derived from the report of the FPC hearing examiner. The report itself shows, however, that these figures are not comparable: The 505,000 figure for the 3 dams is "at site" power production only (the comparable output from the high dam is 513,000 kilowatts); the 924,000 figure for the high dam is at site power, plus power assumed to be produced at 8 plants farther downstream, 5 of which are not in existence. To build these 5 additional plants would cost the Government another $873,000,000 (Public Works Appropriation for 1958, hearings, pp. 129, 144). Even this added cost would not change the dependable capacity comparison as, if these 5 plants were constructed, FPC staff exhibit 367 shows that the dependable capacity would be: High dam, 800,000 kilowatts; 3-dam licensed project, 783,000 kilowatts.

Item 2. Average annual energy production: When the high dam reservoir is low, the turbines could not operate efficiently, and Hells Canyon would produce less power than the 3 dams. At the 1952 hearings on H. R. 5743, p. 360, the Power Manager of BPA testified that in low water years, generation at the high dam would have to be cut down to only 66,000 kilowatts for 3 months of the year. (See also note to items 7–9, below.)

Item 3. Cost of project: The above estimates do not include other costs included in the pending bills to authorize Hells Canyon. Total costs authorized by these bills would amount to over half a billion dollars. The Secretary of the Interior reports (letter of July 1, 1957, House hearings on S. 555, transcript, p. 215) that the construction authorized by the Hells Canyon bills would require appropriations averaging more than $87,000,000 per year for the next 6 years.

Item 4. Power cost: A power-cost comparison, appearing in a tabulation prepared by high-dam proponents, of 2.7 mills for the high dam, as against 6.69 mills for the 3 dams, is based not only upon the incomparable "power output" figures in note 1, but also upon an assumed construction cost for the 3 dams of $191,000,000 (see item 3 in above tabulation), and upon assumed operating costs "370 percent higher" than the actual costs of the Idaho Power Co. The examiner made this clear in his report (pp. 17, 19).

Item 5. Benefit-to-cost ratio: The FPC findings (Nos. 33–35) show a benefit-to-cost ratio for the 3 dams of 1.3 to 1 on power output alone, without giving credit for the flood control and navigation benefits (over $1,100,000 annually) resulting from the licensed project. The ratios shown for the high dam include these benefits. Thus the actual benefit-to-cost ratios are even more in favor of the 3-dam project than indicated in item 5, in the tabulation, above. FPC Staff Exhibit 372 showed that the additional power from the high dam would cost (annually) $8,189,000, and would have a market value of only $5,221,000—i. e., a benefit-to-cost ratio of only 0.64 to 1—and would therefore be economically unfeasible.

Items 7–9. Comparative storage capacity: The 3,880,000 acre-feet of storage space behind the big dam cannot be filled except in about 4 years out of 20; the 1,000,000 acre-feet of storage in the FPC licensed project can be filled every year (hearings on H. R. 5, chart, transcript, p. 237). The FPC found (decision, p. 9) that the 1,000,000 acre-feet of storage in the 3-dam licensed project is consistent with the Army's flood-control plans.

Items 9–11. Flood control, navigation, and recreation: The FPC found (decision, p. 11) that "the public purposes such as flood control, navigation, and recreation could be effectuated to about the same extent under either plan of development."

Professor Hits Cigarette-Cancer Link

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ABBITT. Mr. Speaker, every few years certain people raise the old tobacco-cancer scare. For what reason I do not know. We see it being prominently played up in the press again at this time.

There appeared in the New York Journal-American issue of Wednesday, July 17, 1957, a news article by Walter Bazar entitled "Professor Hits Cigarette-Cancer Link" and in the same issue there appeared an article by Leslie Gould, financial editor of the New York Journal-American entitled "Too Much Talk, No Evidence, So We'll Keep On Smoking."

Under leave to extend my remarks, I include the two articles, which are as follows:

PROFESSOR HITS CIGARET-CANCER LINK
(By Walter Bazar)

A prominent medical pioneer in cancer research today challenged the theory that cigaret smoking is a cause of human lung cancer.

Evidence from both statistical and experimental approaches to the theory "does not appear sufficiently significant to me to warrant forsaking the pleasure of smoking," declared Dr. Harry S. N. Greene, chairman of the Department of Pathology, Yale University.

CITES ENVIRONMENTAL FACTORS

Dr. Greene stated his reasons for doubting that existing "evidence" shows a cause-and-effect relationship between tobacco and lung cancer in his introduction to the new book, "Science Looks at Smoking."

The book, written by Eric Northrup, feature editor of Scope Weekly, a national medical newspaper, was published by Coward-McCann, Inc.

Of reports that the incidence of lung cancer has been rising, Dr. Greene wrote:

"Despite the absence of definite proof in one or the other direction, the assumption generally has been made that the incidence has increased and this has been considered as a clue in the search for a related environmental agent.

"STATISTICAL STUDIES NOTED

"Many factors in man's environment have changed in the past 50 years and several of these pertain to lung cancer. The atmosphere has become polluted with the exhaust gases of industry and automobiles; tobacco smoking has become a universal habit; and X-ray examination for the early detection of tuberculosis has become a standard procedure to which many individuals are subjected at frequent intervals.

"There are many other factors, any one of which shows an increase in prevalence comparable to that believed to obtain in lung cancer; but for reasons that appear more subjective than objective, major attention has been directed toward smoking."

Of statistical studies, Dr. Greene declared:

"Nearly everyone is familiar with the statistical studies purporting to establish a casual relationship betwen cigarette smoking and lung cancer. These studies have been the subject of a barrage of propaganda both in the press and over the radio, and the controversy has provided the entertainment world with much free talent.

"The arguments go on endlessly, for, like the question of how many angels can sit comfortably on the head of a pin, there are no pertinent data on which to base a definite answer."

Northrup wrote of the recently released American Cancer Society statistical study on smoking and lung cancer. It was based on interviews by 22,000 volunteers of 188,000 men between 50 and 69.

"The only questions asked," Northrup wrote, "had to do with their smoking habits. No questions were asked about their general health, occupations, family background * * * amount and kind of industrial and other pollution in their surroundings. The experiment was dropped after 4 years, although cancer requires from 20 to 30 years of latent development."

OTHER QUESTIONS POSED

Concerning experiments with mice, the book states that "mice are highly susceptible to cancer from many agents including sugar and olive oil."

Other questions posed by the book:

If smoking causes cancer, why don't as many women die of cancer as men? The ratio is 5 to 1. As many women smoke as do men, the book states. And why, it adds, do as many women as men die of cancer in industries where other known cancer-producing elements are present?

If smoking causes cancer, why has there been no increase of cancer of the mouth, larynx, tongue, lips, windpipe?

If smoking causes cancer, why do lung cancer death rates vary so sharply from country to country and from region to region, regardless of smoking habits?

TOO MUCH TALK, NO EVIDENCE, SO WE'LL KEEP ON SMOKING
(By Leslie Gould)

As a longtime cigarette, cigar, and occasional pipe smoker, we're getting fed up with some parts of the medical profession, including the United States Public Health Service.

There is or there isn't a tie-in of cigarette smoking to lung cancer.

From public statements of the Surgeon General of the United States—Dr. Leroy E. Burney—we don't know. And we don't think he does.

Last week he issued a long report which got some page 1 scare headlines:

"United States Study Confirms Cigarette-Cancer Tie."

"United States Links Cancer With Cigarettes. Health Service Cites Data."

Dr. Burney started off that report, saying the Public Health Service was concerned with broad factors which substantially affect the health of the American people and has a responsibility to bring health facts to the attention of the health profession and the public.

MAKES STRONG STATEMENT

Then he teed off, saying in light of certain studies it is clear that there is an increasing and consistent body of evidence that excessive cigarette smoking is one of the causative factors in lung cancer.

He went on:

"Many independent studies thus have confirmed beyond reasonable doubt that there is a high degree of statistical association between lung cancer and heavy and prolonged cigarette smoking."

In that and the succeeding trading day on the New York Stock Exchange, shares of the 5 leading tobacco companies lost $29¼ million in value.

A few days pass and Dr. Burney, of the Health Service, clearifies his earlier statement. He backs up quite a bit. Speaking of benzypyrene, which has been found to produce skin cancer, Dr. Burney now says:

"There are some scientific studies which indicate benzypyrene has been identified in cigarette tars. There is no evidence to indicate, however, that benrypyrene in itself is present in sufficient quantities in cigarette tars to cause human lung cancer."

That's a lot different from his previous flat statement.

In his earlier scare report, Dr. Burney cited the "report of Dr. E. C. Hammond and Dr. Daniel Horn of June 5 to the American Medical Association in New York." He refers to them several times as Drs. Hammond and Horn.

"The average reader would assume, particularly with Dr. Burney linking them to the American Medical Association, that they are medical doctors. They are not. One is a "Ph. D." That is a doctor of philosophy. The other holds bachelor and doctor of science degrees. Their field today is chiefly statistical, not pulse feeling. One specialized earlier in child psychology. The other on "experimental population in lower organism," whatever that is.

CAUSE STILL UNKNOWN

The truth of the matter is that no one knows what does cause lung cancer. It could be air pollution—fumes from trucks, buses, and autos. In London, where there is a high incidence of lung cancer, the air breathed by the average Britisher contains the equivalent in benzypyrene to 100 cigarettes a day—5 packs. Who smokes that many?

Until there is better evidence than is now at hand, we will string along with Dr. Harry S. N. Green, chairman, department of pathology, Yale University. In an introduction to a just-published book Science Looks at Smoking, by Eric Northrupp, Dr. Green writes:

"The case against tobacco is derived mostly from statistical association and some experimental work with animals * * *. This evidence from both approaches, statistical and experimental, does not appear sufficiently significant to me to warrant forsaking the pleasure of smoking."

Pyrrhic Victory in Girard Case

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of July 12, 1957, commenting on the Supreme Court's decision in the Girard case:

PYRRHIC VICTORY IN GIRARD CASE

The Eisenhower administration won a Pyrrhic victory yesterday when the United States Supreme Court upheld the surrender of GI William Girard to Japan for trial in the death of a Japanese woman. Washington well may rue the day.

The Nation's highest tribunal reversed the ruling of Justice Joseph McGarraghy in the District of Columbia, barring the turning over of the American soldier to Japan on the ground that he was engaged in the performance of duty and his constitutional rights would be violated. Not even the administration disputed the fact that Girard was on duty at the time of the alleged offense, but

the Court held the administration trespassed on no provision in the law when it waived any right to try Girard.

Significantly, the Court added:

"The wisdom of the agreement is exclusively for the determination of the executive and legislative branches."

What gripes the American people is that assorted reds, pinks, punks, and racketeeers have full protection under the Constitution of the United States, but a defender of our country has none. This does not make sense.

The Court restricted itself to the narrow issue that since there was no law to the contrary there was no obstacle in the path of the administration. Congress, as the voice of the people, has a pressing obligation to meet that challenge with legislation that will leave no room for doubt about how far these status-of-forces agreements can go. There must be no question about the rights of servicemen, no matter what the diplomatic exigencies of the situation.

In effect, the State Department overruled the Defense Department which originally took jurisdiction in the Girard case. To all intents and purposes, Secretary of State Dulles replaced Secretary of Defense Wilson with the approval of President Eisenhower in a showdown on this issue in an obvious attempt to placate public opinion in Japan. This may be diplomacy, but it is not justice. Girard becomes a pawn and we frankly don't like it, even though he gets off lightly in a Japanese court and possibly might not fare so well in a United States court-martial. There is a principle involved that transcends all other considerations.

This ruling will have a tendency to destroy morale in the Armed Forces abroad. If every American serviceman is expendable diplomatically, he is on mighty shaky ground. This must not be.

The duty of Congress is clear in the light of the ruling of the Supreme Court. The loophole must be plugged. The time element may not make it possible to spare Girard, but his buddies in Japan and in other lands must be safeguarded.

The United States should go only so far in these pacts with foreign lands where our troops are stationed. It should not forfeit the constitutional rights of a serviceman under any circumstances or, for that matter, of any American citizen. We are not prepared to pay that price, for the preservation of the American way of life is the sole justification of all our sacrifices.

The Washington Jungle

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. MACDONALD. Mr. Speaker, I would like to call to the attention of the Members of the House an article which appeared in the well known Massachusetts newspaper, the Berkshire Eagle. It concerns our very hard-working and intelligent colleague from the State of Oregon, Congresswoman EDITH GREEN, who has set out some very amusing yet penetrating definitions which are helpful in defining certain aspects of life here in Washington.

The article follows:

THE WASHINGTON JUNGLE

(By Peter Potomac)

That time of the year has arrived—and fortunately almost past—when people from all over the country descend on their Nation's Capital to stare at the strange sights and stranger inhabitants of the Washington jungle. These people, while they are safely at home minding their own business are known as constituents and are usually considered to be fine upstanding people—"the backbone of the great State of ——."

But once they set foot within the Washington city limits (speed limit: 25 m. p. h.) they quickly become known by a less endearing term which I happen to know is quite popular in the Berkshires right now. ("Madam, I don't care if they are almost through the first movement. Will you kindly get back in the monstrous automobile and remove it from my phlox.")

Any place that is worth its weight in fallout has its tourist attraction and the Washington jungle is no exception. What Mr. Munch's trained seals are to the Berkshires, the strange animals in the Washington jungle are to the Nation's Capital. This year there are some especially interesting animals on the prowl, as I am sure any one who has been here and chanced to see, for example, the donkey-eared elephant will agree.

For those of you who have not had a chance yet to come look at the strange beasts, perhaps you will make an extra effort to do so when you hear some of them described. Let me hasten to add that the descriptions of these rare Washington animals which I am about to offer were created by that remarkable Congresswoman from Oregon, EDITH GREEN, and first set forth in a travelog which she gave not long ago before a group of her constituents (tourists, 3,000 miles removed) back home. I am sure you will find them intriguing.

The modern elephant: Sometimes called the streamlined mastodon, the modern elephant is rather new to the Washington jungle. It is a very elusive specimen and so far has been seen in large numbers only during the fall of last year. It is rarely seen now. Some old Washington hands deny its existence; however, those intrepid explorers, Batten, Barton, Durstine & Osborn, assure us it does exist. There is a general feeling that it will reappear in the fall of 1960.

The regular elephant: This animal is, of course, a familiar sight here and is easily recognized in its usual stance—both ears to the ground, eyes fixed on the memory of Capt. Warren Harding and its great legs straddling several fences. Its familiar call has been described by some as a stentorian "I like Ike, but."

The migratory President: A strange bird known to the natives by several names such as Sherm, Jim, and quite often Ike. The migratory President flies very rapidly and far above the strife of the Washington jungle. In fact, it only rarely stops at the large white nest house in the center of the forest, on its flights from Pennsylvania to Georgia.

The coalition dinosaur: A rather remarkable cross between a donkey and a regular elephant which often travels with the herds of one or the other but is never really depended upon by either. Most of its time is spent in the deep recesses of the committee chairman mountains.

The despotted leopard: A substitute for the migratory President which has seasoned hunters very confused. This amazing animal, according to Helen Gahagan Douglas, was first seen in California. Many people maintain this leopard's spots have been removed. Others say that its strange appearance is really protective coloration, but that the spots will be reappear once it becomes king of the Washington jungle.

The party lion: Almost extinct now, although some of its worst enemies are beginning to wish it were back.

The long-nosed snooper: Thought to be extinct, but appears to be increasing in alarming numbers with an entirely new set of feathers. Adept at raising large clouds of dust in the eyes of legitimate snoopers, permitting the prey to escape in the ensuing confusion.

The presidential bug: A recurrent pest, which is not too bothersome right now. It is difficult to tell just how many animals have been bitten by it, although it will probably show up in great swarms before long, and an outbreak of presidential fever is expected after 1958. In fact, a few cases have already been reported. The earliest symptoms are a bad case of cold feet when confronted with issues, and a serious impediment of vision.

The loudmouthed buffoon: Otherwise known as the filibusterer, the loudmouthed buffoon has almost been trapped several times only to emerge stronger than ever, with the aid of the coalition dinosaur. The Texas longhorn is still the dominant jungle animal of this species, but there are those who say that the power of this animal is greatly exaggerated.

Well, there are some of the remarkable animals which have been bringing the tourists to Washington by the thousands. If you haven't been able to come down to see them yet, you should make a special effort—but, if you do, remember, please, don't feed the animals; they are pretty well overfed already. Also, if you are coming, you had better try to make it soon, while the animals are still here. The heat is slowly making the steaming banks of the Potomac uninhabitable and most of the animals will soon be heading for the mountains or the shore—and just we crazy natives will be left.

Can Government Costs Be Cut?

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. GWINN. Mr. Speaker, I would like to submit for the RECORD, a speech by a distinguished citizen in my district, Mr. Clarence Francis, delivered at the 61st annual convention of the New York State Bankers Association, Lake Placid Club, Lake Placid, N. Y., June 21, 1957.

I do not know why businessmen ask the question as Mr. Francis does, Can Government costs be cut? I should think they would be clamoring with placards flying with the words "Government costs can and must be cut."

At any rate, here is Mr. Francis' way of stating the proposition:

CAN GOVERNMENT COSTS BE CUT?—ADDRESS BY CLARENCE FRANCIS

Our discussion today concerns the reduction of governmental costs. This is an important question. We cannot appreciate its true importance, in fact, unless we consider it within the framework of all of the complex, vast, and varied public problems which we face today.

We will talk concretely in terms of the economic meaning of governmental costs and the practical measures which can be taken to reduce them. But I would also like to suggest that the costs of Government can take more than 1 form and have more than 1 meaning.

Let us begin, therefore, by asking ourselves why we are here? Of course, I know that you have gathered to discuss your mutual problems, to exchange information, and to consider public issues in a constructive way as you have done every year for 60 years.

And, of course, you know why I am here. My purpose is to deliver the message of the Hoover report to a group of thoughtful Americans, leaders in their own communities, who have a very special interest in the solvency and stability of our Federal Government.

But let me ask, in a broader sense, why are we here? Why are you and I and all our 170 million fellow Americans here on the North American Continent, here as citizens of the United States of America? This Nation of ours is still a new Nation founded on ideas and ideals greatly different from those prevailing among the vast mass of all the people who have lived in the world in the past and even of those who are living today.

Why, to put it another way, have the people of this continent transformed a wilderness into a dynamic economy in such a short time and why today has this Nation become the leader of the free world in the global contest between liberty and totalitarianism?

These questions may seem far afield from our topic but I think they have a special pertinence to your concerns. Let us consider your role in the modern economy. It was not so long ago, as you know, that a bank was literally a bench. In the Middle Ages the money changers of Lombardy worked at what they called a banca and their French counterparts a banque, both of which may have stemmed from the Latin, bancus.

The exchange of currency was a basic function then and it is today but it is now one of many. The whole history of banking in modern times, it seems to me, has involved the assumption of a series of new functional responsibilities piled one on top of the other. Today we find you occupying some fine, 50-story, air-conditioned benches and this, to me, is a symbol of the vitally creative role which banking plays in every area of our industrial and commercial development.

Now somewhere in the course of your rather breathtaking evolution, a need arose for scorekeepers in national and international transactions. So you became the scorekeepers and you are still scorekeepers but this function, too, has expanded. You are more precisely monitors, with an eye not only to the balance sheet but to the broad trends which affect so many decisions, financial and otherwise.

The economic and social indicators which you have to monitor today are as numerous as the instruments of a jet plane. Having been a personal observer of all the dazzling developments we have witnessed from the horse and buggy to the helicopter, I can testify to the complexities of your task. And one of the most significant single long-range developments concerns our natural resources. In less than a lifetime, we have sounded bottom and gone over to an import position on oil, iron ore, and a host of other commodities which we once considered domestically inexhaustible. This is partly an effect of modern warfare, and partly a result of the inventive energies of our people. At any rate it puts us on a new footing, especially in view of the intricate international obligations we have meanwhile assumed. And it means that our footing must at all times be sure.

For this reason we are obliged, almost daily, to take careful note of every flicker on the economic dashboard. We can dare to be pleased, but we cannot afford to be deluded, by signs of great and continuing prosperity. These signs we see abundantly today but we also note such factors as tight money and the profit squeeze, and we must constantly ask ourselves questions about the relationship of consumer credit to savings, of wages to prices, of automation to productivity, and so forth.

You will note that all these factors, so important today, were of little or no concern to the banking scorekeepers of the past. This is doubly true of what today is the most pervading single question mark of all—governmental costs. As recently as 25 years ago, the Federal budget was less than $5 billion and its influence on the cost of doing business was relatively minor.

Today the interest on the national debt is larger than the whole cost of the Federal Government in 1933. The Government's paperwork alone costs nearly $4 billion a year. Federal taxes, corporate and individual, intrude themselves importantly into every transaction, on the economic scene. They must not be permitted to outrace the immense capacities of our productive industrial machine. And so, when we see a thing called Federal budget—1958 model, a big, red light goes up on the dashboard.

We ask, therefore, "Can Government costs be cut?" To me, the answer is not can they but will they? They can be cut in two ways. Congress and the administration can lop and pare and argue as they are doing right now. But I have come to you to talk about a more fundamental and enduring means of reducing costs. That is by the installation of modern business methods, the elimination of waste and duplication which by sheer habit have lodged themselves in countless areas of governmental operation, and by the reversal of costly trends toward governmental competition with private business.

That is, in short, by adoption of the recommendations of the bipartisan Hoover Commission, unanimously created by Congress, which with the aid of some 200 outstanding experts, made a thorough study of the whole Federal Government between 1953 and 1955. The Commission, as you know, made 314 specific recommendations for modernizing Federal procedures of which to date some 39 percent have been adopted by congressional and administrative action combined.

It is not my purpose today to sell you on the validity of the Commission's findings, for I know you need no selling. I will not even exhort you at length to support the Commission's recommendations, though their acceptance depends on public support. I know that many of you are working in behalf of the report and I will content myself with expressing the confidence that all of you will.

Today I want to make just two points: Governmental costs can be cut, substantially, by application of the Hoover report. We set out not long ago, to track down some of the savings which the Federal agencies themselves officially attest as results of the recommendations of the first and second Hoover Commissions. The study we made covered only a part of the governmental departments and the figure we arrived at is cumulative, not annual. But it came to $2.8 billion and it did certify, OED, that savings can be made.

My second point is this: We dare not let national discussion of the Hoover report bog down in contention over savings. Whether the potential is $5 billion, $4 billion, $2 billion or even $1 billion, the economies inherent in the report are sufficient unto themselves. Let us not lose sight of the far, far larger gain which will be made by arresting the trends of today, by awakening the public to the dangers of waste, by producing a new spirit of citizen participation in the daily conduct of governmental affairs, and by a return to the self-reliant, critical, and independent spirit of our forefathers.

Just 3 days ago, in Washington, there was a meeting of citizens interested in effectuating the Hoover report. They came from every corner of the country to discuss the issues, first among themselves, and then with their Senators and Representatives. There are, as a matter of fact, some 170 pieces of Hoover Commission legislation before the current session and of these just 12 bills were selected as a basis for prompt congressional action.

Some of these measures are more important than others, of course, but they all promise distinct benefits, some in terms of economy, others in terms of more efficient government. You may be interested in some of them yourselves and, if so, I hope you will give them your special support.

First is the bill to install annual accrued expenditure budgeting as governmental procedure. This measure has already been approved by the Senate and, as H. R. 8002, awaits House action. I don't think I need belabor to you the importance of modernizing the Government's admittedly antiquated budgeting practices. Will doing so save money? In any private business it would. Whether or not in Government the saving is several billion dollars a year (as has been contended), there is a principal at stake which transcends dollar economy.

What the Commission found, in effect, was this: Under present methods, huge unspent appropriations carry over from year to year and pile up in the agencies exempt from all further congressional review. Their present total is estimated by the Comptroller General at $70 billion, in fact, nearly equal to a year's budget. But the underlying issue is even more important. It involves legislative control of the purse, an absolute principle of self-government since time began.

Another measure illustrates the way in which governmental functions continue to operate long after the need has passed. This is the bill to discontinue the postal savings system. Again, I need not point out to you that the system, originally created to serve the rural areas, today largely duplicates private facilities in urban areas. Will closing it down save money? There is no precise price tag, but it certainly would free the Government of a needless responsibility and it would take a workload off the postal staff for it has deposits of $1.7 billion and 2,482,000 depositors.

Or take the anti-Government competition bill (S. 1539) introduced by Senator JOHN L. MCCLELLAN and 6 cosponsors of both parties. This would amount to a positive policy declaration by the Congress reinforcing the Commission's position that every business-type governmental enterprise in competition with taxpaying private business should be abolished. In this field, by the way, we can chalk up one of the Commission's chief accomplishments to date. Since the report was issued, some 532 such businesses have been closed, largely in the Department of Defense, while an additional 161 have been ordered to discontinue.

Would this bill save money? Again, there is no way of pricing it out, but what does reason tell us? Even the Government businesses that claim to operate at a profit usually forget to include taxes, depreciation, and other basic costs in their accounting. And again—what is the real worth of any measure which reverses the constant and dangerous encroachments of Government in areas which a free country must reserve for free enterprise?

Or take the amendment to the new Defense Appropriations Act which would establish a Defense Supply and Service Administration, civilian controlled, to handle the procurement and management of common-use supply items. Here huge dollar savings are clearly visible. This measure strikes straight at a source of duplication and habitual waste costing no none knows how many billions of dollars a year. Every spadeful of evidence that the Commission turned up in this area confirmed that fact. One of the most understandable examples is the oft-quoted instance in which the Army shipped 800,000 pounds of tomatoes from the west coast to the east coast while the Navy was shipping 775,000 pounds of tomatoes from the east coast to the west coast.

So here, obviously, is an opportunity to save money, big money. But again let me point out that the principle is more important than the dollars. The principle is genuine unification of the armed services. Lack of unification is a definite danger to the Nation in war and peace and its cost may be reckoned in lives as well as money. Another principle, equally involved, is that of civilian control over matters which civilians should control.

As another example consider the bill to create a Federal Council of Health and thus reorganize and consolidate a score or more of Federal hospital systems. All over the country, some Federal hospitals stand half-empty while new ones rise nearby. Money would be saved by putting a stop to these practices. But, better still, the Federal hospital systems would no longer compete for scarce physicians, nurses, and technicians. We are talking here about a nondollar economy of major significance, the wise utilization of the Nation's precious heal services.

Now let us turn to a bill which is not even intended to save money. I refer to the measure which would create an administrative court with special jurisdiction over actions now handled by the regulatory commissions. Often enough, as you know, these commissions serve as arresting officer, prosecutor, and judge. No one planned it that way, necessarily, but that's the way it is. The Commission found here a direct contravention of constitutional principle and a dangerous infringement of individual liberty.

Still another measure would relax the present inhibitions on disposal of Government real property. At present any transaction over $25,000 must be laboriously reviewed by 2 and sometimes 4 congressional committees. To expedite these sales, considering the Government's huge holdings, would certainly constitute a considerable economy.

Yes, Government costs can be cut. But the big thing about that meeting in Washington was this: Here were men and women who had come to Washington from near and far at their own expense. They are leaders in their own communities and completely representative of thousands of others just like them. They knew why they were there, to express an unselfish and constructive interest in the strengthening and improvement of their free Government. Is this not one of the most heartening signs of our time?

In the course of their 2-year study the members of the Hoover Commission also asked themselves: "Why are we here?" Then they wrote down a 6-point definition of their goals.

Bear in mind, these were 12 seasoned, touch-minded men of both political faiths. They represented widely diverse backgrounds and points of view. They sometimes disagreed on specific proposals but when it come to a statement of their purposes, they agreed completely. Observing that the problems before the Commission have by no means been purely financial, they signed unanimously this declaration of their objectives:

"First, to preserve the full security of the Nation in a disturbed world.

"Second, to maintain the functioning of all necessary agencies which make for the common welfare.

"Third, to stimulate the foundamental research upon which national security and progress are based.

"Fourth, to improve the efficiency and eliminate waste in the executive agencies.

"Fifth, to eliminate or reduce Government competition with private enterprise.

"Sixth, and perhaps the most important of all, to strengthen the economic, social, and governmental structure which has brought us, now for 166 years, constant blessings and progress."

With these words the Commissioners not only understood the social and historical significance of the Hoover report; they laid down a challenge which no thoughtful American of today can afford to ignore.

In effect they reminded us that we cannot maintain world leadership in the fight for freedom if we cannot manage our own affairs; that the vitality of our social and political system depends on the freedom of our economic system; that when citizens become indifferent to their responsibilities, they create a vacuum which government is certain to fill.

Let us grant every necessity for the expansion of government's role in the life of these times. The fact remains that overdependence on government can lead only to encroachment by government, first upon our enterprises, next upon our institutions, and finally upon our fundamental liberties.

The great republics of antiquity won battle after battle and war after war only to lose the ultimate struggle for freedom within their own borders. This was simply because they fell into the habit of dependence on the state and literally voted themselves into bondage and ultimate destruction. Perhaps the change was hardly noticeable at first. Their resources may have seemed largely the same, their talents and energies unimpaired. But along the way somewhere they lost their interest in their responsibilities as citizens.

Now in any age, lack of interest in government on the part of a free people denotes nothing more or less than lack of faith in freedom. That faith is the source of our national strength. It is literally why we are here. The here, of which I speak, of course, is a state of mind, not a place of being. And the recent arrival of the new *Mayflower* provides us with a timely reminder of our own first principles.

When the first *Mayflower* landed, what sort of people had been penetrating the New World? We think immedately of the great adventurers, the Balboas, the Cortes', and De Sotos with their bright plumes and flashing swords. For sheer physical courage and daring, history has seldom seen their like.

By contrast, the Pilgrims somehow seem sombre, sanctimonious, and drab. That, at least, is the storybook impression. Actually the Pilgrims were Elizabethans, lusty, two-fisted, and tough, and the contrast is all in their favor. The courage of the adventurers was one-dimensional, bent only toward conquest and gold. The Pilgrims had all the physical bravery it took to invade the wilderness but they had tremendous moral courage besides. Instead of seeking fortune, they left their fortunes behind them, and they came to stay. With their wives and children beside them, they faced and conquered inconceivable hardships. And they did these things for the purpose of establishing a few simple principles.

Stripped of all ecclesiastical trimmings, the principles of the Pilgrims were basically these: First, no government should be able to tell the individual what to think or what to believe. Second, freemen, working together, are capable of governing themselves and bettering their lot.

Did I say simple principles? So they may seem to us today. But in their time they were strikingly new. The Pilgrims were bold, original thinkers, impatient with the past, eager to improve the future. The beacons they erected drew millions of freedom seekers to our shores, cargoes of human enterprise, initiative, and independence more precious than gold.

In the complex world of today it is difficult to relate simple principles to the vast and bewildering problems which our own energies and ingenuity have in part created. Our capacity to govern ourselves is being put to the test as never before, and upon the outcome depends our success on all other fronts.

The Hoover report supplies us with a vitally-needed guide to the mastery of our governmental machine, the wise use of our resources, both human and material, the maintenance of our solvency, and hence the preservation of our freedom. It calls for a return to the disciplines and responsibilities which form the foundation of what the Commission describes as "our constant blessings and progress."

Finally it confronts us with questions which we alone can answer: Will we stay here? Will we hold the ground we have won, meet the challenge of the present, and hand on to the future a basic heritage enhanced by our own remembrance of first principles? Will we, specifically, make use of this well-wrought instrument called the Hoover report to put the brakes on our runaway governmental machine before it gets wholly beyond control?

My faith in the future is great and I know that you share that faith. No faith can be greater, however, than that of the former President who has devoted his energies so unselfishly to the preparation of the monumental report which bears his name. On his 80th birthday, August 10, 1954, Herbert Hoover noted certain dire predictions concerning the fate of our society and observed, "Civilization does not decline and fall while the people still possess dynamic creative faculties, devotion to religious faith, and to liberty. The American people still possess these qualities."

We can take encouragement from these words, but only to the extent that we make them true. And we, you and I, can make them true only by our own actions. It is not enough to be for the Hoover report any more than it is possible to be passively patriotic. The time for action is here and the course of action is perfectly obvious.

We, you and I and every good citizen, can vote every day of our lives for better government with a little time, a little thought, and a 3-cent stamp. When we do, we are voting not only for economy, not only for Federal stability, not only for national security, peace, and progress but for the right to vote itself.

Teacher's Deduction

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. POFF. Mr. Speaker, under the income-tax laws, any money spent by the taxpayer for the production of taxable income can be deducted as a business or professional expense. Under those rules, businessmen can deduct money spent for entertainment of prospective customers and union members can deduct union dues. Membership fees in bar associations, medical societies and other professional organizations are treated as expenses necessary for the production of taxable income and accordingly are deductible for income-tax purposes. The same is true of money spent to train employees in special skills.

Under the laws of most States, including Virignia, schoolteachers are required periodically to take refresher academic courses at some educational institution in order to maintain their accreditation. Unless they maintain their accreditation they are not eligible for further employment or promotion as a teacher. The

money spent for tuition, books, supplies, travel, and living expenses while away from home comes out of their own pockets.

Under the present law this money is not deductible for income-tax purposes. Clearly it is an expense absolutely essential to the production of taxable income. Without spending it, the teacher could earn no salary at all. Certainly it is as much a business expense as money spent for customer entertainment and union dues. Accordingly, I have introduced a bill which wuold permit a schoolteacher to deduct up to $600 every year for money spent for refresher courses required to maintain accreditation or to further their educational attainments in order to qualify for promotion in the teaching profession. Perhaps no person in our Nation's economy with so much responsibility for the future growth and welfare of the Nation resting upon his shoulders is so underpaid as the schoolteacher. Most assuredly he is entitled at least to stand on the same footing with other taxpayers.

Federal Expenditures

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. McGREGOR. Mr. Speaker, I am most happy to note that President Eisenhower on June 28, 1957, issued a directive to all Federal agencies and I quote: "Keep the rates of commitments, obligations, and expenditures for the fiscal year 1958 at or below the level of the fiscal year 1957." Of course, some of the spenders and New Dealers are putting up a howl that this directive is not in accord with the President's budget request for 1958. Our Federal indebtedness and Federal taxes are not determined by budget requests. They are determined by the amount of money spent by the Federal Government.

The President some months ago submitted a budget setting forth the maximum amount of money that could be spent by the various departments, nearly $72 billion in expenditures. In his recent directive to the departments, they were told to reduce their expenditures at least to the level of 1957, which was $68 billion. I join with the President in attempting to hold our expenditures to that level and if this can be done, I am certain that we can have a tax reduction for all in 1958 and have a sizeable amount to pay on our national debt. The national debt is now about $270 billion but was up to a little higher than $275 billion during the previous administration.

Just for the record, Mr. Speaker, I might add that our national debt is now about $5 billion less than it was 3 years ago. This is not a bad record, and it certainly is excellent in comparison with that of the previous administration, but we can do better. Let us continue to follow the policy of cutting out all unnecessary expenditures so that we can continue to reduce our debt and reduce our taxes.

A reduction in taxes is a wage or salary increase for all.

Huntington Park Elks Lodge, No. 1415, Huntington Park, Los Angeles County, Calif., in the Great 23d District, Annually Sponsors Significant Competitive Essay Contest for Youth Participation and Pays Winners $900 Cash

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent, heretofore granted me so to do, I am very proud and pleased to present for your consideration, and also the consideration of all the other distinguished Members of this great legislative body, the text of the four winning essays on the subject What Democracy Means to Me, together with a letter to me dated July 10, 1957, from Mr. Sheldon E. Bannister, chairman of the youth activity program of the Huntington Park Elks Lodge, No. 1415, at Huntington Park, Calif.

This Elks Lodge is recognized as one of the foremost in the Nation in connection with youth activity programs and you will please note from Mr. Bannister's letter to me that the Huntington Park Elks Lodge was selected as the State of California winner at their recent statewide Elks convention competition in this field.

The letter from Mr. Bannister to me, dated July 10, 1957, comes in answer to my request for authority to ask unanimous consent to insert these four winning essays, about which I had heard previously and favorably, in the CONGRESSIONAL RECORD.

Also note the outline of the Huntington Park Elks Lodge, No. 1415, youth activity essay contest, under which contest rules the four young people chosen as winners of this significant essay contest were victorious.

Mr. Speaker, I am sure that every Member of this great legislative body, in which I have had the honor and responsibility of now being a Member, this my sixth elective term, join with me in congratulating each of the four young winners in this very appropriate contest, and likewise that you one and all join me in very sincere and cordial congratulations and compliments to the Huntington Park Elks Lodge, No. 1415, for taking the necessary time and appropriating the necessary considerable sum of money for the cash prizes. This is an annual contest and I personally know the very splendid and dedicated volunteer services of the youth activity program committee and the very strong support given to this youth activity essay contest by the members of this splendid Elks lodge situated in the beautiful and important city of Huntington Park where my great 23d Congressional District office is located in the Post Office Building:

HUNTINGTON PARK LODGE, NO. 1415,
Huntington Park, Calif., July 10, 1957.

Hon. CLYDE DOYLE,
Member of Congress, House of Representatives, New House Office Building, Washington, D. C.

DEAR CONGRESSMAN: With regard to your letter of June 10, Exalted Ruler F. L. Brown has requested that I, because of my close relationship with this particular activity, handle the reply to your request.

This annual youth essay contest is one of the many youth activities under the promotion and direction of our youth program committee.

As you are well aware, the Order of Elks is distinctively American. The destiny of our order paralleling the destiny of our flag. It is therefore only fitting that Americanism be foremost in our thoughts and actions. With these thoughts in mind, our contest is directed to students, in both junior and senior high schools in our jurisdiction, to encourage free thinking of our youth toward their coming responsibilities of adulthood. Our actions are directed toward having these participants express themselves on paper about a subject on which there has been no previous rehearsal or advance time to prepare a perfect paper based on any research, conference or consultations.

Eligible students, a boy and girl having been previously selected by their school on the basis of a preliminary contest, are certified to us as qualified to participate in a final contest to be held in our lodge quarters. It is at this time that the final subject is given, on which they are to write 1,000 words in a maximum time of 2 hours. This method, being somewhat spontaneous in application, has the desired effect of inducing a contestant to express what is in his heart as well as the mind.

Our contest has 4 winners, a boy and girl from each of 2 divisions—junior high and senior high. It is therefore with a great deal of pleasure that we attach a copy of the essay of each of these winners. Their name, school, and grade are affixed to their individual effort. Full permission is granted for insertion in the CONGRESSIONAL RECORD.

For us, it is extremely gratifying to know that our efforts on behalf of the youth of our country has penetrated so far. As a further note of interest to you, our lodge was selected through statewide competition as the State winner in Elk youth programs.

On behalf of my brothers, may I express our thanks for your kindly interest. With my personal best wishes, I am,

Sincerely yours,
SHELDON E. BANNISTER,
Chairman, Youth Activity Program.

WHAT DEMOCRACY MEANS TO ME
(By William Henn, eighth grade, St. Rose of Lima School, Maywood, Calif.)

Man has ingrained in himself as it were, an innate desire for freedom, for personal advancement, for security. How can man realize these desires? The only way lies in a democracy. That is why I want democracy.

What is democracy? That is the next step. Why do we value it so highly? For me, democracy is a government that is based on the dignity of man; that helps all—the rich, the poor; the literate, the illiterate; the successful and the failures; that respects the wishes of the people governed. Why this? Because, a government's principal object in a democracy is to provide services for the governed; and in a democracy or in any gov-

ernment, the source of authority is from God through the people.

What personal advantages does a democracy hold? What general advantages? What freedom does it allow for me and others? What guaranty do we have of not losing these rights? What security does a democracy offer? How does the Bill of Rights insure our democratic principles? I will treat these questions one by one in the succeeding paragraphs as they pertain to me and to others.

What personal advantages does a democracy hold? In a democracy, every man has a chance at achieving greatness. He has the advantage of being in a democracy. In some countries for years, even for generations, men are locked in the same occupation in the same position without any chance for advancement. This is a pathetic state especially when certain men like these have brilliant minds that could donate great things to modern day society and to the world for all time. In a democracy like ours, a man of genius has his chance at doing great things and advancing to high places. Also, a man of average intelligence can rise to prominence, even more so a man of this kind with ingenuity. These to me are the greatest personal advantages in a democracy.

What general advantages does a democracy hold? In a democracy we are free to choose our representatives, those whom we think will portray the best interests in our locality, or State, or Nation. In that manner we know that we need no fears about our Government, a democracy.

What freedoms do we know in this democracy? We Americans have the privilege to say what we please, and when we please. We have freedom of the press, in the sense that our publications can say anything they deem to be true about the Government or its officers. These two freedoms have but the impediment of restriction of plotting against the Government. We also can practice our religious beliefs without fear of reprimand. These are some of our important freedoms.

How do we know these rights and privileges are protected? We are insured in this aspect of democracy by one of the greatest masterpieces of writing of all times, the Constitution. This great document provides a limited Government of popular sovereignty, and it balances the power in a Federal Government. The Constitution supplies a National Government with a balance of power over the State governments. But this National Government is kept in check by the three governmental branches—the executive, the judicial, and the legislative. This, to me, is a guaranty against oppression and for justice.

What security does a democracy offer? In this America it assures us of our inalienable and ingrained right. We have no fear of losing these or our property or position or life. Democracy, to me, is an insurance policy against fear.

Finally, how does the Bill of Rights insure our democratic principles? The Bill of Rights is democracy itself, in my opinion. Every one of its 10 amendments is at least 1 basic democratic principle. It insures that this United States Government of ours is a Government of the people, by the people, and one that works through the people.

This democracy has endured helping my family, my associates, my fellow Americans, and myself, and it will continue to be an advantage to Americans as long as this Nation, under God, lives on.

What Democracy Means to Me

(By Elizabeth Kossler, eighth grade, St. Emydius Parochial School, Lynwood, Calif.)

Democracy means so very much to me, because it is based on fundamental principals. Democracy is living in our own country this very day. Democracy is based on our Constitution. It is for the people, of the people, and by the people. Democracy has adjusted itself to any period of our national history.

By the Constitution all rights are insured to the people who live in our free country. In this way democracy is living in every State, and is being practiced at all times.

Through democracy the people in our country have gained for themselves freedom of speech, the people of our country are free to say what they think should be law. They may defend their rights whenever necessary.

Freedom of press has also been instituted through democracy. Men are free to print their ideals in any paper or magazine.

Most important, we have freedom of religion. Before democracy men, women, and children were killed for their faith, they had to belong to whatever religion their rulers and kings belonged.

To me democracy means that I am an active part of the Government, of the United States. Democracy has given me the right to vote, when I have reached a certain age. It gives every man a feeling of dignity and respect. He actually has a part to play in the Government. Democracy is based on one living document, the Constitution. In the Constitution democracy is brought out more than any other subject. That is what the Constitution is about, the rights of the people. Democracy, through the Constitution, has made provisions so that all rights may be insured to people in our free country.

An example of how these rights are given to us is through the amendments. As time goes by people will change their needs and wants. Democracy can be kept by adding an amendment to our Constitution. That way we will not destroy all basic foundations for democracy.

Democracy can be interpreted in two ways, Government affairs or everyday living. When I grow older I will use democracy in government affairs. Right now I have more use for it in my daily life. Democracy can be used at all times. Even in school, we may use it. I have the right to speak up when I would like something changed or when making a decision.

Democracy in all periods of our national history has survived. In the time of war democracy went on through battles and bloodshed. In time of peace democracy has still kept alive.

I'm glad that I live in a country that has democracy. The American people are almost the only people who have such rights. In other countries the people are forced to obey the laws and commands of their kings and rulers. We have the right to say what we think should be law and what we wish to be governed by and by whom we would like to be guided by.

Democracy in all respects shows dignity for the people as human beings. It gives everyone the right to a free trial. Also, we the people, have a voice in the Government.

I have a life to look forward to, the life of being free, of being a citizen of the United States, and being able to take an active part in the Government. I will always remember that I was born in a democratic Nation. I am free to do what is right.

In our Government democracy is used at all times. In a bill, becoming a law, it is used very much. Democracy keeps branches from having too much power. It also sees that one branch or one man does not receive too much power.

An example of this is when a bill is being passed, the majority must vote accordingly. The President has power to veto a bill if he thinks it will be bad for the people. Congress may override the President's veto if the majority finds good qualities in it. In this way, no law may go into effect which is bad for the people.

Through democracy the Supreme Court has much power. It tells us whether a law is unconstitutional or not. It has the power to decide what the Constitution means. Democracy has made it possible for them to punish a person for going against the laws of Congress or any state.

Democracy is used in many forms. It is used in factories, businesses and stores. Every day an incident occurs where it is used.

Since democracy is used in showing respect for the people, it is always remembered. Democracy shows respect for me. In return I will try to live up to it.

Democracy today is much more vital than it was a century ago. People appreciate it more today because they understand it and feel they are a part of it.

I am so lucky to be an American, who is free. If I live a life as a good American citizen, I will be practicing democracy.

Democracy is Americanism, that is what the American Nation is most noted for, its freedom and rights. Americanism is living up to the ideals of our forefathers. It doesn't matter of what country you came from or your customs. It is how you live your life. If you live like an American and live up to the ideals expressed in the Constitution you will be living like an American and most important you will be living in a democracy and you can be proud of it.

The democracy of the United States is living at all times. It should be brought into our daily life. Democracy is the most important thing in my life. I will try to be a good American. Democracy is in all truths today living.

What Democracy Means to Me

(By William Walters, 11th grade (Junior), Lynwood High School, Lynwood, Calif.)

As a student, I realize that I am young and that I have yet many things to learn. However, I believe that the meaning of the word "democracy" is sufficiently evident in my mind. On many occasions and different times, this word has been presented to me. It has been mentioned in various and indirect ways; nevertheless, though it has never been clearly defined to me, I have developed, in no evasive way, a definite meaning of the word "democracy."

Democracy is a way of life. Perhaps it is best exemplified in our American way of life, which is widely renowned for this quality. The way our country operates, the method by which our Government functions; this points out what democracy is. For a truly democratic country, a long-lasting nation, democracy is present in the fact that all of the people take part in our country.

There have been, and still are, dictatorial governments. They have risen in power and they have fallen—in such states there have been revolutions and uprisings of the people. It is natural for people to want democracy. A dictatorship is the exact opposite of democracy.

Here in our country the people are granted the right to vote. Our Constitution allows for equal representation of all the inhabitants. The citizens may voice their opinion. They may circulate petitions to make changes. The majority rules. A relatively few men are chosen to act as representatives. Our Constitution was written by such men and passed by a majority vote. This document was devised to run our country efficiently and provide for the needs of practically all the people. These things our Constitution was planned to do and have done, because it was based on a democratic form of government and this is what the people want.

Several other countries have written constitutions containing the same type of democratic principles. But, as we well know, these countries, some of which are still in power, have a completely dictatorial government, and a disparaging way of life. This is because the operations of their country

does not contain the democratic element. A small group of people have risen to power, not as representatives of the people, but to control the country for their own selfish interests. This life of obedience, completely absent of democracy, cannot exist forever. Time only will tell if the thousands of common people will unite and rebel against their suppressors.

Democracy controls the lives of the inhabitants of the entire country. Every single person is affected by the degree of democracy he is given. In small-town politics, democracy determines if better schools are built and other civic improvements. Democracy concerns everyone; people develop a democratic government as they say what they want, and when everyone votes.

However, democracy is not a matter of determining what the people want, and giving it to them. A democratic life is one of almost complete freedom. People may do what they want, when and where they want, within reason. There are no large numbers of militia and supervisors to control the every movement of the people. Our country was first given its freedom in 1776 at the adoption of the Declaration of Independence. At the close of the War Between the States, all slaves were given freedom. Freedom is a basic necessity of democracy; we must be free to make our desires known and to take part in representing ourselves.

As I have mentioned, these is often much difficulty in expressing democracy. It is, of course, an intangible thing, part of the requirements I have mentioned. However, the part which is most evasive, which is necessary to form our democratic way of life, is the spirit which we have, and that the American people are known for.

When our colonies were first formed, our forefathers were content to leave England remain our mother country. But, when Britain took advantage of us in high taxes, unfair tariff, etc., the weak 13 colonies united and developed a spirit which gave them the courage to break away from their original country. Not only did these brave men formally declare independence, but their desire for complete democracy was such that they battled against what was then the strongest, largest, and supposedly best force in the world. They narrowly won this battle; and, I believe, their spirit and initiative led the way to making America a world coveted and completely democratic nation.

What Democracy Means to Me

(By Carol Bettey, 12th grade (senior), Huntington Park High School, Huntington Park, Calif.)

Democracy is the method of arriving at decisions by the free discussion of the people and their majority consent. Webster might define democracy in this way as a general meaning but it has far greater meaning to me.

Democracy to me is the privilege of worshiping where, how and what I please without interference or ridicule from the Government or people around me. I am free to worship a Supreme Being in the way I choose and not in a way chosen by my Government.

Democracy is the freedom from want that gives us a feeling of security. In the security it gives, it also furnishes us with protection from intrusion by military or public officers. Democracy is our protection against the ills suffered by those people in foreign countries.

Democracy might also be defined as my privilege. It lets me walk down the street with my head held high, knowing that no matter what my social standing, I am equal with all of my associates and all of the people I might pass.

Democracy is the little children at play on a warm afternoon. Their cheery hellos and laughter that shows they are carefree and secure. Their feeling of security comes from within because they haven't known any great want or any governmental inflictions on their happiness or freedom.

Democracy is my chance to bring up my children to be happy and secure. In democracy I can let them live lives of happiness and contentment. Democracy will give my husband a fair chance to earn money to support our children.

Democracy also means my education and the education of my family to me. In many foreign countries only the intelligent children or those with a potential or those with money have a chance to learn. In America under our system of democracy we all have an equal chance at education. However, even with our equal chance we only learn what we want or earnestly try to learn.

Democracy is a form of freedom to me. It furnishes us with the four basic freedoms. The desire to be free is a natural instinct in men of all nations. Our freedom actually began many years ago, long before the Constitution, that gives us democracy, came into being. It might be said that it started way back with the Magna Carta, the Mayflower Compact, and the Declaration of Independence and then our democracy was finally rested upon the Constitution.

Our freedom furnished by democracy is a powerful thing. In this freedom I believe we reap as we sow, with every right there is a duty, with every privilege a price to pay, with every power there is a responsibility and with every blessing there is an obligation.

Democracy is our final goal achieved from the spirit of reform to be our guidepost to happiness.

Democracy is founded in this country so that the responsibility falls on the people as a whole, not on a few, on persons not property and on the free development of public opinion, not authority.

Democracy gives me two political rights also. It gives me the privilege to vote for the people I feel most qualified to hold office and it gives me the privilege of holding office when I become of legal age if I so desire.

Our democracy has given me the opportunity to freely breathe, to be unafraid and to respect public officers within myself, knowing that they are for my protection.

This democracy we all enjoy gives me the blessing of enjoying my family and my country to the degree I wish. I can live with or near my family and always feel secure that they are all right and free from harm. I can love them freely and enjoy their company in travel and various amusements. If I so desire I can travel through the United States and the world to be better prepared to appreciate my country and the democratic methods it stands for.

Democracy is the lights seen in a city at night from high on a hill, telling the world that the city is free and unafraid.

Democracy is our chance to travel by the many methods that the great industries of America have developed such as the automobile, the boat, the bus, the airplane, and someday, the jet. These have all contributed to make our Nation into a neighborhood.

Democracy gives me the expressed freedom in the Bill of Rights or first 10 amendments to the Constitution. They consist of such things as freedom of the press and freedom from intrusion in our homes.

Our method of exercising democracy includes everyone, no matter of their race, creed, or color. We have fought and won this privilege and now it is our duty to preserve it.

Democracy argued against tradition, accepted forms of government and precedent when we put it into effect. Great men fought and died that it might live. Now it is in our hands. Democracy is our responsibility in my estimation. Democracy truly means responsibility to me. Democracy will never fail—only the people are able to fail in exercising it. It is a sure and sound system and the people can live with it as long as they practice the rules of free discussion and majority consent. When you are playing a game and forget the rules you are no longer playing the game. The game itself has not changed but the people have started to play another way creating a new game. Democracy is the game we are engaged in and we must remember to use the rules and play fair to make the game worth playing.

There is a famous poem that expresses my understanding of democracy and our way of life quite clearly. It is called the New Colors. It expresses that America accepts the tired, poor, homeless, and tempest tossed of all nations and holds a light beside her golden door to show the pathway in. I feel that democracy is the guiding light along our way to obtain and preserve true freedom.

Democracy to me personally is God's gift. Only a supreme being could have created such a system that could withstand war, conflict, strife, and even civil war. I believe it to be divinely inspired and that it is our job to make the best possible use of the gift He has given us.

Last but certainly not least, democracy is your and my chance to prove to the world that a system so conceived and dedicated can work. It it our chance to show the doubting Thomas's that a government of the people can work. Let us all go forth with the desire to make our democracy last so that I and my posterity will forever know the meaning of democracy, that a government of the people, for the people, and by the people, shall not perish from the earth.

Rules and Regulations Governing Contest, Huntington Park Elks Lodge, No. 1415, Youth Activities Essay Contest

1. The participating school shall hold a 1,000-word essay contest on Why Our Constitution Has Survived, to determine a boy and girl winner from the school.

2. The winners of each school contest shall meet during March 1957 (date to be announced) at the Huntington Park Elks Lodge and compete in a final contest.

3. All final contest essays shall be 1,000 words or more and such words as "a," "and," "the," "is," and "as" shall not be counted in the essay.

4. Eligibility for contest shall be determined as follows:

Senior division (9th to 12th grades, inclusive): All senior high-school students.

Junior division (seventh and eighth grades): All junior high-school students.

To be eligible, participant must be a student within the eligible grades during the spring semester.

5. Deadline for submitting names of school finalists shall be March 1, 1957. Names of school winners shall be submitted by letter to Robert M. Storer, chairman of Youth Essay Contest, Huntington Park Elks Lodge, No. 1415, 3355 East Gage Avenue, Huntington Park, Calif.

6. Contestants of individual schools must abide by such rules and regulations as the school deems necessary to conduct the essay.

7. Judging of school essays shall be done by the individual schools.

8. School essays and final essays will and must be judged for the following: (1) Relation of essay to topic; (2) clarity of thought; (3) forcefulness of thought; (4) sincerity of topic by thought shown in essay.

9. School finalists will be luncheon guests of the Elks Lodge at which time the topic of the final essay will be given to the contestants.

10. The final essay to be eligible for awards must be written during the afternoon of the luncheon at the Elks Lodge.

11. Awards for the winners of the final essay shall be as follows:

(a) Senior division: (1) Boy winner, $350; (2) girl winner, $350.

(b) Junior division: (1) Boy winner, $150; (2) girl winner, $150.

12. Essays of the school finalist shall become the property of Elks Lodge, No. 1415. (These) essays will not be used in any form by the lodge or any member thereof for monetary gain.

13. The judges for the final essays will be announced during February 1957.

14. Announcements of the final winners will be made on the evening of May 3, 1957, designated as Youth Night at the Huntington Park Elks Lodge. All finalists will be required to be present on this evening.

15. Each individual school finalist will receive a certificate of participation.

16. The winning schools represented by the four final award winners will receive an appropriate plaque.

17. All decisions shall be binding and final.

ROBERT M. STORER,
Essay Contest Chairman, B. P. O. E. Elks Lodge, No. 1415.

Japanese Helping Orange County Farmers

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. HILLINGS. Mr. Speaker, the Japanese nationals brought into our country as temporary farm workers under our immigration laws are playing an important role in California agriculture. The Judiciary Committee recently reported on this program and concluded that it was operating satisfactorily and urged a limited expansion of it.

The Los Angeles Times of June 23, 1957, carries an interesting article on what the Japanese nationals are doing in the Orange County area. It is important to note, Mr. Speaker, that Japanese nationals cannot be employed in any case where American farm workers are available; they must be paid the prevailing wage in each agricultural community; they do not interfere with the continuation of our Mexican labor program.

The article follows:

JAPANESE HELPING COUNTY'S FARMERS

(By Helen Johnson)

An Orange County farm and America's foreign relations may seem to be subjects far apart. But put a Japanese man to work on that ranch, give him a chance to see what this country is like, and international understanding begins.

That is happening on all county ranches taking part in a new program developed through the Federal Government to ease the farm labor shortage in California. For the first time Japanese workers are being imported to supplement local and Mexican national labor pools.

One hundred and fifty of the Japanese are now at work in the county, most of them employed by members of the Orange County Vegetable Growers. They are part of the contingent of 876 brought to California during the winter under plans worked out through the United States Immigration and Naturalization Service whereby 1,000 were to be admitted.

APPROVAL STILL AWAITED

While all the farmers who have taken part in the pilot project are enthusiastic about its success, approval of a continuation of the program this year still is awaited. To gather data about the workings and the results of the program a subcommittee of the House of Representatives Judiciary Committee visited Orange County and other California ranches and also conducted formal hearings but no decision on the new project's future has come yet.

The Japanese program is never expected to take the place of the Mexican national program but is looking toward the day when Mexico's economy will be developed to the point where California needs a new source of farm labor. Tom Keeler, secretary-manager of the Orange County Vegetable Growers, said the 1,000-man quota of the Japanese program amounts to less than 1 percent of the number of Mexicans brought in for farmwork.

READY TO LEARN

The intent of the program is well described in the agreement signed by the worker and the farmer:

"The association and worker mutually desire that the worker be beneficially employed in the State of California, United States of America, to alleviate the continuing shortage of agricultural labor and at the same time to give the worker an opportunity to participate in the American way of life and to learn the latest technical methods in American agricultural development."

After listing regulations on hours and living quarters and guaranteeing work, the agreement adds, "The worker shall avail himself of opportunites to attend classes and other projects in English, United States history, agricultural methods and machinery, etc."

Because of the high quality of Japanese men brought into Orange County they are ready to take advantage of the opportunity "to particpate in the American way of life," Keeler said. All are high-school graduates, some are college men, and many are sons of the prominent men in their prefectures.

Chosen in keen competition conducted by the Japanese Government, they were selected as the best element in Japanese agriculture, physically, mentally, and spiritually.

TAKE SPECIAL COURSES

Before being flown to California the young men underwent a 2-week orientation course that included basic English and an outline of American history and customs as well as an explanation of the worker's agreement, examination, and use of agricultural machinery and field work under simulated agricultural conditions.

Now that they are in America they want to learn as much as they can. Quick to learn in the field, they also are quick to learn in their spare time. The televison sets in their housing units are good teachers, and opportunities to see something of the community are taken up eagerly.

Because many members of the Orange County Vegetable Growers are Japanese-born themselves or of Japanese descent, the newcomers come in for some extra-special attention. One grower, for instance, has bought a bus for the express purpose of showing his employees southern California, and visits to factories, the San Diego Zoo, and similar places which would interest them are arranged.

ADJUSTMENT NOT COMPLETE

The men aren't expected to adjust to everything American, though. The menus for their meals provide foods to which they are accustomed as well as typical American dishes. In some of the housing units Japanese-type baths have been built.

Although the Mexican nationals and the Japanese are housed in different units, the two groups get along well and the Mexicans seem to enjoy helping the newcomers and exchanging languages.

The men are paid the regular wage for field work. Making sure they are properly protected in their working and living conditions are Japan's Council for Supplementary Agricultural Workers, the United States Immigration and Naturalization Service of the Department of Justice, the United States Department of Labor, and the California State Department of Employment's Farm Placement Service.

Each man is hired on a 6-month contract that is renewable up to 3 years. As the program was set up, the 3-year limitation is to give others from Japan the opportunity to come to America to work.

JAPANESE FAVOR PROGRAM

Japanese reaction to the program is shown in a report prepared by the Japanese consulate general in San Francisco. He said, "Being scrupulously selected from among 10 times as many aspiring applicants as are jobs available, the workers who have already arrived have attained a higher reputation than had been expected or hoped for. The general impression of the local Japanese consulates is that the program is more successful than had been anticipated."

The Orange County Vegetable Growers' opinion of the new program was expressed by President Robert A. Heil in writing to Representative PATRICK J. HILLINGS, a member of the investigating congressional committee:

"Our organization now has 121 Japanese workers. Our member-growers are very well satisfied with these Japanese and we have requests for many more. We are anxious to receive the Department of Labor certification for continuation of this program in California. We feel that no further authorization would constitute discrimination against the Japanese in favor of the Mexican nationals. It should be the growers' choice as to which workers to use."

SANTA ANAN WANTS 2,000

Another Santa Anan, Jack J. Miller, manager of the California Farm Labor Association, who helped set up the Japanese labor program, is in favor of bringing in 2,000 men this year.

"I'm very well satisfied with the program from practically every aspect," Miller said. "Those workers who are being brought in from Japan fill a need in agriculture that is difficult to fill by domestic or other foreign labor. The Mexican worker has been a good and loyal worker for us and the Japanese program will never replace the Mexican. But we're going to have a shortage in agricultural labor and we need to have another source of supply available should the economy in Mexico develop to such a place that we won't get workers from south of the border."

Miller added, "The Department of Labor has taken the position it doesn't want to approve Japanese labor on the basis that the Mexican labor is adequate. But the farmers would like to have a choice of selection."

Then he pointed out the great effect the now program is having against communism in Japan. The Japanese consul general in Los Angeles 4 or 5 years ago said such a project would improve Japanese-American relations and keep out communism and recent evidence is proving that, Miller said.

Testimony at the hearing conducted by Representative HILLINGS in Los Angeles indicated that a Japanese prefecture expected to go communistic in its last election voted the opposite way because of the reports of America sent home by Japanese farm workers in California.

Ike's Grasp of Fiscal Policy Shown in Erratic Tactics

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nashville Tennessean. It is my opinion that this is a commendable editorial and one which presents the true facts in regard to the President's fiscal policy, or lack of policy. The editorial follows:

IKE'S GRASP OF FISCAL POLICY SHOWN IN ERRATIC TACTICS

One of the most curious things about Mr. Eisenhower's administration has been how, for the major part, he has always escaped criticism.

Few, if any Presidents, have ever been so politically blessed. If the Eisenhower administration makes mistakes, it is never Mr. Eisenhower who gets the blame, but rather some department head or cabinet officer.

The Republicans always leap to his defense when criticism is uttered or implied, and invariably the tenor of their defense, is couched in tones of outrage to be expected if the flag were critcized, or the honor of their home States.

President Abraham Lincoln certainly never got such consideration, nor did Presidents Grant, Harding, Hoover, Roosevelt, and Truman. When their administrations erred, the critics turned no major barbs on a cabinet officer; the shafts were saved for the President himself.

So, when Senator ROBERT S. KERR commented in the Senate that President Eisenhower, on the subject of fiscal policy * * * has no brains, and went on to say that fiscal experts could be paraded for months before the President and he would remain just as uninformed as he is now, the Republicans acted as if they been stabbed.

Perhaps the connotation of the word "brains" registered more strongly than Senator KERR intended. In clarification he asserted he meant a lack of understanding.

To anyone who is not blinded by the aura of the great white father must come the realization that Mr. Eisenhower's understanding of many of the facets of his administration is either severely limited, or that he is kept purposefully uninformed by members of the team.

If Mr. Eisenhower must depend upon people like outgoing Secretary of the Treasury George Humphrey or Assistant President Sherman Adams for being fully informed, the possibility is that he is kept in the dark. But one would think after all this time that Mr. Eisenhower would at least have caught on.

Mr. Eisenhower's lack of knowledge about the natural resources policy and special privileges for big electric utilities has been agonizingly apparent. During the Dixon-Yates controversy, it was discovered during a press conference that the President had not been informed by his staff of details of this case affecting a big section of the country and an important Government project. More recently it became apparent that Mr. Eisenhower knew little of what was going on in the Idaho Power Co. tax writeoff.

When questioned about a possible appointment to the TVA board, Mr. Eisenhower displayed in his remarks an amazing lack of knowledge about the TVA Act.

When Mr. Eisenhower's $71 billion budget was presented, along came Mr. Humphrey to say that it could be cut and to talk in gloomy terms of depression curls of hair. Then, Mr. Eisenhower admitted cuts could be made and finally wound up by lopping $520 million from foreign aid requests. After a short time, Mr. Eisenhower came back with speeches to the Nation telling why the budget could not be cut, and talking in terms of absolute minimums.

Now it comes to light that Mr. Eisenhower has written a letter to the Budget Bureau asking Federal agencies to hold their spending and contract signing to levels of the fiscal year just ended. Federal spending in fiscal 1957 was about $70 billion. The estimates for this year are about $73 billion. In other words, after talking of absolute minimums, Mr. Eisenhower now seems to propose slicing $2 to $3 billion off the anticipated rate of spending.

If Mr. Eisenhower's off-again, on-again tactics in regard to the budget are any indication, then we must agree with Senator KERR to the extent that the President does not understand the fiscal policy of this administration. And why he should be above and beyond criticism in this respect is beyond comprehension.

Memorial to Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. WITHROW. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein a memorial to Senator Joseph R. McCarthy by the Catholic War Veterans. The memorial was delivered in the Catholic cemetery in La Crosse, Wis., May 30, 1957, by the Past State Commander Patrick J. Whelan, on behalf of Catholic War Veterans' Bishop McGavick Post 421.

MEMORIAL TO SENATOR JOSEPH R. MCCARTHY

In the death of Senator Joseph R. McCarthy, the Catholic War Veterans have lost one of their most distinguished members, and the Nation has lost a patriot and a leader in the struggle to free the world of the Communist menace.

Born and educated near Appleton, a law graduate of Marquette University, he was judge of the Wisconsin circuit court for a term before serving with distinction in the United States Marine Corps in the Pacific during World War II. He was elected to the United States Senate in 1946, and re-elected in 1952.

Senator McCarthy soared to national prominence as member, then chairman, of the Senate Permanent Investigations Subcommittee. In his short career, in a period of confusion and doubt, he was one of the few of our national leaders to have a clear vision of the great political problem of our time. With this vision went the cold courage and the tenacious determination to solve that problem. Many today understand that problem through his pioneering efforts. Only history will bring to light for posterity the full record of his unprecedented almost lonely efforts for a great cause.

Since 1946, Senator McCarthy had been a member of the Appleton, Wis., post of the Catholic War Veterans. Through his help, Congress passed a bill introduced by the Catholic War Veterans by which the United States Post Office now uses a "pray for peace" stamp on envelopes for cancelation purposes.

Senator McCarthy's pastor and other persons close to him have testified to his sincere devotion to his church, and to his faith. He died as he had lived, a loyal son of the church, with the consolation and strength of the last sacraments. May his soul rest in peace, and may his bereaved family take comfort in the prayers of his millions of friends.

Address by Judge Hyman J. Reit at the Temple Bnai Israel and Sheerith

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ZELENKO. Mr. Speaker, I take pleasure at this time in presenting the address delivered by Judge Hyman J. Reit at the Temple B'nai Israel and Sheerith Judah, located in Washington Heights in New York City, on Sunday, June 9, 1957. Judge Reit's remarks are as follows:

Mr. Chairman, honored guests, ladies and gentlemen, tonight we are celebrating a great event in the history of the Community Center of Washington Heights. The burning of the mortgage that encumbered the Temple B'nai Israel and Sheerith Judah and its community center for the past 40 years. At the very outset I want to take this opportunity of extending the sincere thanks and appreciation on behalf of the temple and our congressional Representative, the Honorable HERBERT ZELENKO, who, upon this occasion, presented to the temple the American and the Israel flags which will adorn our pulpit.

It is not amiss upon such an occasion as this in the presence of such a multitude of attendants and a great number of distinguished guests who play such an important role in the politcal, philanthropic, and religous life of the city of New York to relate the history of the temple and the first Jewish community center built in the city of New York.

It was in the year 1916 when a small body of men determined to build an institution that could take care of the religious, educational, and physical needs of the men, women, and children who resided in Washington Heights.

I was privileged as its president, which office I held for 35 years, to carry out the will of the community. It was determined that the building to be erected by the congregation should house within its walls, no matter what the cost be, a talmud torah to care for the religious training of the children, a synagogue to meet the needs of those more advanced in years, a gymnasium and swimming pool to take care of the physical needs of the young and old alike, club rooms, lecture hall and reception rooms for the purpose of advancing social needs of the community and to enable the members and others to meet each other in closer bonds of fellowship. It was decided to throw the doors open to all movements of every kind, nature, and description affecting civic improvement for the good and welfare of the community of Washington Heights as well as of the city of New York.

Our temple meant a great deal to every man, woman, and child who came under its

influence. Not only is it a most beautiful and stately house of prayer, but it also meets the social needs of the neighborhood. The community of Washington Heights at that period did not have any institution which took into account the fact that the neighborhood can be a potent force in developing the spiritual life of the individual. It was this need and with this thought in mind that the synagogue has been made a true community center, fostering activities of a scope broad enough to include the old as well as the young, with adequate provision for the recreational as well as the spiritual requirements of our community.

Facilities for the welfare of our children have been carefully provided with an eye to physical comfort, as well as to their religious training. One floor of our institution was given over to excellently equipped classrooms and an assembly room. Nothing has been spared in order that the child be given an appreciative knowledge of Judaism and its duty toward the community, state, and Nation.

For the adolescents, classes were established in Bible, Jewish history, and in Hebrew, and adult classes and discussion groups in Bible and Jewish ethics.

At a certain time in the life of every boy and girl there comes a craving to be affiliated and associated with a club, and such organizations for boys and girls were established and directed by trained leaders who fully understood the nature of the adolescent. Boy and Girl Scout troops, literary, social, and dramatic clubs were organized for that purpose. It was possible to serve the community in ways that a house of prayer alone cannot possibly undertake. It welded the people of our neighorhbood together and made them a large family, sharing in the joys and happiness of the community.

After 5 years of constant struggle in connection with the construction, in 1922 the building was fully completed. On May 27, 1922, the temple was dedicated, and a program was arranged that continued for a period of 1 week. On Saturday evening, May 27, at a banquet held at the temple, the congregation and its many friends were honored to hear addresses delivered by Hon. Otto A. Rosalsky, judge of the court of general sessions, Hon. Louis Marshall, the great leader of the Jewish people in the United States, and the Honorable Julian W. Mack, judge of the United States circuit court.

On Sunday, May 28, at 2:30 o'clock, the temple was further received by the then Honorable John F. Hylan, mayor of the city of New York, who was the recipient of a key to the temple, and in his address stressed the importance of community centers of the nature that was erected in the city of New York. Also upon this occasion the Honorable Samuel Untermeyer, the Honorable Nathan Strauss, the Honorable John P. Cohalan, the surrogate of the county of New York, and the Honorable Isaac Siegel, who was then the congressional Representative of Washington Heights, were present and delivered dedication addresses. The dedication selections were beautifully rendered by the late Cantor Joseph Shapiro and his choir, and the invocation and prayers were delivered by the then Rabbi Max Kadushin. All of the rabbis of Washington Heights—Rabbi Max Drob, Rabbi Herman Martin, Rabbi Rudolph Lupo—participated in the dedication during the week of celebration.

It was in the year 1924 the Jewish community was thrilled by the arrival of Dr. Chaim Weizmann in the United States. This was his first visit to the country. The congregation determined to extend a great welcome to Dr. Weizmann and arrangements were made that his reception was to take place in the temple. Upon that occasion the then mayor of the city of New York, the Honorable John F. Hylan, and a great number of distinguished leaders in the political, philanthropic, business, and religious world were present and participated in this great reception. His mission in this country was to organize the Keren Hayesod (Palestine Foundation Fund) for the purpose of helping the development of the then Palestine and exerting an effort to unite the Jewish people for the establishment of a Jewish state in the land of Israel.

Since the erection and dedication of the temple and the community center the synagogue became the center of all philanthropic drives for all causes both Jewish and Christian, and took a very active part in the civic work of the city of New York.

It gives me great pleasure to express my gratitude to the officers, directors, trustees, the sisterhood, and the men's club for their untiring loyalty and unstinting devotion to all of the causes that were embraced in the work of this community center. I am very grateful to the distinguished guests who upon this occasion have favored us with their presence.

I cannot conclude without expressing my deep and sincere appreciation to our distinguished and learned Rabbi Philip Alstad who has unstintingly given of himself continuously and constantly to the great work of religious training and education to the thousands of our parishioners.

He, like the great Prophet Isaiah, combined knowledge and wisdom and like the Prophet Hillel, taught us never do unto others that which is hateful to yourself.

May it be the will of God that we continue with greater spirit and strength the noble work of religious, educational, civic, and philanthropic work which we have commenced 41 years ago.

Hon. James B. Bowler

SPEECH
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. NATCHER. Mr. Speaker, I rise to pay tribute to our late colleague, JAMES B. BOWLER.

JAMES BOWLER was first elected to the House of Representatives to represent the Seventh District of Illinois on July 7, 1953, after serving 43 years on the Chicago City Council. He was assigned to the Committee on Education and Labor which he served diligently and well. He also took an active role in the legislative program of the House, and it was indeed a rare occasion for him to be absent from the floor. During the 85th Congress, JAMES BOWLER was made a member of the Committee on Appropriations, and one of his subcommittees was Agricultural Appropriations, on which I have the pleasure of serving.

JAMES BOWLER'S contributions to good government were many and will long be remembered by his colleagues. But JAMES BOWLER is forever implanted in our memories for reasons other than public service. Endearing him to all were the qualities of devotion to his family and friends, a keen sense of humor, rugged integrity, and good commonsense which he possessed in such abundance. I am acutely aware of the privilege afforded me in being associated with such a man.

The State of Illinois and the United States deeply mourn the passing of JAMES BOWLER. A man of his ability and character is irreplaceable. To his wife and family I extend my profound sympathy in their sorrow.

Hon. Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. RUSSELL W. KEENEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. KEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two resolutions unanimously adopted by the Du Page County executive committee of the American Legion, and one by Hinsdale Post, No. 250 of the American Legion, memorializing one of our Nation's great, courageous, dedicated public servants, the late Hon. Joseph R. McCarthy of Wisconsin.

The resolutions are as follows:

RESOLUTION OF HINSDALE POST, NO. 250, THE AMERICAN LEGION, HILLSDALE, ILL.

Mrs. JOSEPH MCCARTHY,
Appleton, Wis.

The following resolution was spontaneously and unanimously accepted on the floor of a business meeting May 6, 1957:

"Whereas your beloved husband, the late Senator Joseph McCarthy, has met an untime end; and

"Whereas he was one of the Nation's great, courageous, dedicated public servants; and

"Whereas he was a hero to many, anathema, only, to those of doubtful purposes; and

"Whereas many of the things for which he fought are one and the same with the purposes of the American Legion; and

"Whereas we of the Hinsdale American Legion Post, No. 250, Department of Illinois, feel a deep sense of loss at his untimely passing: Therefore be it

"*Resolved*, That this resolution of condolence be forwarded to you, and we further resolve to carry on, to the utmost of our ability, that work which he has, thus far, so ably advanced."

As proposed by Past Commander R. Noble.

Respectfully,

C. A. BURKHARDT,
Commander.

RESOLUTION OF DU PAGE COUNTY EXECUTIVE COMMITTEE, DEPARTMENT OF ILLINOIS, HINSDALE, ILL.

Mrs. JOSEPH MCCARTHY,
Appleton, Wis.

The following resolution was spontaneously and unanimously accepted on the floor of a business meeting May 8, 1957:

"Whereas your beloved husband, the late Senator Joseph McCarthy, has met an untimely end; and

"Whereas he was one of the Nation's great, courageous, dedicated public servants, and

"Whereas he was a hero to many, anathema, only, to those of doubtful purposes; and

"Whereas many of the things for which he fought are one and the same with the purposes of the American Legion; and

"Whereas we, of the Du Page County executive committee, Du Page County, Department of Illinois, feel a deep sense of loss at his untimely passing: Therefore be it

"*Resolved*, That this resolution of condolence be forwarded to you, and we further resolve to carry on, to the utmost of our

ability, that work which he has, thus far, so ably advanced."

As proposed by Comrade Jack DeRosa.

Respectfully,

WENDELL JACKSON,
Commander.

The Establishment of an International Trade Commission

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I recently wrote to the Honorable Walter Williams, Under Secretary of Commerce, Department of Commerce, on the subject of the establishment of an International Trade Commission as provided in legislation which I introduced, H. R. 637:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 13, 1957.

Hon. WALTER WILLIAMS,
Under Secretary of Commerce,
Department of Commerce,
Washington, D. C.,

DEAR MR. SECRETARY: Many thanks for your helpful letter of June 25, 1957. It was a source of regret that the Department of Commerce did not see its way clear to endorse my bill H. R. 637 but I appreciate the study and attention which the Department has given to my views and understand thoroughly its point of view.

In 1955, I had the opportunity of giving some study to our problems in Turkey and Italy, and do envy you your trip last fall. I have always wanted to attend the Seattle International Trade Fair, and intend, some day, to see what you have so courageously created in the Northwest.

I am certain that you would have welcomed such a Commission as I hope will at some time be established in the early days of this fine effort. We are both trying to accomplish the same purpose and I am certain that we shall continue to be mutually helpful.

Many thanks for having brought up my statement as regards the lack of trained personnel. I heartily agree that it would be most unfair to judge the present personnel in these programs at this phase, from the standpoint of the trained professional.

Being an international trade fair and exposition professional takes many years of careful training and there has not, up until the present time, been a real necessity for such a group of men in the United States. Abroad this is a profession and we naturally want to meet other countries with trained staffs equal to theirs. This takes time but I am convinced that we will eventually be able to meet them on their own grounds.

My reference to personnel had to do with the period from 1931–55, with which I and my advisers have been, through actual experience, closely associated, however, I have been disappointed that the available experience in the United States has not been more fully taken advantage of in our Government's programs.

May I recall to your attention the long letter I wrote on March 16, 1955, and which was entered in the CONGRESSIONAL RECORD of March 30, 1955, with my bill H. R. 5301, which originally proposed the creation of an International Trade Fair Commission, restricted to operation within the limits of the United States in the field of international trade fairs, expositions, and trade marts.

In this letter, appreciation of the work of the Department of Commerce personnel took form as follows:

"I know of the stalwart services of numbers of unsung civil servants in the United States Department of Commerce, who have labored long to develop these foreign-trade media. To them goes great credit."

The program of the Trade Mission Division of the Department has been of special interest to me. Last year one of my constituents had the real opportunity of being a member of one of these missions abroad. We lunched with the Director of this Division and my constituent was most enthusiastic as to the results being accomplished through this program. As you stated, much assistance is being given to American businessmen in participating in these foreign trade fairs, and much valuable information is being distributed in foreign countries through our taking part in the international trade fairs.

To my mind, this is the proper way for the Departmnt of Commerce to participate in international trade fairs abroad. I am not in favor of using the Department for purposes of propaganda as is now being done. It is neither dignified nor in accord with the long-established customs of the countries in which we are exhibiting. I do not think that this is the intelligent way to make friends.

The international trade fair is solely for purposes of trade.

The International Bureau of Expositions in Paris felt so strongly about certain violations of the Convention of 1928, under which treaty it was established, as to define the purposes of the Foire—the trade fair—at its semiannual meeting of November 5, 1953. It is as follows:

"Trade fairs are regularly recurrent bodies. They take place at fixed dates and are intended to create wide markets where manufacturers can show their products and transact business."

Under article 1, International Convention, signed at Paris, November 22, 1928, concerning international exhibitions, manifestations in which member nations participate of less than 3 weeks do not have to be cleared through the bureau. This excludes the usual trade fair.

The regulations of the Brussels Universal and International Exhibition, 1958, governing the manner of participation by foreign nations were also accepted at this session of the bureau. I speak of this as it would be impossible for any great international exposition to take place without the official participation of the member nations of the bureau.

The negotiations by the New York World's Fair of 1939 before the bureau for the acceptance of its regulations were long and delicate, and there is much unfinished business with the bureau which faces any future international exposition in the United States which may wish to have the bureau's blessing.

You know the warm support I gave to Public Law 860 of August 1, 1956. In July 1956, I flew especially from Wilkes-Barre to Washington, exercising my congressional prerogative, to attend a closed session of the House Foreign Affairs Committee, where I strongly advocated the voting of sufficient funds to make those programs possible.

I still support the Government's purposes. However, in following the performance in this field, both at home and abroad, by governmental and private agencies, I was more strongly convinced that legislation of the character of H. R. 637 was not only desirable but highly necessary. I could mention the unsatisfactory results of projects in this country as well as abroad, but, for the moment, it would serve no good purpose. My whole desire is to be helpful and cooperative.

The success of the recent United States World Fair in New York has been a source of much satisfaction and the promoters as well as the directors of the New York Coliseum deserve great credit.

The opening of the St. Lawrence seaway in 1959 and the possibility of a great international exposition of the type of the Brussels Exposition of 1958, in this country during 1960, where the great nations could participate, has stimulated considerable interest in numbers of our great cities.

Our problems in this field are being multiplied and it is the opinion of the really experienced that there will be a need for Government financial assistance as envisaged in H. R. 637, under private management.

It has been demonstrated by projects launched within the last few years in the United States that the pioneer dollar is a thing of the past, and that in any future development in this field, that public financing of one sort or another will be necessary. That does not exclude the United States Government, which has generously contributed for many years to our various international expositions.

It was a pleasure to hear from you, and do be assured of my constant cooperation.

Sincerely yours,

DANIEL J. FLOOD.

The Late Honorable Fred A. Blake

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks I include therein a speech, which I recently delivered at the exercises dedicating a memorial plaque to the late Honorable Fred A. Blake, of Gardner, Mass., a former very prominent, able, and distinguished member of the Massachusetts General Court for many years and a beloved citizen of that beautiful city.

The dedicatory exercises were largely attended by friends and fellow citizens and distinquished public officials and were a most impressive tribute to a great American.

I also ask unanimous consent to include in my remarks an article relative to the exercises from the celebrated Gardner News, one of the outstanding newspaper publications in my district and State.

A very touching incident of the dedication was the attendance of Representative Blake's family and his seven young grandchildren, who conducted the unveiling.

The speech and article follow:

REMARKS OF CONGRESSMAN PHILIP J. PHILBIN AT DEDICATION OF MEMORIAL PLAQUE TO THE LATE HONORABLE FRED A. BLAKE—NATIONAL GUARD ARMORY, GARDNER, MASS., JUNE 29, 1957

My dear and distinguished friends, we are gathered here this afternoon in this splendid National Guard Armory to dedicate this meaningful, impressive memorial plaque

in honor of our very dear friend and distinguished public servant, the late Representative Fred A. Blake.

In a very real sense there is a special fitness and appropriateness about the dedication of this plaque because it will perpetuate the memory of one whose service was outstanding and unselfish and whose constant aim was to help the people of his district, and to sustain and improve the great government of our beloved Commonwealth.

Fred Blake was a modest, humble man. He was not given to show or ostentation. He was deeply devoted to his family and his friends. He was dedicated to his tasks. He was high and noble in his purpose, and able, painstaking, honest and effective in everything that he undertook.

Fred Blake was a solid, successful businessman who came up the hard way by virtue of his own ability, perseverance, and hard work.

He knew there was no easy road to success. Because he was so close to the people that he lived with and served, he was so much the better fitted to assist them with their problems and to represent them with such conspicuous results in our great general court and in this beautiful city which he loved.

He was honored by all those who knew him, by his friends, his business associates, and those in the public service who knew so well the integrity of his purpose, the depth of his sincerity, his allegiance to those who struggled, his aim to make his full contribution to community, State and Nation.

In the general court he was a valued member of the important Committee on Military Affairs, and had expert knowledge of our needs in the great field of national defense and State cooperation.

He was a loyal friend of our great National Guard, and did everything in his power to assist and sustain this indispensable arm of our defense, to maintain and expand its facilities for even greater service to our country. It is most fitting that its outstanding leader, General Harrison, should be with us on this moving occasion.

To be sure, I could not possibly encompass the career of this illustrious legislator in these brief remarks, but we may all be sure that what he did, what he achieved, what he contributed will live long in the memory of his district and in the annals of our Commonwealth. His life, his unselfish work, his ever ready willingness to help the people regardless of race, class or creed, exemplified the finest that there is in American public service.

Devoted husband and father, gracious considerate neighbor, capable businessman, acknowledged civic leader, esteemed public servant and long term member of the general court, and above all, a man of character, ability, stature, and Christian virtue, Fred Blake typified everything that is stable, sound and inspiring in American life. He was a great law-maker and a great American. He is mourned by a veritable host of friends and associates, his memory will ever be green among the people and especially among those of us who knew him for the gracious and devoted friend that he was.

It was a privilege and a blessing indeed to know and work with him. But it was even a greater privilege and blessing for his community and his constituents and our Commonwealth to have the benefit of his high motivations and his unflagging efforts to lighten the burdens of the common people.

It is difficult, I know, for any of us on this occasion, in the presence of Mrs. Blake and his family, to express words that may console them for the irreparable loss they have suffered, and the great irreplaceable void that has been left in their lives by his untimely passing.

It is comforting to note, however, that Mrs. Blake, his loyal helpmate and wife, has been brave and resigned in the spirit of her Christian faith to the heavy affliction which has come upon herself and her wonderful family, and it is due in very large measure to her love, devotion, interest, and cooperation that this impressive plaque has been made possible.

I know we have all been very much impressed and touched by her wonderful example of devotion to the memory of her esteemed and beloved husband, and that also of all her family. While we have heavy hearts today, we also have a sense of great honor, privilege, and pride, because in dedicating this plaque, we are joining together as family, friends, and comrades to pay heartfelt tribute to the memory of one who has kept the faith with the people, the memory of a beloved husband and father, a loyal friend, and an unfaltering champion of democracy and justice, the late Fred A. Blake.

May he find rest and peace in his heavenly reward.

And may this beautiful memorial ever inspire us and those who come after us to serve the people with courage, integrity, and devotion, in the words of the poet:

"So live, that when thy summons comes to join
The innumerable caravan, which moves
To that mysterious realm where each shall take
His chamber in the silent halls of death
Thou go not, like the galley slave at night
Scourged to his dungeon but, sustained and soothed
By an unfaltering trust, approach thy grave
Like one who wraps the drapery of his couch
About him and lies down to pleasant dreams."

MEMORIAL TO FRED BLAKE IS UNVEILED

Seven grandchildren of the late Representative Fred A. Blake and Mrs. Victoria Blake unveiled a bronze memorial plaque to their grandfather in the drill shed of the new State Armory on West Broadway Saturday afternoon.

The unveiling in which the seven youngsters were escorted by Maj. Gen. William Harrison, Jr., adjutant general of the Commonwealth, was the high point of a program honoring the former representative who served this district at the State house for 20 years.

The septet included Donna Rae, Virginia Jean, Victoria Jane, and Marion Patricia Blake, children of Dr. and Mrs. Edward A. Blake; Alan Fred and Diane Mary Dernalowicz, children of Mr. and Mrs. Henry Dernalowicz, all of this city; and Susan Mary Fortune, daughter of Mr. and Mrs. Benjamin Fortune, of Northboro.

Congressman PHILIP J. PHILBIN was the chief speaker in the exercises which were attended by nearly 150, including State and municipal officials, delegations from the city's veteran organizations and the Gold Star Mothers, the Gardner Fish and Gun Club, Hillcrest Aerie F. O. E. and other organizations in which Mr. Blake had been active; and Company G, 181st Infantry, which is based at the armory. Martin H. Walsh, his successor as Gardner's representative on Beacon Hill, was master of ceremonies.

Congressman PHILBIN who worked with Representative Blake in bringing about the erection of an armory here paid a warm tribute to him as a public spirited, forward looking, and liberal representative who gave generously of his time and effort to help not only his constituents but the citizenry-at-large. "Fred Blake was devoted to national defense," Congressman PHILBIN said. "He recognized the need for a strong America and worked unceasingly for the Military Establishment and the National Guard which bulks so strongly in it.

"Fred Blake introduced the first bill for a Gardner Armory back in 1943. He lived long enough to see the building started, but his untimely death in March of 1956 prevented him from seeing it an accomplished fact. This memorial plaque will be a testimonial to his unceasing and unselfish work for all time and a source of inspiration to his family and to all of us."

Adjutant General Harrison lauded Mr. Blake for his constant support of the Guard on Beacon Hill and Mayor Ulric O. Fredette paid a warm tribute to Mr. Blake's contributions to the community. Other speakers were Capt. Robert L. Croteau, municipal assessor and commanding officer of G Company, State Senator Elizabeth Stanton of Fitchburg, and Gordon Rayner, secretary of the Massachusetts Laundry and Linen Supply Association which Mr. Blake had served as president for several terms.

Captain Croteau, who formally accepted the plaque for the company and the Guard, expressed the deep gratitude of himself and the members of his organization for the splendid building which has been provided for the unit. Senator Stanton touched in some detail on her association with Mr. Blake at Beacon Hill and his constant work on behalf of his district. Mr. Rayner said that despite the heavy demands on his time, Representative Blake had worked long and effectively for the association he headed.

Rev. John B. O'Connell of Holy Spirit Church in South Gardner delivered the invocation. Seated on the platform and introduced to the gathering were Col. Ralph Noonan, State quartermaster, Col. Burr G. Jacobsen of the Company G citizens' committee, Representative J. Robert Mahan of Leominster and Miss Ann Shirley retired Phillipston teacher who had taugh Representative Blake from the fourth through the ninth grade.

Telegrams from Governor and Mrs. Foster Furcolo, Lt. Gov. Robert M. Murphy, former Gov. Paul Dever, Speaker Michael Skerry of the house, Senate President N. H. Holmes and Congressman Thomas O'Neill of Cambridge, and Gen. Otis Whitney, State commissioner of public safety, were read by the toastmaster.

Hells Canyon and Nebraska

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. MILLER of Nebraska. Mr. Speaker, in my home State of Nebraska there is a bit of controversy raging concerning my stand in opposition to the Federal Government building a high dam in Hells Canyon on the Snake River. Most of the criticism has come from a group of public-power officials but with the exception of these people my attitude has been pretty generally approved in Nebraska. At the close of my remarks I would like to insert in the RECORD the text of two editorials which appeared in the Ord Quiz, a weekly newspaper published in Ord, Nebr., and considered one of the outstanding weeklies in the State and the Council Bluffs Nonpareil in Iowa.

I have explained my stand on Hells Canyon to the people of Nebraska by newspaper, newsletter, and radio. I have explained to them I stand for public power such as we have in Nebraska, locally controlled and managed. This

type of power is far different than the Federal power which is controlled from Washington.

I have explained that I am also a believer in free enterprise. In the Hells Canyon case private money is available for the construction of 3 dams from which will come approximately the same amount of power as from the 1 high dam. The hydroelectric heads would be exactly the same.

What some people fail to realize is that power is needed in the Northwest now. The private power company can supply this power starting sometime next year. Power from the high Federal dam would be several years away, and would cost the taxpayers of America about $700 million to fully complete. The private power company will provide an adequate power supply for the future from a taxpaying enterprise that will pay millions of dollars in taxes to the county, State and Federal Government. This would not be true if the dam was built by the Federal Government. In fact the records show that half of the Federal power in the Pacific Northwest is being sold, much of it at less than the cost of production, the FPC when it granted the permits for the three dams project said:

> They found the three-dam plan best adapted to a comprehensive plan of development as required by the Federal Power Act.

This was a unanimous decision by the bipartisan board. The board gave the Idaho Power Co. a license to build three dams—Brownlee, Oxbow and Hells Canyon. Its decision was confirmed by unanimous decision of the United States Circuit Court of Appeals and twice by the United States Supreme Court.

Acting in good faith, the Idaho Power Co. has already started construction of one dam which is about half completed. The company has spent some $57 million already and the construction cost is daily mounting. If the Federal high dam were to be granted, this construction would be utterly wasted and would wipe out the millions of dollars worth of work already accomplished by the 1,200 men who are working around the clock to get power on the line late in 1958.

Under the license granted by the Federal Power Commission the private company must impound up to 1 million acrefeet of flood control water at its own expense. The company must make its power available from the three dams to the Northwest power pool which would help serve the power needs of the whole region.

The company must provide fish traps and equipment which will permit the salmon and other fish to get to the head water to spawn. This is done at a cost of millions of dollars and does not cost the Government one penny.

The rates of the power company will be controlled by the local State power commission. Their securities must pass Government inspection. They must pay local and Federal taxes. They are willing and able to do the job.

Secretary Seaton has described the building of the dam as "wasteful and extravagant expenditure of the public funds." This Congress is economy minded. I cannot believe they would appropriate nearly $100 million a year for 6 or 7 years when the job can be done by free enterprise at a much reduced figure.

I cannot believe that those who propose the one high dam will really give serious consideration to stopping the development by the private enterprise company which would deprive this area of badly needed power and in addition have the dam built at the taxpayers' expense, particularly when it can be done by the private group.

The people of Nebraska well know that I do not believe the Federal Government should do for the people what they can and should do for themselves.

I don't mind the criticism I have received from a few people in Nebraska. I am a little amazed that some public power advocates would want me to compromise my position and do what they call horse trading. I am just a boy from the country, but it seems that trading a $10 million project for a $700 million project would not be a very good trade. In the 15 years that I have been in Congress I have never yielded to political or legislative coercion or blackmail. I do not expect to do so now. When a project has merit it will have my full support. When it does not have merit and is not feasible, I must in all good conscience oppose its construction.

The two editorials that follow, one from the Ord, Nebr., Quiz, in the heart of my district, has given me a little pat on the back. I believe it sums up pretty well the thinking of the folks in Nebraska. The other editorial from the Council Bluffs, Iowa, Nonpareil, is entitled "Hells Canyon Federal Power Would Mean Higher Taxes." I commend the reading of these two editorials to my colleagues.

The editorials follow:

[From the Ord (Nebr.) Quiz of July 18, 1957]

IN PRAISE OF DR. MILLER

We're getting doggoned fed up with the politically inspired carping at Congressman A. L. MILLER by some of the public-power interests in Nebraska.

To one who has studied the record, it's very apparent that these groups are trying to make Dr. MILLER the whipping boy for their own ineptness and dog-in-the-manger attitude of some years back. They are being joined loudly by a few remnants of New Deal zealots, who would use the issue at stake, the heavy transmission line from Fort Randall to Grand Island, as a coattail on which to ride to public attention.

The whole criticism of our Congressman is laden with absurdities. A Democratic Congress voted down a public-power dam in Idaho. Ergo, Dr. MILLER as a Member of that Congress is labeled as an anti-public-power leader. A Democratically controlled Congress voted down Government building of a heavy transmission line from Randall to Grand Island; ergo, Dr. MILLER is blamed because of what happened on the Hells Canyon, Idaho, proposal.

It wasn't so very many years ago—about 5—that the Randall line would have been built except for the resistance of some of Nebraska's big power-producing interests. At that time they foresaw the heavy line and cheap power as a possible threat to their virtual power monopoly in the State, and decided they wanted nothing to do with it.

At that time, the cheap power from Randall would have been the nemesis of such boondoggles as the Columbus power plant, whose haphazard production of electricity at the expense of irrigation farmers is only too well known to farmers of the Loup Valley.

Apparently, our public-power interests couldn't foresee a future with air-conditioning, television, and pump irrigation. They couldn't believe the rural electrification would expand until every farm became an electrical customer with an ever-increasing demand for power.

So much for the critics. Their shortsightedness today is just as absymal as it was several years ago.

What is so asburd about the public power interest's choice of a whipping boy, is that no Nebraska public official, since the days of the late Senator George W. Norris, has done as much in Washington in the interests of irrigation and the bringing of electricity to our rural areas as has A. L. MILLER.

His record of active promotion of reclamation and irrigation projects in Nebraska—whether in his district or not—is unchallenged. His devotion to the cause of rural electrification is admitted by his severest critics.

You'll note we haven't said that Dr. MILLER is an ardent backer of public power. Public power in Nebraska means one thing, in the Nation, the meaning is different. In Nebraska public power is locally controlled, and locally managed, even though there are some who would like to see a glorified Federal control similar to that in the TVA area. Let's keep our public power a Nebraska power. And let's give credit to farsighted Americans like Dr. A. L. MILLER who are helping us maintain our local stature and ideals.

[From the Council Bluffs (Iowa) Nonpareil]

HELLS CANYON FEDERAL POWER WOULD MEAN HIGHER TAXES

Approval of the Federal electric power project in Hells Canyon would shift a billion-dollar burden upon the taxpayers at the very time most people want Government expenses reduced.

Furthermore, approval of the Federal project on the Idaho site would mean an indefinite delay in production of electric power needed in the immediate future.

The Idaho Power Co. already is building a dam which will be producing power next year, unless forced to discontinue construction.

Costs alone should persuade Congress that a Federal dam in Hells Canyon would be an irresponsible waste of public funds.

The proposed Federal dam would cost at least $400 million. Federal, State, and local tax losses over the 50-year period of the Idaho Power Co.'s license would amount to about $487 million. Another $68 million would have to be paid to the Idaho company for construction already completed at company expense.

Since the Federal Power Commission licensed the Idaho Power Company to undertake the Hells Canyon project, not a single new fact has been placed on record to challenge the validity of the Commission's decision.

The tax amortization granted the Idaho Power Co. has been removed by the company itself rejecting tax privileges.

It should also be noted that the usual arguments for Federal power projects—the accompanying benefits of navigation, flood control, and reclamation do not hold for the Hells Canyon project.

Justification for a Federal dam at Hells Canyon is based almost entirely on power development. It is not a multipurpose project with byproduct electric power.

The dams the Idaho Power Co. plans to build would develop almost as much power as the high dam proposed by advocates of

public power. The company expects to begin producing power much sooner than the high Federal dam could possibly get into operation. The company will pay taxes which the Federal Government of course would not do.

It seems inconceivable that Congress would approve the costly Federal project at the very time citizens everywhere are demanding Federal economy.

Greater Wilkes-Barre Flood Control Works Dedicated

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address presented by Maj. Gen. Anthony J. Drexel Biddle, Jr., Pennsylvania adjutant general, at dedication ceremonies held at Wilkes-Barre on Tuesday, July 16, 1957, upon completion of the multi-million dollar flood-control system for the Wyoming Valley area:

ADDRESS BY MAJ. GEN. ANTHONY J. DREXEL BIDDLE, JR.

I am sensible of the honor of speaking to you on this significant occasion.

I don't suppose anyone—outside of the residents of the nearby affected area—had a closer view than I of the flood two summers ago. I had come up with the Pennsylvania National Guard to lend a helping hand. I saw the damage being rent—people being made homeless; bridges washed out, roads inundated, factories and other places of business falling before the force of the torrential waters. So I know what this system of dikes means to you. Its creation reflects the foresight and determination of the community to counter the challenge of ravaging floods, and as an engineering achievement it is a tribute to the officers and staff of the United States Army Engineer Corps and to the effective cooperation accorded by the department of forests and waters headed by our able friend Maurice Goddard. Then too, and very consequential, there is the credit due to the community's statesmanlike representation in Washington, D. C., for this dynamic individual has contributed handsomely indeed, through sustained efforts to engage and hold Federal interest in the project. He's been a good friend of mine for years. I have come to recognize in him a rare combination of forcefulness, tact, and greatness of mind and action.

And, in this connection, it has been found by those who've perhaps not always gone along with this distinguished Representative of yours, that, once he's on the warpath for a project he considers good for his community, it takes more than a system of dikes to cope with him.

There's a story they tell about him in the Nation's Capitol and with the permission of the clergy I'll tell you: It was about the time of the 1955 floods—one of his colleagues asked the other: "Say, have you read about the rumpus that d—— flood is raising?"

The other colleague who was a bit hard of hearing, replied, "No, but if he keeps on insisting on those dikes, we may as well go along, for nothing short of a tank will stop DAN FLOOD."

Now, every one of us in all parts of the country is faced with a new challenge of a different kind. This one was hurled at us on June 12 by Soviet Foreign Minister, and Chief of the Soviet Communist Party, Nikita Khrushchev. He challenged the United States to a duel of economics and ideology.

Commenting on communism's sacred ideology, Khrushchev said there was only a single road of good revolutionary theory, and that was Marxism-Leninism.

This Communist challenge in the economic and ideological fields is one that all of us in this country will have to accept, and we shall probably be spending the major part of our lives in meeting it.

The fundamental concept of communism is atheism. This, together with the materialistic philosophy involved, represents, of course, a major difference between the ideologies of the free and captive worlds.

In the Communist world it is a case of the disbelief in God, of atheism, and the economic exploitation of the individual by the state, in a country where the people are slaves of the government; here we have our faith in God, our belief in the dignity of the individual, and free enterprise, and equality of opportunity for all the people, in a country where the Government is the servant of the people.

So it is up to us to accept and meet this challenge—even if it takes the rest of our lives to do so.

At the same time, we must seek all possible means to improve our relations with the Communists. And, in our dealings with them, we must always be ready to lend an ear to any proposals which might advance a better understanding. But it would be only prudent to apply the test of "acts—not promises."

The cold war is not our invention, nor does its continuation correspond to our desires.

Since the close of World War II, we have observed the cynical, mercurial switches in Soviet foreign policy: from bluster to affability, and back again to bluster.

In light, moreover, of the historic duplicity of the Russians, and until they demonstrate a willingness to translate words into such concrete acts, as would warrant some measure of free-world trust—we would be justified in maintaining a strong posture of defense and in insisting—as they traditionally do in Missouri—upon being shown.

So, while we shall have to accept and meet this new Communist challenge in the economic and ideological fields, we must at the same time bend our efforts to preserve the peace—but, bearing in mind that to prevent war, we must remain strong.

What with the modern weapons of destruction and the capabilities of delivering them—any general atomic war would be so destructive, that no true victor would emerge.

All of us are effected directly or indirectly by the requirement to make this Nation secure in a period of unremitting tension. We are frequently impelled to ask ourselves whether these vast expenditures of funds and efforts are really necessary for peace. Yes, I am afraid they are, as long as we are confronted by the Communist conspiracy, which has as its ultimate aim, the destruction of the United States and the moral, ethical, and spiritual foundation on which the American way of life is based.

As the atomic capabilities of the potential enemy increased, our military authorities have turned to a re-examination of all their efforts to verify that they blend with our our political, economic, and moral assets to form a national strategy designed for the prevention of war—an integrated strategy combining all our national assets. Nor is this response to the Communist threat exclusively military. It includes the political, economic, and moral assets as well. It is in recognition of this need for an integrated strategy that there has been developed the philosophy for security based on the deterrence of war. Thus, all our military preparations find justification in their contribution to prevent war.

We must be prepared to defend ourselves in the new forms of cold war techniques, whether they be propaganda, psychological or subversive attack—but these unconventional weapons will not be successful unless backed by armed power. Armed power still is at the core of a nation's protective shield. The armed power may never be used, but it must be in the wings.

If our deterrent strength is to be effective and to carry conviction, we must have a combination of moral, as well as physical force, capable of driving home in the mind of the potential aggressor the fact that any action against the interests of the United States and its allies, would bring unacceptable consequences. And it must be evident that our leaders are determined, that our policies are just, that our people are well informed, and our Nation is strong in spirit, as well as in material weapons. We must show a potential aggressor not only our military strength, but also that we have the mind and the will capable of directing these weapons with purpose and consistency.

But there is a further important defense consideration. Because of the new and advanced weapons of warfare, it is to our national advantage to meet aggression as far as possible from our own shores.

We must therefore have outlying bases throughout the world, and forces at those bases with a capacity to retaliate instantly and effectively in event of a major act of aggression.

It will therefore be necessary for the United States to develop a wider participation in international affairs and to vigorously reinforce the principles of the free world through such instruments as NATO.

NATO is, as you know, an association of free nations to keep the peace through collective strength. And this concept of collective strength is based on enlightened self-interest.

American forces have helped to erect this bulwark against possible Communist aggrandizement, in Europe, in the Far East and Middle East. The resultant collective security helps to protect the territory of our Allies, and it protects our own territory as well.

Now a word about this collective strength—it consists of three parts:

First, the spiritual force of the operation; second, the economic, then the organized military strength.

Now the military contribution to war deterrence is important, indeed indispensable, but it is far from being a complete answer in itself. Without economic and political stability and spiritual stamina, military strength is devoid of its essential foundation. All effective strength must have its roots in the elemental or spiritual and moral strength which derives from the devotion of people to the values, which are the essence of their nation—and from their dedication to the preservation of these values.

A strong economy is a prime essential in an ally, and its military burden must be such that it can manage to carry it for the long haul. Defense budgets necessarily represent the proper dividing line between national danger and excessive expenditure.

The Soviet bloc has a force of considerble magnitude in being all the time. If we tried to match it division for division, plane for plane, we would be running into economic difficulties, we would risk overturning the very system we are determined to support.

NATO's strength has increased 4 to 5 times since it was organized. Indeed, I venture to say, far more than that. For there's taken

place a general acceptance of the concept of collective security. Moreover, there now exists a farflung network of airfields serviced by a vast fuel feeder line system. Furthermore, there has been developed a flexible logistics system in support of the Armed Forces—and, among other things, cooperation in the economic field.

I believe that peace and security can be won through sustained strength, which, if maintained at the point of keeping the military scales in balance, will keep us in position to speak effectively in the interests of assuring peace for the future, and of keeping this world a decent, tranquil, humane place in which to live.

The Current Situation in the Middle East

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. FRIEDEL. Mr. Speaker, recent events compel me to bring to the attention of the House a most serious situation which I view with great alarm as it involves the security of our country and that of the entire Western World. I refer to the fact that three Soviet submarines have joined the Egyptian fleet, which is obviously disquieting news to say the least, for it is an obvious fact that this is but further evidence that an ever-increasing shipment of arms of war, munitions, planes, as well as other military equipment will be sent by the Reds to Egypt and other Arab countries, thus further enlarging their already vast stores of the implements necessary to wage aggressive warfare

It is also a well-established fact that both Egypt and Syria are reported to have initiated a major effort to regain the amity and friendship of King Saud of Saudi Arabia. It is through this policy that President Gamal Abdel Nasser of Egypt and his stanch followers in Syria are sponsoring Soviet penetration into the strategically important and oil-rich Middle East. I submit that the recent acquisition by Egypt of these submarines is clear evidence of the implementation of Russia's desire to acquire effective control of that entire area of the world.

The Middle East, a vast and complex region, is a strategic crossroads linking three continents. It is the repository for two-thirds of the world's known oil reserves. But even more important, it is a region seized by conflicts that are threatening international peace.

Even before so much oil was discovered beneath the sands of the deserts, the Middle East had left deep imprints on world history. It gave rise to the three great religions—Christianity, Islam and Judaism. It would indeed be a great pity, nay, a great shame and indeed a sin, if such an important part of this globe, which naturally includes the Holy Land, were to fall as a prey to the hands of a Godless and cruel nation which subscribes to the erroneous and wicked idea that religion is the opium of mankind.

It was at the beginning of this year that Egypt entered into another arms deal with Russia, a nation dedicated to world domination and conquest. It is not by chance that Egypt's Nasser remarked that that arms deal alone "was worth more than a quarter of a billion dollars in propaganda to Soviet leaders."

This latest move as to the submarines is but further indication of the many activities that are helping to tie Egypt to the Communist world and the danger of Egypt's complete alinement with the Communist bloc is now more than a possibility with which we must reckon.

Yet, in the face of all this, Secretary of State John Foster Dulles, according to a dispatch reported in the New York Times of July 17, 1957, suggested that perhaps the United States should play a less important role than in the past in the search for a solution of Arab-Israeli issues. This is indeed strange and does not augur well for future American foreign policy. We may properly ask Mr. Dulles whether we should turn our backs to our true friend in the Middle East—the State of Israel—which is a genuine democracy and a God-fearing nation.

The press of July 19, 1957, reports that Saudi Arabia has begun fortifying the entrance to the gulf of Aqaba. The gulf is the State of Israel's only means of access from the Red Sea to its growing port of Eilat. It is said the Saudis made contacts with Egypt through the Egyptian-Saudi joint command headed by Egyptian Gen. Abdel Hakin Amer. By this ominous news, the picture became clear. The submarines from the communistic Russians are to be used as means of blockading the straits of the Gulf of Aqaba and, thereby furthering the evergrasping, rapacious appetite of the Soviets for increasing its sphere of influence. This we must stop before it becomes too late.

A distinguished characteristic of our country in all its history has been our insistence on maintaining our standards and principles as a democratic nation in all our dealings in the field of international relations.

I earnestly urge that we redouble our efforts to bring peace and stability to the Middle East. Essential to the prevention of hostilities in that area is a fair and clear American foreign policy. The world has a right to expect progressive leadership from the United States of America. Lack of American leadership in the Middle East will result in continued violence which may eventually spread to other areas. Promises, which have been made or implied by the President of the United States to Israel concerning the use of the Suez Canal and the gulf of Aqaba, must be fulfilled if we are not to yield to the blackmailing devices of Arab and Egyptian potentates who flirt with communism. Egypt must not be permitted to return to the position from which it may again blockade the gulf of Aqaba and its international waterway. No doubt it appears that is what Egypt had in mind when it acquired these submarines.

We must ever be vigilant and not permit atheistic and despotic Soviet influence to be further extended. If the United States wishes to keep the Communists at bay, it will have to move fast.

The "Unloading Fee" Racket

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an article by Matt Triggs, assistant legislative director of the American Farm Bureau Federation, appearing in the July-August 1957, issue of the Nation's Agriculture, official publication of the federation, which spotlights a racket plaguing farmers and dealers in farm products. Congress sought to end this unscrupulous business through the Hobb's Racketeering Act, but enforcement in recent years appears to have been indifferent. In addition, it may be that tightening of the statute is indicated.

The article follows:

THE "UNLOADING FEE" RACKET
(By Matt Triggs)

A trucker hauling farm products (or nonfarm products) to most middle Atlantic cities will have to pay tribute to local labor unions before being permitted to unload.

The forced collection of truck unloading fees is spreading rapidly. Most truck arrivals in New York City, Boston, Newark, Philadelphia, Akron, Pittsburgh, Jersey City, Youngstown, Columbus, Cincinnati, Cleveland, Albany, Providence, Wheeling, Wilkes-Barre, Scranton, Johnstown, and many other middle Atlantic cities are currently subject to unloading fee collections.

The collection of fees in most cities was at first restricted to a few points, and a few large volume commodities. But as the system in a particular city gradually becomes more firmly established few trucks escape payment.

Farmer-owned trucks are often exempted at first, but as the program gets well established collections are also made for farm trucks.

The amount of the fee varies by city, and sometimes even within the city. Most fees in Philadelphia, for example, are $18.40, irrespective of the size of the truck or the load. In New York the more-or-less-standardized charge is $19.68. It takes between 1 and 2 hours to unload most trucks.

The normal situation is for the truck-driver to unload the packages on pallets, which are then moved away by worklift operators. But when the collection of unloading fees is started, the truckdrivers are not permitted to unload. They must stand by while the unloading is done for them.

Local labor unions, usually teamster union locals, have been responsible for establishing and enforcing the collection of unloadings fees. The union assigns a man or men to each unloading station. These men are not employees of the warehouse or other receiving concerns—although for all practical purposes they take possession of the unloading premises, decide who is to be unloaded next, and otherwise supervise the unloading operation.

I watched three trucks of apples being unloaded at a Philadelphia chainstore receiving warehouse. Three men assigned to the platform by Teamsers Union Local 107 were in full charge of the operation. A fee of $18.40 was collected from each truck-driver. Efforts to elicit information from two of the men were unsuccessful. Their reply was "Ask Foley. He's the boss."

Mr. Foley was reluctant to talk but finally did so. The conversation went like this:

Question. What happens to the money you collect?

Answer. How do you mean?

Question. Do you give it to local No. 107?

Answer. Oh, the union doesn't have anything to do with this.

Question. They assigned you here, didn't they?

Answer. Well, it used to be there were a lot of bums and drifters hanging around the warehouse trying to get a job unloading and the union thought the situation ought to be cleaned up.

Question. Well, who gets the money?

Answer. Well, me and my helpers.

Question. You mean you're sort of an independent contractor?

Answer. Well, I guess you might call it that.

Question. Suppose a load should tip over on one of the helpers. Do you cover him with workmen's compensation?

Answer. I don't know. Nothink like that ever happened around here.

Question. Do you make social-security payments and withhold income taxes?

Answer. Oh, Uncle Sam takes care of that all right. * * *

Question. How about unemployment-insurance payments?

Answer. Oh, that's O. K., too.

At this point Mr. Foley had to go some place in a hurry.

I asked one driver—"Why don't you join local 107; then you wouldn't have to pay the unloading fee each trip." He said he had tried to do this but was advised local 107 was closed. He was told to join his local Teamsters Union, which he did, but this did not prevent the imposition of the unloading fee thereafter.

One driver said he got mad one day and tried to unload himself.

However, nobody would take the pallets away—so after a while he had to go hunt up Mr. Foley and pay him the unloading fee.

Unloading fees are not new. Many years ago they were fairly common. With the approval of the Hobbs Antiracketeering Act the practice died out in most areas.

But experience with the Hobbs Anti-Racketeering Act has indicated the collection of unloading fees does not constitute a violation of the act unless violence or fear of violence is present. While this element may be present in particular instances it is not ordinarily present. All that usually happens is that you don't get unloaded.

Although the fee is actually paid by the truckdriver, it is charged back to the farmer. Many farmers are paying this fee who do not know they are paying it.

It is either included in the transportation or marketing charge they pay or deducted from the price they receive. This includes farmers in all areas whose commodities are shipped by truck to middle Atlantic markets, even though the practice may be unheard of in their areas.

The collection of unloading fees is a very lucrative business for somebody, and may be expected to expand into all areas unless stopped.

Farm Bureau has urged the McClellan committee to make a complete investigation of the forced collection of unloading fees, and to recommend amendment to the Hobbs Antiracketeering Act to prohibit such extortionate practice.

Farm Bureau told the committee: "We submit that to compel a person to purchase a service who does not desire such service and would prefer to perform it for himself, is not a legitimate labor-union activity, but may be more accurately described as a racket."

Lester Pearson's Political Blackmail

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. SHEEHAN. Mr. Speaker, Mr. Lester Pearson, the former Canadian Minister of External Affairs, spoke to the convention of the American Society of Newspaper Editors in San Francisco during the past week.

Apparently, Mr. Pearson undertook to tell us how to run our Government, and implied certain counteractions unless we changed our ways.

Mr. Pearson also lectured the assembled editors on matters concerning Canada's internal security. Apparently, though, Mr. Pearson failed to take into consideration one of the reasons for his ouster from power, which was his evident mishandling of the E. Herbert Norman case, in which he tried to hide from his Canadian voters the full implications of Norman's Communist connections and affiliations.

The Chicago Tribune, in their editorial of Thursday, July 18, covered this matter as follows:

POLITICAL BLACKMAIL

Admitting a somewhat substantial prejudice on past performance against Lester Pearson, we are still shocked by the exercise in political blackmail the former Canadian minister of external affairs perpetrated before the American Society of Newspaper Editors at its convention in San Francisco. Mr. Pearson, a member of the Liberal government which was unseated by the Progressive Conservatives in Canada's recent national election, retains a seat in the dominion parliament. If he was stating an official Canadian position, in behalf of the incoming government, Americans will be bound to raise their eyebrows. If he was speaking without present authority, the Canadian government may well be concerned over his presumption.

Mr. Pearson's general theme was that Americans had better mind their manners and keep their noses out of Canadian affairs, meanwhile cooperating with Canada on Canada's terms.

First, Pearson said, the United States should export less to Canada and take more Canadian imports. Canadians, he said, are "irritated" by United States trade restrictions. If there is not a substantial alteration in the present flow of goods, Canada "obviously will have to take some kind of remedial action."

The implicit threat is that Canadians will be required by their government to buy less in this country or that restrictions will be placed upon American investment in Canada. Inasmuch as the industrial development of Canada depends to a large degree upon American capital, Mr. Pearson seemed to be hinting at a policy of cutting off the nose to spite the face.

The former minister also spoke sharply about the dumping abroad of American farm surpluses which compete for markets with Canadian wheat. He said that if this continued, our relations generally will suffer.

Mr. Pearson further specified that while Canada was content to share the shelter of the American defense tent, it reserved full independence in dealing with matters of internal security. Apparently he is still piqued by the Senate Internal Security Subcommittee's investigation which prompted Pearson's friend, E. Herbert Norman, Canadian Ambassador to Egypt, to jump to his death from a high building in Cairo.

Pearson's explanations of this affair in the Dominion Parliament were something less than candid. He admitted that the Canadian Government had knowledge of Norman's early affinity for communism, but insisted nevertheless that Norman was worthy of trust. It has since developed that Norman feared that 60 or 70 Canadian and American officials might be drawn into the inquiry if it were allowed to proceed. His suicide, generating an outcry from Pearson and others, had the effect of stifling the Senate inquiry before it moved on to others.

Nevertheless, Pearson was unwilling to say in Parliament that the Senate subcommittee's facts were in any way untrue or unjustified, prompting the present Prime Minister, John Diefenbaker, to charge, "He equivocates."

Canada is an ally of the United States in the North Atlantic Treaty Organization, which is concerned with the mutual security of 14 nations against communism, yet Mr. Pearson is unwilling to agree that the conspiracies of Communist nationals in the member countries are part of the common defense problem. He is a vocal Atlantic Unionist and has been his country's spokesman at the United Nations, but his extreme internationalism is directed only against the national sovereignty of the United States.

The many breaches of Canadian and British security represented by the cases of Dr. Alan Nunn May, Klaus Fuchs, Bruno Pontecorvo, Donald Maclean, and Guy Burgess have apparently not convinced him that Communist treason is any serious threat, or that the United States has a right to be concerned about it, even if America suffered injury because of unwise trust reposed in these men and others. It is a curious outlook, and the editors who attended Mr. Pearson's speech may be tempted to wonder what cause he is arguing.

Judge Michael F. McDonald, of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of July 15, 1957, which comments on the passing of former Judge Michael F. McDonald:

MICHAEL F. McDONALD

Former Judge Michael F. McDonald easily qualified for a place among the leading members of the Luzerne County bar.

Judge McDonald had the good fortune to be born in Sugar Notch which has given the professions, the church, and Government so many outstanding figures for half a century. At the time of his death, he was a resident of Hanover Township.

As a trial lawyer, associated at the onset of his career with John T. Lenahan, he was

in the limelight a great deal because of the demand for his services in many of the outstanding cases during 51 years of active practice. Well versed in the law, poised and gifted with a silver tongue, he commanded respect and inspired confidence.

Professionally, he received recognition in many forms. Gov. George Earle elevated him to the bench. The State supreme court named him to the State Board of Law Examiners. He held a number of important solicitorships. And perhaps the finest compliment was paid to him by his three sons who followed in his footsteps.

Judge McDonald duplicated his success as a lawyer in his extracurricular activities which ranged over a wide field. Among other things, he was a prominent Roman Catholic layman and Democrat. His contribution to the development of the Wyoming Valley Playground and Recreation Association added to his reputation as a useful citizen and good neighbor.

Pacific Northwest Stands on Its Own Feet

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD at this point an article from the forthcoming August issue of the Reader's Digest. I believe this article pays the people of the Northwest a fine tribute. Ours has long been a tradition of do-it-yourself, and of people who are not afraid to roll up their sleeves, to pitch in to a job and get it done.

This article explains the tremendous job of hydroelectric power development that we in the Northwest have done, and what we are doing to make sure we have a continuing supply of power for the future.

I am certain that in these days of dependency on the Federal Government for many of the functions that have traditionally been assumed by local agencies or private enterprise, that this article will create good will and respect for the people of the Northwest among thinking Americans all over the Nation, who will, through the Reader's Digest, read about the self-reliance and ambition of our people.

The story reads as follows:

PACIFIC NORTHWEST STANDS ON ITS OWN FEET

(By William Hard)

My favorite American region, right now, is the Pacific Northwest, reaching westward from Montana to include Idaho, Washington, and Oregon. It contains the most vigorous effort now existing in the United States toward getting away from undue dependence on the Federal Government and toward a renewal of local self-reliance.

The problem is one that pervades the whole country. It is authoritatively calculated that the Federal Government now has 67 different varieties of grants to States and localities. They amounted in 1954 to some $3 billion. In 1958 they will amount to more than $5 billion.

It is idle to say that these grants are imposed upon the States and localities by the Federal Government. They are demanded by the States and localities. Reform cannot come from the stratosphere of the District of Columbia. It has to come from a revived belief in themselves by energetic citizens at the grassroots. Such citizens are now spectacularly appearing in the Pacific Northwest.

In that region the financial assistance of the Federal Government has been especially profuse for great dams on the great rivers with which the Pacific Northwest is so abundantly blessed. In the last 20 years the Federal Government has spent $2 billion on these rivers. But the light-and-power requirements of the region have steadily expanded. To meet them in the next 10 years the Federal Government would have to appropriate $3½ billion. That would be at the rate of approximately $1 million a day.

The response in the State of Washington tends to prove that local agencies can meet their own light-and-power needs without a penny from the Federal Government in the Pacific Northwest, or anywhere else.

I now salute a valiant band of rebel local agencies in the State of Washington, called the Puget Sound Utilities Council. It has five members. Two of them are municipally owned: Seattle City Light, and Tacoma City Light. Two of them are county-owned: Chelan County Public Utility District, and Snohomish County Public Utility District. The fifth is the privately owned Puget Sound Power & Light Co. Their different ideologies do not prevent them from working together toward independence from the Federal Government. They have declared:

"Our utilities agree that it is their responsibility to take care of the total electric power needs of the Puget Sound-Cascade area for all purposes, including industrial growth, and they intend to do so."

This is a shot that should be heard around the Nation.

The most striking adventure growing out of this declaration of independence is the Chelan County Public Utility District's immense project on the Columbia River itself. The Columbia, mightiest of the region's rivers, has been virtually a Federal preserve. On its broad course the Federal Government has built a series of world-resounding dams: Grand Coulee, Chief Joseph, McNary, The Dalles, Bonneville. Now the little Chelan County Public Utility District, at a point impudently near the Federal Government's Chief Joseph, is building a dam called Rocky Reach, rated at an ultimate enormous capacity of about 1 million kilowatts.

How does Chelan dare do it? Why, because of cooperation from its partner, the Puget Sound Power & Light Co. Privately owned Puget has agreed to buy all the electricity produced at Rocky Reach by publicly owned Chelan, except what may be needed by Chelan itself and by a neighboring public-utility district called Douglas. Thereupon Chelan has been able to raise $23 million—and proposes to raise $227 million more—through sales of revenue bonds to investment bankers.

So what now becomes of the notion that only the Federal Government can finance large dam projects? Chelan PUD has killed it. And another public-utility district in the State of Washington, the Grant County PUD, has killed it some more by means of the most amazing mingling of local agencies ever contrived in the United States.

This Grant County PUD has been licensed by the Federal Power Commission to construct a project called Priest Rapids and Wanapum, also on the Columbia River. Toward that end it has already raised $166 million through sales of revenue bonds to private investment houses. Why do those bankers welcome those bonds? Because they are backed by power-sales contracts which the Grant County PUD has arranged with twelve cooperating local purchasers.

Two of those purchasers are public-utility districts. Six are city-owned electric systems. Four are unregenerate, unrepentant, privately owned electric companies. The 12 together have contracted to buy three-fifths of the electricity produced by the new Grant County PUD project. This cooperation is accepted by investment bankers as gilt-edged security. It could be imitated by local agencies, public and private, in many other parts of this country. It is the way out from power dominance by the Federal Government.

How large is the Priest Rapids and Wanapum project? It will be the third largest producer of hydroelectric power in the United States. And I am convinced that there is no American powerplant project, however large, that cannot be financed by local agencies within States—or between States.

Let's see how far that process has gone in the Pacific Northwest. There are a number of unfinished Federal hydroelectric projects in the region's rivers. When finished, including installation of additional units in existing projects, they will produce some 2.3 million new kilowatts. But look at the surge of local initiative. Hydroelectric projects now under way by local private agencies and by local public agencies and by minglings of both will produce, when finished, more than 4 million new kilowatts. In other words, the local horse is far outstripping the Federal horse in the Pacific Northwest as they go into the stretch.

Clearly the Federal power advocates must now do something to retrieve their fortunes. And they are doing it. Led by Senators WAYNE MORSE and RICHARD NEUBERGER of Oregon, they are claiming that certain victories of Democratic candidates over Republican candidates in the Pacific Northwest in last year's elections prove that the voters there have issued a mandate for Federal power. But was Federal power the principal concern of the voters? It was not.

Surveys of the moods of the voters in last year's elections in Idaho, and Washington, and Oregon establish the solid fact that Federal power was a minor issue in their minds. They were more interested in American foreign policy, in world peace, farm relief, the high cost of living. Only a tiny number of the voters interviewed said that any passion for Federal power determined their votes.

So what must we conclude? We must conclude that the reign of Federal power as a dominant factor in the thinking of the Pacific Northwest is over. And we must conclude that Federal power can be made to yield to local power in every other region in America.

I now take you to the Pacific Northwest's must truculent and controversial river, the Snake.

The Snake wriggles its way westward through southern Idaho and then turns northward on the border between Idaho and Oregon and plunges into one of the deepest river gorges on earth, where it presently arrives at a most romantic and most political spot called Hells Canyon. For now some 7 years the Federal power advocates have been imploring the Congress to authorize the building of a Federal Hells Canyon Dam. There is no more persistent political effort in the United States. It is energetically supported by a quite thrilling female Congressman from Idaho named GRACIE PFOST. She is widely known in Washington as Hell's Bells Gracie. She is immortalized by letters which appear on a Hells Canyon cliff and which say, "Gracie Slept Here."

Nor is the project without money backing. In recent years the National Hells Canyon Association, out of contributions from certain labor and farm groups, has spent more than $100,000 on behalf of the Hells Canyon bill.

This bill affects the honor of the Federal Government. It would violate and annul a solemn compact between the Federal Government and a private enterprise: the Idaho Power Co. Long ago the company asked the Federal Power Commission to give it a license to construct three dams in the Hells Canyon stretch of the Snake River. The Commission took 20,000 pages of testimony from the company's friends and from the company's foes. It then unanimously recommended that the Federal Government should not construct a Hells Canyon Dam. It gave the Idaho Power Co. a license to build its three proposed dams: at Brownlee, at Oxbow, and at Hells Canyon. Its decision was confirmed by a unanimous vote of the United States Circuit Court of Appeals in the District of Columbia; and the United States Supreme Court refused to overturn it.

The company in good faith went immediately to work. It began construction at Brownlee and Oxbow, and began planning for construction at Hells Canyon. It has now spent some $40 million on construction expenses and obligations. The Federal Hells Canyon Dam would not only supplant the Idaho Power Co.'s license for its Hells Canyon Dam but would inundate and drown out all of the millions of dollars' worth of work already accomplished by the company at its Brownlee and Oxbow dam sites.

Senator MORSE is fond of talking about morality. He might well be asked, "Is it moral to break a Federal contract and destroy $40 million worth of private investment?"

Senator MORSE and his Federal power colleagues justify such treatment of the Idaho Power Co. by saying that its license to build three new dams is a giveaway. It is a phrase hurled at every license issued by the Federal Power Commission to a private company. It is nowadays a viciously misleading phrase. Let us look at it in the case of the Idaho Power Co.

Under the license granted by the Federal Power Commission the company must do the following things:

It must impound up to 1 million acre-feet of flood-control water at its own expense.

It must take the power it gets from its Snake River dams and link that power with the Northwest Power Pool, thus helping serve the power needs of the whole region.

It must provide fish traps and fish ladders to enable salmon and steelhead trout to survive its dams (at a cost of millions of dollars) for the benefit of the Pacific Northwest's fishermen.

It must provide marsh areas for waterfowl to nest in.

It must provide recreational areas in consultation with the Government's National Park Service.

In other words, the Idaho Power Co., though a private company, must perform all the public services that benevolent publicly owned enterprise would perform.

On top of which it must do three more things that the Government would not have to do.

1. It must submit its retail selling rates for power to the local State regulatory commission.

2. It must submit its issues of securities to the Government's Federal Power Commission.

3. It must pay local and Federal taxes.

Isn't this a strange sort of giveaway? I think that the true "giveaway" would be if the Federal Government, for the sole benefit of the Pacific Northwest, should finance a Federal Hells Canyon Dam at a cost to us taxpayers of $350 million.

Some Senators recently hurled a fog of abuse at the Idaho Power Co. for a so-called fast tax writeoff granted by the Government's Office of Defense Mobilization. Faced with this misleading attack, the company has now rejected the writeoff privileges, to eliminate further beclouding of the real issues.

But suppose the Idaho Power Co. had accepted these privileges? Would it have been guilty of sinning against the public? Let's look at the facts of the fast tax writeoff.

These certificates should really be called certificates for rapid depreciation. That's all. Under them the company could have deducted from its taxable income, for 5 years, some two-thirds of the construction costs of 2 of its new dams in the Snake River. But then what?

Then the company would begin to make up for it. For 5 years it would have paid less than normal taxes. Thereafter, it would pay more than normal taxes. At the end of the lifetime of the two dams it would have paid full Federal taxes on all of the income from the operation of the dams.

The rapid depreciation certificates certainly would have given the company a temporary advantage. Was such an advantage deserved? Again, let's look at the facts. The Idaho Power Co. serves some 60 defense plants and military installations. Thereupon it rates inclusion in the rapid depreciation law which was enacted by a Democratic Congress and reenacted by a Republican Congress. This has been a bipartisan national policy for promoting the construction of facilities for future national defense. Some 22,000 rapid depreciation certificates have been issued, 929 of them to electric light and power companies. Is it not odd that the Senators should have singled out the Idaho Power Co. for their wrath?

Finally, is it not equally curious to hear the advocates of a Federal dam at Hells Canyon complaining because the Idaho Power Co. could have received a temporary deferral of taxes? At present rates the Idaho Power Co. will pay $500 million in Federal and State taxes during the course of its licenses. The Federal dam, being owned by the Government, would never pay any taxes at all.

We have in the Congress today a so-called economy wave. It is an odd wave. It shows a lot of force in cutting down expenditures for Federal functions which are really truly properly Federal, such as the Defense Department, the State Department, the United States Information Agency. But it wavers when it comes to cutting down Federal expenditures for regional projects that the local folks themselves could handle.

When I consider what is being done by the Puget Sound Utilities Council, by the Chelan Public Utility District, by the Grant Public Utility District, by other neighboring municipalities and public utility districts, I can only repeat: "The Pacific Northwest is right now my favorite region." It is producing men who can stand on their own local feet.

The Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including a resolution approved by the Republican Party in my own congressional district of Wisconsin. It extends sympathy to Senator McCarthy's widow and commends the late Senator for the services he has rendered to his party and to his country.

Be it resolved, That the Republican Party of the First Congressional District of the State of Wisconsin does express:

First, its most sincere sympathy to Jean Kerr McCarthy, widow of our late Senator Joseph R. McCarthy; and

Second, its commendation of and appreciation for the service rendered the State, the party, and the Nation by our late Senator Joseph R. McCarthy.

Putting the Brakes on Government Spending

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. TABER. Mr. Speaker, pursuant to the request granted me, I submit a telegram from Charles R. Sligh, Jr., to the President and an editorial from the NAM News on the current efforts being made to reduce expenditures. The editorial is entitled "Putting the Brakes on Government Expenditures."

The telegram and editorial follow:

Hon. DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D. C.

According to press reports, you have directed all Government departments and agencies to hold fiscal 1958 expenditures to the levels of the 1957 fiscal year, except for extraordinary circumstances. This step toward firm control over spending by your office is welcome news and points the way to economy and moderate budgets, not only in the current year but in succeeding years. Industrial leadership strongly commends and supports this kind of action and believes it will greatly aid the fight against inflation and the goal of economic stability.

Congratulations and best wishes.

CHARLES R. SLIGH, Jr.,
Executive Vice President, National Association of Manufacturers.

PUTTING THE BRAKES ON GOVERNMENT SPENDING

Students of Government finance have long recognized that Congress does not really have control of the purse strings anymore and that the amount the Government spends is not determined by how much it appropriated but on how the various departments and agencies carry out their functions.

Congress authorizes the spending programs, to be sure, but these may be operated thriftily or lavishly, depending on how the administration chooses to handle them. If a Government agency decides to be overgenerous with the taxpayers' money, and isn't brought up short by the Budget Bureau or the White House, spending can mount rapidly and Congress is caught in a dilemma. It is virtually forced to supply whatever money is requested to carry out the program.

Thus, President Eisenhower's order of last week to all departments and agencies of the Government to hold spending down to the level of fiscal 1957 is the most significant news the Nation's taxpayers have had in many a day. If the Budget Bureau rides herd on this directive and sees to it that it is carried out, the way is cleared for orderly reduction of personal and corporate income taxes along the lines of the Sadlak bill. This bill, introduced early in the present

session, calls for earmarking most of the additional revenue which results from the Nation's economic growth for tax reduction rather than for increased spending programs.

NAM has been pointing out for a long time that the real key to Government economy lies in action by the President to hold spending down. That is the reason Charles R. Sligh, Jr., executive vice president of NAM, immediately sent Mr. Eisenhower the telegram which is reproduced elsewhere in this issue.

Do Not Tamper With the McCarran-Walter Act

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to call attention of my colleagues to the splendid article in Southern States Industrial Council Bulletin of July 15, 1957, on the subject of the McCarran-Walter Act. It seems to me that all of us would want to think carefully before attempting to tamper with the McCarran-Walter Act. We have many problems in this country and considerable pockets of unemployment and certainly we would be adding to our problem and to the unemployment situation in many places if we should break down the provisions of this tried and tested immigration law that we now have. It is difficult for me to see how the friends of our common people and our laboring people could give their approval to any dissipation of the provisions of the law that protects these people here in America. The article mentioned by me is as follows:

DO NOT TAMPER WITH THE MCCARRAN-WALTER ACT

While little has been said publicly, we are informed that opponents of the McCarran-Walter Immigration Act are stealthily planning another effort to emasculate the statute and to open the floodgates to foreign immigration.

Notwithstanding the claims of the Communists and others who seek to destroy this law the McCarran-Walter Act was no hysterical spur-of-the-moment legislation, rushed through the Congress on the wings of fear of communism. On the contrary, the study and preparation that went into this law were the most extensive, and over the longest period of time ever devoted to a single piece of legislation. Nearly a thousand persons were called to testify by the committee, and the act as passed by the Congress had the endorsement of the Departments of State and Justice, as well as the Central Intelligence Agency. The House vote on the bill was 206 for, 68 against, and the favorable vote in the Senate was unrecorded. For some reason Mr. Truman exercised his veto power of the bill; which action the Congress speedily overrode—278 to 113 in the House, 57 to 26 in the Senate.

In spite of the charges of its opponents that the act is reactionary, Fascist, and racist, the experience in its administration shows that it is the most liberal immigration law in United States history. Congressman WALTER H. JUDD, once a medical missionary to China and an authority on the Far East, said the act "removes at one stroke the remaining racial discriminations in our nationality and immigration laws which have so greatly contributed to ill feeling in many parts of the world."

The effort to amend the McCarran-Walter Act will have as its objective, among others, the adoption of amendments that will increase annual immigration to this country from around 250,000 to in excess of 600,000; repeal the chief screening and security safeguards of the law; and, most important of all, destroy the national origins immigration system set up in the statute, which gears the flow of immigration for maximum assimilation and for the preservation of our cultural integrity.

Without discussing contemplated amendments in detail, it suffices to quote from a recent statement by Congressman FRANCIS E. WALTER, Democrat, of Pennsylvania, a coauthor of the McCarran-Walter Act:

"Analysis of these and literally dozens of other pending amendments reveals a common thread: they all aim to subordinate the interests of the United States to the interests of other countries and their citizens. This is, in fact, the major theme of diatribes against the McCarran-Walter Act."

In the last session of the Congress there was a tricky effort to destroy this immigration law. In view of the fact that it is now being suggested that Congress will soon adjourn, we can be assured that the same kind of effort will be made, and soon. It will succeed unless we are alert to the situation.

In an article The Truth About the Immigration Act written by Mr. WALTER shortly after the immigration law was passed, he said, "Are we to have a policy based primarily on the desires of Europe? Or are we to have a policy which is based primarily on what is good for America?"

The council believes the test of any immigration policy must be, what is good for America. If you agree, write your Senators and Congressman urging them to oppose any effort to tamper with the McCarran-Walter Act.

No Compromise With Principle

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mrs. GREEN of Oregon. Mr. Speaker, in the current struggle in both bodies of the Congress to secure to all our citizens their constitutionally guaranteed rights to participate in choosing those who will represent them, we have heard much of late about compromises.

A very thoughtful and thought-provoking editorial in the Milwaukee Review for July 4, 1957, points out some of the dangers inherent in compromise on this all-important subject. It emphasizes the crucial point that we shall in the years to come reap the harvest—for good or for evil—of what we now do.

I, for one, cannot and will not compromise with principle. On this issue we are not dealing with abstract, technical legal points. We are dealing, instead, with human liberties—with fundamental rights and freedoms—with the basic tenets of our form of Government.

The editorial to which I refer should be read and studied and pondered by every Member of this House and of the other body. It carries a deep and enduring lesson from history as to what we may expect if we again attempt to compromise with principle.

I, therefore, under unanimous consent, include this editorial in full in the CONGRESSIONAL RECORD, as follows:

SOME THOUGHTS ON INDEPENDENCE DAY, 1957

Thomas Jefferson warned us * * * Jefferson's warning censored from Declaration * * * "extirpation" the penalty * * * America's greatest weakness * * * racial arrogance degrading, un-Christian.

Thomas Jefferson, as everybody knows, wrote the Declaration of Independence. Today we honor, presumably, the great event. Out of July 4, 1776, has come the world's most powerful nation. By the accident of birth, except for the few who chose this Nation, we are all the heirs of incredible good fortune—and of Tom Jefferson's ringing handiwork.

Everyone knows, I said a moment ago, that T. J. wrote the Declaration. On this anniversary perhaps you would be interested to know that the Continental Congress worked over the draft that the great Jefferson wrote, adding words here, deleting phrases there. The most extensive deletion was the most important, and the error done when this section was struck out haunts our Republic to this day.

The error has cost our Nation at least a half million dead. It has tarnished our name among most peoples of the earth. How vastly more wise was the red-headed, 33-year-old Virginian than the property-minded conservatives who, even in the midst of the revolutionary breakaway from Britain, were unwilling to follow Jefferson's lead.

We refer to the section against slavery.

Perhaps you would like to read, 181 years later, the manifesto against slavery which, had it been in our original Declaration, would have committed the young Nation to equality between races as we pretended to do among all men.

In the list of abuses of mankind by King George III against which the colonies were in rebellion, Jefferson wrote this:

"He has waged cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of a distant people (Africans) who never offended him, captivating and carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. This piratical warfare, the approbrium of infidel powers, is the warfare of the Christian King of Great Britain. Determined to keep open a market where men should be bought and sold, he has prostituted his negative suppressing every legislative attempt to prohibit or restrain this excrable commerce. And that this assemblage of horrors might want no fact of distinguished die, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which he has deprived them, by murdering the people on whom he also obtruded them: Thus paying off former crimes committed against the liberties of one people, with crimes which he urges them to commit against the lives of another."

This was no new or incidental theme with young Jefferson. Long before the Congress asked him to draft the Declaration at Philadelphia, the Virginian had already taken his firm stand against slavery.

In his famous Notes on Virginia he struck out against human bondage:

"There must doubtless be an unhappy influence on the manners of our people produced by the existence of slavery among us. The whole commerce between master and slave is perpetual exercise of the most boisterous passions, the most unremitting despotism on one hand, and degrading sub-

missions on the other. Our children see this, and learn to imitate it * * *. And can the liberties of a nation be thought secure when we have removed their only firm basis—a conviction in the minds of the people that these liberties are a gift of God? That they are not to be violated but with His wrath?

"Indeed, I tremble for my country when I reflect that God is just; that His justice cannot sleep forever * * *. The Almighty has no attribute which can take sides with us in such a contest * * *. The spirit of the master is abating, that of the slave rising from the dust, his condition mollifying, the way I hope preparing, under the auspices of Heaven, for a total emancipation, and that this is disposed in the order of events to be with the consent of the masters rather than by their extirpation."

How prophetic were Jefferson's words. Thousands of masters were indeed "extirpated" in the Civil War, and in conflicts before and since. Hundreds of thousands of others, black and white, were "extirpated" because South Carolina, Georgia, and a couple of other southern colonies even then would not vote to strike against slavery as well as against King George. And New Englanders, too, who sat in the Continental Congress, found the shipping of Africans in the molasses-cotton-slaves triangle a profitable business.

LOST BY ONE VOTE

Jefferson tried again during the years of the Confederation. By one vote only, in 1782, Congress defeated Jefferson's proposal to exclude slavery forever from all the territories. By one vote only—and again it was fraught with terrible consequences in later years.

At the other end of his life he wrote in 1825, as follows, to Miss Frances Wright, a friend:

"At the age of 82, with one foot in the grave and the other uplifted to follow it, I cannot permit myself to take part in any new enterprises—not even in the great one (of emancipating the slaves) which has been through my life my greatest anxiety. The abolition of the evil is not impossible; it ought never, therefore, to be despaired of. Every plan should be adopted, every experiment tried, which may do something toward this ultimate object."

Jefferson spoke not of the institution of slavery alone, but of the arrogant theory of race superiority. This was contrary to every fiber of his democratic nature, and he saw clearly it was the weakest spot in the armor of the new Republic.

STILL OUR WEAKEST LINK

To this day, 90 years after slavery itself is abolished, it is still the weakest link in the chain. Jefferson foresaw more than anyone of his time that the destiny of our Nation must be rooted in democracy, not aristocracy and arrogance. Today we live in a world more than three-fourths of which is populated by people of darker pigmentation. Jefferson's lexicon knew no such phrase as the lesser breeds. For our Nation to practice slavery and later discrimination on a basis of race, was to violate both our religious pretenses and our democratic honor.

How clearly he saw the price we would pay for this infidelity.

RACIAL ARROGANCE DEGRADES US

We have paid bitterly as a Nation for failure to face this basic issue at the outset, as Jefferson pleaded with his colleagues to do. We have fought several wars with tragic racial overtones. Our credit is low in Asia and Africa and South America and the islands of the seas as our racial arrogance and false pretenses to democratic equality have become known. Our enemies, some of them more conceited than ourselves, have maliciously magnified our weakness.

Our American people have awakened to the racial issues in our generation as never since Lincoln's time. Great progress is being made in our Nation every day. Young people of all races, North and South, are far ahead of their parents and grandparents in ability to live together, in mutual respect and good will.

But the atomic era is a violent one, in which the passion of a moment can destroy for a millennium. Behind sound economic or political relations, as Jefferson saw so clearly, must lie a belief in people, a faith in mankind.

THE GREATEST ISSUE STILL

This, then, is the greatest issue of our day. We take this much of our readers' time and attention on this traditional holiday to discuss it because it lies at the root of our fears, costs us our wealth in sterile billions taxed for defense, fritters away the genius of our productive system, and cancels out the gospel of good will which is the root of the Christian faith.

As Jefferson said with feeling so long ago, but as if it were pointed squarely at us today: "The Almighty has no attribute which can take sides with us in such a contest."

On Limiting Atomic War

EXTENSION OF REMARKS

OF

HON. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. COLE. Mr. Speaker, the part which nuclear energy should properly play in our military armament has been a matter of grave concern to me for some period of time and, in fact, for several years I have felt that a greater concentration on perfection of small, versatile, tactical atomic weapons should have been made by our Government rather than production and perfection of the whoppers.

On July 1, 1957, I presented to the House a discussion on the subject of the atom and our military posture. Only yesterday I happened to read an article in the June issue of the Bulletin of the Atomic Scientists, entitled "On Limiting Atomic War." I read it with great interest and no small degree of approval, although it must be conceded that there are areas in the article which seem somewhat illusory and unrealistic. The article is a condensation of a pamphlet prepared for the Royal (British) Institute of International Affairs, the authors of which are Rear Adm. Sir Anthony Buzzard (Royal Navy, retired); P. M. S. Blackett, professor of physics, Imperial College of Science and Technology, London University, and Nobel prizewinner in physics; Denis Healey, Labor Member of Parliament; and Richard Goold-Adams.

I commend the article most seriously to the careful study of all those in and out of the military establishment having any responsibility for our national defense. It is also deserving of the attention of the thoughtful citizens.

The article follows:

ON LIMITING ATOMIC WAR

The new age of the hydrogen bomb has introduced into military strategy more changes than most people have yet admitted to themselves. It has also made a fundamental difference to the political background against which military strategists must think and plan.

The indictment against the two leading Western governments—American and British—is, first that they have not really told the public what they are thinking about defense; and secondly, since there is almost no evidence to the contrary, that they are in fact pursuing contradictory theories without knowing their own minds. The essence of the dilemma is the way the West is relying on being the first to use atomic weapons, without public opinion in fact being prepared to support any such step. Thus, there is in practice no intermediate stage between the use of conventional forces and a course that most people believe would lead to the use of H bombs and mean mass suicide.

The final American rejection of the idea of using an atom bomb at Dien Bien Phu in 1954 suggests that the West will in practice shrink from massive retaliation with its unknown consequences. The threat of unlimited retaliation is in reality useless for local wars, for the only kind of situation, in fact, that is likely to confront the free world during the period immediately ahead.

The opponents of graduated deterrents argue that to remove the threat of strategic bombing with hydrogen bombing weapons is to make both sides more willing to embark on war. If the ultimate horror is gone, they argue, we get back to somewhere near where we were before. In such circumstances, while one group of powers might be less hesitant about opposing any future aggression by the other, it is obvious that the first side would be equally less hesitant about starting an aggression.

In reality this argument cuts both ways. If there is no fear of global nuclear war, then substantial aid for the victim of aggression will be more readily forthcoming. And the balance would seem to come down more heavily in favor of the theory of graduated deterrents on the grounds that for a country to embark on aggression, knowing that this would mean atomic war even on a limited scale, is very different from starting an old-fashioned conventional war. It is all too easy to treat lesser atomic weapons as of little consequence. In reality, by any previous standards, they are huge and terrible in their effect. Any sane aggressor would think twice before risking such retaliation, even on a limited part of the area of his own side.

Logically, the argument surely goes even further. Indeed, the boot is on the other foot. It is not so much the possible removal of the strategic H-bomb threat by means of graduated deterrents which makes minor aggression more likely, as the very existence even now of the thermonuclear stalemate. To leave both sides afraid to use their maximum force because of the fear of world suicide is surely more, not less, dangerous to local peace than to impose an intermediate stage which could act as a very formidable deterrent in particular cases without fear of world suicide.

Against the whole of this complicated background there stands a confusion of Government purpose and performance which is only less in Washington than it is in London. There is an attempt to cater for major war both with atomic weapons and without.

The weakness of British and American policy as expressed in statements (from their military and political leaders) is that it ignores the key problem of defining distinctions between the tactical and strategic use of atomic weapons. Clearly, if the West is to be free to select the intermediate grade of action of tactical atomic warfare then it is vital to convince all concerned that such warfare can in fact be waged without its spreading to total war.

Those concerned are, on the one hand, the public in the western democracies, on the other, the governing clique in the Soviet Union. For, if public opinion in the West believes—as it does at present—that the use of any atomic weapon means starting down the slippery slope that ends with the H-bomb, then the democratic governments will have their hands tied behind their backs. Equally, unless the Communist leaders can be convinced that western governments can and will use atomic weapons to resist large-scale local aggression, half the retaliatory forces of the West, and, what is more important, its ability to deter aggression will be lost.

Three points must be made clear at the outset. First, this is avowedly a presentation of the case for graduated deterrents. Secondly, in discussing distinctions between the tactical and strategic use of atomic weapons, the idea has been to suggest practical lines of inquiry rather than any cut-and-dried formula.

Lastly, the word tactical needs explaining. In terms of weapons it is being used here to mean those which can be used at anything up to 500 or even 1,000 miles from the center of the fighting. And tactical atomic weapons refers to those containing small atomic explosive charges, whether they be bombs, shells, or missiles. Strategic nuclear weapons are those delivered at much longer ranges, and containing atomic explosives many times more powerful. In terms of targets, tactical refers to the manifestations of the enemy's war effort and his armed forces; strategic targets represent the sources of power supporting the armed forces, that is, industry and civil population.

DESIRABILITY OF LIMITED WAR

If the western governments genuinely believe what they have begun to suggest so tentatively, namely, that there are three possible categories—global war, limited war but with the use of tactical atomic weapons, and conventional war—then they must also take steps beforehand to see that the differences are understood.

What is even more important is the role of defense policy in preventing war from breaking out. The possibility of a limited atomic defense is a far more flexible, effective, and specific deterrent to Russian or Chinese ambition than the vague fear that aggression will lead to global war. For there are two elements in any deterrent; its severity and its certainty of application. And it is no good trying to overemphasize the severity, if the deterrent is thereby made uncertain. A deterrent will be more effective if it is reasonably severe and certain to be applied, than if it is disastrous in its severity and uncertain to be applied.

The fact that those responsible for Western defense have rightly embarked on a policy of equipping American and British forces with atomic weapons. While no one would ask the generals and air marshals to reveal their technical plans, the whole question of trying to make proper use of all grades of atomic weapons hinges on publicity rather than secrecy. It is, therefore, an urgent question of great public interest to decide exactly how far it is in fact desirable, in peacetime, to distinguish between tactical and strategic nuclear weapons.

Undoubtedly, the first and overriding argument in favor of making any such distinctions is that, unless all concerned are convinced of the practicability of such distinctions, no country threatened with attack would even be willing to accept assistance from American or British forces if this involved the use of atomic weapons on its own territory.

The Soviet Union, moreover, appreciating these fears, would be free to play upon them by intensifying its propaganda that tactical atomic war would inevitably spread to total war. This would enable the Russians to exploit a situation with their superior conventional forces. If this exploitation were to take the form of actual aggression, either tactical atomic weapons would in fact be used after all—with great division of opinion in the West and great risks of total war—or the anti-Communist forces would probably be defeated.

The second reason why it is highly desirable to make a clear distinction in peacetime between the tactical and strategic use of atomic weapons is that unintentional war is almost certainly the main real danger.

The third reason for trying to establish distinctions now is that the longer they are worked out beforehand the more likely they are to hold good in war. If tactical atomic war should break out, unintentionally and despite the existing deterrents, uncertainty would be bound to increase the chances of such warfare spreading to total and global war. A last-minute declaration about drawing lines between tactical and strategic nuclear weapons and between tactical and strategic targets would have little chance of being observed.

The fourth reason why distinctions are desirable at this stage is that they would diminish the risk that either side would resort to war over a local dispute. It cannot be repeated too often that a deterrent is more valuable if it is certain to be applied than if it is greater in severity but less certain of application.

Lastly, the threat of tactical atomic retaliation by itself is, after all, likely to be a sufficiently severe deterrent to any probable form of deliberate local Communist aggression. As we all well know, during the decade since 1945 the world has found it hard to believe that anyone in their right mind would use even small atomic weapons against an enemy, until the other side had first incurred responsibility for initiating such appalling destruction; or, that any people, except possibly in the huge expanses of Russia and North America, could stand up to more than a minimum bombardment even with these small atomic weapons, let alone destruction from the hydrogen bomb. Let there be no mistake, therefore. The threat of tactical atomic war is a terrible and tremendous deterrent in itself.

The study of atomic warfare is, in fact, a daunting one, since it consists of an endless series of balances between realism and emotion. Thus, although it may be argued that there will never be another atomic bomb dropped in anger, since no country, least of all a Communist one, will be willing to accept such a responsibility before the bar of history, it is only by pursuing the present arguments to their rational conclusion that the chances of avoiding any kind of atomic war can be properly assessed.

There are, for instance, two further factors which logically bear on the desirability of creating acceptable distinctions between tactical and strategic atomic weapons. One is that, from the point of view of the free world, it is the West which enjoys—and will probably enjoy still for several years yet—considerable superiority in weapons suitable for tactical atomic war. There is a constant danger of underrating Soviet technical progress—and the capacity of the Soviet Union has certainly been misjudged in recent years in many different fields—but, however rapid Soviet progress in the atomic field, America's sheer start in time must give the West a quantitative lead in atomic bombs and warheads at least until the early 1960's.

There is admittedly the further important question of means of delivery. Some airmen are extremely sensitive to the lessons learned over the past 17 years about the significance of air superiority. They wisely stress the constantly changing technical position in terms of obsolescence. They emphasize the value of having the initiative, being, if one chooses to call it that, the aggressor rather than the country caught out by a surprise attack. And, above all, some of them insist that so-called tactical air power cannot operate effectively until air superiority has been gained; nor do they believe that this can be secured over a first-class air force without a strategic air offensive.

On all these points the layman would be foolish to dispute the views of the experts in their own element. There are, on the other hand, three factors which render this expert experience only one aspect of a wider picture. First, the arguments just advanced essentially concern a global war.

Second, the implication that overall air superiority has to be obtained, in order to drop tactical atomic bombs on their targets, does not do justice to the devastating power of the single weapon.

Third, those who regard the strategic air arm as indispensable to tactical operations ignore both guided missiles and atomic artillery. Even if tactical command of the air had been entirely lost by either side, the trend toward guided missiles makes it virtually certain that atomic weapons could cause immense destruction up to several hundred miles into an enemy's territory.

Another argument which suggests that the use of tactical atomic weapons would at present suit the West more than the Communist bloc is that, when used tactically, they favor the defender of territory. And while there is always a considerable danger that this kind of military view may be proved as false as others have in the past, it does at present stand on two logical calculations. The attacker, for his part, is normally compelled to concentrate his land forces for the assault and hence to move them about in the open; in the atomic age both would mean that he presents better targets for atomic weapons than the defender, who is more able to dig in. Then, from the defender's point of view, the potency of tactical atomic weapons and their ability to contaminate the ground and communications reduces the forces required to defend a given front. Admittedly, some airmen query the effectiveness of atom bombs against troops. But, until such time as the question may have been put to a practical test, it seems illogical to suppose that atom bombing is not a very severe hazard indeed for an army in the field.

Lastly, the other factor bearing on the desirability of distinctions between tactical atomic weapons and targets is the picture as it presents itself around the table in the Kremlin. Even asuming that the Western case for these distinctions were to become widely accepted, the criticism would remain that the Communists would never confirm them in war. The very advantages that may be claimed for the West would render the policy unacceptable to Moscow, which would then turn the tactical atomic war into a global war. This, however, is a hasty judgment that does not stand up.

What, after all, would a global war be about? It would be about the domination of the world by either the Communist idea or the ideals of the free nations. The evidence from Moscow during the past year has in fact emphasized that the Russian leaders are unwilling to gamble on any step that might lead to global nuclear war, in which immense destruction would be wrought in the Soviet Union itself. They are even less willing than many people in America to face such risks. Compared with these possibilities and this evidence, it is fair to argue, that in the event of conflict, the establishment of clear distinctions between local and global war would seem to offer very considerable attractions and advantages to the Communist leadership, just as it would to the West. And it should be emphasized here that the chances of success of any such proposals would depend entirely on Russian self-interest. The accusation

that the implementation of these ideas would always depend on Russian good faith simply misses the point.

Coming back, finally, to the broad argument of the deterrent, the knowledge in Moscow that, if pressure on a non-Communist country were pushed too far, it might lead to a local war in which they could count on atomic weapons being used against them tactically, would almost certainly act as strong deterrent. The political cost to the Communist cause of a local adventure involving tactical atomic weapons would almost certainly be too high. There is, therefore, little doubt that, both to prevent war and to limit it if it should break out, the earliest possible establishment of distinctions is highly desirable.

PRACTICABILITY OF LIMITED WAR

Granted for the sake of argument that distinctions between the tactical and strategic use of atomic weapons are desirable, are they practicable?

There are in fact three principles which should determine the main character of any proposed rules about distinctions between the tactical and strategic use of nuclear weapons, or, to put it loosely, between the weapons themselves. The first is that even tactical atomic war should be sufficiently costly to an aggressor to make local aggression not worth while, either militarily or politically, or both. Secondly, on the other hand, every effort should be made to prevent tactical atomic warfare being automatically so terrible that any threatened country or its allies would shrink from the possibility of resorting to atomic weapons in order to defend itself. Thirdly, any rules about distinctions should be sufficiently clear and simple to stand a reasonable chance of being observed for as long as hostilities might be expected to last. All this is a tall order.

In considering this problem, there are three separate but interrelated questions—theater, weapon, and target—and it is a matter of opinion which should be discussed first. Because the central problem is to avoid the indiscriminate use of nuclear weapons, particularly the H bomb, the best course is to start with a study of the practicability of making distinctions between one kind of weapon and another; then to consider whether a line can be drawn between various types of target; and finally to discuss the problem of confining atomic war to a definite area or theater.

Is it possible, then, to define an atomic weapon limit beyond which neither side would go if it knew that the other would not do so first? One advantage in judging an atomic explosion by its results is that, given proper preparations, these can be measured. Thus, once an agreement had been reached, either tacit or explicit, a country overstepping the limit could be detected by means of the effects left by the explosion of its weapon. The growing popular fear, that even the current rate of hydrogen bomb tests will eventually raise the universal background of radioactivity to proportions dangerous for the whole human race, already makes this line of inquiry something which would certainly receive instinctive public support.

In considering the necessary rules, four factors must be recognized which bear on the character of any atomic explosion—though they are necessarily an oversimplification of a very complicated case. These are the type of bomb (and the word "bomb" is to be taken as a general term meaning bomb, shell, or any other atomic weapon or device); the height at which the bomb is exploded; its power (depending on its type and construction); and the nature of the surface on or over which it may have been exploded.

It is the indiscriminate character of fallout that must be eliminated so far as is possible from tactical weapons. Hence, the kind of bomb to be used tactically should obviously not in general be of the three-decker fission-fusion-fission type. On the other hand, these so-called H bombs appear to vary in effect according to their construction and they may not necessarily produce such significant fallout effects if exploded at a great height. Equally, coming down to straightforward fission or so-called atomic bombs, the smaller the bomb or shell the nearer it can be exploded to the ground and so to its target without significant after-effects. From a military point of view, incidentally, a small bomb accurately aimed might be best against certain types of targets, while a bigger one, burst higher up, would be more useful against others; in the present limited state of knowledge, however, there is still a good deal of dispute about the relative military advantages of various types of explosion. Lastly, bomb for bomb, and height for height, the residual radiation effects seem worse and more widespread if the explosion takes place in or near water than if it takes place in or near a land surface.

These points suggest certain lines on which distinctions might be made. First, the general basis would be height plus type of bomb, as judged by the effects produced; and already military experts are talking of some of their existing atomic weapons being clean and others dirty. Secondly, any line drawn on this basis would inevitably be quite arbitrary. The actual power of a bomb would be important but not decisive; the aim, it cannot be repeated too often, is to stop the unlimited absolute, to change and curtail, that is, the indiscriminate nature of atomic weapons. Thirdly, the limit for tactical use should be as small as possible since, apart from anything else, the possibility of exploding a quantity of any tactical atomic weapons at all should be an adequate deterrent to local war. On the other hand, weapons should not be so small as to make it unreasonable to expect the Soviet rulers to conform to the limits intended. Lastly, the limit should be such that, even if marginally exceeded, it would still not come near the megaton range.

Assuming it is in fact practicable to make a distinction between the all-out hydrogen bomb and the explosion of limited effect, what about the other two main sides of the problem—the target and the war area? First of all, is it practicable to draw a line between one type of target and another, between one that may legitimately be attacked under a particular code of rules and another that may not? The broad objective is certainly clear enough. This must be to spare from mass destruction as many civilians as possible, without unduly upsetting the relatively military situation either in favor of the Communist powers, whose possible aggression must be effectively deterred, or in favor of the West. The main reason for this latter condition is that on it seem bound to hinge the real chances of getting the Communist powers to conform to any proposed new rules of atomic warfare put forward by the West.

Throughout this discussion two assumptions are being made. The first is that, while these rules of atomic warfare would be drawn up mainly with the struggle between the two great power blocs in mind, they could also apply to the use of atomic weapons in any war. And in due time, it is not to be supposed that only the great powers would possess atomic weapons.

The second assumption is that, when discussing the practicability of target distinctions, a war in which such distinctions were to be observed would be one of limited area as well as limited scope. When war is mentioned most people in this country, somewhat naturally, think of war in Europe. But whatever else may hold true about the proposition of limited tactical atomic warfare, Western Europe itself presents a special case, because of its political and economic importance to both sides. It should, therefore, be excluded from the immediate argument and it will be dealt with briefly as a unique problem at the end.

In trying to establish distinction between one type of target and another, there are two lines of thought to follow. One is to consider drawing a line between civilian and military objectives. The other line of thought broadly relates to the conception of distance from a front line, the idea being, of course, to limit atomic attacks to something like a battle area, in its widest sense, but to allow all kinds of attack within that area. The difficulty of this, however, is that it requires yet another definition—say, the land-battle area—which both sides would have to observe.

With these two thoughts in mind, the first possibility would be to bar from all atomic attack, any town or city, including ports, over a certain size regardless of the targets it contained, with only very limited exceptions. The value of this is its simplicity. Not only can it be understood by democratic public opinion; there is also more chance of having it observed in war. The minimum exceptions to this simple formula would almost certainly have to be those cities in the actual land-battle zone which had not previously been declared and proved to be open; those from which offensive weapons had already been used, this would include the launching of guided missiles—the points of origin could usually be detected—and those whose nearby airfields had been used for offensive purposes.

A second possibility would be to bar from atomic attack all towns and cities over a certain size not containing important targets of tactical military value. This would represent, in effect, an attempt to combine a distinction between long-term strategic targets and those of immediate military significance to a particular campaign, with the general idea of preventing the atom bombing of large concentrations of civilians. Incidental to this concept also lies the theory that any local war in which atomic weapons were used would not be a long war; it could thus be decided by tactical attack rather than by strategic bombing. One prerequisite for any such delimitation, however, would be that those types of military targets considered urgent and tactical would have to be listed. They would include, say, airfields, areas of troop concentrations, military communication centers, missile sites, operational naval bases, and so on. But they would exclude such long-term strategic targets, however vital to an ultimate and long-drawnout decision, as war industries, major communication centers far from the battle area, training and administrative headquarters, and, of course, distant big cities.

Both these possibilities—a simple ban on all towns over a certain size and a ban on targets not of immediate military importance—raise several further questions. One is inspection. Any city declared "open" in the land-battle zone could probably be inspected without insuperable difficulty by highly mobile teams of United Nations or other neutral observers, as it would not lie so very far from the front line. The ban on cities not falling within this category, however, would require a more elaborate system for being declared open, and their status would have to be proved by more thoroughgoing inspection; this problem would loom less large if some form of international inspection had already been organized in connection with disarmament. On the other hand, a ban on big cities can be argued to

be largely self-monitoring, since it would normally be easy to tell whether their airfields were being used offensively. Experience with guided missiles also now suggests that their origins can be pinpointed fairly accurately.

A third possibility, following a distinctly different general line of thought, would be to base a system of distinction between tactical and strategic targets purely on distance from the center of a battle zone, and to confine tactical targets to the decisive area of land fighting; there would also have to be a corresponding arbitrary line at sea. If this could be achieved in any realistic sense it would, of course, be the safest way of guarding against tactical atomic warfare spreading to the indiscriminate H-bombing of cities.

There are, however, several fairly strong objections to it. Tactical aircraft now play a major role in land battles and they would probably do so in atomic warfare. Yet, in terms of modern high-speed aircraft, even considerable distances mean very little. For this distinction to hold, therefore, the atomic bombing of tactical airfields would probably have to be barred; and this seems impractical—at least if both sides possessed tactical atomic bombers. Some distinguished military experts nevertheless believe that only in some such conception as this does there lie any real possibility of developing a distinction between the tactical and strategic uses of atomic weapons.

There is another quite different objection which is easily overlooked when talking about the use of atomic weapons. This is that distinctions by distance over such a short depth as the actual land-fighting zone—say, 50 miles—might not provide a sufficiently severe deterrent to an aggressor, since his airfields and communications away from the land-battle zone would be open only to attack with so-called conventional high explosive and naphthalene bombs.

A further though not insoluble objection relates to the problem of airfields in general; this applies to all the possible target distinctions so far mentioned, that is, by size of towns as well as by distance from the front. On the one hand, many airfields are near big towns, which means that an atomic attack on any airfield would almost certainly do serious damage to a neighboring town; on the other, airfields will, in fact, be the key points in any war of the future. And in this sense tactical support of a land battle might even extend to over 1,000 miles. But, surely, ways could be found for showing that any given airfield was not being used.

Lastly, there is one other possible line of thought about drawing distinctions between one kind of target and another. The idea is that atomic weapons might be confined to purely defensive use, that is, to action directly concerned in repelling an enemy's attacking land, air, or sea forces.

One immediate objection, some people might say, is the difficulty of deciding what constitutes defense and what constitutes offense; in modern war the definition of an aggressor is becoming a matter of opinion depending on the stage at which the political argument is considered to have begun. But the fact is that a purely military distinction about defensive use as such should not be impossible to draw up, and it is at least worth attempting since such a concept would be less far removed from the world's conscience than some other ideas that have been put forward in this connection.

Some forward limit would also have to be defined. And here the best deterrent might be to say that targets in the enemy's own territory could be attacked with tactical atomic weapons back to a distance at least as far as the penetration by aggression; a corresponding line would also have to be drawn arbitrarily at sea. Admittedly, the idea of using atomic weapons anywhere within one's own territory, while observing a limit on the other side, would obviously not receive any willing approval from one's allies. But the proposal is in fact designed to meet the moral criticism that nations with superior development in the west are rattling their atom bombs, eagerly waiting for an opportunity to use them against the backward colonial peoples of Asia.

As with weapons, target distinctions would clearly have to be known and thoroughly understood by both sides well in advance, if they were to stand a reasonable chance of holding good in local war.

In regard to theater limitations, there is less room for detailed argument. The best approach is to illustrate a line of thought by means of 1 or 2 assertions, partly obvious and partly contentious. In the first place, the fear of global H-bomb war, in fact, the thermonuclear stalemate, makes limitation of a war area something which both sides would probably want.

The second general assertion is that a local war might either be limited to the suggested rules of tactical atomic warfare, or it could be total and unlimited within a given area. As to the second possibility, there is no inherent reason, for instance, why all-out war with full-scale hydrogen bombs should not develop in the Far East without spreading to Europe, and obviously there are various grades of risk. But the chances of a local war spreading would certainly be far less if H-bombs were not used, and if the proposed rules of tactical atomic warfare had already been established beforehand.

An additional reason why a tactical atomic war in a limited area, not vital to the survival of either side, need not spread is that neither would be likely to demand unconditional surrender as the price of victory. In spite of the murderous havoc wrought by even tactical atomic weapons, peace should be possible by negotiation, as it was in Korea.

The third and last general assertion to be made is, once again, that Western Europe itself must be regarded as a special case, lying outside the mainstream of the argument presented here. If distinctions between the tactical and strategic use of atomic weapons could be elaborated and accepted for lesser theaters, they might in due course play a part in saving the center of Europe from total destruction in a global war. Even distinctions between targets might, in time, also hold partially good. But it cannot be emphasized too strongly that this is not what the present discussion is about. As things stand today to limit atomic war in Western Europe to tactical atomic weapons would certainly be difficult, though by no means out of the question. The case for graduated deterrents, however, does not hinge on Western Europe. Its applicability there, in the highly special circumstances of this crucial central front of the western world, would be a bonus that no one could count on.

Western Europe is in fact an exception because both sides regard it as a vital area; because its dense population in such small and crowded territories seems a serious obstacle to the effective exercise of target distinctions; and because specific sections, notably the Ruhr, are of critical economic importance. Thus, in spite of loose talk in the United States about fortress America, neither Washington nor Moscow could afford to see the balance of power changed in Western Europe; this is the essential factor which makes the German problem so important.

One last word should be said about limiting atomic war to those of any other given areas. A special feature of the great Communist empire now bestriding Asia and Europe is that the Soviet Union stands in a class by itself. Development in Communist dogma about the fundamental role of the Soviet state, as well as Russian national characteristics, imply that any attack on even the fringe of Russia's own territory must be considered only with considerable reserve. In general, to touch Soviet territory must greatly enhance the risk of global war. On the other hand, there is every reason to be realistic about the problem. One can well imagine, for instance, that if the Russians or their local Communist henchmen became involved in a limited atomic war in northern Persia, Soviet Azerbaijan might be attacked without starting a global war. In any case the Russians should be left in no doubt about the possible extent as well as the limits of the retaliation against them.

There is also one last point. The question of deterrence is the most important of all. The distinctions outlined are designed to prevent war quite as much as to win one if it starts. Obviously, it is impossible to make distinctions which are certain to hold in war. But, provided the possibility of their holding is good enough to make measured retaliation likely, then the uncertainty only serves to increase the deterrent. On the other hand, the fundamental condition is that the distinctions should have become established in the first place.

To summarize the conclusions, the first is that the West could not contain deliberate Communist aggression in the Mediterranean, the Middle East, the China Seas, Korea, and other smaller places, with conventional forces alone. Indeed, no one educated in the military and political facts of the present decade now disputes this. What is in mind is a major local Communist-sponsored attack on the countries and interests of the free world; a war genuinely limited to minor local forces would be another matter.

Second, therefore, only 1 of 3 possible courses lies open to the West. Either it must be readily prepared to risk total war on an issue that is not vital; or it must greatly increase its conventional forces; or it must take such measures as it can to ensure that nuclear defense is made possible on a limited scale. Of these three, the first and second are politically and militarily impractical. The third is the only rational course in spite of its political undesirability.

Third, however, limited nuclear defense would be impossible without, first of all, drawing a definite line to distinguish between the tactical and strategic use of nuclear weapons, and then educating people on both sides of the Iron Curtain to understand and recognize it. As regards the Russians, this can be achieved only by showing them that it would be in their own interest, as well as that of the West, to observe the distinctions in local war. As regards Western public opinion, it is essential to pursue a policy of far more and far better-informed discussion than any that has taken place up till now. And this in turn hinges on the Government at least knowing its own mind. The Government may defend the ambiguities of its present policy by claiming that greater definition would diminish the deterrent to war, and that in any case the less the public is told about atomic weapons the better. But this is not so. Unless public opinion does become better informed, the current growth of half-knowledge about the terrible effects of major nuclear weapons will lead to such rigid opposition to their use that the West might find itself committed to the alternatives of total war or surrender.

Fourth, if it really is disputed that distinctions between big and little nuclear wars are practicable, then the present costly policy of developing large quantities of small-scale atomic weapons is already wrong. Some would certainly be required, it is true, in support of ground troops in the opening days of an attack, for instance, on the NATO area. But once the decisive major weapons were involved in a global war, a decision would be reached relatively quickly and in would not depend on what had happened on

the ground. Already acceptance of these distinctions is inherent, even if not openly admitted, in Western defense policy. And to reject the basis for them at this stage would be to condemn an immense amount of existing expenditure as a great waste of public money.

Fifth, Western Europe is a special case make it a vital area to both sides. Some of the lessons of limited war may apply. But, by and large, peace will be maintained on the central front in Western Europe by virtue of the overall thermonuclear stalemate.

Sixth, an important byproduct of establishing effective distinctions between different types and uses of atomic weapons will be made ecentual international control and disarmament easier.

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article entitled "Karl Marx: The Almost Capitalist" written by Mr. Louis O. Kelso and printed in the March 1957 issue of the American Bar Association Journal:

KARL MARX, THE ALMOST CAPITALIST

(By Louis O. Kelso)

England of the mid-19th century, in the throes of the industrial revolution, was not a pleasant place to work. Anyone who entertains the contrary idea need merely consult the writings of the economists of that period, or its historians, or even its novelists, such as Dickens.

It was against a background of the disintegration of the agricultural economy of England, and the human chaos incident to the industrialization of production that Karl Marx set himself the task of improving the lot of the factory worker.

Beginning slowly during the first 75 years of the 18th century and reaching a crescendo during the last quarter of that century and the first half of the 19th century, incalculable changes took place in the lives of laboring people. The transformation was initiated first by the intensification of the division of labor and later by the crowding of workers into hand or hand-and-machine factories. This phase was, in factory after factory, followed by the mechanization of progressively more of the manual tasks, shifting to animal power, then water power and wind power, and then to steam for basic motive power.

The resulting disorganization in the lives of the people affected was stupendous and frightful. Only the few who were quick to adapt themselves to the era of the machine were able to avoid the destruction—frequently successive destructions—of their means of livelihood through the radical changes resulting from rapid technical obsolescence of the methods of production. The impact of these swift transformations was more than could be safely digested and absorbed by the farm populations which began to turn to the industrial cities for their means of living.

The division and subdivision of tasks once calling for the most highly developed skills until the tasks could be performed in many instances by women and children provided the opportunity, and the indigence entailed in the shifting from an agricultural life to dependence upon the fluctuating employment in factories provided the inducement: thousands of parents exploited their children by forcing them into the factories. Wives neglected their families to become factory employees. The full fury of competition between man and machine, between merchants, between manufacturers, and between nations was unleashed among people who had not the faintest idea of its implications. Methods by which producers could become reasonably informed about markets were almost wholly lacking. Laws against adulteration of products had not yet been enacted. Industrial safety codes and means of compensating the dependents of injured workmen were unknown. The sanitary conditions of factories in general were incredibly bad. An employer who worked the men, women, and children in his factories only 12 hours a day was something of a public-spirited paternalist. Foreign trade brought the local supplier into competition with foreign producers he had never seen or heard of.

Newly born industrial enterprises and the people whose fortunes were tied to them, learned the nature of industrial production primarily by successive bitter experiences. Businesses ran through constantly recurring cycles of expansion, boom, overproduction, liquidation, and depression. Superimposed upon this disorganizing parade of booms and slumps were the disrupting effects of primitive money and credit systems providing mediums of exchange containing built-in erratic gyrations of their own. The money system of Great Britain, like that of other countries experiencing the industrial revolution, suffered not merely from irresponsible banking, inadequate knowledge, poorly designed regulatory laws, and rampant exploitation of the opportunities for financial fraud, but also from the results of heavy importations of gold and silver—the monetary metals—from the New World.

Without analyzing here the causes, we need merely note that the problems of the workers fell upon deaf political ears in Britain and elsewhere as the industrial revolution progressed, until their agonized suffering reached the notoriety of an unsuppressible public scandal. Even then, the factory owners, who could point proudly to the fact that for the first time in history, per capita increase in the output of goods and services was beginning to race ahead, had no basis in experience for knowing whether they could at once be humane in their labor relations and still maintain their positions in the unprecedented hurly-burly of competition.

MARX' WORK—THE CAUSE OF INJUSTICE

Against this background, in which the mere outlines of industrial production under free enterprise were vaguely taking shape, Marx set himself the task of finding the cause of economic injustice. His masterpiece, Capital, draws and documents the picture of the industrial revolution from the standpoint of the industrial worker. He was the one primarily responsible for having attached the name "capitalism" to the theretofore unclassified economic system of Great Britain. Marx' source materials, in addition to his own indefatigable personal studies of factory life, were the reports of the Royal Commissioners on the Employment of Children and Young Persons in Trades and Manufactures, the Reports of the Inspectors of Factories (who were appointed under the Factories Regulation Acts of 1859), the Reports from the Poor Law Inspectors on the Wages of Agricultural Laborers, the Reports of the Select Committee (of the House of Commons) on the Adulteration of Food, and other official documents, as well as the writings of the economists of his day.

Because of the dire suffering of the industrial workers, Marx, who knew the facts and knew how to describe them, made a powerful emotional case for economic reforms to improve the lot of the worker. Since the actual operation of the system, which he called "capitalistic" was as enormously beneficial to the segment—less than 10 percent—of the population who owned the factories as it was destructively detrimental to most of the 90 percent who worked in them, Marx could have led a revolt against the established order by pointing to this disparity alone. But he did not choose to do so. He made the most painstaking and ponderous effort to seek out the cause of the injustice.

At length, Marx rendered his verdict. The malefactor, the cause of all this limitless human misery, was the capitalist. His crime, felonious by all canons of human decency and fairness, was the unrecompensed piracy from the defenseless industrial workers of most of the wealth which they alone created. No plunder in history, said Marx, could compare with the enormity of the offense of the capitalist who, without working himself, appropriated the products of the worker, leaving the worker with only the minimum amount paid as slave-wages to keep him alive and to enable him to produce.

MARX AND CAPITALISM—THEY ALMOST MEET IN THE DARK

The root of all of the evil Marx surveyed was, he concluded, the private ownership of the means of production. The emotional case which he built in favor of a revolution to improve the position of the industrial worker was mountainous. The method of carrying out the revolution, he advocated, was for the workers to seize the government by force and then to use the state to expropriate the ownership of capital. Unfortunately, the moral truth of the massive case which Marx marshaled for improvement of the lot of the industrial worker was dwarfed by the magnitude of his error in assigning as the cause of the maldistribution of wealth, the private ownership of capital.

In the course of his investigation, Marx actually saw, but was prevented by this error from comprehending, the underlying principles of capitalism. Since there can be no doubt about Marx' honest effort and fierce desire to find the key to a workable industrial economy, we are justified in venturing the speculation that had Marx understood the implications of the principles of capitalistic distribution which presented themselves to him as appearances only, he might have become a revolutionary capitalist instead of a revolutionary socialist.

Karl Marx, as he reflected upon the causes of economic injustice in the first century of capitalism, came to a conclusion as momentous as it was mistaken. The world was to suffer as much from the critical error of the decision as it had suffered to provoke Marx to make it. Had he not been blinded by a borrowed myth, Marx might well have proclaimed, "People of the world, unite. Extend the benefits of capitalism to all mankind." Instead, he exhorted the workers of the world to unite and "throw off the chains" of capitalism.

Had Marx chosen the capitalistic alternative rather than the socialistic one, the world would be a vastly different place in which to live today. Without the false and seductive promises of socialism, Russia, the nation built on Marxism, would be without the principal rhetorical weapon which it uses to seduce the minds of men.

Yet it is a fact that Marx actually considered the problems which should have led him to discover capitalism. But for three basic errors in reasoning, Marx might have been looked upon today as the apostle of capitalism rather than its detractor and tormentor.

The three mistakes that turned Marx away from capitalism rather than towards it, have made Marx the false prophet of the industrial worker. Together with the Socialist writers who have followed in his footsteps, Marx deprived generations of workers from realizing that in capitalism—not in socialism—lies their hope for economic well-being, the good life, and political freedom.

THREE MISTAKES—THE COURSE OF HISTORY CHANGES

The three errors which Marx made were these:

1. His adoption of the labor theory of value which had previously been advanced by David Ricardo.

2. His failure to understand that the private ownership of property, including capital instruments, is indispensable to political freedom; in short, his failure to understand the menace to human freedom of the ownership of the means of production by the state.

3. His mistaking the wealth produced by capital for surplus value, that is, value which he thought was created by labor and stolen from the laborer by the capitalist.

Let us examine each of these mistakes. In the course of doing this, we shall see in each case how closely Marx came to acknowledging the actual principles of capitalism. Yet in every case, having grasped the principles, he also rejected them because of his fundamental errors.

Error No. 1: The labor theory of value.

Except for the few wants which man can satisfy directly by things adequately supplied by nature, human labor, for untold ages, had been the primary source of the creation of wealth. Man, with his hands and his brain, has given value to raw materials found in nature by imparting to them qualities which render them able to satisfy his wants. Similarly, man has performed personal services for himself or for others which have also satisfied needs. Nothing is more obvious than that man must wrest his living from nature through the cleverness of his mind, the strength of his muscles, and the skill of his body. Since, at the outset, then, man was the only acting force, the idea that all changes in nature's raw materials were wrought by man alone was both obvious and indisputable. The labor theory of value—the idea that labor is the only agency capable of creating wealth, i. e., adding value to raw materials and performing services—must have been approximately correct in primitive times and, to a lesser degree, in preindustrial economies.

But once men applied their intelligence to constructing tools and machines which were able to produce wealth, or at least to cooperate with human labor in the production of wealth, a basic change occurred, the significance of which was not at once fully appreciated. The fact that all economic value was not created by labor, but rather by labor and capital together, was obscured by the fact that, in the early stages of machine production, machines were usually operated by their owners. As a result, the services of the machines were indistinguishably commingled with those of the machine owner and so there was yet no occasion for recognizing the separate economic functions of each.

The significance of the labor theory of value is more than academic. If labor is the source of all value created in the productive process, then labor has a valid moral claim to all wealth created through production. Then the only moral claim of the owner of capital is to have his capital restored to him, that is, to get back the value of his capital with compensation for the effects of wear, tear, and obsolescence. Honestly to reach his conclusion that the capitalist was thieving from the laborer, Marx had only to believe that labor did in fact create all economic value (that is, the values added to raw materials found in nature).

But confronted with the fact that capital instruments were actually performing more and more of the functions which added value to raw materials and were even beginning to compete with labor in the performance of purely service activities, Marx could not prove the proposition that labor was the sole creator of value and he did not try. He merely asserted, again and again, that the proposition was historically true and that its truth was of very recent discovery. All commodities, including capital instruments, said Marx, "are only definite masses of congealed labor time" (Capital, Modern Library Edition, page 46, New York.)

"The recent scientific discovery that the products of labor, so far as they are values, are but material expressions of the human labor spent in their production, marks, indeed, an epoch in the history of the development of the human race, but by no means dissipates the mist through which the social character of labor appears to us to be an objective character of the products themselves." Marx is here saying flatly what he elsewhere elaborates—that although capital instruments appear to create wealth, this is merely an illusion, and that there is some sort of mysterious "congealed labor" hidden in the capital instrument which enables it to give value to its products.

At this point Marx actually saw one of the basic principles of capitalism: that capital instruments do create wealth, just as labor does. But he rejected the idea as an "appearance" only and held doggedly to his belief that only labor could create wealth. By denying the obvious, that in an ever-increasing number of instances, the performance of particular production tasks may be carried out alternatively either by labor or capital instruments; and by asserting that regardless which method was used, the capital instruments owned by a "capitalist," were in fact, "labor instruments"; and by concluding that whichever method was used, labor in fact created all the value, Marx put the capitalist in the unethical role of getting something for nothing.

Today we are not merely familiar with the phenomenon of machines to make machines, we are also acquainted with the trend to make automated machines with automated machines. Nevertheless, tracing the process backward through several technological generations sooner or later brings one to the point where the predecessor of a particular machine was made by hand labor. Since Marx regarded human labor not only as an ingredient in an economic product, but as the only ingredient other than raw materials provided by nature, the problem of machines made largely by machines was a disconcerting one for him.

The value of a product, he said, is determined by the amount of labor time it contains. After a few technological generations of producing machines primarily by machines, what could be said of the machine which, although it contained almost no value in terms of man-hours and required very little assistance from labor in the form of an operator's man-hours, turned out a vast quantity of products, all of which sold for very good prices?

Marx actually considered this problem. How could he square the labor theory of value with a machine containing very little value (in terms of man-hours of labor) which at the same time is operated with very few man-hours of labor, yet which produces a great amount of wealth? Confronted with this problem, Marx might have announced another of the basic principles of capitalism: that the productiveness, the productivity of capital instruments, in comparison with that of labor (other than the top echelon of labor consisting of management and technical workers) is steadily rising. But here again Marx rejected the clearly discernible truth and supplanted it with a corollary to the labor theory of value.

In this case, he said, the machine, after yielding up what little "value" it contains, works gratuitously, just as the sun works ripening the corn in the field. Marx here came within a hair's breadth of recognizing the increasing productivity of capital instruments in comparison with that of labor. Had he allowed himself to see the point, it is safe to assume that a man of Marx' sincerity would have cried, "If capital instruments are the source of the increasing production of wealth in an industrial economy, the owners of capital instruments are rightly the persons who should receive the proceeds of the wealth so produced. Let us then set as our goal the greatest possible accumulation and perfection of capital instruments for the greater production of wealth. And let us so regulate our economy as to extend the opportunity of engaging in production through the ownership of capital instruments to an ever-increasing proportion of the population."

Marx missed this critical point. Faced with the spectacle of the production of vast wealth through a large contributory effort by capital instruments and a negligible contribution by labor, Marx could merely say: "In modern industry man succeeded for the first time in making the product of his past labor work on a large scale gratuitously, like the forces of nature." Thus did Marx substitute for objective analysis the dogma he had borrowed from Ricardo.

Error No. 2: Marx' failure to understand the political significance of property.

Before examining Marx' second critical error, it may be helpful to take note of what the concept "property" means in law and economics. It is an aggregate of the rights, powers, and privileges, recognized by the laws of the Nation, which an individual may possess with respect to various objects. Property is not the object owned, but the sum total of the "rights" which an individual may "own" in such an object. These in general include the rights of (1) possessing, (2) excluding others, (3) disposing or transferring, (4) using, (5) enjoying the fruits, profits, product or increase, and (6) of destroying or injuring, if the owner so desires. In a civilized society, these rights are only as effective as the laws which provide for their enforcement. The English common law, adopted into the fabric of American law, recognizes that the rights of property are subject to the limitations that (1) things owned may not be so used as to injure others or the property of others, and (2) that they may not be used in ways contrary to the general welfare of the people as a whole. From this definition of private property, a purely functional and practical understanding of the nature of property becomes clear. Property in everyday life, is the right of control.

Property in land: With respect to property in land, we need merely note that the acquisition of an original title to land from a sovereign is a political act, and not the result of operations of the economy. If the original distribution of land unduly favors any group or type of persons, it is a political defect and not a defect in the operation of the economy as such. A capitalistic economy assumes and recognizes the private ownership of land. It may, as under the Federal and State mining laws and Federal homestead acts, encourage private ownership of land by facilitating private purchasing of mining, timber, agricultural, residential, or recreational lands.

Property in capital: In a capitalistic economy, private ownership in all other articles of wealth is equal in importance to property in land. From the standpoint of the distributive aspects of a capitalistic economy, property in capital—the tools, machinery, equipment, plants, power systems, railroads,

trucks, tractors, factories, financial working capital, and the like—is of special significance. This is true because of the growing dependence of production upon capital instruments.

Of the three components of production land is the passive source of almost all material things except those which come from the air and the sea, while labor and capital are the active factors of production. Labor and capital produce the goods and services of the economy, using raw materials obtained, for the most part, from land. Just as private property in land includes the right to all rents, the proceeds of sale of minerals and other elements or substances contained in land, private property in capital includes the right to the wealth produced by capital. The value added to iron ore by the capital instruments of a steel mill becomes the property of the owners of the steel mill. So in the case of all other capital instruments.

Property in labor: What is the relationship of the worker to the value which he creates through his work? It has been said that no one has ever questioned the right of a worker to the fruits of his labor. Actually, as was long ago recognized by John Locke and Jean Jacques Rousseau, the right of the worker to the value he creates is nothing more than the particular type of private property applicable to labor. Each worker, they said, has a right of private property in his capacity to produce wealth through his labor and in the value which he creates.

Marx and property: Marx did not err in his understanding of the dependence of capitalism upon private property. In fact, the Communists, following Marx, appreciate this absolute dependence more than do non-Communists, many of whom influenced by the conviction that Marx is full of errors, have falsely entertained the idea that this is one of them.

Marx, however mistaken he was in his program for achieving the economic changes he thought were needed, cannot be charged with having intended to worsen the economic and political condition of modern man. The facts of his life and character permits us little doubt that his intention was to eliminate suffering by substituting a fairer distribution of ecoonmic goods and services, and through this, a more equitable distribution of leisure and the opportunity to lead a good life. Marx was rightly, if also vehemently, critical of the exploitation of the many by the few.

Had Marx seen that the socialization of capital (i. e., its ownership by the state) would of necessity place the control of capital in the hands of those currently wielding political power, thereby unifying economic and political power, the two basic sources of social power, we can assume that Marx would not have advocated the destruction of private property in capital instruments. If the factory owners of the 19th century, having political influence but not unlimited political power, were in a position to exploit the worker, the bureaucrats of the 20th century in a socialized state, possessing not only unlimited political power, but also unlimited economic power through ownership (i. e., control) of the instruments of production, are infinitely better equipped to exploit workers and other nonbureaucrats. What better proof of this than Russia and the Russian satellites?

THE COMMUNIST POLITICIAN—A TRUE TYRANNICAL CAPITALIST

It is the Communist politician who sees in Marxism the opportunity for personal power and wealth which Marx, if we may take him at his word, failed to perceive. The Communist politician perceives in communism the personal advantage to himself which comes with the transfer of property (working control) in the means of production to the state, and the elevation of himself to a place in the management of the state. The Communist politician is thus able to epitomize in himself the kind of tyrannical capitalist Marx declaimed against, with the further opportunity for unlimited despotism that is inherent in the fusion of political power and economic power in the same hands.

Marx' failure to perceive the political significance of private property has allowed his doctrine to furnish the most perfectly designed ruse for potential tyrants that has ever been devised. In the name of benefiting society as a whole, the actual control of the capital instruments and land is placed in the hands of those wielding political power.

Marx' second great error prevented him from seeing that the ideal "classless society," of which he dreamed, is not one in which a political group in power has the function of distributing wealth. It is rather the political economy in which the individual ownership of property—particularly capital instruments—is spread over the entire population. Only such a broad distribution of private economic power can guarantee individual freedom and the power of the people as a whole to limit or turn out at will a political group in power.

Marx was actually on the verge of recognizing that, so long as men are what they are, capitalism is the only possible classless society. His failure to do so derives from his failure to understand the political significance of private property. He consequently also failed to understand the political significance of state ownership in a Socialist state. To concentrate control over the means of production in a political group is to establish that administration as a class—an all-powerful class—and to remove all possibility, so long as such a group exercises its power fully and ruthlessly, to overthrow such despotism by means other than force.

Marx recognized that the men who were the owners of productive property also enjoyed individuality, leisure and opportunities for culture and education. (Ibid., p. 581.) This being so, it is nothing short of fantastic that he brought himself to these illogical conclusions: (1) Destroy private ownership of productive property. (2) Make all men workers. (3) Appropriate all wealth produced in excess of that required to sustain workers, and let it be distributed by the state as its political leaders see fit.

The political commissars, however, who employ Marx' ideas for their own purposes—the exploitation of power and wealth which socialism offers to a ruling bureaucracy—are not so illogical. The destruction of private property in the means of production is their guaranty of self-perpetuation.

There is a Marxian tenet that the nature of a society is determined by the mode of production (whether agricultural or industrial), and the ownership of the means of production. It is sound. The conclusions here reached are within and consistent with this fundamental insight.

Thus the second great Marxian error caused Marx to seek in socialism what he could have found only in capitalism.

Error No. 3: Mistaking the wealth created by capital for wealth created by labor and stolen by the capitalists. Each of the three critical mistakes which Marx made in his study of capitalism arose from the fact that he began his analysis with a study of distribution, rather than with a study of production. At the distributive end something less than a tenth of the population, for the most part owners of land and capital, were faring infinitely better—receiving a proportionately greater share—than were the other nine-tenths, whose only participation in economic activity was as workers or as recipients of public charity under the poor laws. The pattern of distribution was bad from whatever standpoint it might be judged. Those who were receiving the great share were the capitalists, the owners of the expanding industrial and commercial enterprises.

For Marx, capitalism was simply what he observed in the European world around him, and primarily in Great Britain. Since the distributive pattern was unsatisfactory, capitalists and capitalism, he concluded, must be at fault. Labor had historically been the source of all production of wealth, and the workers were now receiving a progressively smaller proportion of the proceeds of production. Down with capitalism.

Had Marx started with an objective analysis of production and a deeper insight into the property-freedom relation, he might well have concluded with a declaration of war against capitalists for hoarding capitalism.

Let us now examine once more the principles of capitalistic production that Marx might and should have used as a starting point. In an exchange economy, and particularly in an economy of freely competitive markets, each service and each commodity is valued for its peculiar ability to satisfy a certain desire of the consumer. Whether the service or commodity is produced by labor alone or by capital alone or by the cooperation of these two, is unimportant to the potential purchaser except as the method of production implants specific characteristics in the thing marketed. It is the finished product which is demanded by the purchaser, not the knowledge that it is produced in one way or another—a mere means by which the product was brought forth. Contrary to what some sentimentalists think, there is nothing sacred about the products of labor that is not equally sacred about the products of capital or those produced jointly by capital and labor.

To effect any change in the nature or position of material goods or to perform any kind of a service, material goods must be acted upon. Marx recognized this; but, because of his obsession with the labor theory of value, he contended that only labor could be credited with the value of material goods produced or services performed. "Useful labor," he said, "is an eternal necessity imposed by Nature without which there can be no material exchanged between man and Nature, and therefore no life." To effect such changes in matter, or to perform such services, purely physical, that is, mechanical means, must be used. With rare exceptions, pure thought is not economically compensable. Speech, writings, mechanical action—all these things, performed by man, are capable of entering into economic transactions. The thought behind such speech, writings, mechanical action, is not by itself capable of entering into ordinary commerce.

Man as a nonscientific and nonmanagerial subsistence-laborer is, from the standpoint of economics (aside from his separate nature and position as the consumer), a primitive, low-horsepower engine, relatively clumsy and of brief durability, for the production of economic goods. Man the worker, except in the fields of science and management, has grown steadily less impressive since the onset of the industrial revolution. He can work 8, 10, or 12 hours at a stretch and then must rest. His strength and speed of action are quite limited. He is subject to numerous ailments, often adversely affected by climate, temperamental and not infrequently lazy. He makes many mistakes. As a factor in the production of wealth, man is progressively less successful in competing with capital instruments, except, again, as a scientist or as manager.

It is not as a worker that man is master of the earth. It is as the intelligence behind all production, and as the consumer—the reason for production and the destiny of the things produced—that he is supreme.

It may well be that confusion between man the worker and man the thinker—the

source of all ideas and plans—contributed as much as any cause to Marx' failure to recognize capital as a producer of wealth in the same sense that labor is. Mental activity enters into economic transactions primarily in two ways:

1. The mental activity of the scientist and manager is responsible for the invention, development, improvement, and production of capital instruments, and the supervision of productive activity of both laborers and capital instruments. Scientists and managers are in general the top echelon of labor—the professional level. Their services include entrepreneurial activities, in which they provide the initiative in organizing the capital and labor to institute or expand particular business activities. A substantial portion of their services is rendered in improving the productivity of capital instruments, thus promoting the substitution of machines for men and otherwise reducing labor requirements, where to do so will reduce the costs of production and render the businesses in which they are engaged more efficient and competitively better. The steady improvements in capital instruments, systems of production, and organization of productive processes, are the results of the mental activity of the scientists and managers. Their ability to produce in these fields is the secret of their rising productiveness and the increased demand for their services.

2. Mental activity enters into nonscientific work and nonmanagerial work in varying degrees. The intelligent direction by the worker of his own activities is incidental to the mechanical work performed by him. Labor is compensated for a particular type of service of a physical nature which could not be rendered in the absence of intelligent direction on the part of the worker himself.

Marx recognized that machines and men are competitors in the sense that scientists and managers, in carrying out their function to produce goods and services in a competitive market, strive to eliminate labor costs and to improve upon hand methods of production. "The instrument of labor [meaning, of course, machines, the instruments of the capitalist] when it takes the form of a machine, immediately becomes a competitor of the workman himself." In speaking of this competition, Marx comes as near as possible to recognizing that capital instruments are active forces in the production of wealth, performing an economic function of the same sort as labor, and frequently performing functions which can interchangeably be performed by either.

Marx observes that in the case of the handcraft industries, "the workmen are parts of a living mechanism. In the factory we have a lifeless mechanism independent of the workman, who becomes its mere living appendage. * * * By means of its conversion into an automaton, the instrument of labor confronts the laborer, during the labor process, in the shape of capital, of dead labor, which dominates and pumps dry living labor power. The separation of the intellectual powers of production from the manual labor, and the conversion of those powers into the might of capital over labor, is, as we have already shown, finally completed by modern industry erected on the foundation of machinery. The special skill of each individual insignificant factory operative vanishes as an infinitesimal quantity before the science, the gigantic physical forces, and the mass of labor that are embodied in the factory mechanism and, together with that mechanism, constitute the power of the 'master'." It may well have been Marx's failure to recognize that capital instruments in practice supplant not only physical forces but intelligence, that deterred him from recognizing that capital works just as labor works.

Whether Marx could have closed his eyes to the facts of production in the now-dawning age of automation is an interesting speculation. Yet even in Marx's own day it should have been possible for him to recognize that the scientists (engineers) in designing capital instruments build into these instruments the capability of performing operations which, if performed by labor, would require the application of brainwork. His obsession with the labor theory of value rendered him incapable of this insight.

But today, with the development of feedback, self-correcting and self-programing machines, capable of automatically performing a sequence of logical operations, correcting their own errors as they perform their productive tasks, choosing from built-in instructions or characteristics their proper functions, it is likely that even Marx would have broken through his barrier obsession that labor does all the work.

Human minds ultimately direct the production of goods and services. This is true of the functions of capital instruments as it is of workers. As a production process uses more and more capital instruments, more of the human mental control of the process of production is shifted away from workers to scientists (and their mechanical progeny) and to management. Thus the private ownership of labor is not, in action, essentially different from the private ownership of capital. Each involves the right of control of an active means of production, the right to take the fruits of such production, to produce where and when the owner desires, and to accept or reject conditions of production. The most significant difference is that the owner of capital instruments is not required to be personally present in the productive process; he produces, or in any event he may produce, vicariously. Mental activity as such is not the basis of the property rights of either labor or capital owners in wealth produced.

What difference would it have made to Marx' theory of capitalistic economics if he had recognized both the power of labor and the power of capital instruments to create wealth? It would have made all possible difference.

If all wealth is created by labor, and if the total wealth created is in excess of that distributed to labor on the basis of the market value of labor, then the excess is surplus value. This surplus value, according to Marx, is something really stolen from labor by the capitalist. It is elementary that wealth belongs to him who creates it, and if only labor can create wealth and capital instruments cannot create wealth, then the owners of capital have no possible claim to a share in the proceeds of production. The most they could legitimately claim would be to have the value of their original capital, which has been partly or wholly consumed in the productive process.

More About John M. Blair and His Philosophy

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. VAN ZANDT. Mr. Speaker, since we are hearing a lot about the Senate's Antitrust and Monopoly Subcommittee, the following editorial from the May 25, 1957, issue of the National Review is of timely interest:

Under the chairmanship of Senator ESTES KEFAUVER, the Senate's Antitrust and Monopoly Subcommittee is about to launch a riproaring, muckraking investigation of American business practices, a project that, the chairman is undoubtedly hoping, will carry him to the 1960 Democratic Presidential nomination. For chief economist in this inquiry, Senator KEFAUVER has hired one John M. Blair. Mr. Blair is author of a book named Seeds of Destruction, greeted upon publication in 1938 by the enthusiastic applause of the English Marxist, Harold Laski. The book's thesis, argued by standard Marxian dialectical proofs, is simple, namely: That capitalism and private enterprise are no good, that they throw the masses out of work, lower their real living standards, and pile up luxuries in the hands of the upper classes. It is not on record that Mr. Blair has repudiated or changed his views. It takes the oldtimers back to the good old New Deal days when the staffs of similar congressional committees were being run by Alger Hiss, Lee Pressman, John Abt, Henry Collins, and friends.

Congress Makes Mistake

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. BARING. Mr. Speaker, for months I did everything I could possibly do to persuade the House Appropriations Committee, not only to recognize a moral obligation to the western mining industry which acted in good faith in reliance of Public Law 733, and to the Government's direct appeal to produce tungsten, but to appropriate the $30 million authorized by the law in order to avoid what would otherwise be a crippling blow to the domestic mining industry.

What I predicted has come to pass. It is also with deep regret that I feel compelled to insert in the RECORD today, a letter addressed to me by K. C. Li, chairman of the Wah Chang Corp., which informs me of the demise of an entire town in my State.

Unfortunately many of my colleagues, in all conscience, could not visualize the consequence of permitting Public Law 733 to die. It was a promise by the Congress to the people.

The letter follows:

WAH CHANG CORP.,
New York, N. Y., July 16, 1957.
Representative WALTER S. BARING,
Congressman for Nevada,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE BARING: Thank you for your letter of July 10.

Since I know your deep interest in this matter, I take the liberty of reporting to you, with profound regret, the action of our board of directors in closing the Lincoln mine at Templute, Nev., until further notice. A copy of the board's instructions suspending operation until such time as Public Law 733 is reactivated or until the long-range program promised by the President is promulgated, is attached.

I am sure, Representative BARING, as one who has worked so industriously for the continuance of the tungsten industry, this deci-

sion, made necessary by the failure of the House of Representatives to appropriate the necessary funds, in spite of your gallant efforts, will be a great disappointment to you as it is to me.

It is a pity that the growing town of Tempiute will have to be abandoned. Several hundred people are presently bereft of a livelihood and will be forced to pull up roots and migrate to other places. The loss to the State of Nevada and county of Lincoln in revenue will be substantial.

As for Wah Chang, the venture has been a losing one but we have gained a measure of satisfaction in that we feel we have accomplished what many considered impossible, namely the establishment of an industry in Tempiute with real potential contributing to the independence of our country in the production of a vital and strategic mineral, sorely needed at the time of its inception in 1951. At the close of 1956, the production rate of tungsten in the United States was 1 million units annually, making our country the world's largest producer, and production at Tempiute was a substantial factor in this achievement.

We have built a town in the wilderness, supplied it with electricity by constructing a 63-mile powerline, and provided ample water and services incidental to life in an independent community. We pray that in some way Tempiute can again be of service to the State of Nevada, rather than become a blighted ghost town reminiscent of a past era.

The mine and mill are equipped with the most modern machinery capable of producing more than 100,000 units of tungsten per year. What a tragedy that all this must be abandoned.

My associates join with me in the expression of our deep appreciation to you, dear Congressman, and to your staff for your understanding and sympathy of our position in this matter.

Faithfully yours,

K. C. LI, *Chairman.*

H. R. 8002—Perhaps the Most Dangerous Bill of This Session

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. FORD. Mr. Speaker, H. R. 8002, the so-called accrued expenditure bill, is scheduled for House floor consideration within the next few days. It is opposed by practically everyone who has been exposed to it heretofore. It is favored by many who unfortunately have been misled by extravagant claims of savings and who do not really understand that every major argument advanced for it is without real substance. The truth is, the bill, if adopted, will cost the Treasury money rather than save any money.

Under leave to extend, I include an excellent summary by the Honorable JOHN TABER of the effects the bill would have. He knows something about the business of appropriating. He refers to H. R. 8002 as "perhaps the most dangerous bill that has been brought before the House at this session."

His letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 2, 1957.

DEAR COLLEAGUE: Because I feel so strongly that the bill H. R. 8002 is a very dangerous bill, perhaps the most dangerous bill that has been brought before the House at this session, I feel impelled to write to you and ask you to join with those of us who understand it and oppose it.

This bill will make it easy to get appropriations in large amounts by way of contract authorizations, and absolutely destroy the power of the Appropriations Committee to keep things in line and give the United States Treasury a chance. It will utterly destroy all prospects of a tax cut and break down our hopes of balancing the Budget. It is going to make membership upon the Appropriations Committee an almost impossible task, and I feel that I am justified in submitting this to you.

It is so easy to get an appropriation for a small amount tied to a contract authorization for a big amount that we will not be able to stop any raid on the Treasury, no matter what it is, if this proposal is adopted.

May I quote in part from the Report of a Temporary Subcommittee of the House Committee on Appropriations, which subcommittee was appointed to study the administration plan to improve Congressional control of the Budget: "it is the view of the subcommittee that the accrued expenditure method should not be adopted. It has disadvantages and offers no improvement. The best system that can be devised ought to be employed, but the accrued expenditure method is not it."

The spenders are delighted with this kind of an approach because they know it will be easy to get money and impossible for those who would like to save to stop it. The departments tend to get better prices on things they buy when they have the appropriations in hand.

Those who advocate the accrued expenditure basis lay great store by the idea that the present large unexpended appropriation carryovers are a problem but the fact is with the contract authority procedure there are also large unexpended balances. The fact of the matter is that the Appropriations Committee reviews all unexpended balances at the present time annually, and they go into it so carefully that there is no question but what they know what is going on and appropriations which have been made that are not needed longer are recovered.

The passage of this bill means not only greater spending but it means practically giving up the control which the power of the purse has given to the Congress and which has been the source of our liberties.

I hope that you will join in trying to stop this dangerous bill.

Very sincerely yours,

JOHN TABER.

The Late Joseph R. McCarthy

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolution adopted by the Menominee Indian Advisory Council in memory of the late Senator Joseph R. McCarthy:

A RESOLUTION F-16 (1957)

Resolved by the Menominee Indian Advisory Council in regular meeting assembled this 14th day of May 1957, on behalf of the Menominee Indian Tribe, That we do hereby convey to the family of Senator Joseph R. McCarthy, its sincere sympathy and condolence in the passing from this world of Senator McCarthy.

Resolved further, That the advisory council, on behalf of the Menominee tribe, pays this special tribute to a great man who devoted many years of his lifetime as a valuable and devoted friend of the Menominees. His relationship with this tribe as a whole was one that stands out as an example of good fellowship and can be best exemplified by the many friends he made in this tribe.

It is our prayer that his soul may rest in peace.

A MOTION

GORDON DICKIE. I move for the adoption of the resolution.

PETER WAUKECHON. I second the motion.

ACTING CHAIRMAN. All those in favor of the motion raise your right hand; contrary; the motion is carried unanimously.

JENNIE WESO,
Acting Chairman and Secretary of Menominee Indian Advisory Council.

The A B C's of Civil Rights

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ABBITT. Mr. Speaker, I am glad indeed to see that now for the first time the press, the daily columnists and news commentators generally are letting the people know what the so-called civil rights bill really is. For some reason, heretofore there has been a blackout on the evils of this legislation. It has been referred to as "a simple little right-to-vote bill." Actually anyone who has studied the measure knows that the part referring to voting rights is one of the lesser parts of the measure and possibly would be the least objectionable part of the bill.

On July 17, 1957, the columnist James Marlow had an enlightening article entitled "The A B C's of Civil Rights" This column appeared in the Northern Virginia Sun as well as in other papers. This article points out some of the evils of the bill and I hope it will be widely read by the people of America. I am convinced that if the American people knew what the bill really contained they would demand that the legislation be defeated promptly.

Under leave to extend my remarks in the RECORD, I include the article which is as follows:

THE A B C'S OF CIVIL RIGHTS

(An analysis by James Marlow)

WASHINGTON.—This is an A B C on the civil-rights bill, backed by the Eisenhower administration and despised by southern Democrats. In the Senate they'll fight it for weeks.

They'll try to soften it with amendments. But Senator RUSSELL (Democrat), Georgia,

has said the goal is to kill it. Senator ERVIN (Democrat), North Carolina, has said, "It can't be patched up enough to make it palatable."

It has four sections, each of which is in for a rough going-over:

No. 1 would set up a 6-man Commission to study civil-rights problems for 2 years. It seems to give the Commission an almost unlimited field. The Commission could subpena records and witnesses—although only in the States where witnesses live.

Refusal to obey the subpena could land a man in jail. The President would appoint the Commission. The Commission would appoint a staff director, who'd really run the show and who could accept volunteer investigators.

The Senate would have final say—by approval or disapproval—on the Commission members. RUSSELL wants the Senate to have final say on the staff director, too. This would give southerners a voice in picking him.

And RUSSELL wants no volunteer investigators. He said he wants to avoid trouble from "long-haired or short-haired reformers."

No. 2 would create a new Assistant Attorney General to preside over a new civil-rights division in the Justice Department. Now there is only a civil-rights section in the criminal division.

No. 3 is an extremely wide ranging piece of legislation. Southerners storm over this, want it knocked out entirely. It would give the Attorney General brand new powers in the civil-rights field.

No one yet has listed all the civil-rights situations into which he could step under No. 3. Attorney General Brownell himself has said he could use it to back up the Supreme Court's ban on public-school segregation.

It would amend several old laws—going back to 1861 and 1871—on civil rights. Now, under those laws, an individual whose civil rights are violated can sue for damages and ask a Federal judge for an injunction.

Tacking No. 3 onto those old laws would mean that the Attorney General, without waiting for an individual to act, could ask a Federal judge for an injunction to stop civil-rights violations in a variety of fields.

Anyone disobeying the order could be tried by the judge himself—without a jury—and sent to jail for contempt of court.

Another old law on the books—passed to support those laws of 1861 and 1871—authorizes the President to call out the troops to back up a court order.

Thus section 3—by amending those old laws to which the calling-out-the-troops law now applies—would give the President authority to call out the troops to back up a court order issued under No. 3 of this bill.

No. 4 would let the attorney general get a court order to stop anyone from interfering with an individual's voting rights. Again, as under No. 3, disobedience would bring trial by a judge, without a jury, and possibly a jail term.

Southerners protest that in such a case a man should get a jury trial. Brownell has said there's nothing new about trial by judge without a jury for contempt of court. He has cited 28 laws under which this can be done.

The bill's supporters argue that action is faster through trial by judge. For example: A voting registrar ordered to stop interfering with a Negro's efforts to vote could, if he disobeyed, be tried by a judge before election. Thus a Negro would still have time to vote.

But a trial by jury in such cases would probably come after an election, still leaving the Negro voteless. And the bill's supporters question whether a southern jury would convict a registrar in such a case.

The Duck Stamp Bill, H. R. 8699

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD the contents of the recent issue of the Outdoor News Bulletin, issued biweekly by the Wildlife Management Institute, dated July 19, 1957, setting forth the reasons why the new duck stamp bill, H. R. 8699, authored by my good friend, Congressman FRANK BOYKIN, should be enacted into law.

BULK OF DUCK STAMP FUNDS SLATED FOR LAND PURCHASE

Under the terms of H. R. 8699, a new bill by Congressman FRANK W. BOYKIN (Alabama) that would amend the Migratory Bird Hunting Stamp Act of 1934, a large part of the annual duck stamp receipts actually would go for acquiring land for the national waterfowl refuge program, according to the Wildlife Management Institute.

H. R. 8699 would earmark 65 percent of the duck stamp revenue for land purchases. The remainder would be available for refuge development, maintenance, research, law enforcement, and the printing and distribution of the duck stamps. The measure was drafted to meet the objections of House Merchant Marine and Fisheries Committee Chairman HERBERT C. BONNER of North Carolina to earlier bills which sought to raise additional funds for land purchase either by increasing the duck stamp fee or instituting a Federal matching plan.

The use of the Migratory Bird Hunting Stamp Act revenue has been criticized widely in recent years because of the way in which the nearly $50 million in collections has been dissipated. Sportsmen endorsed the issuance of duck stamps in 1934, and the increase in the fee in 1949, because they thought that the extra cash would be used to speed up the waterfowl refuge land-acquisition program. To their dismay, however, only about $4½ million have been used for that purpose. The greatest part has gone for the routine operations of the United States Fish and Wildlife Service.

H. R. 8699 would halt the misuse of this special fund by requiring that a significant part be set aside for land purchase. This plan has widespread support in that conservationists believe that the routine operations of the Service should be financed from regular appropriations rather than from the sportsmen's pockets. After all, the Federal Government has well-defined obligations and responsibilities for the preservation of migratory birds under the terms of the Migratory Bird Treaties with Great Britain (Canada) and Mexico.

A second provision of the Boykin bill would authorize the Fish and Wildlife Service to lease or purchase small marshes and potholes as special waterfowl management areas. The aim is to enable the Service to assist the States by helping to compensate for the tremendous loss in natural waterfowl habitat through the drainage of wetlands in the Dakotas and other North Central States and in the wintering grounds. The stimulus of Federal subsidy and technical assistance has accounted for the drainage, and hence the destruction for wildlife purposes, of about 350,000 potholes in the Middle West since 1943. Wildlife leaders are deeply concerned about the impact that wide-scale drainage is having on what is potentially the finest natural waterfowl breeding grounds in the United States.

These so-called waterfowl production areas have their principal value, of course, for the nesting and rearing of waterfowl. Any other use made of them by waterfowl is of lesser importance. It is planned that the areas thus preserved would be kept separate and apart from the national waterfowl refuge system.

The Fish and Wildlife Service, therefore, would not be obliged to establish costly permanent boundary lines, or to patrol the small tracts regularly or prohibit hunting. The major form of hunting near the small wetland areas would be for pheasants and other upland game birds rather than waterfowl.

The main point of this provision is to take a positive step toward protecting more of the remaining small water areas for nesting waterfowl from drainage.

H. R. 8699 has strong public support and Chairman BONNER and the other Members of Congress obviously will be receiving a flood of requests for prompt and favorable attention of this important wildlife legislation.

Opposition to the Foreign-Aid Program

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. SAYLOR. Mr. Speaker, the Federal Government's first obligation is a cut in income taxes rather than a continuation of the foreign-aid program which I call the international charity bazaar sponsored by Washington party givers and paid for by the people back home.

Although there have been many pious intonations regarding the desire to increase individual income-tax exemptions, the general feeling is that Congress will wait another year to take this humane and long-overdue action. Meanwhile, foreign aid is presented as an irrevocable responsibility.

For my part, I believe that the overburdened American taxpayer should be granted immediate relief. Nations which have milked the United States Treasury since the end of World War II should have been weaned long ago.

The $64 billion turned loose all over the world in the past decade through the foreign-aid program is equivalent to the total cost of a twenty-thousand-dollar-plus home for every family in Pennsylvania. While this worldwide project has been continued year after year, Congress has consistently rejected enactment of depressed-area legislation that would provide assistance to our own American citizens in surplus labor regions of this country.

This indifference to the needs of the American citizen first is too fantastic to comprehend. Originally offered as a short-term plan designed to help friendly nations bolster their economies, the foreign-aid program is now pushed as a part of Uncle Sam's necessary annual

expenditures. The bureaucrats who handle the disposal of these grants have, of course, an important personal stake in this lush philanthropy, yet it is difficult to understand how their selfish philosophy can prevail over the interest of the American people.

What is all the more ridiculous is that the current program calls for handouts to Tito and other representatives of communism which our dollars are supposedly combating.

Civil Rights That Breed Civil Wrongs

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely editorial by David Lawrence, which appeared in the June 19, 1957, issue of the U. S. News & World Report:

CIVIL RIGHTS THAT BREED CIVIL WRONGS
(By David Lawrence)

What is being proposed in Congress these days in the name of civil rights and what is being decreed by the Supreme Court makes a mockery of a written Constitution.

For, under our Constitution as written, there has always been reserved to the States of the Union the right to determine the qualifications of the voters. But now the Federal Government, without the slightest sanction from the same written Constitution, is trying to deprive the States of the right they have always exercised—to specify by law the qualifications for eligible voters. To take away this right is a civil wrong.

Every State has restrictions on the voting privilege. Some require educational tests. Some specify property ownership. Others fix the time of residence within a State. All States fix the age limits. An article on pages 45–47 of this issue gives a summary of such laws.

The right of each State to pass its own laws governing qualifications for voting is not challenged anywhere in the Constitution, except that the right to vote cannot be abridged because of race, color, or sex.

But it is alleged that, under cover of educational or literacy tests, there are some denials of voting rights in the South because of race or color. So the Federal Government, through a civil-rights bill, now is proposing to become a policeman and psychology expert—to inquire into the motives of the State officials everywhere and to harass them by the investigative process of a national commission set up for the purpose.

It is a fact that more than 1,500,000 Negroes do qualify for voting in the South and that, in three southern cities, Negroes have recently been elected to city councils. The issue, therefore, is not whether any Negroes are being permitted to vote, but whether the Federal Government shall review in each case the actions of a State election board on the suspicion that the State's requirements have not been or will not in the future be uniformly applied.

If election boards can be punished, the Federal Government can coerce the Governors and the members of the State legislatures and the mayors of our cities and the governments of our counties.

Is there any limit, then, to the Federal power? Are we to have an era of "civil wrongs" perpetrated in the name of "civil rights"—a return to the tragic follies of the "Reconstruction" years of 1866 to 1880?

The civil-rights legislation now proposed would enable the Federal Government—by force of arms, if necessary—to compel the integration of races in the public schools. This is a "civil wrong."

Furthermore, the proposed law would set up a system whereby suits would be filed in the name of the "United States" instead of by individual complainants. Thus automatically would trial by jury be prohibited. This is a "civil wrong."

But where is there any concern shown by the President and the majority of Congress for the civil rights taken away from white and Negro citizens alike throughout the United States when, against their will, they are obliged to join labor unions to keep from being dismissed by an employer acting under the duress of a labor contract? This is a civil wrong.

Where is there any concern for the civil rights of the tens of millions of citizens, who wish to be protected against the enemy's infiltration of our institutions but who now see the Supreme Court of the United States rewriting the first amendment to the Constitution to permit Communists and Communist sympathizers to be immunized from congressional inquiries? This is a civil wrong.

Where is there any concern for the civil rights of Congress itself when it wishes to obtain by investigation the necessary information for the law-making process but now is impeded by the fiat of a reckless Supreme Court? This is a civil wrong.

Where is there any concern for the civil rights of the American people as a whole when the Supreme Court rules that it is lawful now to advocate publicly the forcible overthrow of the Government of the United States?

The establishment of a judicial oligarchy and a Federal despotism is not the way to assure civil rights. It is the way to inflict more civil wrongs.

It is a deliberate defiance of everybody's civil rights, particularly the rights of the people themselves and of the several States as guaranteed to them heretofore by the 10th amendment.

It is the way to disunity and national frustration.

It is the way to a breakdown of the spirit and letter of the Constitution itself.

It is the age-old way of coercion and tyranny that leads inevitably to violence. It is not the way of volition, the way of patient persuasion, the way of reason.

Hon. James B. Bowler

SPEECH
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. ELLIOTT. Mr. Speaker, I want to take advantage of this opportunity to pay my respects to the life and public service of our departed friend, JAMES B. BOWLER. I had the privilege of serving with him on the Committee on Education and Labor during the 83d and 84th Congresses, before he went to serve on the Committee on Appropriations.

Congressman BOWLER had a high sense of duty in the public service. He had served his own Chicago for a period of 50 years before coming to this body. As we sat on the committee together, we sometimes had an occasion to talk before the committee opened its deliberations, and he sometimes told me stories of his public service that were of the greatest interest. On one occasion I suggested to him that he should take the time to write some of his rich experiences into a book.

I found the gentleman from Illinois, Mr. BOWLER, to be a man of very practical mind. It was easy for him to see through conflicting contentions and come to a sound, workable conclusion. He loved the people. He had their interest always uppermost in his mind. He was a kindly man. He suffered much physical pain and anguish, yet he lived in the spirit of the Ella Wilcox poem which says:

Laugh, and the world laughs with you;
Weep, and you weep alone,
For the sad old earth must borrow its mirth,
But has trouble enough of its own.

I was in position to realize that our departed friend carried a heavy burden in his physical limitations, but he never complained. As a matter of fact I never heard him mention it at all.

Mr. BOWLER was a very cooperative person in all his dealings with the Members. He was a good party man. He took great pride in being a good Democrat.

He was a fighter for what he believed in. The things he stood for were good for the people. They were good for the country.

I shall miss his friendship very much.

Proposed Closing of Corona Naval Hospital Protested

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. HOSMER. Mr. Speaker, the Navy's proposal to close the Corona Naval Hospital has caused a storm of protest from the southern California area. I submit two samples. The first is an editorial from the Long Beach Press Telegram and the second a letter from the Fleet Reserve Association to Representative SAUND in whose congressional district the hospital is located.

CORONA NAVAL HOSPITAL CLOSING WOULD CAUSE SEVERE HARDSHIPS

If a tentative plan for closing the Corona Naval Hospital December 31 is carried out, it will work a severe hardship on thousands of Navy men and their families in Long Beach and the surrounding area.

The Corona Hospital appears on a lengthy list of possible economies by the Navy. This list, the Secretary of the Navy points out, is a tentative plan and not a directive. But even a cursory survey of the situation in this area with regard to Navy medical facilities would show that the Corona establishment is performing a vital service.

It has been the central naval medical facility for the entire region ever since the sharp curtailment in 1954 of services at the Terminal Island Navy Base dispensary. An

estimated 25,000 members of the Armed Forces and their families are served by the Corona Hospital.

The hospital's patient load has been so large that it was necessary, recently, to berth the hospital ship U. S. S. *Haven* in Long Beach as a relief measure.

But the hospital ship could not be considered a replacement of the Corona facility. It has limited personnel and is not suitable for treatment of dependents.

The Navy itself, in its planning for the future, acknowledges the need for hospital facilities in this area. Tentative plans call for a 250-bed naval hospital to be constructed in Long Beach in 1959.

But before such a hospital has been built and is open for service, it would be folly to close down the Corona Naval Hospital.

We can appreciate the reasons for the Navy's review of shore-based establishments. The Navy's ships have become the first line of national defense. Their maintenance is costly.

But the Navy and Congress should think twice before making arbitrary cuts which would eliminate critically needed hospital facilities in an important coastal defense area.

FLEET RESERVE ASSOCIATION,
Washington, D. C., July 11, 1957.

Hon. D. S. SAUND,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SAUND: Members of the Fleet Reserve Association, numbering upward of 50,000 career enlisted men of the Navy and Marine Corps, have received reports of your opposition to the closing of Corona Naval Hospital with great interest and approval.

This association has several thousand members in the area of the State of California which is served by the United States Naval Hospital, Corona, Calif. These career military personnel, both active and retired, in Long Beach, Los Alamitos, El Toro, March Field, Inyokern, China Lake, Los Angeles and other adjacent areas of California, have come to rely upon these facilities, as evidenced by published press reports that the hospital delivers some 300 babies a month in addition to other treatment of various diseases including polio, tuberculosis, rheumatic fever and other ailments.

Particular attention is invited to the fact that the medicare bill restricted career personnel on the inactive list (retired, Fleet Reserve and Fleet Marine Reserve) to use of military and Public Health Service hospitals, and this use was further restricted by the clause "subject to availability of space and facilities".

It is obvious that elimination of a military facility like Corona, with its 750-bed capacity, will have aded impact on the morale of all military men and women in that area, when one considers that thousands of career military personnel have settled in this area of California, to spend their declining years of life, after having served a full career in the armed services of the United States.

Please be assured of our active support in your endeavors to retain Corona in commission. The big question in everyone's mind is "How does the Navy propose to provide adequate and timely medical service and facilities to personnel in this area if Corona is closed"?

Very respectfully,

R. A. LANGDON,
Administrative Assistant to the National Secretary.

(Copy to Senator WILLIAM F. KNOWLAND, Senator THOMAS H. KUCHEL, Representative BOB WILSON, Representative CLYDE DOYLE, Representative CRAIG HOSMER.)

Federal Aid to School Construction

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ROOSEVELT. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following reprints from various newspapers regarding school construction legislation, prepared by the Division of Legislation and Federal Relations of the National Education Association, 1201 16th Street NW., Washington, D. C.

These comments are, I believe, indicative of the attitude now prevailing in many areas of our Nation, and I feel they they are indeed worthy of note by the Members of this body.

The reprints follow:

[From the New York Times of June 30, 1957]

FEDERAL AID FOR SCHOOLS HAS NOT RESULTED IN FEDERAL CONTROL IN CASES STUDIED

(By Benjamin Fine)

Federal aid to education received support last week from several sources. President Eisenhower again endorsed it in a letter to Republican Representative PETER FRELINGHUYSEN, JR., of New Jersey. And 75 business leaders from across the country signed a statement calling for passage of the measure.

In spite of such indication of support and the steady pressure for Federal aid on the part of organizations like the National Education Association, the aid bill remains bottled up and its prospects are not good.

Because much of the opposition to the bill hinges on the charge that it would mean Federal domination of local school affairs, a study made public by Teachers College, Columbia University, was very timely. The study indicated that Federal aid does not necessarily mean Federal interference.

The study was of some of the 3,000 school districts that now receive Government funds under Public Law 874 because they have swollen enrollments caused by Federal activities in their areas, such as defense plants or military bases.

The estimated amount of Federal aid given these districts in the 1955–56 school year was $90 million.

Under the guidance of the department of educational administration of Teachers College, Dr. Robert I. Sperber studied 500 of the 3,000 school districts. The study found that only a tiny minority of the districts complained of any Federal control over their educational programs, even though they received substantial Government support.

"Federal control over school personnel, the curriculum and instructional programs had not accompanied the distribution of funds," the study concludes.

RESULTS OF THE STUDY

The specific conclusions that the study reached are:

1. No Federal control had resulted from field examinations of school districts by regional representatives of the Division of School Assistance in Federally Affected Areas, a unit of the Office of Education.

2. Discretionary control powers granted to the United States Commissioner of Education by the law had not led to Federal control.

3 The vast majority of school officials spent very little time in handling matters pertaining to Federal aid.

4. Most school officials felt that citizens were more willing to support their local school programs as a result of receiving Federal aid.

What are the implications of this study? Dr. Sperber contends that Federal control is not likely to occur when Federal-support legislation is carefully conceived and when the Federal officials who administer the program are sensitive to the dangers of Federal control over personnel, curriculum and instructional programs.

The question arises as to whether the lack of control noted under the emergency measure would carry over under the administration bill now in Congress. From all evidence available, the same standards would be observed. As the study points out: The greatest single weapon against Federal control is the feeling of the American people against it. A sensitivity to control and interference has been built up over the century and a half of American history.

[From the Anderson (S. C.) Independent of June 30, 1957]

CHARLESTON PROSPERS ON FEDERAL AID

In Charleston the newspapers constantly harp on the evils and dire consequences of Federal aid and the expenditure of Federal funds to develop national resources.

Paradoxically, much of Charleston's prosperity is derived from Federal spending of one sort or another. Right now they're also looking forward to spending $28 million of South Carolina taxpayers' money on ports improvements for private gain.

In Charleston, also, there is ranting over Federal aid to schools. The papers and States rights politicians say they want none of it.

Yet more than $650,000 in Federal aid to schools in Charleston County is accepted without a murmur of protest.

It must be concluded that in Charleston eyes the spending of taxpayers' money—Federal or State—is an evil practice not to be condoned. Unless, of course, it is spent in Charleston.

[From the Portland (Maine) Press-Herald of July 2, 1957]

BRIGHTER OUTLOOK FOR SCHOOL BILL

WASHINGTON.—The recent civil-rights battle and the overwhelming victory won by the White House-directed liberal group in the House of Representatives may mean a better chance for the controversial Federal aid to education legislation when it comes up in the House very soon.

The vote on the civil-rights bill weakened the already tenuous link between southern Democrats and conservative Republicans. The southern Democrats were willing to trade one of their future votes against the school bill for a GOP vote in favor of the jury-trial amendment to the civil-rights measure.

No Republican came through on the deal as they had in the past, so the Dixiecrats may return the favor and vote for the school bill which many Republicans want to beat.

The Democrats can do this in good faith since their States would be the major beneficiaries under the school-aid program.

[From the Philadelphia Bulletin of July 2, 1957]

EDUCATION TO THE FORE

Philadelphia is host to the National Educational Association in a year when education has grown to become one of the most vital concerns on every level of Government. All of the 48 States are digging into their pockets to find money to finance a tremendously expanding need of the schools. Federal aid to education now has the endorse-

ment of the President, and the measure is high up on the congressional calendar.

Whether or not the NEA will this year see victory in its long battle for Federal aid, the proposition has advanced to the stage where it is no longer looked upon as chimerical. Increasing numbers of Americans have been converted to the NEA's point of view that every American child has a right to an adequate education, no matter where he lives.

Families no longer stay put as much as they did a generation ago. Children born in a locality that cannot afford them a good education turn up as adults in distant cities, and become problems.

With the apparent breakdown in family discipline, an added social responsibility is placed on teachers. Their care of children is not measured by the opening and closing of school doors. The whole life and development of the child is their concern. Surely the bearing of such a responsibility justifies the demand that teachers be granted salaries in line with their professional obligations.

[From the Philadelphia Inquirer of July 3, 1957]

THE TEACHERS AND FEDERAL SCHOOL AID

The emphasis placed by the National Education Association on Federal aid for school construction in the present period of unusual expansion and overcrowded classrooms entails certain dangers of which the teachers gathered in this city are not unaware.

That is why their representatives were at such great pains to qualify a request for more vigorous Presidential support of emergency legislation to help the States. Such funds as are advanced to local districts from Washington must not be permitted to result in Federal control. It is because of this danger particularly that many oppose help in any form from outside the local community.

The responsibility for paying the bills of education should rest upon those who benefit from it. Traditionally it has been up to the local community to support its own schools, with some help by the State where necessary. Governor Leader's warning that to break with this tradition might mean Federal control is one that should not be ignored.

Yet the very character of the emergency which now faces the schools of the Nation shows why temporary help at least has a validity which did not apply in other times. It is not only that the Nation is faced with the task of keeping abreast of an unprecedented rush of technological progress in order to survive but that in this rush it dare not permit any substantial proportion of its young people to miss out on the basic training they must have to serve themselves, their community and their country.

Communities that are unable to meet their obligations to education inevitably pass their problems on to the rest of the Nation. Many of their young men can't qualify for military service because of illiteracy or similar handicaps. When they and their families move to other localities, their lack of preparation imposes a terrific strain on the facilities of communities that had always before succeeded in maintaining good schools.

Thus it is imperative that schools everywhere in the Nation be brought up to acceptable standards, that teachers be competent and adequately paid and that classrooms be available to shelter all the children of their districts without crowding.

The obligation for attaining this goal belongs primarily, we believe, to the local community, but it does not stop there, particularly in the emergency now facing the Nation. For this reason, we join the NEA in urging that Congress pass pending legislation to help the States meet their school construction problems and do it as quickly as possible.

Murphy Army Hospital, Waltham, Mass.

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following material prepared by FELA and other persons interested in retaining the Murphy Army Hospital at Waltham:

DATA PERTAINING TO DEPARTMENT OF THE ARMY PLAN TO CLOSE MURPHY ARMY HOSPITAL, WALTHAM, MASS.

1. REQUIREMENT FOR MURPHY ARMY HOSPITAL

(a) Army claim: "The number of patients at Murphy is too small to justify the operation of this hospital."

Fact: The number of patients is deliberately kept at a low level, the result of special policies applied only to this hospital by the Surgeon General; if these policies were applied to any other hospital the result would be the same low patient strength. Among such special policies are the following:

1. Military patients who are to be hospitalized for a prolonged period are normally transferred to a hospital near their homes so that their families may visit them. Such patients whose homes are in New England are not moved to Murphy Army Hospital; instead, they are sent to hospitals in such distant places as Pennsylvania and Colorado. An example of this is M. Sgt. Nunziato DiBona, 79 Miller Street, Quincy, Mass., was transferred from Germany to Sampson Air Force Base, N. Y., on November 2, 1955, and kept there for almost 4 months.

2. Army hospitals are normally staffed with sufficient doctors to care for all types of illnesses but for over a year the Surgeon General has failed to provide doctors at Murphy Army Hospital who can perform certain specialties. As a result, many patients must be transferred to other hospitals for treatment. There is only 1 dentist here while the Boston Army Base has 3.

3. Air Force personnel at Bedford Airbase and Army units stationed in the Greater Boston area have been directed to send personnel requiring medical treatment to Fort Devens or to Chelsea Naval Hospital. There are now over 125 Army and Air Force patients at the Chelsea Naval Hospital; these patients should be at Murphy Army Hospital.

(2) Army claim: "After the medical-care bill becomes law, the need for a hospital in Waltham will be even less than it is now."

Fact: Under the medical-care bill thousands of dependents will be entitled to hospitalization. As shown in the House of Representatives Committee Report No. 1805 on this bill, the cost to the Government for this care will be far less when it is provided in a military hospital than when dependents go to civilian hospitals. Further, it was pointed out by the House Committee on Armed Services that it is vital to insure that military hospitals continue to treat dependents in order that career medical personnel may be retained by the Armed Forces. The committee's report states (Rept. No. 1805, p. 10):

"It is obvious that career physicians worthy of their profession need and expect to treat many types of illnesses that are common in a civilian practice. It is doubtful if the career medical groups of the respective services could be maintained with any degree of stability if their practice eventually became restricted to service personnel who are normally the healthiest group in the Nation. And those physicians who did stay in the service with a restricted type of practice might later be transferred to a foreign station where they would be expected to treat dependents. Such physicians might then find themselves in the unfortunate situation of having to treat diseases and illnesses ranging from pediatrics to geriatrics without having had sufficient experience to maintain the skill of their profession while serving in the continental United States where their practice had been limited to service personnel.

Since the Murphy Army Hospital is located in a section of the country which is heavily populated it is obvious that great numbers of dependents will come here for medical care as authorized under this new law.

(c) Army claim: "Greater Boston is a poor location for an Army hospital."

Fact: Boston is renowned as one of the world's leading medical centers. The Army could and should take advantage of this fact by transferring patients to Murphy Army Hospital when their illness requires the advice of competent consultants. Here, the assistance of doctors and clinics such as the following are available:

1. Dr. Paul D. White, heart specialist.
2. The Leahy Clinic.
3. The Joslin Clinic for Diabetes.
4. Harvard Medical School.
5. Massachusetts General Hospital.
6. Pratt Diagnostic Clinic.
7. Kennedy Memorial Foundation.
8. The Children's Hospital.

2. COST OF OPERATING MURPHY ARMY HOSPITAL

(a) Army claim: "If Murphy Army Hospital can be closed as a hospital, an annual savings of $3 million will result."

Fact: If this hospital were closed very little would actually be saved. The following costs which are included in the annual cost referred to by the Army would not be saved; they would arise at other Army medical facilities to which military personnel would be transferred and in which patients would be hospitalized:

1. Pay of all military personnel now stationed here.
2. Pay of additional civilian personnel required to care for the resulting increased patient load at other hospitals.
3. Cost of medical supplies and drugs.

3. USE OF MURPHY ARMY HOSPITAL BUILDINGS BY THE CORPS OF ENGINEERS

(a) Army claim: "The buildings at Murphy Army Hospital are needed for the Corps of Engineers."

Fact: There is more than 400,000 square feet of vacant space at Boston Army Base which is available for the Corps of Engineers. This space is now idle.

(b) Army claim: "It will be more economical for the Engineers to be located in the hospital buildings than in the Boston Army Base."

Fact: The engineers' study of necessary alterations at Murphy Army Hospital was kept low by failure to show all of the work which would ultimately be required there. On the other hand, their estimates of $500,000, for alterations at the Boston Army Base were padded to an unreasonable degree. A correct estimate would be about $200,000. One instance of padding is the inclusion at considerable cost of electrical outlets set in the concrete floor at all desk locations; simple inexpensive ceiling fluorescent lighting would be adequate. Another instance was the provision for a system of new passenger elevators when existing elevators could be modified for a tenth of the cost of new ones. There are sufficient telephone lines already in place at the Army Base to satisfy the division engineer's requirements; at Murphy Army Hospital 200 additional lines would have to be installed. The annual cost for utilities and maintenance at Murphy Army Hospital for the engineers would be $1 per square foot; at the Army Base the cost to the engineers would $0.30 per square

foot. After the Air Force vacates their part of the hospital in 1958 as planned, the engineers will have to carry the entire cost of the installation; this will increase their cost per square foot of required space to $1.75.

(c) Army claim: "By replacing the hospital activity and moving the division engineers into the hospital buildings there will be an increase in business in the area. This will satisfy the Members of Congress."

Fact: Whether the division engineer offices are in Waltham or at Boston Army Base will make no difference; the personnel will continue to live, where they do now, in towns throughout the Greater Boston area. On the other hand, closing the hospital will result in removing over 600 military personnel and dependents from this area. Although Maj. Wallace King, hospital executive officer and Mr. Robert Lafrenz, division engineer executive assistant, have informed the hospital custodial employees that they will be transferred to the engineer organization, both of these officials have acknowledged that as soon as the hospital closing has been accomplished the custodial employees will have their positions abolished. This is an example of the attempts being made to keep the closing operation quiet so that Members of Congress will not know of the plan until it is an accomplished fact.

Additional note: The Surgeon General appears to be repeating an error made in 1950. At that time, 3 months prior to the beginning of the Korean fighting, Murphy Army Hospital was closed. When the fighting broke out it was necessary to reopen the hospital at a cost of almost $500,000.

Now, with the situation in the Middle East at the explosion point, it could very well prove disasterous to close this hospital. If hostilities should break out, Murphy Army Hospital would again be one of the most important hospitals for the care of our battle casualties.

MEMORANDUM

The Army has given a number of reasons for closing the Murphy Army General Hospital. Primarily the Army seems to feel that the closing of the hospital is an economy measure and is in the best interests of the Government. The Army has also indicated that the hospital facilities will be utilized by the Corps of Engineers and the Air Force more advantageously than now.

As a matter of fact, the hospital site is far from being advantageous to the Corps of Engineers, and the present Air Force project which is located at the installation is due to disband within the coming year. It has been suggested to the Army that there is 400,000 square feet of vacant space at the Boston Army base which could be used as a headquarters for the Corps of Engineers. The Army in rejecting the possibility of the use of the airbase facilities, made this comment in a letter to Senator JOHN F. KENNEDY, of Massachusetts, dated April 19, 1957:

"The Boston Army Base was considered as a possible site for the New England division engineer office in June 1955. The Boston Army Base is a large multistoried, dockside, warehouse facility. It is located in a strictly waterfront industrial area and while well suited for warehouse and dockside terminal usage its location and structural character are considered undesirable for a general office facility. The Army estimated that it would be necessary to expend approximately one-half million dollars to convert the warehouses to adequate office space. A highly important consideration in this matter is that the Boston Army Base will be required for warehouse and pierside terminal purposes in the event of mobilization. Additional expense would be incurred at that time to return the facility to its existing condition were the warehouses converted to office space. It is reiterated that the other military medical treatment facilities in the Boston area are capable of assuming the workload accomplished by the staff at Murphy Army Hospital without depriving anyone of the medical care and treatment authorized under current laws and regulations."

You will note from the Army's comment on the use of the Boston Army Base that they do not feel it is desirable for a general office facility because in the event of mobilization the Army base would be required for warehouse and pierside terminals in addition to expenses which would be incurred at that time to return the facility to its present condition. It should be borne in mind that this is exactly the same reason why it is felt the Murphy Army Hospital should be kept in operation and not converted to an engineering project because in the event of mobilization the hospital too would have to be reconverted at tremendous expense and at the same time it might very well be impossible to recruit the trained personnel necessary for a hospital facility. As a matter of fact this is exactly what happened in 1950, when the Army closed the hospital and 3 months later had to reopen it at tremendous expense because of the Korean conflict. If the Army feels that it is necessary to maintain the 400,000 square feet of idle space at the Army base because of the possibility of mobilization, it should be equally true that the hospital facilities at Waltham should be kept in a similar standby status for the same reason. It is interesting to note that the Corps of Engineers are engaged in river and harbor work, and use a great number of boats for this purpose. The Army base would give the Corps of Engineers docking space for these boats which is not available at Waltham.

At the present time the Corps of Engineers is located on Causeway Street at the North Station in Boston. There is an irrevocable 3-year lease on the premises which still has 2 years to run, and it is considered extremely dubious that any economy in operations will result if the Government finds it necessary to pay rental for 2 years on premises which it cannot occupy. The economy aspect of the closing of the Waltham Hospital is further open to question when one considers the following statement of Senator JOHN F. KENNEDY contained in a letter dated July 11, 1957 in which he said, "and the engineers have indicated that considerable new personnel will be required to provide installation support-type services." The only conclusion that can be drawn from Senator KENNEDY's statement is that to operate from the hospital grounds the Corps of Engineers will have to engage additional personnel which are not now necessary at their present location.

Bedford Air Force Base, which only has dispensary facilities, utilizes the Murphy Army Hospital for its personnel. Murphy Hospital is 12 minutes by auto from Bedford, while the Chelsea Naval Hospital is 40 minutes from Bedford, and the Fort Devens Hospital is 30 minutes traveling time from Bedford. It can easily be seen that in the event of an emergency at Bedford, adequate care for personnel could not be obtained unless the Murphy Hospital is retained.

Housing Industry Needs Help

EXTENSION OF REMARKS

OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I wish to discuss the urgent need for implementation of the Housing Act of 1957, which the Congress has voted to spur the lagging home-building industry. Members of the building trades, builders, real-estate people, lenders, and suppliers from the district which I represent in California, all await implementation of this legislation which, among other things, lowers the downpayment schedule for FHA-approved loans.

To date, the FHA has not put into effect the new downpayment schedules which were approved and authorized by the Congress. I wish to place in the RECORD a news story and an editorial from the Stockton, Calif., Daily Record of July 13, which indicates the need and demand for implementation of the Housing Act.

REAL ESTATE SLUMP IN SAN JOAQUIN COUNTY

Real-estate lending in San Joaquin County in June slumped considerably from the level for the same month last year, according to the Security Title Insurance Co.'s Stockton office.

The company's report shows that 484 loans totaling $3,840,223 were issued last month on real estate in the county, compared with 604 loans totaling $6,012,215 in June 1956.

FHA BILL SIGNED WITH RESERVATIONS

Because of its possible inflationary effect, the fate of the FHA bill on the President's desk was in doubt until he signed the measure yesterday with reservations. These include his limitation of spending to his budget figure of $1,025 million, nearly $1 billion below the amount approved by Congress, and his lack of action thus far to effectuate provisions for permissive lower downpayments.

We hope the President will go along with the latter provision as a further stimulus to home ownership and construction. Especially desirable is the deduction in downpayments on residences in the $10,000 to $15,000 category, the area of heaviest demand. Rising costs have virtually priced middle-income families out of the housing market because of the present demand for nearly $2,000 in cash to swing a loan on a $15,000 dwelling.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Civil-Rights Debate

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. JOHNSON of Texas. Mr. President, the Baltimore Sun this morning highlights in an editorial the sobriety and the lack of dogmatism with which the present debate is being conducted.

It is strengthening to the Nation to realize that men can approach such a controversial issue as civil rights on a nonpartisan, realistic basis. One of the finest examples is the partnership between the junior Senator from New Mexico [Mr. ANDERSON] and the Senator from Vermont [Mr. AIKEN], two of the great statesmen in this body.

Mr. President, I ask unanimous consent that the Baltimore Sun editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIKEN AND ANDERSON

The remarkable and comforting thing about the civil-rights debate in the Senate so far is the extent to which it has fanned out from being a merely regional issue. There is no doubt where the southern—the Deep South—Senators stand, and no doubt what kind of a bill they would like; namely, no bill at all. But there is far from an embittered confrontation at this point and so far there is wide disposition among the Members to avoid dogmatism and to make haste slowly.

The most graphic indication of this is the sponsorship of the amendment to strike part III from the administration bill as it passed the House. Part III is captioned, "To Strengthen the Civil-Rights Statutes and for other purposes." This is the place where the proposed act broadens widely into desegration and the general civil-rights area, though the right-to-vote was thought at first to be the only civil right it aimed to protect. Part III is the place where by reference to other statutes, Federal troops were brought into the picture as an at least conceivable enforcement of court injunctions against civil-rights violations.

It was Senator RUSSELL, of Georgia, who pointed out the full implications of Part III in a speech on the Senate floor which may prove the pivot of the current civil rights fight. The implications had not really been hidden, as he suggested, because they had been discussed in hearings on the bill. Senator RUSSELL'S vivid statement alerted the country, generally, however, to the content of part III. He made clear the Deep South's quite unqualified dismay at this part of the bill.

Whereupon the amendment to strike part III was offered, and—this is the point—by a Republican Senator from Vermont, AIKEN, and a Democratic Senator from New Mexico, ANDERSON. Obviously neither of these men is in the deep southern tradition. More to the point, neither of these men is in that northern conservative camp which in times past has been apt to deal with the South on civil-rights matters in exchange for southern support on conservative issues in the North. AIKEN is a liberal Republican and ANDERSON is a liberal Democrat. Both come from the group, represented in both parties, which in the past has tended to push civil rights against southern opposition.

The Associated Press has now taken a poll and finds that 40 Senators out of 64 would favor limiting the civil-rights bill to the protection of voting rights. Efforts to frame an amendment competing with the Aiken-Anderson proposal on part III have failed. They may yet succeed, but the informal poll shows that there is great strength in the Senate for cutting the bill back to the voting protections which were originally believed to be its sole objective. And whatever the fate of their amendment, AIKEN and ANDERSON symbolize the sobriety and the lack of dogmatism with which the Senate is proceeding on the touchiest of all issues now before it.

The Open Curtain

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. JOHNSON of Texas. Mr. President, in its lead editorial this morning, the New York Times outlines what is one of the basic issues of our day. The issue is the need for broad exchange programs to penetrate the Iron Curtain.

There can be no enduring and lasting peace until the Soviet erected Iron Curtain is pierced. There must be some way for people on both sides to have access to each other. Once that occurs, we can look forward to a period of truth and justice in international affairs.

That was the thought that motivated my "open curtain" proposal some weeks ago.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES–SOVIET EXCHANGE

The subject of exchange of persons between the United States and the Soviet Union is very much in the news these days. At the level of visits by high-ranking persons, President Eisenhower reacted favorably at his last press conference to the notion of a meeting between Soviet Marshal Zhukov and his opposite number here, Defense Secretary Wilson. At the level of cultural and technical exchange, a revival is now planned of Soviet-American technical and cultural exchanges. A State Department announcement last week end indicated that the program of such exchanges, which largely ceased after the bloody Soviet repression in Hungary last fall, will expand once more to a modest scale the remainder of this year. At still a third level of activity, a small number of American young people are planning to attend this summer's so-called World Youth Festival in Moscow.

These different kinds of exchanges raise different kinds of problems. In commenting on the Zhukov-Wilson meeting idea, for example, the President warned against holding meetings which might arouse exaggerated expectations. Certainly the so-called Summit Conference in Geneva 2 years ago produced little despite the fact that it brought together the chief figures in the United States, the Soviet Union, Great Britain and France. A Zhukov-Wilson meeting, if it took place, could hardly hope to solve any key problems. Moreover, many Americans are keenly aware that Marshal Zhukov commands the Soviet Army which slaughtered Hungarian freedom fighters less than a year ago.

Cultural and technical exchanges fall into a different category. They have limited, realizable aims, and do not arouse unwarranted expectations. The cultures of the Soviet peoples should certainly be more available to us than they have been, and we can certainly gain in some areas from knowing more about Soviet technical development. Conversely, it is all to the good if Soviet citizens get a chance to see and hear more of our cultural achievements, and in many technical fields—as the Soviet Union now admits—the Soviet Union is anxious to learn from us. So long as there is genuine reciprocity, we may hope that such contacts will increase.

The most difficult problems arise in the area of arranging exchanges of ordinary people. We have only gains to anticipate from having large numbers of Americans see the Soviet Union and large numbers of Soviet citizens see our civilization at first hand. Unfortunately, our present legislation is not based on that premise. In particular, our legal requirement that foreign visitors be fingerprinted, except in the case of official visitors, has been cleverly used by the Soviet Government as a pretext for prohibiting the visits of Soviet tourists here. Since limited numbers of American tourists have been admitted into the Soviet Union, the comparison has permitted Soviet propaganda to make dishonest, but not entirely ineffective, charges of a United States "Iron Curtain." All this has been further complicated by the Soviet effort to use American travelers to the Soviet Union for propaganda purposes, as in the case of the World Youth Festival.

We need not have any exaggerated notions about the contributions of any presently foreseeable exchange of Soviet and American tourists to see that the present situation requires correction. Senator DIRKSEN has introduced a bill which would ease the fingerprining requirement. That bill would seem the very minimum we need to do to disarm the Soviet propagandists.

But beyond that it would seem desirable that we adopt a much more imaginative approach to the subject. We must realize that the Soviet people have been raised on a diet of lies about our way of life. Anything which will contribute to permitting Soviet people to see that what they have been told about us is false should be encouraged. The United States is the world's mightiest piece of evidence as to what freedom and free enterprise can achieve, and it is in our interest that those living under socialism should get a chance to compare what our and their systems can accomplish for the great mass of the people.

Resolution of Texas Press Associations Calls for Adequate Pay for Skilled Military Personnel

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. JOHNSON of Texas. Mr. President, the recent annual convention of the Texas Press Association, held in San Antonio, adopted a resolution calling for an adequate pay scale for trained military personnel, in order to retain them in the service.

The resolution is important, because, to quote from an editorial regarding it in the San Marcos (Tex.) Record, "The people of the Nation need to understand the situation, and to correct it."

The San Marcos Record, edited by Walter Buckner and Addison Buckner, is one of the truly outstanding smalltown newspapers of Texas. This editorial is typical of the Record's thoughtful approach to matters of public interest, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PRESS RESOLUTES

The Texas Press Association in convention last week in San Antonio passed several resolutions, one of which needs special mention:

That we recommend a pay scale for military personnel commensurate with the duties performed and adequate to retain for the services sufficient trained technicians to fully man our machines of defense, and to carry out further research and development; a pay scale which will retain trained personnel for the military service rather than surrendering them to private industry too soon after they have become proficient.

It was pointed out by Senator LYNDON JOHNSON in an address at Kelly Air Force Base that "the Air Force spends $43,000 to train an airman for 4 years; then, when he has become proficient, he quits the service and goes to work for private industry—because he can make twice as much money."

He continued: "Gen. Curtis LeMay told me recently that only 8 percent of his Strategic Air Command is fully trained; the other 92 percent stays in only 3 or 4 years which is not long enough to produce fully trained technicians."

In view of the statements quoted by Senator JOHNSON, the press group passed its resolution.

The people of the Nation need to understand the situation, and to correct it.

Productivity and the Older Worker

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mrs. GREEN. Mr. Speaker, the maximum productive level which the United States can achieve depends on the greatest possible utilization of all the technical know-how of the men and women of our laboring force. When the skills of any of them are wasted because of unfounded prejudices of management against our older citizens, then we are not utilizing our great potential to best advantage. Our industrial might has not grown great on the basis of any fear to embark upon unchartered courses. Industry has moved where opportunity beckoned, and the laboring man and woman have felt free to offer their skills where needed.

Prejudice against our older workers constitutes a barrier to the full utilization of their skills that will prove costly to America unless it can be broken down.

In a column in the Washington Post and Times Herald for July 18, 1957, that astute commentator, Malvina Lindsay, has pointedly and clearly indicated the current and needless waste of manpower in the United States because of this unreasonable prejudice against the older worker. Under unanimous consent, I include her column in the CONGRESSIONAL RECORD, as follows:

"MEAT AND BUTTER" ARMY DWINDLING

(By Malvina Lindsay)

If this Nation wins the productivity race to which Nikita S. Khrushchev has challenged it, the many will indeed owe much to the few. For the corps that produces is being compressed from both ends of the age yardstick—but especially from the one marked "past 45."

Growing discrimination against persons between 45 and 65 seeking reemployment is concerning business organizations, civic groups, and legislators. In fact, discrimination is moving down the age scale, reports the Office Executives' Association. Men, it says, are beginning to meet hiring resistance at 30 and women at 35. By the time a man reaches 50, 42 percent of companies are closed against him. A woman job seeker of 50 is turned down by 56 percent of firms.

This, says the association, represents economic waste and unrealistic hiring policies, especially in view of the shortage of office workers.

At the same time, increasing enrollment in high school and college, and prolonged scientific and technical training, are pushing up the age at which youth becomes productive.

But youth still has the upper hand in the market place. Here is one example: A man past 50 with wide experience and varied background in a nonscientific field recently found himself jobless because of a geographic shift in personal affairs. In his job-seeking rounds he received the familiar rebuff, "too old." But a friend's son, just out of high school, was hired in the same area of work, for $60 a week—a salary the older man would have accepted.

Labor Department studies put 45 as the age at which it becomes harder to get a new job. The person 45 or more has one-third the chance to get a job as does the one under 45.

Recently Representative THOMAS J. LANE, of Massachusetts, proposed that the House Labor Committee make a full-scale investigation of job barriers for persons past 40. He charged a conspiracy of silence concerning the problem.

New jobs for mature workers constitute a special problem in New York, where about one-third of those on the city's payrolls are between 45 and 65. Because of this a Committee of Employment and Retirement Practices for Older Workers of the Community Council of Greater New York made a study of how to increase mature workers' opportunities.

It found government and private agencies throughout the country were trying to provide placement facilities for older workers, also turning to research to learn the effects of aging on job performance. However, much more urgently needs to be done in both fields, the committee points out.

It was found that while employers were generally willing to retain workers who could "pull their weight," they were reluctant to hire new ones past 45 because of pension plans, prejudices, emphasis on building for the future.

A survey of reemployment practices for older workers made by the Department of Labor in 7 large cities showed that 52 percent of all openings had age limits under 55, that 41 percent drew the line at 45 and 20 percent at 34. Yet studies of job performance show that mature workers are generally more dependable, more skilled, and have less absenteeism than young employees. Other studies have shown there are means of minimizing or eliminating increased costs of private pension plans as applied to older workers.

About one-fifth of the Nation's population is past 45, and the average adult in the labor force is now at the beginning of this category. Any big upset in industry, including a shift in activities or skills, would mean hardship for many workers trying to make new starts.

While relatively few mature workers are directly engaged in producing the meat and butter that Mr. Khrushchev has set as the measure of victory in the cold war, all contribute to the standard of living that is the pride of the American system.

If workers tend to be frozen from youth to age in their jobs for fear of hazards of change in their forties, or even their thirties, the American system will lose much of its dynamic and creative force. The trend to hire from an ever smaller age group will put more persons on the sidelines—and more on public assistance, also increase the psychological toll of depressed morale.

Address by Hon. Herman Talmadge, of Georgia, Before Annual Department Convention, American Legion of Georgia

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address which I delivered on Saturday, July 20, 1957, before the annual department convention of the American Legion of Georgia, which was held at the Bon Air Hotel, in Augusta, Ga.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR HERMAN E. TALMADGE BEFORE THE ANNUAL DEPARTMENT CONVENTION OF THE AMERICAN LEGION OF GEORGIA HELD AT THE BON AIR HOTEL IN AUGUSTA, AT THE GEORGIAN DINNER ATTENDED BY SOME 850 LEGIONNAIRES, THEIR WIVES, AND MEMBERS OF THE AMERICAN LEGION AUXILIARY—THE SENATOR WAS INVITED TO SPEAK BY DEPARTMENT COMMANDER GEORGE OSBORNE OF MARIETTA

Commander Osborne, Mrs. Hodgson, distinguished guests, ladies of the American Legion Auxiliary, and my fellow Legion-

naires, it is gratifying to me that events in Washington were such that it was possible for me to get away these few hours to be with you on this memorable and traditional occasion.

I recall with found memories other occasions in years past when I have had the privilege of meeting with you, discussing our mutual hopes for Georgia and exchanging ideas for the advancement of our State and region.

I feel a close attachment for this organization.

I stand with you in your ranks and join you in supporting the imperishable principles for which you stand.

Our common bond as members of the American Legion and former comrades in arms is an enduring one.

I value my membership in the American Legion.

I know that this is one organization which is working 24 hours a day, every day, for our American way of life.

When I think of the Legion and of all for which it stands, there comes to mind the pages of our history that record this land's greatest triumphs and deeds of Americans far beyond the usual standard of loyalty, patriotism, bravery, and sacrifice.

I think of San Juan Hill, the Marne, Flanders, Belleau Wood, Chateau-Thierry, the Argonne Forest, North Africa, Sicily, Mount Cassino, Tokyo, Ploesti, Schweinfort, Bremerhaven, Normady, the Bulge, Bataan, Corregidor, Midway, Guam, Guadalcanal, Inchon, and Heartbreak Ridge. I think of all those other sanguinary battles which have been waged in the annals of our Republic—battles which have been fought at so great cost in lives and material substance.

The American Legion has not forgotten.

On no occasion has the American Legion ever failed to stand up and speak out vigorously in defense of our institutions and ideals and for maintenance of our guaranties of liberty and freedom. It has done so courageously, sometimes in face of severe hostility and at actual peril to the organization itself.

The undeviating record of the Legion, therefore, has been, and ever will be, to keep faith with those Americans who have gone on before, many of whom made the supreme sacrifice for the cause of freedom.

My friends, with that past record of the Legion behind us, and with solemn dedication to the future, I want to take this opportunity of discussing with you the most deadly peril ever to confront us as a Nation.

That threat is the sustained and vicious attacks now being waged on two broad fronts, the objective of which is the utter annihilation of our system of representative constitutional government in this country.

These attacks, clever and calculated in design, are twofold.

One is aimed at destroying constitutional processes and the protective safeguards of freedom they afford.

The other is aimed at destroying the Nation through internal bankruptcy.

Should either succeed, it will succeed with finality.

The attack on constitutional government goes to the very heart of our existence as a nation.

That is true because once we lose our precious rights under that instrument, we cannot defend ourselves against any other threats, either from within or from without.

What threats have been posed to constitutional government in the last few years?

We have seen the United States Supreme Court, in a series of partisan political decisions, deliberately ignore the Constitution of the United States and substitute impractical and unproved theories for established law and precedent as the basis for its rulings.

We have seen the Federal judiciary invade and seek to obliterate the reserved rights of the States in many fields of their internal activivty.

All of these decisions are flagrantly unconstitutional.

They are not the "law of the land," as some falsely insist.

They are the judge-made law of force and force alone.

It is not the people of the South who defy the Constitution; rather, it is we who uphold it.

We will never submit to this unlawful and unconstitutional judicial tryanny.

We will resist its imposition with all the strength at our command.

We are not going to sit idly by while an unconsititutional, arbitrary, and illegal extension of Federal judicial power is attempted.

This is not only an attack on the rights of the States to govern their own affairs but also is a gross abuse of judicial processes imperiling the civil liberties of every American citizen.

Equally dangerous to the liberties of all the people of the whole United States is the misnamed Brownell civil rights bill now being debated in the Senate.

This diabolical 6-point program is a grave threat to our traditional concept of constitutional government.

If it is enacted, any army of Federal agents will swarm over every State, harassing and intimidating the people and usurping the functions of local law enforcement authorities.

Under this measure the full might of the United States Army, the United States Navy and the United States Marine Corps could be used to enforce with bayonets and bombs the provisions it is proposed that Congress enact into law.

And by the very vagueness and general terms of the language of the present law which the administration wants to amend, the bill now being debated would extend the authority of the Attorney General of the United States over the entire field of civil rights.

The law, as it now reads, prohibits any interference with or denial of "the equal protection of the laws" or "any right or privilege of a citizen of the United States."

That language covers an area as broad as the imagination of mankind and as fathomless as the minds of some individuals who may transiently enforce its provisions.

Who is to say what constitutes equal protection of the laws?

Who is to enumerate the rights and privileges of a citizen of the United States?

Under the authority of that loose language the Attorney General could initiate injunctive proceedings affecting not only the full range of laws governing relationships between individuals, groups, and races, but also such totally unrelated fields as taxation and the location of roads by Federal and State agencies.

He could take the position that failure to employ a person because of race, creed, color, national origin of any other factor constitutes a denial of the rights and privileges of a citizen of the United States and thereby set himself up as a one-man FEPC with authority to use the military might of the United States to regiment the industry and business of the Nation.

There is not an area of human thought or conduct which the language of the bill now before the Senate does not cover. It runs the gamut from sowing to reaping, from sleeping to waking, from thought to action and from the cradle to the grave.

The Attorney General, through clever manipulation of the amendment process, would subvert the language of the present law under which trial by jury is inherent and limits of punishment specified into a cloak for actions in the name of the United States under which trial by jury is denied and the extent of punishment left to the unbridled discretion of the presiding judge.

If enacted, this so-called civil rights bill would change private action to Government action.

It would interfere with the right of Americans to pursue their equitable remedies.

It would deny Americans the right of indictment.

It would deny Americans the right to confront and cross-examine their accusers.

It would deny Americans the right of trial by jury—a right now guaranteed by law to even rapists, murderers, and traitors.

It would have the net effect of completely changing our form of Government from one under which rights are inalienable with the individual to one under which rights are arbitrarily determined by the Attorney General of the United States.

It does not confer upon a single American a single additional right. The only person to whom it grants any new rights is the Attorney General of the United States, on whom it confers the arbitrary and unrestricted power to use the Federal judiciary as an instrument of his political caprices to deny civil rights.

It would make of the Attorney General a czar of civil rights superior even to the Constitution of the United States.

I cannot emphasize too strongly the serious nature and far-reaching implications of this proposal for evil results.

To me, it is regrettable that we are called upon to establish an American inquisition to smear the name of our generation on the pages of history.

To me, it is regrettable that we are called upon to usher in another age of hate, similar to reconstruction days, to blight an otherwise peaceful Nation and destroy the unity which exists among our citizens.

To me, it is regrettable that we are called upon to force on an unsuspecting populace legislation which had its inspiration in the dark ages.

To me, it is regrettable that the Congress is wasting its valuable time and energies on such a worthless measure.

The same effort applied along constructive lines to develop the human and natural resources of this great country; to stimulate new job opportunities; and to provide decent housing and more effective governmental services for the masses of our people—would result in the advancement of real civil rights and human security for minorities and majorities alike.

My friends, I assure you, that as long as this bill is pending before the Senate, all of my strength and energies will be devoted to exposing its iniquity and in laying bare is tyranny before the Nation.

I am proud to take my stand under the inspired generalship of my able and distinguished colleague, Senator RICHARD B. RUSSELL, of Georgia, who has done a masterful job in this fight, in defense of the rights and liberties of the American people and the sacred Constitution of the American Republic.

A situation of grave concern to me is that brought on by the so-called status-of-forces treaties and related bilateral agreements. Under them American service personnel and their families stationed in foreign lands have been placed at the mercy of foreign governments and courts.

Our State Department has negotiated these treaties and executive agreements with some 50 foreign countries in which hundreds of thousands of our military personnel are located.

These treaties do nothing less than abrogate the basic constitutional rights of the American soldier who serves abroad and any dependents who might be with him on foreign soil.

While the language of these agreements is complex and seeks to cover every possible situation, interpretation is left largely to foreign governments. This is true, particularly, where the foreign government is the first to get custody of the soldier after the complained-of offense is committed.

The wording of these treaties and agreements completely ignores the provisions of our sacred Bill of Rights.

Foreign courts, under the status-of-forces agreements, do not have to afford our servicemen or their families even the minimum procedural safeguards to which they would be entitled as a matter of right as United States citizens pursuant to the Constitution in our own courts.

The American soldier and his family, thus, are subjected to the laws and procedures of the host country which in many cases are completely repugnant to our own.

It is unthinkable that the United States should draft its sons to protect its freedoms and then rob them of those same freedoms while they wear the uniform of their country.

If an American serviceman or one of his dependents commits a crime while abroad, he, by all means, must be punished. However, the punishment should be imposed by an American tribunal operating under American law and in accordance with the guaranties of the United States Constitution.

Prior to the negotiation of the Status of Forces Treaty and related agreements, the United States undeviatingly followed the policy laid down by Chief Justice John Marshall during the early days of the Republic that the Constitution follows the flag.

This treaty and related agreements should be repudiated and the Marshall tenet once more reestablished as the policy of this Nation.

If the United States, as the strongest nation on earth, cannot protect the rights of its servicemen and their families in foreign countries, then it should bring them home.

So, we have seen, that through unconstitutional usurpation of power by the Federal courts, through proposed force bill legislation, through surrender of our service personnel to foreign courts and through a myriad of similar devices, our system of government, as wrought by the Founding Fathers, is under sustained attack.

Not being able to carry their point under the system, its enemies have set out to destroy the system itself.

Of course, you and I know that if they succeed, they would not only destroy the greatest country on earth, but themselves in the process.

I am convinced, too, that irresponsible fiscal policies now being followed by our Government constitute a threat to our national existence.

Being such a threat, there is always the danger that some of the clamor for increased spending may be prompted, without full justification, by those who would hasten the day of our insolvency.

The President's promise to stabilize the cost of living has fallen by the wayside.

The dread specter of runaway inflation threatens every institution in American life today—the home, the church, the school, and the business.

Proposed Federal spending contained in the budget for the current 1957–58 fiscal year is $7.1 billion more than it was 2 years ago.

During the current fiscal year the Federal Government expects to collect out of the United States taxpayers the stupendous total of $75.8 billion.

Today, roughly one-sixth of the gross national product of this country is being paid in Federal taxes.

One wonders how long this Nation will survive such a drain on its economy.

It is completely inconsistent to give lip-service to controlling inflation while feeding it at the same time with profligate spending.

Our Government has grown so large and its activities become so extensive that no one disputes the fact that there is much waste in its operations.

Tremendous defense and other savings could be realized through a continuing congressional review of all unexpended appropriations to determine their validity in the light of present conditions.

As far as the armed services themselves are concerned, appropriations to them should be determined in light of the latest technological advances as well as through a concerted effort to eliminate duplication and to reduce manpower through full utilization of latest developments and ideas in weapons and tactics.

In the field of foreign spending, the time has come for elimination from the budget of purely foreign economic aid and for a thorough and searching examination of each and every military assistance project, to insure that the American taxpayer is getting his money's worth in national security.

The American taxpayer has a right to demand that this Nation cease doing for people in other countries what it either is unable or unwilling to do for our own citizens here at home.

In conclusion, I make this observation.

Sometimes we may be justified in feeling frustrated with the policies of our Government.

But we must never sell America short nor should we discount the loyalty, courage, honesty, ability, and sincerity of purpose of the American people.

They have demonstrated again and again their intense determination to meet and to overcome whatever challenges may confront them.

Because of this, I am confident that this Nation will survive in spite of all the mistakes its governmental leaders may make.

I put my faith in the good sense of the American people to save us from ourselves.

We must not be deceived by the cries of those who would destroy us. A return to fundamentals is the key to survival in this day and age even more than was the case in all the other periods of great stress and strain that have marked the life of our Nation.

Washington needs to pause for reflection and for a reevaluation, to realize fully once again from whence comes all freedom, all equality, all strength, all integrity, all security, and all those other precious attributes identified with our growth as a nation.

There must be a renewed respect for the true meaning of the Constitution and a respect for law as it is written.

There must be an instillment of sound business practices into the Government.

There must be a solid determination on the part of all public servants to keep faith with the people.

Americans must be freed of the attendant evils of bureaucracy, redtape, intimidation, and tyranny so that our people may once again be masters of their own destiny.

And we must not lose sight of the unchallenged fact that a militarily impregnable and economically invincible America is the world's best and only hope for peace.

We, of the American Legion, look forward to the future with confidence.

We do so in kindred spirit and with renewed dedication.

As legionnaires, we share an unwavering conviction that the welfare of the American people and the solvency, safety, security, and sovereignty of our own Nation must be our primary concern.

To that precept, we are solemnly pledged.

It is with a prayer to a divine providence for guidance that we give to our common country our enduring love, our heartfelt patriotism, and our boundless devotion.

Address by Hon. Chapman Revercomb, of West Virginia, Before the State Convention of the Sons of Italy

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the State convention of the Sons of Italy, at Logan, W. Va., on July 15, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR CHAPMAN REVERCOMB BEFORE THE STATE CONVENTION OF THE SONS OF ITALY AT LOGAN, W. VA., JULY 15, 1957.

It is a great pleasure for me to meet with you here this evening on the occasion of your State convention and I want you to know that I feel highly honored to be your speaker.

I am acquainted with many of you personally and am proud to number among my friends and acquaintances hundreds of men and women throughout our State and Nation who are of Italian descent. I know from personal association with them that no more patriotic group of citizens is to be found in our land than those whose family descent is from Italy.

It can truly be said that you have helped make America the wonderful Nation that it is today. I congratulate each of you on the splendid contribution you have made to our State, and I want to take this opportunity to commend the Sons of Italy Lodges throughout the Nation. The good works of your organization stands out in countless communities throughout the land.

Few nations have contributed so much to civilization as the land to which you owe your origin. The culture your forebears bequeathed to the world through the centuries has enriched the lives of civilized men everywhere. The testimony to this contribution is to be found in the marvelous buildings they erected, in the great works of art they produced, in the new movements they originated for the betterment of mankind. The works of your painters, sculptors, musicians, writers and scientists are known and appreciated in every land. The contributions your patriots have made to the cause of human freedom likewise looms large in the annals of history.

Few nations experienced greater travail in emerging a free and united nation than did Italy. For centuries European armies fought their battles on her plains for continental supremacy. The Po Valley provided France and Austria for many decades with arena in which to wage war. From the downfall of the Roman Empire to the middle of the last century virtually every major power endeavored to establish a foothold on Italian soil. They did not succeed. But political unification was long retarded.

Through the centuries of division and subjugation, independence and liberty was ever the dream of your people. That dream was to become a reality through the bold and daring action of men like Mazzini, Cavour, and Garibaldi, each of whom holds a distinct place in the history of Italy. Each of these great leaders knew how to channel into the service of the Italian cause those sovereign principles of liberty and nationality.

No more inspiring hope for mankind has been expressed than that voiced by Mazzini when he said:

"I raise my vision to the future and foresee the people arising in their majesty, brothers in the same faith, with a sole bond of equality and love and an ideal of civic virtue which daily increases in beauty and power. I foresee the people of the future who have not been spoiled by luxury, who have not been driven by misery, conscious of their rights and duties."

Permit me to dwell briefly on the great issues that face us in this era. The age-old aspiration of man to be free is more dominant everywhere in the world today than at any previous time in history. It warns us that the freedom we enjoy here in America is the most priceless heritage we possess. At the same time, it makes us aware that freedom once won is not eternal; it has to be jealously guarded against the recurring disease of tyranny.

It is significant to note that in our lifetime most of the world's people have changed their forms of government. Since the end of World War II, no less than 19 countries have won their independence—and during the same brief span of time, several hundred million other people have become enslaved by dictatorial Communist regimes.

Communism, which now has inflicted the disease of tyranny on nearly a billion people, is inflamed with fevers as freedom struggles to reassert itself in nations like Poland and Hungary. And who can tell whether the pressure of this struggle for freedom may not burst the seams of the Iron Curtain and involve the free world in military action?

Elsewhere in the world, tensions are equally great. A militant nationalism possesses the former colonial areas of the world as they struggle for independence. Great empires, such as Britain and France, are shrinking as their former possessions and power fall away.

We are living in a revolutionary age—perhaps the most revolutionary age in recorded history. The world has changed more in the last 40 years than in the previous 400, much more in the last decade than in the last half century.

Science spawns new and terrible weapons, such as the H-bomb, the jet plane, and guided missiles, which are capable of unbelievable destruction.

Against this background, ready to exploit every weakness, every difficulty in nations not yet under domination, we have the specter of an evil force that would destroy the way of life enjoyed by the people of this country and free men everywhere.

Even if we in this country had the assurance that communism did not include the destruction of the United States—and our assurances are all to the contrary—we would have sufficient reason to oppose it. We know from experience that man and his immortal destiny will always seek freedom and that freedom long denied builds up irrepressible pressures. A world in which almost one-half is held in subjugation is a world in which the tensions are such that no one can live in complete peace and security. In addition, the very principles of communism fly in the face of man's timeless quest for self-betterment.

Communism rejects every value man holds sacred—the dignity of man, the independence of nations, free governments, freedom of enterprise, religion, and of the press, the right to private property, and the precepts of morality and humanitarianism. Communism openly sows hostility. It employs duplicity, conspiracy, betrayal, subversion, aggression, and revolution.

Therefore, our first concern must be for the security of our Nation and our people.

We know that conditions are such in the world that we must maintain a defense force capable of deterring aggression in every area of the world vital to our own security.

How best to provide such a defense force is a question that looms more and more important in this age of revolutionary changes. Scientific developments are taking place so rapidly that our whole concept of defense has changed radically in the last few years.

For example, the modern B–52 atomic jet bomber can place more explosive force over a target on a single mission than all the thousands of planes that flew many thousands of missions in World War II. Just last week it was announced that a new jet bomber, far more powerful than the B–52, has been completed and tested. Thus, each new scientific development inevitably produces revolutionary changes in our defense program.

Under these circumstances, I am convinced that if we are to maintain a defense force adequate to meet our changing needs, we must rely more and more on a professional Army, Navy, and Air Force made up of volunteers.

I am convinced that the present policy of using the draft to replenish our military forces is not only more expensive but also gives the Nation less security than would a smaller, highly trained professional army.

Men who are drafted today are out in 2 years. New methods and machines are being developed so rapidly that the training a man receives today may be entirely outmoded within a year or two.

What we need is a highly trained volunteer Army and National Guard equipped with the most modern weapons available. In my judgment, this would give us greater security at less cost than the present draft system.

Next to providing for the Nation's security, our second major concern in this age of revolutionary changes must be to foster a sound and strong economy here at home for the benefit of all our people.

From the Nation's beginning to the present time, America has undergone vast changes. Its growth and development have been fabulous, certainly far beyond the dreams of any of its founders.

The most significant thing about this remarkable growth, in my judgment, is the fact that it has been achieved under conditions of freedom which permit every individual the opportunity to make of his life what he will.

We have grown from a nation of 3 million people with a gross national income of less than $1 billion to a nation of 170 million and a gross national income of more than $400 billion. Our people are better fed, better clothed, better housed, and enjoy better health than any other people anywhere else in the world. We have reached the highest standard of living enjoyed by any people in all history. Today there are gainfully employed more than $65 million persons and our economy continues to expand.

This is not to say there are no serious problems facing us here at home. However, it is my conviction that if we do not sacrifice the priceless principles of freedom and liberty which have made America a great, good, and united nation of people, we shall retain the strength to triumph over any adversity.

I am reminded at this point of a statement made by Benjamin Franklin when he emerged from Philadelphia's Independence Hall to announce to the waiting throng that a Constitution had at least been adopted for the new Nation. A woman rushed up to him and cried:

"Pray tell us, Mr. Franklin, what kind of a government have you given us?"

He replied: "A republic—if you can keep it."

A free form of government we still have today, but the challenge to keep it is as great today as it was in 1787.

And as we fervently seek the pathway of peace and labor together to maintain a strong economy, and to improve the living standards of all our people, let us not forget the words of a great American spoken nearly a century ago. He said:

"The primary cause of our great prosperity is the principle of liberty for all—the principle that clears the path for all—gives hope to all—and, by consequence, enterprise, and industry to all."

Small Business—Testimony by George J. Burger, National Federation of Independent Business

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. CAPEHART. Mr. President, recently Mr. George J. Burger, vice president of the National Federation of Independent Business, appeared before the Senate Committee on Banking and Currency to testify with reference to proposed legislation affecting the Small Business Administration. During his testimony, I engaged in a colloquy with him. I ask that a portion of the colloquy be printed in the Appendix of the RECORD.

There being no objection, the excerpt from the colloquy was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM OPEN HEARING ON SMALL-BUSINESS LEGISLATION, JUNE 3, 1957

Senator CAPEHART. Will the gentleman yield?

There is not any question that you and your organization did a lot in the early days of the Small Business Administration to help in formulating policies and programs, because the whole thing was new, and the Korean war was going on, and someone had to do it. You and your organization did a splendid job in assisting. But once they started to stretch their legs and got the process working out, has it not worked well since then?

I agree with you it should be on a permanent basis. Either that, or we should extend it for 5 years, or something of that sort. I do not like this year-to-year extension, or every 2 years. I agree with you on the policy. At least it should be every 5 years, or every 10 years. I have nothing against the policy, but do you not think it has been working fairly well?

Mr. BURGER. Senator CAPEHART, let me answer both your question and Senator CLARK'S. There was a statement made very recently, within the past 30 days, quoted in the press, by the Under Secretary of Commerce, or the Assistant Secretary of Commerce. He charged or stated, as it was told in the press, that one of the contributing reasons for the failure of small business was the lack of managerial experience. We have heard that and we are wondering whether that theme or that thought goes down to the policy board in setting the overall policy.

Senator CAPEHART. It does not follow because some employee of the Department of Commerce, which has thousands and thousands of employees, made that statement, that that is the policy which they follow.

Mr. BURGER. But I believe that same gentleman acts as the Secretary of Commerce's

alternate. I think in your counterpart committee, the House Banking and Currency Committee, just as a matter of information—and maybe you members of the committee are aware of it—there have been recommendations made by other witnesses, and even by some of the members of the committee of an advisory board bringing in the Secretary of Commerce or his alternate, and a small-business man. We did not make the recommendation.

Senator CAPEHART. If I were going to make any recommendation on this subject it seems to me that it might well be to keep the setup as it is, but have an advisory group of 25 men by regions in the United States, which would meet every quarter, or twice a year. Then they would make a report to the Congress and to the President as to the general policies adopted by this group as to the operation of the Small Business Administration.

I would favor something like that, which I think might well be helpful, but I cannot agree with you on a one-man operation. I am not particularly wedded to having the Secretary of the Treasury or the Secretary of Commerce, but I think you would have to have some group or board of directors in there to take their place, because you have it in your own business. Your small-business agency has a board of directors.

Mr. BURGER. Exactly.

Senator CAPEHART. And they make the policies.

Mr. BURGER. Not as far as legislative or economic programs are concerned. The members do.

Senator CAPEHART. But they make the general policies. They elect officers. We are here to listen to the witnesses and get their ideas and suggestions on what we are doing, but I do want to say this—and I want the record again to show it—that you were a great help, in my opinion, to the organization of this agency from its beginning. As you know, I was chairman of this committee when the bill was passed.

Mr. BURGER. That is right.

Senator CAPEHART. You remember the big debate we had on the floor of the Senate and the great interest there was in it. Then, after it was set up, you remember it took some little time to get it going, and going properly. We had a couple of directors. Mr. Barnes was the second director, was he not?

Mr. BURGER. That is right. He was acting counsel and moved in as director.

Senator CAPEHART. Yes. But I remember the great help you were to the committee, not only in writing the bill but also in getting it going well. I am under the impression it is doing exceptionally well. Am I right or wrong about that?

Mr. BURGER. It is. It is.

Senator CAPEHART. I think if we make it permanent, or extend it for 5-year periods, just like we do the Export-Import Bank, that would accomplish the purpose. I do not believe we should increase the amount that they can lend to any one concern. We should keep it a little-business organization.

Mr. BURGER. As to the ceiling on the loans, we have some recommendations on that.

Senator CAPEHART. But I wish you could help us to get a graduated income tax for business.

Mr. BURGER. We are working on that, Senator CAPEHART.

Senator CAPEHART. And also a permanent amortization for the facilities that they buy.

Mr. BURGER. Our position on that is with you. We have been before the Senate Finance Committee.

Senator CAPEHART. I know you have been advocating both of those things. They will do more good than any two things or any dozen things we can do to help little business.

Mr. BURGER. The Senate Small Business Committee has recommended that the Administration be made a permanent agency, and since that time bills have been introduced by both Senators SPARKMAN and THYE providing that the agency be made a permanent agency of the Government.

I want to pay particular credit to the line of questioning put to me during my appearance before the Senate Small Business Committee by both Senators SPARKMAN and THYE as to the overall operation of the Small Business Administration during the life of the agency, but it would be my opinion that they would concur in our recommendations.

Senator CLARK. This is again the Select Committee on Small Business you are referring to.

Mr. BURGER. I would like to see the day come that I have been fighting for for the last 6 years when we will have that a standing committee.

Senator CLARK. Yes, but the only point I want to make is that it is not this committee.

Mr. BURGER. I know it is not this committee.

Senator CAPEHART. You would not want to take that jurisdiction away from us?

Mr. BURGER. You know, Senator CAPEHART, the fight we made on that thing, and only a year ago last July I was able to get 72 Senators to go along with that.

Senator CAPEHART. I used to be on that Select Committee on Small Business myself.

Mr. BURGER. I will make that correction then.

Shortly after the agency was created in the summer of 1953, and continuing right up to the present moment, we have made it our personal interest to check at the top and the local levels into the operations of the Small Business Administration to make certain that the will of Congress is being carried out. To a degree, we feel satisfied that our action in this respect has been helpful to the agency itself and to small business which we represent.

In July 1956, speaking for the federation, in a conference with Dr. Arthur Burns, the then Economic Adviser to the President and chairman of the President's Cabinet Committee on Small Business, we made seven specific recommendations on small business to be considered by this group, and one of the principal recommendations was that the Small Business Administration be made a permanent agency and that full control be vested in the Administrator in setting the policy.

In our appearances, by invitation, before the platform committees of both the Republican and Democratic national conventions in Chicago and San Francisco, again one of the principal recommendations we made before those groups was that the Small Business Administration be made a permanent agency, with control vested exclusively in the hands of the Administrator. There were no outward comments from members of the platform committees of both parties as to any objections, and in this respect we are glad to note that after my appearance before the Small Business Committees of both the Senate and the House, Mr. Barnes, the Administrator, announced the administration would favor the agency being made a permanent agency.

There are bills presently before your committee which embody the recommendations of the membership of the National Federation of Independent Business, and in each instance the vote has been overwhelmingly in favor of adoption of these bills.

In our appearances before the Small Business Committees of the Congress we have made our recommendations as to the overall policy which should be used in a continuing agency which would be as Congress expected it to be, as a real help to efficient, progressive, independent business of all descriptions.

In my appearance before the House Banking Committee under date of May 15, it will be found, to the credit of that committee, their interrogation during the time I was on the stand was most complete as to the overall problem facing small business.

Finally, Mr. Chairman, we know of no other agency in the Federal Government that is subject to policymaking in conjunction with any other Government agency. We do not believe that the Treasury Department has a full understanding of the problems of small business, and we hold the same view as it relates to the Department of Commerce. Both of these Departments have their rightful place in our Government, but they do not belong in any direct action that will be helpful to small business.

Indian Lands, Indian Rights, and the Stockgrower

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article by me in the July 1957 issue of the South Dakota Stockgrower.

An explanation in part of S. 2446, the article points up some of the problems facing Indian and white alike in fractionated heirship lands.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIAN LANDS, INDIAN RIGHTS, AND THE STOCKGROWER

(By United States Senator FRANCIS CASE)

We have all heard of the $64 question. And of a $64,000 question. But not until I was reading a report by the Comptroller of the United States dealing with a land problem in South Dakota did I ever hear of a question divided into 54 trillion parts.

The report is entitled "Administration of Indian Lands by Bureau of Indian Affairs." The 54 trillions comes in as the lowest common denominator for the varying amounts of interest held by 99 heirs to a tract of 116 acres of land taken by the Army engineers for Fort Randall Reservoir.

"Arrows Sticks in Him" (or Walking Many Arrows) was determined to have the right to 4 trillion, 199 billion, 168 million, 842 thousand, 4 hundred/54 trillionths of the 116 acres. The value of that interst was computed at $585.67.

On the other hand, Francis Hairy Chin was determined to have only 2 billion, 887 million, 907 thousand, 628/54 trillionths of an interest worth exactly 37 cents.

Only one other Indian heir had as many 54 trillionths of interest as had Walking Many Arrows. Four other Indians had the 37-cent interest. Three had a 43-cent interest.

Some ninety other Indians had interests ranging from 64 cents to $384—all expressed in numbers of the 54 trillionths of an interest. I have been using 54 trillion as a round number. Actually, the fractional interests were in terms of a 54,268,714,886,400th share of the 116 acres.

ONLY HALF SINGLY OWNED

The Comptroller General's report says that as of June 30, 1954, out of 103,774 Indian

allotments, only one-half were held by single owners whereas 28,576 were held by from 2 to 5 owners and 20,480 were held by 6 or more owners.

At the Billings area office, one allotment of 160 acres was owned by 78 heirs, another by 73 heirs. Those figures were for February 1955.

In the 2 years that have elapsed—how many of those heirs have died and their interests passed on to others, with further fractionating of interests? Who knows?

The Comptroller General discovered:

1. Indian heirs ordinarily do not have the facilities or cash to settle estates.

2. No economic incentive exists for the Indians to simplify the status of heirship lands.

3. Indian family relationships are complicated. Marriage and divorce may follow tribal custom rather than State law.

COMPTROLLER RECOMMENDS ACTION

So, the Comptroller has now formally recommended that "Congress consider legislation to authorize the Secretary of the Interior to sell or partition inherited lands held under trust patent, without requiring the consent of all competent owners and without limiting that authority, as at the present time, to cases where one or more of the heirs is determined to be incompetent."

I think the Comptroller simply threw up his hands as the Army engineers must have when they found that this mounting fractionating of interests required denominators of millionths, billionths, and trillionths to reach a common factor that could express the size of an heir's interest.

If that was the fix of the Comptroller General of the Army engineers in making a settlement for lands acquired once and for all, what is, or has been, the plight of the stockgrower who wanted to rent one of these tracts of land from Indian owners?

Or, of the Indian who finds himself with an interest in land that he cannot use, rent, or sell?

MANY COUNTIES ARE INVOLVED

In Roberts County, S. Dak., thousands of acres lie idle and produce weed seeds that wash down to fertile croplands because of the practical impossibility of fixing responsibility and ability to manage the land.

In other counties with Indian lands, the problem is similar. And that goes for a very large number of counties in South Dakota.

Fractionated heirship Indian lands tantalize the Indian owners and torment the stockman who tries to use them.

Leasing through the agency offices brings a round of bookwork, frayed tempers, and frustration.

And, when heirship interest can be determined, some Indians find themselves like the young returned soldier Sioux did in Denver, a few months back. He got a check for 7 cents as his share of a lease fee. It would cost him 10 cents to cash it.

How much it cost the Government to lease the land, determine the interests and mail the checks, you guess.

PROVISIONS OF S. 2446

So—once again I have introduced a bill to meet this problem. It is S. 2446 and I have put into it certain ideas developed through correspondence and conversation with many people, white and Indian.

This bill (S. 2446) specifically does these things:

1. Permits any Indian holding an undivided interest in trust land to petition in State court for partition of interest, with a grant of fee title to result.

2. Requires the court to cause the lands to be sold at not less than appraised value when partitioning of the land is not practicable and the proceeds distributed according to interests.

3. Permits the tribe of the reservation where the land is located to meet the high bid or appraised value and buy within 30 days—or, any member of the tribe within 20 days after the tribe's right expires.

4. Continues the land in trust for Indian heirs or purchasers not determined to be competent, but requires the Secretary of the Interior to issue a patent in fee to Indians determined to be competent or individuals who are not members of a tribe.

5. Permits any Indian to apply to any court with naturalization jurisdiction for a determination of free and unrestricted status if (a) honorably discharged from 2 years of peacetime or 90-day wartime military service, or (b) graduated from high school or equivalent, or (c) found to meet the requirements for a certificate of naturalization.

6. Authorizes the Secretary of Interior to issue an "interim trust patent" to any Indian who has a certificate of free and unrestricted status which "will keep such lands and property in a trust status and not subject to taxes until disposed of by him and title is transferred to another person."

HELPS BOTH INDIANS AND STOCKMEN

The provisions of this bill will, in my opinion, provide a fair answer to the mounting fractionating of interests in Indian lands and contribute toward solving our so-called Indian problems in South Dakota.

The sole-owner Indian who wants to be on his own can seek a certificate in the circuit court that will give him full management of his property. And, if he wants to sell a tract of land and use the proceeds to buy a home where he has a job, he will be free to do so.

Until then, he can retain his presently-owned land in a tax-exempt status. This is necessary for the protection of the Indian who does not have the resources as yet to operate his lands in the tax world. But if he sells the lands, the buyer gets a fee patent and the lands go on the tax rolls.

The Indian boy or girl who has served in the Armed Forces the period of time which is recognized for veterans' benefits, or who has graduated from high school or who meets the tests for naturalized aliens is clearly as entitled to free and unrestricted citizenship as the alien who joins the Foreign Legion or who goes through naturalization proceedings.

The stockman who wants to rent from the owners of Indian lands will know there is a procedure for the untangling of lands in probate and the establishing of rights and interests that are clear and unmistakable and fair to all concerned—with protection for the Indian or tribe who wants to exercise Indian preference. We will be glad to receive suggestions and comments. Ask for a copy of the bill if you want one by dropping me a card—FRANCIS CASE, 325 Senate Office Building, Washington 25, D. C.

Do Not Sacrifice One Liberty to Gain Another

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I received from Mr. Yale B. Bernstein, an attorney of Philadelphia, Pa. Mr. Bernstein states that he is active with the Philadelphia branches of the ADA, NAACP, and the American Civil Liberties Union. He favors integration at all levels. Nevertheless, Mr. Bernstein commends me for my stand in favor of a proper amendment to provide jury trials in connection with the civil-rights legislation, pointing out eloquently that we should not sacrifice one liberty to gain another.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PHILADELPHIA, PA., *June 18, 1957.*

Senator ESTES KEFAUVER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR KEFAUVER: Even though you are not the Senator from my State, I felt that I should write to you and commend you for your vote in committee to amend the pending civil-rights legislation to provide for jury trials in criminal contempt cases. I am writing to you because you will most likely get abuse and criticism from both the pro-and anti-civil-righters; the former because of your stand for jury trials (they will forget your courageous lone vote against the Communist Control Act of 1954), and the latter because of your position in favor of the pending civil-rights legislation per se. You have, in my opinion, taken the difficult but correct position from the point of view and liberalism.

To set the record straight let me premise this discussion with the statement that I am unalterably in favor of integration at all levels, just as soon as possible (and maybe just a little sooner than that). I have worked, as the national organizer of the student branch of the Americans for Democratic Action, to set up prointegration groups in your State and other States in the South. I am now an attorney active with the Philadelphia branches of the ADA, NAACP, and American Civil Liberties Union. However, let me emphasize that in this letter I am speaking as an individual and not as a member of any of these groups for I find myself in disagreement with their stand with relation to the above-mentioned jury-trial provisions. I find myself in an odd position in holding these views as I am advocating a position that is held by many of those who would oppose all civil-rights legislation. But I have learned that one cannot refuse to speak his convictions merely because his enemies agree with him. Just because the Communists profess a belief in civil rights, we should not be afraid to advocate civil rights, and just because the KKK profess the belief in jury trials in civil-rights cases is not reason to oppose such jury trials.

It is not an easy decision. The right to a jury trial and the right to vote and be free from discrimination are both basic values. However, I think it is time that we learned that we cannot take away one right in order to try to secure another. I think that it was Franklin who said that he who would give up liberty for a little safety deserves neither liberty nor safety. It is time we learned that we must look at yesterday and toward tomorrow and not only at the expediency of today, and that we must not have one stand for our friends and another for our enemies. Liberty is for both friend and foe alike or it is not liberty.

The law usually provides for contempt proceedings in two major cases. One is where something disruptive occurs in the courtroom itself, or in the immediate vicinity of the courtroom. Here, the judge before whom it happens, or another judge assigned by him, prosecutes the breaker of the court's order without trial by jury. I do not think that this fact situation is relevant to our discussion as this is not the situation at which the pending civil-rights legislation is aimed. The second situation is where the court, usually by injunction, orders something to be done or not done. In

this case, it would be a civil contempt where the refusal to obey the order does not also involve the violation of a State or Federal law, and it would be criminal contempt if the refusal to obey the order does involve the violation of a State or Federal law (i. e., court orders no violence on a picket line. X hits a strikebreaker. X is guilty of criminal contempt, because in his violation of the court order he also committed the act of assault and battery). In criminal contempt, the general law states that the accused may demand a jury trial, except in cases where the United States is a party to the action. (The general law has been modified with regard to certain labor-injunction statutes.) Convictions for contempt are subject to the usual appeal procedures.

In the proposed civil-rights legislation, the law was framed to permit the United States to seek injunctions to protect an individual's right to vote, etc. This is somewhat of an extention of the usual injunction sought by the United States for, in this case, the United States is seeking an injunction for the protection of an individual and not for the United States itself. I agree with this extention for I realize that in many communities the individual, if he secured an injunction in his own name, might be subject to retribution.

The problem arises when we say that the individual accused of contempt shall not have benefit of a jury trial, and may be tried by the judge issuing the injunction (the same judge who determines whether the individual should be arrested for allegedly violating that injunction), or by another Federal judge also without a jury trial. It is true that this is not strictly a criminal trial, but if the accused is found to be guilty, he may be sentenced to a long term in jail, so irrespective of what name you give it, the law, prior to your vote for the amendment, would have provided for the placing of a man in prison without benefit of a trial by a jury.

The argument against jury trials in civil rights injunction cases is usually twofold. The first being that there is no constitutional question involved and that if you are against trial without jury in contempt cases, you should change the whole contempt law and not merely that portion involved in the civil-rights legislation. The second, which is the main thrust of the argument, is that today southern juries may or will not convict violators of Federal antidiscrimination injunctions, and that since the factual question of guilt is rarely in dispute and that since the right to vote, etc., is so basic and cannot be safeguarded if convictions cannot be secured, the proposed civil-rights legislation should not provide for trial by jury in contempt cases.

The first argument presented above is, in my opinion, without merit. The mere fact that trial by jury in contempt cases is not deemed to be required by the Constitution does not indicate the wisdom or lack of wisdom of this position. If Congress is willing to extend trial by jury (for whatever motives) beyond what is deemed to be constitutionally required, the liberals should praise the decision as a fuller measure of freedom, and not condemn it as unnecessary or unwise. And the proposition that it has generally been the law to refuse jury trials in contempt cases of this sort does not require the conclusion that we must work only to amend the whole contempt trial law. Of course we should do this, but meanwhile, if we are opposed to convictions without jury trial, we should oppose this concept wherever we can, and not merely cry all or nothing.

The whole question, it seems to me, rests upon one point, and only one point. Is it worth allowing individuals to go to jail without trial by jury in order to attempt to make more secure the right to vote and be free from some forms of discrimination, and whether trial by jury will harm the securing of these rights. As I have said before, it is a tough decision and one where liberals can honestly disagree, athough to me, the answer is clear.

I think that it is incumbent upon us to look deeply into the value of convictions for civil-rights violations, and their effect on guaranteeing civil rights. I believe that the mere fact that there is a Federal injunction will deter many from acting in violation of it. (Previous Federal injunctions, i. e., "white primaries," desegregation of graduate schools, etc., worked in many instances.) Irrespective of whether they agree or disagree with the injunction, the strength of the Federal mandate will deter some, and the risk of a trial, jury or otherwise, will deter others. (In this point Osmond Frankle, ACLU counsel is in agreement. He also questions the desirability of contempt convictions without jury trials.) I also believe, from some personal observations in the South, that some juries will convict, although not all will, where guilt is shown. But law that does not have the support of the community will have little positive effect and could cause harm if unintelligently enforced. Law is only part of the picture. If a man is convicted without benefit of a jury trial, and that conviction does not have the support of at least a large minority of the community, you will create a martyr and not an example. Of course, in the short run, you may make more secure the right to vote, but at what cost? I am fully in support of the civil-rights legislation, as laws are needed, but not laws that take away some freedom to try to get some other.

Placing a man in jail is the absolute denial of his civil rights and liberties. This must be done to some men to protect others, but we should not abrogate any man's liberty without absolute necessity, and without as many safeguards as possible, especially if we are to take away his liberty in the name of liberty. We have fought too long and too hard for jury trials to permit them to be disregarded without serious misgivings. The fact that a jury will not convict a guilty man is no more reason to eliminate jury trials than it would be to eliminate trials themselves. The fear that the jury will not agree with the law, or is sympathetic toward the defendant should not cause us to bypass the jury. We should, of course, attempt to get as impartial a jury as possible, and this can be done by challenges at the trial itself. If we cannot get 12 relatively impartial men in the entire community, especially if the prosecuting officers are Federal and not local, we should look toward a new solution to the problem (i. e., cutting down the representation of those areas that deny others the right to vote) but not eliminate jury trials. To bypass the jury in this situation would be unwise, for a logical extension of this argument would be that a man should never be tried by members of his own race, or nationality, or religion, or sex, or economic group, etc., since they might be sympathetic to the defendant. We all would balk at trying southern violators by northern juries, or vice versa. If we ever get to the state where we are willing to say that we should refuse jury trials because juries won't convict, we will have taken away a basic right for which we have fought for many centuries. It is my belief that civil liberties dictates, as does the spirit of the Constitution, that no man be placed in jeopardy of jail unless he has the right to a trial by a jury of his peers if he so desires.

I also believe that the argument that there is little factual disagreement in these contempt cases and that therefore juries would not be necessary is, to my way of thinking, invalid. There will be factual questions to be decided, and besides, the jury historically, serves two purposes; to determine the physical facts and to look at the entire situation and to apply the general law to the particular circumstances which only the community can know. Of course in the South this may mean a low rate of convictions, but civil liberties is not measured by the number of convictions, even when those convictions are aimed at enforcing civil rights. I have no sympathy for those who would try to deprive another of his rights, but my sympathy does go out to those rights, and it is for that reason that I believe that we cannot circumvent jury trials, no matter what the cause. Appeal provisions and safeguards are not enough. Every lawyer knows that in the main, what happens during the trial will prevail. No matter how fair the procedures, or how thorough the appeal, the very elimination of the jury, in my opinion, deprives the accused of the fair trial civil libertics demands. I have great respect for the Federal judges in the country, but I also know that history has produced a Web. Thayer, and his sort also. I do not want to allow freedom versus jail to be left up to one man.

Let us look at history for a moment. Consistency is not always wise, but in the area of personal liberty, there is no greater cornerstone than equal rights for both friend and foe. There cannot be one justice for us and one for them.

Before the Constitution was written, William Penn was indicted for speech against the crown. The jury in this case, although pressured unmercifully by the bench, refused to convict, reserving the right to interpret the law as well as the facts. This case has come down to us as a hallmark of liberty. Also, before the Bill of Rights was written, John Peter Zenger was tried for criminal libel. The attorney for the defense (Andrew Hamilton, Alexander Hamilton's brother) admitted the facts that constituted guilt under the law, but demanded that the law be changed by the jury. This acquittal is another hallmark in our fight for liberty. How many of us would have voted to convict John Brown even though he was, in fact guilty under the law? How many of us would have voted to convict the violators of the Fugitive Slave Act, or would have sat back while permitting a judge, without a jury, to decide guilt or innocence? In fact, no jury was permitted under this act, a fact which roused the Abolitionists to arms.) As I have said, there is not two brands of freedom, according to who is in the driver's seat.

But let us look a little closer into the use of the injunction and contempt itself. The major case which liberals thought wrongly decided was the Debs case. When the Government could not gain a conviction against Gene Debs for his participation in the Pullman strike (they first tried to convict him for conspiracy. This conviction required a jury trial), they turned around and sentenced him, without benefit of a trial by jury, for contempt, Debs having allegedly violated a Federal injunction. Governor Altgeld, of Illinois, decried this trial without jury, as did one of the greatest liberals of all times, Clarance Darrow. The liberals, like Debs, Altgeld, and Darrow, who had to fight to establish the right to trial by jury, condemned the injunction-contempt-no jury trial procedure one of our greatest threats to liberty. Yet, today, all seems to have been forgotten by the liberal.

Labor, historically harrassed by injunction-contempt proceedings, fought hard and long and finally got through Congress the Norris-LaGuardia Act. Among its provisions are the following:

"In all cases arising under this act in which a person shall be charged with contempt of a court of the United States * * * the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the contempt shall have been committed * * * [except where the contempt was by an officer of the court or in the court's presence]."

This was considered another landmark for liberalism.

Today, it appears as if labor and the liberals have forgotten the past as well as the possible future. Let us suppose someday Congress decides to take away our rights,

not by criminal statute, but by contempt action without trial by jury. A minority could be destroyed this way, as well as helped. Also, why not injunctions against all crimes. We could get convictions without worrying about juries.

This is, of course, not too likely to happen, but as I have tried to point out, we cannot have one set of rules when the Government is going our way and another set when it is going against us. Procedural consistency is too valuable to allow it to be controlled by the particular ideology in power, even if we agree with those in power and even if we unalterably oppose those against whom it is aimed. The ends, no matter how desirable, do not justify the means.

Associate Justice William O. Douglas in his book Almanac of Liberty wrote the following with regard to the above-mentioned William Penn case.

"* * * Short cuts are always tempting when one feels his cause is just. Short cuts have always been justified on the ground that, the ends being worthy, the means of reaching it are not important. Short cuts, however, are dangerous. If they can be taken against one person or group they can be taken against another. Our greatest struggle has been to provide procedural safeguards that will protect us against ourselves and make it certain as possible that reason and calm judgment will not be swept away by passion and hysteria. Experience shows us that it is the William Penns of the world, not the criminals, who suffer most when the procedural safeguards for fair trials are relaxed."

We cannot give up civil liberties for civil rights. It is not enough that all men are equal, unless all men are free. The liberal must, and I congratulate you, Senator KEFAUVER, for realizing this, work for a society where all men are equal and all men are free. It took us too long to build the strong road of jury trials to now cut into the wilds of contempt trials.

The right to vote will come, as will the end of discrimination, irrespective of the jury-trial provisions. Perhaps it will take a little longer by taking the main road (although we can never know unless we try). If we don't guarantee jury trials, we may find ourselves in the position that Justice Black spoke of when he dissented against the Illinois race liable law. There he said that if any minority group rejoices at that method of trying to provide civil rights they should remember the old adage: "Another such victory and we are undone."

By voting for jury trials, you have been consistent with your high principles. It is true that politics makes strange bedfellows, but so does courage, and by voting for the civil-rights legislation with jury trials you will have declared the principle that there shall be no denial of civil liberties, either on the grounds of race, religion, sex, creed, or national origin, or on the grounds that someone is your enemy.

Sincerely,

YALE B. BERNSTEIN.

Job Difficulties of People Over 45 Years of Age

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. BECKWORTH. Mr. Speaker, I include an article which appeared in the Reader's Digest recently and an article that appeared in the Dallas Morning News, June 29, 1957, concerning people over 45 years of age who have difficulty obtaining employment.

For 20 years I have undertaken to focus attention on the unfair disadvantages this group has in its efforts to obtain employment. It is encouraging to note that more and more interest is being shown in the problems of this group.

The articles referred to follow:

[From the Reader's Digest for July 1957]

HELP WANTED: FOR THE FORTY-PLUS

(Condensed from Your Life)

(By Ronald Schiller)

Forty-seven-year-old Harry Davis boarded his usual commuter train in a pleasant suburb. There was nothing in his appearance that set him apart. But the appearance was a mask, for Harry Davis was a man in desperate trouble. After 23 years with the same firm, he had lost his $11,000 job as office manager when his company merged with a larger concern. And despite a year of heroic effort, he had been unable to find another position—because of his age.

When the train reached the city, Harry strode purposefully down the platform. But instead of boarding a bus or taxi to his office, as did the other passengers, he went into the waiting room. This was the moment when that feeling of despair and panic invariably assailed him. He waited for it to subside, then telephoned the three employment agencies where he had applications on file. He got the usual answers: "Nothing interesting for you today, Mr. Davis." Next he opened his newspaper to the employment section (he didn't like to read it on the train where friends might see him) and scanned the long columns, skipping those ads which specified "under 40" or "under 45," circling others which required personal letters. Most of the rest of the day he spent sitting in offices waiting to be interviewed by personnel managers, most of them younger than he, who had answered his letters regarding previous ads.

Harry's interviews usually went well. He is capable, intelligent, and well qualified for the positions he has sought. But he cannot hide the damning "Age: 47" on his application blank. He is on the wrong side of that mysterious, senseless 40-year age barrier which, in the American labor market, separates the employables from those considered "too old" to hire.

Among Harry's worst enemies are the pension and retirement plans that many firms have instituted to protect their employees. To hire a man Harry's age a company may have to pay twice as much in premiums as for a man in his thirties. When Harry has offered to waive his pension rights or pay the additional premiums himself, he has usually been told that it is against company policy or that it would mess up the bookkeeping.

A big problem to a man in Harry's position is to maintain his morale. A dozen times a day he has to remind himself, "You're in fine health, you're in the prime of life, you've had valuable business experience. You may land the very next job you apply for. Just keep plugging."

But these self-administered pep talks cannot stay Harry's rapidly deteriorating financial condition. Like many white-collar workers, he has never been able to save much money. There has been a family to raise—two sons—and his position has required that he maintain a good standard of living. He received 2 months' severance pay when he was discharged, and State unemployment compensation helped while it lasted. But, outside of a little money in the bank, his only assets are a 3-year-old car, some life insurance, and a $16,000 house on which there remains a $10,000 mortgage.

I do not know what is going to happen to Harry and his family. When I last saw him he was on his way to another interview, for a job as supervisor of a shipping department for a small firm that would pay him $4,000 a year. "It's a young company," said Harry hopefully. "With my experience there should be plenty of room for advancement * * *."

Everything related here about Harry Davis is true except his name. But whatever we call him, he is important to us. He is representative of a growing reservoir of unemployed American men over 40, and women over 35. I have interviewed many such men and women, ranging from factory and office workers to professionals and executives. Their stories differ in detail from Harry's, but they all share three things: frustrated lives, shattered hopes, and fear of the future.

Age bias in employment is an increasingly serious matter in the United States because the proportion of middle aged in our population is rocketing upward. Fifty years ago the average life expectancy of American men was 47 years; today it is 67. Moreover, people today stay young longer. Their normal useful working life has stretched considerably. Yet employers continue to set age limitations in their hiring policies that might have applied in the 1890's.

The Department of Labor recently made an extensive survey of employers to find out why they don't hire older workers. The reasons were difficult to pin down. But the general feeling was that older people were too slow to meet production requirements, "too set in their ways," less creative than younger workers, harder to train, more prone to absenteeism, and that their physical condition was not as good.

The latter charge is undeniably true: if a job involves heavy physical work, a young man is apt to be better. But the other reasons have turned out to be myths. A survey of 3,313,000 employees made by the National Association of Manufacturers showed that in work performance 93 percent of the older workers were equal or superior and only 7 percent were not equal to younger workers. A more detailed study by the University of Illinois revealed that rates of absenteeism and lateness are actually lower among older employees, and that their loyalty, sense of responsibility, and morale are higher. They are also less prone to accidents.

On the white-collar and executive level a common myth is that serious morale problems develop if older men are put to work under executives younger than themselves. In cases where circumstances have forced the issue, this theory has failed to hold up. Two years ago, for example, a New Jersey electronic concern, needing executive help, violated its own employment age policy by hiring 2 men in their fifties. They turned out so well that last year 5 more were hired. "From now on older men get preference here," the young president of the firm told me. "They've upgraded the whole level of work."

"Actually," states the NAM report, "older workers are the cream of the crop."

As a result of such findings, a few large concerns have begun to reexamine their employment practices, with good results. One department store now makes it a policy to hire older workers. "Hiring employees over 40 is good business for us," reports a Chicago manufacturer, adding that any slowing of speed among older workers is more than made up by higher quality work. An insurance company, disturbed by the fact that many girl office workers quit work after a short time, now makes it a policy to hire older women.

The 40-plus clubs, composed of older unemployed executives who have banded together in several cities to help each other find jobs, were among the first agencies to dramatize the situation, and over a period

of years report some remarkable successes.

The New York club has placed so many of its members in the past 2 years that it has had to advertise for new job seekers. The Boston club reports it returns to employment "83 out of every 100 men" within 8 to 28 days. The San Francisco club's roster has dropped by two-thirds.

Meanwhile, to help women over 40 find employment, San Francisco businessmen last year established an organization called Careers Unlimited. It has placed more than 50 women in jobs each month. Similar organizations have been springing up in other cities.

But hopeful as these activities are, they have not yet succeeded in skimming off more than a fraction of the middle-aged job seekers who report to Government employment agencies each month. The tragic fact revealed by the Department of Labor survey is that half of all employers still have age restrictions, and that between 50 and 60 percent of the job openings are still not available to men over 40 or 45, or to women over 35.

Federal and State Governments have not been idle. Two years ago the Federal Government took the initiative by abolishing age restrictions on Federal jobs. Five States—Colorado, Louisiana, Massachusetts, Pennsylvania, and Rhode Island—have passed laws forbidding age discrimination against workers, by either Government or private employers.

But employment experts now place their greatest hope in a new concept: special job counseling for workers over 40. The Department of Labor plans to help install trained counselors in all 1,700 of its employment offices this year. The program is based on the highly successful experiences in Canada and New York State, where special advisers have succeeded in raising job placement of older workers by as much as 400 percent.

The job counselor's task ranges from helping an applicant to recast his whole plan for the future down to such simple advice as telling a woman to use less lipstick. Sometimes the counselor's most obvious advice requires the most persuasion, such as convincing a job seeker to be more realistic about pay demands, or to look for a job on the fringes of a city where younger people are often reluctant to work, or to retrain himself in a skill that is in greater demand.

In analyzing an applicant's qualifications the counselor also searches for hidden employable talents the job seeker may not himself know he possesses. Examples: A 55-year-old textile salesman, unemployed for 16 months, found satisfying work as a proofreader; a 59-year-old former Army paymaster won a position as head of the research department of an advertising agency.

Persuading employers to drop their age bars is the toughest part of the counselor's job. It takes missionary zeal, diplomacy, "and sometimes a touch of honest guile," says Joe Nawn, special counselor to the 40-plus job seekers at the Newburgh, N. Y., State employment office. Once an employer phoned Joe asking if he had a receptionist—"under 30, of course." Joe knew a widow who qualified in everything but age and badly needed the work. He talked so fast and enthusiastically about the lady's experience, ability, and charm that the question of age never arose again. A month later the employer called to say how pleased he was with his new receptionist. "Did you know she was over 50?" asked Joe. "Gosh," exclaimed the shocked employer, "I forget to ask her age."

"No community today can afford to be without the services of a special job counselor for the 40-plus," says Senator Thomas C. Desmond, chairman of New York State's Legislative Committee on Problems of the Aging. "But the counselor cannot do the whole job. He needs the community's help."

Desmond's plan for community action consists of four steps: (1) Organize a steering committee of members from the local chamber of commerce, service clubs, and other civic groups; (2) make sure a special job counselor is appointed to the local employment agency; (3) utilize the local schools' vocational and adult-education services to retrain the unemployed when necessary; (4) enlist the community's biggest guns to help break down local employers' prejudices against older workers.

Any suggestion that older workers should be hired as a charitable gesture, or as a civic duty, infuriates Senator Desmond. "It should be no such thing," he explodes. "Employers should hire them because it's to their own economic self-interest to do so. Older workers earn every dollar paid them."

The crisis that confronts the 40-plus right now, in an era of almost full employment, will seem minor compared with what we may expect in tthe 1960's, when the World War II "baby crop" enters the labor market. Unless business changes its attitude soon, warns Secretary of Labor James Mitchell, the growing number of middle-aged unemployed could become "the most potent group this country has ever known and forbe some kind of public program for its own survival."

The fact is, as President Eisenhower has stated, "We cannot afford to squander our manpower through a prejudice which obscures the values of maturity, responsibility, and constancy found in older workers."

[From the Dallas (Tex.) Morning News of June 29, 1957]

THE CASE FOR FOLKS OVER 45

(Reprinted from the St. Petersburg (Fla.) Times)

A myth, says Webster, is an imaginary or fictitious thing or person. The Times recently referred to the "vicious myth" concerning working ability of those over 65. Now, these unreal dragons again have been attacked by the New York State Labor Department. The department listed eight reasons given by employers for not hiring workers over 45 years old. The reasons and the truth:

1. They are less productive. The truth: Three surveys, says the New York Industrial work by older workers are equal to or superior to that of younger employees.

2. They are often absent. The truth: Older workers have a 20-percent better attendance record than younger workers, said a 1956 United States Labor Department survey.

3. They are involved in more accidents. The truth: The same survey showed workers 45 and over had 2.5 percent fewer disabling injuries, 25 percent fewer nondisabling injuries than those under 45.

4. They do not stay on the payroll long enough to justify hiring expenses. The truth: Studies show separation rates for older workers much lower than for younger employees.

5. It is too costly to provide them with adequate pensions. The truth: "This is an easy generalization."

6. They will cause major increases in employee group insurance costs. The truth: Here again it all depends on the nature of the plan.

7. They don't have needed job skills. The truth: "On the contrary," the article says, "the older worker is likely to possess more skills, training, and know-how than younger job hunters."

8. They are inflexible and unimaginative, have trouble getting along with younger workers. The truth: An unjust, sweeping generalization which is seriously overrated.

The Bulletin points up again our national inconsistency in clinging to age limitations long since overcome, in deliberately wasting a large and necessary portion of our manpower potential. In the common interest, it is every man's business to challenge and correct any and all of these myths whenever faced with them. Equally, we should support and encourage such practical efforts as Industrial Experience, Inc., now being organized in St. Petersburg, to employ skilled workers over 65. In this aging Nation the bell of time is tolling. Either we will overcome these mythical figures or they will overcome us.

Death of Senator McCarthy

EXTENSION OF REMARKS

OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. KUCHEL. Mr. President, on the occasion of the passing of our late beloved colleague, Joseph McCarthy, memorial resolutions were passed across the country by representative civic groups. Two of such resolutions were adopted by the Republican State Central Committee of California and by the board of supervisors of the city and county of San Francisco.

Mr. President, I ask unanimous consent that the text of each resolution be printed in the Appendix of the RECORD.

There being no objection, the texts of the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION 2

Whereas Senator Joseph McCarthy of Wisconsin had during his lifetime been in the forefront in humanity's fight against Communism; and

Whereas his death has been a great loss to the American people; Now, therefore, be it

Resolved, That the Republican State Central Committee of California regrets the passing of Senator McCarthy; and be it further

Resolved, That a copy of this resolution be sent to Mrs. Joseph McCarthy and California's Representatives in Congress.

Adopted May 10, 1957.

RESOLUTION 17787—IN MEMORIAM, SENATOR JOSEPH MCCARTHY

Whereas thousands of San Franciscans have been profoundly saddened to note the passing of United States Senator Joseph McCarthy of Wisconsin; and

Whereas the tragic loss visited on the sorrowing family of the late Senator Joseph McCarthy is one which will be shared in great measure by all enlightened people throughout the world, who accorded him the deepest respect for his uncompromising honesty and steadfast devotion to the highest American principles: Now, therefore, be it

Resolved, That the Board of Supervisors of the City and County of San Francisco adjourn its meeting this day out of respect to the memory of the late Senator Joseph McCarthy; and that a suitable copy of this resolution be tendered to his bereaved widow, Mrs. Jean Kerr McCarthy, as an expression of the Board's heartfelt sympathy and condolence.

(The foregoing resolution was introduced by Supervisor James Leo Halley, on behalf of all members of the Board of Supervisors of the City and County of San Francisco, and

adopted by unanimous vote thereof at the Board meeting held on Monday, May 6, 1957.)

JOHN JAY FERDON,
President of the Board of Supervisors.
JOHN R. MCGRATH,
Clerk of the Board of Supervisors.
GEO. CHRISTOPHER,
Mayor of the City and County of San Francisco.

Tribute to the Late Senator McCarthy

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. DIRKSEN. Mr. President, since the decease of our late colleague, Senator Joseph R. McCarthy, a large number of organizations and institutions, including State legislatures, political groups and others, have adopted resolutions expressing their deep regret and profound sympathy over the passing of this true patriot, who did so much to alert this Republic to the Communist danger.

Among such organizations is the Illinois Federation of Republican Women, who on May 8, 1957, uttered a proclamation expressing the sense of loss over the passing of the distinguished Senator from Wisconsin. I request unanimous consent that a copy of this proclamation be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

Whereas in the death of Senator Joseph R. McCarthy, the United States Senate has lost one of its most courageous Members, a great Republican Senator who, like his friend, Senator Robert A. Taft, will be remembered long after his passing; and

Whereas since even before the Korean war, Senator McCarthy was the leader of the patriotic fight to eliminate pro-Communists and subversives from our Government and from vital defense industries; and

Whereas Senator McCarthy fought the Communists and their supporters at the sacrifice of his health and in spite of the fact that it made him the victim of the same organized smear tactics which forced MARTIN DIES out of Congress, and deprived our country of the services of Gen. Douglas MacArthur; and

Whereas Senator McCarthy served his party well by personally campaigning for and helping to elect many Republicans to high office, but put his country ahead of his party, and fought valiantly, in war and in peace, against our Nation's enemies; and

Whereas Senator McCarthy, in the great American tradition of Abraham Lincoln, rose to high office over the handicaps of poverty and lack of an early education, yet always lived a modest and exemplary personal life, and, when his income tax returns were scrutinized at the demand of his enemies, he was found by the Democrat in charge of the Internal Revenue Bureau to have overpaid his taxes by more than $1,000: Therefore

Resolved, That the Illinois Federation of Republican Women expresses its deepest regret at the death of Senator Joseph R. McCarthy, and consequent great loss to the State of Wisconsin, to the Republican Party, and to our country, and extends its heartfelt sympathies to his widow; and

Resolved further, That a copy of this resolution be sent to Mrs. McCarthy, to the Governor of Wisconsin on behalf of the people of Wisconsin, and to Senator EVERETT M. DIRKSEN, who courageously served on Senator McCarthy's committee and voted against the censure of Senator McCarthy.

Done at the spring meeting of the Illinois Federation of Republican Women on this 8th day of May, in the year of our Lord 1957.

Disarmament Plans

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an excellent editorial entitled "Urges Caution on Disarmament Plans," from the July 17, 1957, issue of the Greenville (S. C.) News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

URGES CAUTION ON DISARMAMENT PLANS

Hope is still entertained in many American circles that some new agreement can be reached with Russia that will provide for a certain degree of curtailment in armaments.

To the citizen following the disarmament news, this hope appears very slim, especially when every proposal made from the western side seems to meet with somewhat contemptuous Russian disparagement.

But voices of caution are being raised which may very well cause more of us to be less eager for the West to seek too hastily to bring up proposals that will please the Kremlin. Our experience with Russian tactics suggests that if Russia ever agrees to armament cutting proposals, it will insist on a plan that will give the Soviets some distinct advantage in a military and political way.

That is the fear of some who view with a certain uneasiness the current talks. A case in point is the opinion presented in a recent article by G. F. Hudson, director of Far East studies at Oxford University. Mr. Hudson is a distinguished historian who served 6 years in the research department of the British Foreign Office.

His studies of the world situation lead him to the conclusion that "unfortunately it is extremely difficult, because of the actual circumstances of the strategic situation in Europe, to imagine any agreement on limitation of arms which, however fair it might seem on the surface, would not in practice work out to the disadvantage of the West."

It may seem an extreme view to say that almost any arms curtailment agreement would give Russia an advantage over the West, but there can be little doubt that it is the determined Russian aim to gain such an advantage. The Kremlin policy is likely to be to keep stalling on really fair and equitable proposals in the hope of eventually gaining concessions that will give it a real victory.

And this country could do itself a grave injury by allowing eagerness to reach an agreement to blind it to the traps which shrewd Kremlin negotiators will lay.

The Treasury's Dilemma

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. SPARKMAN. Mr. President, in yesterday's Washington Post there appeared an editorial entitled "The Treasury's Dilemma." It has reference to the recent offering by the Treasury of Government bonds at 4 percent interest. It correctly points out that a part of the trouble was brought about by the Treasury itself, in originating the high interest rate when it offered the 3¼ percent issue in 1953.

It is a very readable and thought-provoking editorial. I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to bt printed in the RECORD, as follows:

THE TREASURY'S DILEMMA

Criticism of the Treasury for the 4-percent interest rate it has offered on some of its refinancing has been coming hot and heavy from Democrats in Congress. Such criticism would be more constructive if it pointed a feasible alternative way out of the dilemma. The Treasury has $24 billion in Government obligations coming due during the remainder of this calendar year. It either had to refinance these at rates which would attract funds or pay them off in cash—which it is in no position to do. Although the response will be the test, the rates of 4 percent for 4-year notes (actually redeemable in 2 years) and 3⅝ percent for 120-day certificates do not seem out of line with present market requirements.

To castigate the Treasury for the predicament is easy. It did, judging from the oversubscription, pay too much when it sold long-term issues at 3¼ percent in 1953. Because of the outcries during the latter business decline, it may have been gunshy and may have neglected opportunities for placing more of the debt on a long-term basis. Secretary Humphrey has not been conspicuously successful, certainly, in stretching out the debt. The average maturity stood at 46 months in 1953; in May of 1957 it was 43 months. In the past, too, various high Treasury officials proclaimed their belief that interest rates were too low; and this belief (which may well have been correct at the time) is now being cited against them.

Yet no one can think that the Treasury is pleased with the rates it now has to offer. The Treasury's job is to finance the activities of Government and manage the Federal debt. The new issues, which replace issues ranging downward from 3¼ percent to 1½ percent for certain short-term obligations, will increase debt service costs substantially—adding perhaps hundreds of millions of dollars to the Federal budget. Moreover, the Treasury is approaching the legal limit of 4¼ percent on Government bonds, although this does not apply to other types of securities.

The fact is, however, that the Treasury is a competitor in the tremendous demand for funds from corporations and from State and local governments. This demand remains heavy despite the high rediscount rate set by the Federal Reserve Board. It would no

doubt increase rather than diminish if interest rates generally were made easier.

Thus the Treasury is caught in a squeeze. Its immediate concern with refinancing calls for a lower Federal Reserve interest rate. Yet its broader concern with preventing runaway inflation calls for support of the Fed. Actually there have been many disagreements between the Treasury and the independent Federal Reserve. Critics who complain that the relationship is too cozy overlook the fact that one proof of coziness would be a suggestion that the Fed again support the government bond market—which has not occurred.

A case can be made that the present inflation is not of the classical variety, since excess capacity exists in steel, automobiles and other heavy industry, and hence that easier money would promote more demand. But it is hard to argue that easier money for more plant expansion would be a curative when the labor market is already tight in most instances and surplus capacity already exists.

Certainly the philosophy of postponing unessential expansion, which is one objective of the high interest rates that influence the Treasury's action, involves some risk that the economy may become stagnant. It is necessary to apply the brakes very carefully, and to watch closely the effects on small business. But this risk is preferable to the risk of wild inflation which many of the alternate suggestions would invite. It is far easier to talk of cheaper money than to face the morning-after consequences.

Annual Report of the United States Attorney for the Northern District of Illinois, July 1, 1957

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. DIRKSEN. Mr. President, the northern section of Illinois has as its chief law-enforcing official at the Federal level a man whom it was my pleasure to nominate. His name is Robert Teiken. He is the United States attorney for northern Illinois. In my judgment he has made an excellent record. Ever so often he issues a very brief report of some of the accomplishments of his office. I think it is quite worthy of a place in the CONGRESSIONAL RECORD, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ANNUAL REPORT OF THE UNITED STATES ATTORNEY FOR THE NORTHERN DISTRICT OF ILLINOIS

It is again a pleasure to report to the Attorney General and to the people of the 18 northern counties of Illinois concerning the activities of the office of the United States attorney for the northern district of Illinois for the fiscal year just ended.

Since litigation is the chief activity of the office, it is fitting to report the successes and failures we have had in the courts.

The United States Supreme Court passed on four important cases originating from this district and ordered reargument in another.

In *U. S.* v. *Achilli*, the Court decided that the Government must prosecute income-tax evasion as a felony and not as a misdemeanor. Achilli's felony conviction was, therefore, upheld.

In *U. S.* v. *Witkowich*, the district court ruled that, during the period between a deportation order and the deportee's actual departure from the country, he may be compelled to answer only those questions which concern his availability for deportation.

U. S. v. *Korpan* is significant because it is the only Supreme Court case which has interpreted the phrase "so-called slot machine." The court of appeals had reversed the defendant's conviction in the district court. On certiorari, the Supreme Court reversed the court of appeals and upheld the Government's position.

U. S. v. *Roviaro:* In this now well-known case dealing with the identity of Government informers, I regret to say that the Supreme Court did not follow the lead of our court of appeals and reversed the Government's position.

In *U. S.* v. *Lightfoot*, the Supreme Court has ordered reargument. It is significant to note in respect to the Lightfoot case that despite *Yates* v. *U. S.*, recently decided, the Lightfoot case apparently has sufficient merit to require further study by the Court.

In the United States Court of Appeals for the Seventh Circuit we represented the Government in some 51 appeals during the year. Some of the more important decisions include:

1. *U. S.* v. *Nathan* represents the first time this court of appeals has dealt at length with the problem of denial of civil rights by vote falsification. The decision is notable for the court's highly technical and erudite discussion of the application of general intent as against specific intent in suffrage cases under the civil rights statute, 18 U. S. C. 241. The distinction made by the court of the Williams and Screws cases is a notable contribution to this field of law. The Supreme Court denied the defendant's application for certiorari in this case.

2. In *U. S.* v. Ansani the court affirmed the conviction of members of the Chicago crime syndicate who attempted to evade the provisions of the Johnson Act by selling so-called trade boosters which were nothing but electronic devices to substitute for the familiar spring and reels found in one-armed bandits. Certiorari was denied by the Supreme Court in this case.

3. *U. S.* v. *Holsman* is of significance to the practical administration of mail-fraud statutes. We obtained a reaffirmance in this field of the familiar doctrine that a bench judgment may not be disturbed on appeal except for a total lack of evidence, and that good faith is a factual defense and not a legal defense.

4. In re April 1956 term grand jury, another facet of the Shotwell tax case is examined. The case extends the doctrine of Grand Jury secrecy to prevent the Government from using grand-jury documents in a civil proceeding.

5. In *U. S.* v. *Parker*, the defendant's conviction for perjury was affirmed on appeal. The case is of the utmost significance to the Government for its definition of the word "material" as used in the perjury statute (18 U. S. C. 1621).

6. In *U. S.* v. *Rodriguez* the court of appeals wrote 1 of the 2 existing Federal opinions recognizing the fact that in a criminal case an oral stipulation between counsel for the Government and counsel for the defendant, made in the presence of a defendant, is admissible in evidence and binding.

7. In *U. S.* v. *Killian* the court affirmed the defendant's conviction for falsely denying that he was a Communist in a certificate filed with the National Labor Relations Board. Although the case was decided after the decision of the Supreme Court in *U. S.* v. *Jencks*, the court of appeals made no reference to the Jencks case and followed its own former decision in the Lightfoot case concerning the right to inspect Government investigative reports.

8. *U. S.* v. *Walker* will be of practical importance in the administration of the Narcotic Control Act because the court flatly holds that hearsay evidence may constitute probable cause for search and seizure without a search warrant.

9. In *Hsuan Wei* v. *Robinson* the Government obtained a reversal of a ruling by Judge Perry. The court of appeals held that a Chinese marine who was admitted to the United States for Marine training was deportable upon the termination of such training.

Now pending in the court of appeals is the United States attorney's petition to disbar Attorney Abraham Teitelbaum, twice convicted of income-tax fraud. The district court denied the petition on the ground that no moral turpitude was involved in the tax fraud cases.

In the district court, the Government's most important victory was in the 5-week trial of 3 steel companies found to be discharging solids in the Calumet River to such an extent that the channel became blocked. Judge Barnes ordered the companies to restore the channel to "its established depth."

The Government won denaturalization cases against two top Chicago area Communists, Leo Fisher and Anthony Minerich. Paul "The Waiter" Ricca, alias Paul DeLucia, a leader of Chicago's crime syndicate and one of the Nation's top hoodlums, was also ordered denaturalized. The Ricca case culminated about 3 years of intensive work by the Immigration and Naturalization Service.

A number of important criminal cases were also tried during the year. The notorious "Mr. Five by Five," who had been previously acquitted in Buffalo, was convicted of using an interstate wire to defraud. Joseph Marzec and other officials of the Polish Roman Catholic Union were convicted of income-tax evasion arising out of their failure to pay taxes on kickbacks from loan brokers dealing in Polish Roman Catholic Union loans. Convictions were also obtained in 3 major bank robberies, 3 bank embezzlement cases, and a manslaughter case. Guilty pleas were entered in several obscenity cases. One heroin peddler was sentenced to 17 years, the longest narcotics sentence in the history of the District. Recently, 3 defendants were found guilty of selling 56 pounds of marijuana. During the year, Hodge, Hintz, and Epping pleaded guilty and were sentenced, as was the former secretary of the Sigma Chi Fraternity. Anthony DeRosa, whom the Chicago police have never been able to convict, pleaded guilty to theft from interstate shipment and is awaiting sentence. The former mayor of Joliet, Ill., was sentenced for failure to pay income taxes on unreported kickbacks from contractors installing parking meters and a waterworks for the city of Joliet. We were unsuccessful in two important cases. Although a jury found an escort service operator guilty of violating the White Slave Traffic Act, the judge set the verdict aside. Joseph Glimco and his codefendants were found not guilty of labor racketeering. Two other cases came to an abrupt end before trial; a prominent banker was shot before trial for misapplication of bank funds and a well-know lawyer jumped or fell from his apartment window on the eve of a Mann Act trial.

Several important indictments returned during the year will be tried this coming year. One of these is a mail-fraud indictment against Nathan Shavin, a Chicago lawyer with a large personal-injury practice. Albert Paull will be tried for fencing stolen furs, Dr. Jay Schmidt for using the mails to defraud, and Harry Cohen for submitting false and fraudulent documents to obtain FHA loans. Paul "the Waiter" DeLucia, de-

naturalized this past year, will now be tried for income-tax evasion. Max Podalski and Jack Perno are awaiting trial on labor racketeering indictments. Taft-Hartley Act indictments are pending against Youngblood, of the painters union; Gallagher of the tuckpointers union; and Angelo Inciso, of the independent auto workers.

As in past years, we have often been able to correct questionable practices in the business community without actually instituting criminal proceedings. For example, as an aftermath of the Hodge case, we called in approximately 150 bankers who had been paying local officials to keep public funds on deposit. As a result of our warnings issued in this conference this practice has been discontinued.

We started the 1955–56 fiscal year with 12 grand juries on call and we ended this year with the same number. During this time we had 22 grand juries sitting for a total of 340 sessions as compared to 206 for the preceding period.

The most gratifying result of our activity this past year has been the upsurge of respect for the Federal criminal process in this district. The 1955 conviction and sentencing of a precinct captain and his "ghost" election board in the first ward started this upsurge and brought about three things. First, it demonstrated to the professional precinct election officials that their ward committeemen were powerless to protect them from Federal prosecution. Second, it gave renewed courage to the various individuals and civic groups who, for many years had been laboring in vain for clean elections. Third, local election officials were put on notice that tolerance of corruption might make them parties to a vote fraud conspiracy. With this background, a Federal grand jury commenced an investigation in the summer of 1956 to determine why 100 to 150 fraudulent names per precinct appeared on the poll lists in the transient and river wards, as the evidence collected in our 1955 vote fraud investigation had shown. Precinct canvassers appeared as witnesses before the grand jury, and had difficulty explaining how names remained on the poll lists for 5 and 6 years after the registrants had moved away or died. Evidently, word was passed among the precinct canvassers that the Federal grand jury knew its business, for, in the final canvass before the 1956 fall general election, about 177,000 names were removed from the poll lists by the canvassers themselves. The professional precinct workers evidently realized what it meant for the "Feds" to be interested in an election, for on November 6, 1956, Chicago experienced its cleanest election since the turn of the century. It is too much to believe that the professional precinct workers had voluntarily reformed, so it must be concluded that fear of Federal prosecution motivated the renaissance in Chicago's political morality.

The most significant law-enforcement technique this office has developed during the year has been our ever-expanding cross-index system of tabulating the activities of those involved in organized crime. This system implements our belief that we must not wait for a case involving organized crime to come to us, but, rather, we must identify and bring to terms those on the ascendancy in the rackets before they become so entrenched that it is virtually impossible to obtain evidence against them.

Financially, we have much more than "earned our salt." Nine tort claims cases were tried; 5 were decided in favor of the Government and 4 for the plaintiffs. Of the $765,635 claimed in these cases, we paid out only $16,065. In addition, we settled 18 other tort cases involving claims of $240,238 for $29,010. In other words, injury claims of $1,005,873 against the Government were disposed of for $45,075, or a face-value saving of $960,797. Our collection unit recovered fines of $114,099, civil obligations of $355,281, undocketed collections of $111,894, bond forfeitures of $3,020, a $100 penalty, and $119,678 of compromised claims, for a total collection for the Government of nearly $700,000.

Again this year, in conjunction with our Chicago Police Department liaison officer, we have escorted some 2,000 high school civics students through this office and the other nearby Federal agencies concerned with the judicial process. It is always inspiring to meet with these splendid future citizens who visit us with their civics instructors to get firsthand knowledge of the Federal process. Members of our staff have on their own time and at their own expense talked to over 150 civic and service groups about the work of our office and the Department of Justice. The numerous letters of appreciation we receive from participants in both programs highly attest the usefulness of these programs in interpreting the Federal judicial process to our citizens.

The law school student program has again proved its worth to us and to the students who participate in it. We feel that the introduction of these law students to the public service not only is beneficial to the student, but also to the profession and the Government service.

The accomplishments of this office over the past year have been made possible by a highly competent group of enthusiastic men and women who devote their full time and energy to one client, the United States of America. The record reflected in this report is also due to the wholehearted cooperation of our judges and the investigative agencies. Without them and our very loyal staff of civil servants our workload would be impossible to carry.

Though our obligation as Government lawyers requires zealous and resourceful representation of our client, we are ever cognizant of the fact that, above all, we must seek a just result in every case in which we appear.

It is an honor to be called by our President to represent the United States in this Judicial District of Northern Illinois, and it is a real privilege to enjoy the leadership and support of the Attorney General of the United States of America in this representation.

The Algerian Crisis

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a further series of comments and editorials on the Algerian crisis.

The growing number of reports both here and abroad on the Algerian problem appearing in the press during the past weeks indicates that the political atmosphere may be improving to the point where reasonable settlements can be explored.

The selections I insert today confirm this growing interest, and the need for a reexamination of the problem by our own State Department.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of July 20, 1957]

KENNEDY, ALGERIA, AND FRANCE—SENATOR'S VIEWS ON ISSUE SEEN SHARED BY INCREASING NUMBER OF FRENCHMEN

(By Dorothy Thompson)

Senator JOHN F. KENNEDY's call upon the administration 2 weeks ago to stop supporting the French war in Algeria pleased neither the State Department nor the French Government, which profoundly resents outside intervention in what they have chosen to consider a domestic affair.

His proposal was that the good offices of the Premier of Tunisia, the Sultan of Morocco, and the North Atlantic Treaty Organization be used to reach a settlement in Algeria which would achieve independence for Algeria and interdependence between France and her north African neighbors.

Dulles' reply was that Algeria is an extremely complex French problem, that he would "hate to see it made ours," and that if the Senator wants to tilt against colonialism he ought to concentrate on the Russian variety.

It may be that the Senator's public remarks were ill advised from the viewpoint of French reactions, but there was certainly nothing anti-French about them. The French position in Algeria is becoming increasingly hopeless. The problem is complex, as all great problems are. It is ours, whether we want to make it so or not. France is a member of NATO, as such is organized in the common defense of Europe, and is the recipient of American arms, while the bulk of her army is engaged in a squalid guerrilla war against Algeria nationalists. This war prejudices the position of the whole West in all Africa, the Middle East, and Asia, and greatly contributes to pro-Russian sentiment.

Furthermore, the administration, itself, shares the views of Senator KENNEDY about how the problem should be settled.

And so do an increasing number of able, influential Frenchmen. If Senator KENNEDY's intervention aids them, he will have done a service. If his remarks only serve to harden the minds (and the arteries) of upholders of the present policy, and whet the appetites of Algerian extremists, he will have done more harm than good. But nothing he said should encourage either.

The revolt in Algeria has endured nearly 3 years, and until recently it almost amounted to treason in France to criticize the policy of pacification by force.

But dissenters are now coming to the fore as the result of the total failure of that policy.

Three books have recently appeared in France by authors known to all Frenchmen, who represent quite different political orientations.

M. Servan-Schreiber is the young editor of L'Express, the paper of former Premier Mendes-France. M. Philip is a former Socialist minister and veteran pro-European. Finally, M. Raymond Aron, professor at the Sorbonne and a senior editor of Le Figaro, is an outstanding conservative.

All report on the Algerian situation from first-hand experience and profound study. The conclusions of each are colored by the temperaments and general political views of their authors.

M. Servan-Schreiber, an early critic, being of military age, was called to the colors and shipped to Algeria to halt his typewriter. The result is "Lieutenant in Algeria," is as devastating an account of the idiocies and confusions of French policy as one can read.

M. Philip writes in the "Social Treason" as a liberal Socialist despising the lack of principle of his own party and the adverse effect on European socialists in general.

M. Aron, whose mind is lucid and cool, writes in the "Algerian Tragedy" with his

usual detachment and intellectual objectivity.

But all agree that the policy initiated by M. Mollet cannot succeed; that it is based on a myth—that "Algeria is an integral part of the French nation"; that the loss of French sovereignty in Algeria need not mean the economic ruin of France; and that a solution lies along the lines suggested by Senator KENNEDY and strongly upheld by Premier Bourguiba of Tunis, perhaps the ablest prowestern statesman in the Arab world.

Many Frenchmen of all parties have privately shared these views for some time. The difficulty has been to break the deep-freezing French public opinion. But it is breaking, and the thaw has not been induced by leftists.

Both enlightened conservatives, Senator KENNEDY and M. Aron have much in common apart from their views of the Algerian question.

[From the Syracuse (N. Y.) Herald American of July 7, 1957]

SENATOR KENNEDY AND FRENCH IMPERIALISM

(By Alexander F. Jones)

Senator JOHN F. KENNEDY of Massachusetts has again demonstrated that he is amply equipped with a rather rare quality—political courage.

For the young statesman has made a speech on the Senate floor reciting the French record in Algeria and in Indochina and calling on the United States to stand for its old ideals on independence. He asked that the United States come out against colonialism and for Algerian independence.

Naturally every newspaper in Paris is storming for Senator KENNEDY's scalp.

And Secretary of State John Foster Dulles coldly remarked the chairman of the Senate Foreign Relations Subcommittee on United Nations could more profitably spend his time opposing Communism and the Soviet Union.

As a matter of fact the Kennedy speech on French colonialism and our supine support of it has been crying to be made for nearly a decade.

Only a man dedicated to the truth and impervious to the maudlin cries of French sentimentalists would make a speech on this subject.

Senator KENNEDY is not anti-French.

But neither is he a hypocrite and he cannot study the record of France in Indochina and in north Africa without nausea.

And he cannot remain silent on our support of French imperialism and colonialism while we cry out—on the other side of our mouths—for the independence and self-determination of all peoples.

We are for independence and self-determination of people just so long as it does not include the millions in economic slavery in French colonies.

The phrase "economic slavery" is not used loosely. Anyone who has ever been in Indochina knows those peoples could not so much as build a clay tile—everything had to come from France.

We paid a billion dollars a year to help France try to defeat independence in Indochina—and we lost the respect of Asia.

Senator KENNEDY pointed out how we helped defeat the U. N. proposal to debate on independence for Tunisia and Morocco.

Those countries won independence despite our support of Franch imperialism.

Now it is Algiers and France has an army of 400,000 there attempting to defeat the independence rebels.

The United Nations has been told Algiers is not a colony of France—it is an integral part of metropolitan France.

It is none of the business of the outside world what happens in Algiers, Paris insists.

Senator KENNEDY is equally insistent that it is the business of the United States and all other freedom-loving countries.

He said the treatment of Poland by the Soviet Union is a Communist imperialist counterpart of French imperialism in Algiers.

He intends to discuss the Polish situation in a second speech.

Young Senator KENNEDY, convalescing from a war injury operation in a hospital last year, wrote a small book entitled "Profiles in Courage." It discussed the way Members of Congress met crises in our national life with courageous stands that sometimes meant their own political futures.

From this speech it is evident JOHN KENNEDY has set his course as did the men he discussed in his book.

This speech is so graphic a picture of French colonial operation and of our policy in supporting it that publication of major proportions is deemed worthy of reproduction. Because of its length, it will be divided in three installments.

It is recommended reading.

[From the Indianapolis Star of July 14, 1957]

WHERE RIGHT MAKES MIGHT

Democratic Senator JOHN KENNEDY has offered a resolution to the United States Senate proposing that the United States Government place its influence behind efforts to fulfill the aspirations of the Algerian people for independence from France. We hope the Senate approves this resolution. We hope the President and Secretary of State act upon it.

There are three ways Americans can view the Algerian problem. One is that it is none of our business and we should not get mixed up in the internal affairs of France. Another is that we should support the French position because we need our great French ally more than we need Algerian support. The third is that it is consistent with American tradition and American principles to support the national independence of all peoples, to oppose colonialism of all kinds and to seek to end imperialism by whatever peaceful means we can.

It was certainly our business when we freed the Philippines and Cuba, helped establish free Liberia, pressed for the independence of Indonesia and India, helped Greece, Iran, and Turkey in their struggles for independence. It was our business to urge the British withdrawal from Egypt and to oppose the British-French-Israeli attack on Egypt. All of these actions were consistent with the mainstream of American political philosophy and with our American belief in the rights of men to govern themselves.

France is our ally and an important one. But if French policy violates American principles are we bound to support it just because France is an ally? On that basis we should have supported France and Britain in their invasion of Egypt. We may need France as an ally in Europe, but it is quite obvious that France needs us as an ally far more than we need France.

While France is using American helicopters and planes to suppress Algerian rebels, how good an ally is France for us in Europe? A France that is bleeding itself white and spending itself into bankruptcy by carrying on this fruitless struggle against native Algerians is hardly a dependable and powerful partner in our own defense against Communist aggression.

Even most Frenchmen will admit that the Algerians will eventually win freedom. Why not now? Why not before the Algerian Arabs become so embittered and so intransigent that a harmonious settlement will be made impossible?

There has risen in the Arab world a new vigor, a new nationalism, and new drive for independence that cannot be stopped. It has driven the British and French and Italians from Lebanon, Syria, Jordan, Egypt, Libya, Tunisia, Sudan, and Morocco. It will drive them from Algeria. These people will no longer lay supine under the rule of foreign strangers. Repression will only bring more violent revolt. Bullets will only bring more bombs. Tanks will only bring more massacres.

Paradoxically France can only remain in Algeria by getting out of Algeria. The British learned this in India and forgot it in Egypt. The longer France persists in trying to hold on to Algeria by force, the less influence France will have when these people finally wear down their oppressors and win their independence.

The United States does have a direct interest in Algeria. We supply France with guns and planes and money—ostensibly for the defense of Western Europe. But France is wasting both her substance and ours in this hopeless attempt to turn back the colonial clock. Why should we finance and support the oppression of people who, even as we, want only to be free from foreign domination and rule themselves?

Like the British the French do not want to admit that history has caught up with them. They are no longer the great colonial power they once were. This last remnant of French colonialism in North Africa is striding toward freedom. Why should not we aid what we cannot stop, support what we cannot defeat, aline ourselves with a cause that is as much our own cause as it is the cause of all men seeking freedom in this world?

In the recent past the United States Government has supported France or stayed neutral on the Algerian question. This is neither a brave nor an intelligent policy. What counts is what is right in Algeria, not what is expedient. The right policy for Americans is, of course, to support the aspirations of all people for national independence.

If we wish to keep communism out of the Middle East—as our Government insists it does—we will not do it with dollars. This has already been proved by the relative failure of the Eisenhower doctrine and the Richards mission. As Senator KENNEDY so rightly put it, "The strength of our appeal to these key populations * * * lies in our traditional and deeply felt philosophy of freedom and independence for all people everywhere." When we have supported this philosophy unreservedly we have never failed. When we have abandoned it, we have abandoned not only our own national interests but the cause of human liberty itself.

[From the New York Times of July 21, 1957]

PARIS UNDER PRESSURE FOR PEACE IN ALGERIA—GOVERNMENT HOPES NATIONALISTS MAY BE INTERESTED AS WELL

(By Harold Callender)

PARIS, July 20.—It came to light this week that the French Government had again been in secret and unofficial contact with the Algerian rebels in quest of a negotiation. Similar feelers had been put out last October without success.

They were secret, for a while, because it was hoped that if they failed the fact might not become known. Anyhow, it is difficult for a great nation to seek talks with those whom its leaders have condemned as terrorists unworthy of speaking for Algerians, and who demand an independence that France refuses to concede.

The feelers became known when three Paris newspapers opposed to the Government's policy published what appeared to be circumstantial details of the visit to Tunisia by an aid of the Foreign Minister. These details were, of course, known to the rebels who might have desired their publicity.

Meanwhile the sincerity of the Goverment was called into question because another of its arms, the counter-espionage service, had arrested and searched a Moslem interme-

diary who had flown to Paris from Tunis in connection with the feelers.

The divisions that always exist within governments are especially conspicuous in Paris since all governments here are coalitions. If some ministers hoped for peace by compromise, or perhaps only for a gesture toward peace that might impress the foreign world, others have so far stood stiffly against any major concessions.

PERSONAL EMISSARIES

Apparently the Foreign Minister, Christian Pineau, and the Minister for Algeria, Robert Lacoste, had separate personal emissaries in Tunis this month, though not necessarily for the same purposes. M. Pineau is concerned about United Nations criticism of France's Algerian policy. M. Lacoste is concerned mainly with beating the rebels.

The tough line personified by M. Lacoste, who has been subject to increasing criticism in France, has dominated official policy so far. But the general opinion is that it has failed to achieve its aims.

The somewhat hectic quest of a new policy is dictated by several considerations:

1. There is the United Nations deadline. Algeria will again be discussed by that organization in the autumn. The view here is that in February the Political Committee of the United Nations gave France a kind of respite, meanwhile suspending judgment. The respite has still brought no solution and no new policy.

2. There is European union, symbolized by the treaty for a European common market which the French National Assembly has just approved. The treaty calls for associating the overeas territories with the common market. This can hardly be seriously undertaken while Algeria is in a state of guerrilla war.

3. There is the Sahara, rich in minerals and oil. Some suggest it may become a second Middle East in terms of oil resources. Many suggest it may go far toward making France independent of Middle Eastern oil.

There are two reactions here. One is that France's oil independence would be worth the price of Algeria's political independence.

OIL FOR DEVELOPMENT

Another reaction is to suggest that France should use the oil to pacify Algeria. It is proposed that France announce that what she wants is the oil, not the profit on it; that she intends the profits shall go to the adjoining territories, including Algeria, Morocco and Tunisia, to finance the economic development in those countries which is now financed by the French state.

Although the Algerian problem is closely linked with France's economic needs, it has been discussed mainly as a political issue.

The President of the Republic, René Coty, and the Premier, Maurice Bourges-Maunoury, have virtually ruled out independence and it would be difficult to withdraw from this position. At the other extreme are some, notably the writer Raymond Aron, who urge that Algeria cannot be considered a part of France and that its future independence should be accepted. Between these two views is that of Jules Moch, French delegate to the United Nations disarmament subcommittee, who proposes partition of the country between an Algerian state with wide internal sovereignty and a European community forming a prolongation of France.

The French were also reluctant to grant independence to Tunisia. The Tunisians were wise in not at first demanding it. They first sought and obtained internal autonomy and independence quickly followed. A similar procedure is predicted for Algeria.

But Algeria is a very different problem because of the approximately 1,200,000 Europeans, mostly French, who would perhaps revolt before accepting an Algerian state comprising about 8 million Moslems. It is their attitude that ties France's hands. Nobody has yet found a way of reconciling independence for Algeria with the rights and interests, and above all the emotions, of these descendants of 19th-century French settlers.

Consequently public opinion has not crystallized behind any of the views outlined above, or behind any other views. The same is true of parliamentary opinion, which varies even within party groups. But the trend is away from the official line and toward admitting that Algeria is destined to become independent to some extent and at some time. Although it runs directly counter to the traditional French doctrine of assimilation of overseas territories reflected in the constitution, the British term "commonwealth" is creeping into the French language to designate the ultimate status of overseas territories.

FOREIGN CONCEPTION

It is a very un-French word, for it embodies an un-French conception. Its use signifies that many Frenchmen are coming to believe that former empires have to be liquidated and that Britain has found a good way to liquidate hers while France has found none.

The comparison has limited validity. For the British Commonwealth, a delayed result of the American Revolution, was developed as a new kind of link with English-speaking dominions and was later extended to Asiatic and African countries like India, Pakistan, and Ghana as an experiment too recent to be finally judged. Yet the term "commonwealth" has its uses here in suggesting there might be a kind of independence that need not mean complete separation of overseas territories from France.

Freedom of Association

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why Not 'Freedom of Association' For Everybody?", from the July 26, 1957, issue of the U. S. News & World Report.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY NOT "FREEDOM OF ASSOCIATION" FOR EVERYBODY?

(By David Lawrence)

The Supreme Court of the United States on June 17 last added to the Bill of Rights of the Constitution a new phrase—"political belief and association."

The Court said: "Nor can the first amendment freedom of speech, press, religion, or political belief and association be abridged."

The words "political belief and association" have never been in the Constitution, nor has there ever been a definition by the Supreme Court of what is included under "political belief and association."

We are ordered now, however, to accept as the supreme law of the land this edict from the Court:

"Merely to summon a witness and compel him, against his will, to disclose the nature of his past expressions and associations is a measure of governmental interference in these matters."

This means that the citizen who knows, for instance, through his associations that members of a so-called political party are plotting the overthrow of his own Government, is under no obligation to divulge his knowledge of a prospective crime of treason.

This raises a significant question: Does such ironclad protection for Communists and subversives extend to the political belief and association of loyal Americans?

Many workers, for example, conscientiously hold, as a right of political belief and association, that they should not be compelled to join a labor union organization—and, of course, labor unions are in politics. But employees are forced to sacrifice their beliefs as the price of a job.

Many employers hold, as a right of political belief and association, that they should not be compelled to dismiss employees who decline to join unions. But Federal law today compels the employer to dismiss such employees unless they are willing to conform to the belief of the majority in a plant.

May we assume now, therefore, that the right of association—which, in theory, is a right given to the employee and the employer alike—cannot hereafter be abridged and that this provision of the existing law now violates the first amendment?

What shall be said, moreover, of the compulsory process visited on the employer by the same statute requiring him to bargain collectively with the agents of a majority of his employees? The employer today is not permitted to recognize any minority of individuals who may wish to make separate arrangements with him for compensation.

Since by mere fiat of the Supreme Court the Constitution is now so readily amended, it would appear logical to petition the Court to add just a couple more words so that the phrase will read: "political, economic, and sociological belief and association."

An economic or sociological right is precious as any political right. Indeed, the three are inseparable.

As for sociological belief and association, the Supreme Court can hardly forget that it specifically emphasized sociological considerations when it ruled in 1954 in favor of mixed schools. Sociology can be regarded now as a part of political science anyway.

Surely citizens who band together to choose the companions for their children in public schools are entitled to all the privileges and immunities that members of the Communist Party now are to enjoy. Should not freedom of association be applicable also to education generally? Is it to be limited solely to the professors and teachers and not granted to the parents or to the students themselves?

If, for instance, some citizens wish to join with others in establishing mixed schools for their children, should not this right of association be respected, along with the right of a community to provide separate but equal facilities so that all-white associations and all-Negro associations can be preserved through processes of volition rather than compulsion?

For if freedom of association is now an integral part of the Constitution, this freedom should be available to the millions of citizens who never have faltered in their faith in the American system of government. It should not be confined to those who now have been given by the Supreme Court the right to advocate publicly the forcible overthrow of our Government and to conceal their associations with a political party having secret alliances with a foreign government that is hostile to us.

Let us hope that the Supreme Court, which now has become virtually a legislative body, will, as Congress does, respect the right of petition.

May the Supreme Court of the United States listen to the pleas of the people and apply the equal protection of the laws to all citizens, so that not just a few thousand Communists but everybody may enjoy freedom of association.

The Secretary of the Treasury, Mr. Humphrey

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. SPARKMAN. Mr. President, I have much admiration for Secretary of the Treasury Humphrey. I have differed with him on many of his viewpoints, but I have always recognized both his ability and his sincerity. As he leaves the office of the Secretary of the Treasury, we are entitled to the views of those who have been in position to appraise his work. One such viewpoint was expressed in a recent letter to the Washington Post from Seymour Harris, chairman of the department of economics, of Harvard University.

I ask unanimous consent that this letter be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MR. HUMPHREY'S LEGACY: A CRITICAL APPRAISAL

The press almost universally has greeted Secretary Humphrey's announced departure from public life with encomium. Indeed the Secretary has many virtues: he is smart, shrewd, persuasive, aggressive, hard working, and determined. (Even when in disagreement, one senses a powerful intellect in presenting the wrong position.) Above all, one knows where he stands. I wish I could join the chorus of praise that is traditionally showered upon a departing official.

But the above virtues are not enough to make a great Secretary of the Treasury. Future historians will not be misled by the paeans of praise. The originality and skill of Alexander Hamilton in dealing with our monetary and debt problems, the theoretical insight and genius for finance and administration revealed by Albert Gallatin, the unusual capacity shown by John Sherman in the resumption of payments after the Civil War, and the flexibility, and ability to use staff of Morgenthau—these are missing in Mr. Humphrey.

In 1954, when he was called before the joint committee to assess once more the foolish and clumsy dear-money policy of 1953, he would only say and say again and again that if he had to do it over again, he would do it in every detail as in 1953. He would not change a single move, he told the Joint Committee on the Economic Report. In contrast, Chairman Martin of the Federal Reserve Board freely admitted mistakes had been made. This is an example of the Secretary's rigidity.

His inflexibility and unwillingness to learn is suggested by his asserting time and again that taxes should be cut at the top of the boom just when virtually every economist would hold taxes should be increased. He, like ex-President Hoover, had failed to learn that fiscal policy should be tailored to fluctuations in the private economy. (One can be a conservative and yet absorb the A B C of modern economics, as Congressman MILLS so eloquently showed recently.)

When, in 1954, a tax cut was the appropriate action, Secretary Humphrey supported such a policy—but it is clear now, not because he had absorbed or shown the slightest interest in the advances of modern economics, but rather because tax cutting was part of the administration's platform.

Throughout his 5 years in office, he has adhered to economics of a bygone age which takes little account of the relation of spending to economic prosperity.

His ignorance of the elements of modern economics is also attested by the furor he raised over the 1958 budget. Had he not concentrated on the dollars involved but on the budget in relation to the size of the economy, or the rising national income even as public expenditures rose, he would have known that there was no danger in the current budget. In fact, the weight of the budget had been greatly reduced in the last 5 or even 10 years.

The danger, in fact, lay elsewhere. It lay in the attempts of a powerful personality to impose his outmoded views on the Government. In the giant budgetary cut of 1954, which weakened our military and international position, the Secretary was not satisfied to be merely a Secretary of the Treasury.

He had to take over defense—even as today his interference in the spending on health, education and social security has endangered the programs of the Department of Health, Education and Welfare and numerous other programs, such as foreign aid, depressed areas, slum clearance, flood insurance, and, of course, defense. At least, Secretary Folsom, the able head of HEW and former Under Secretary of the Treasury, has lost the Treasury touch, a good thing for the country.

Perhaps Secretary Humphrey's greatest blunders result from his determination to take over the budgetary prerogatives which are not traditionally his. This country has a budgetary system under which the Director of the Budget, reporting to the President, squeezes the water out of the budget. But not content to assume the responsibility for proposing tax measures, Secretary Humphrey tried (and to some extent succeeded) to take over the Budget Bureau as well. It is common knowledge in Washington that acting over the head of the Director of the Budget he pressured departments to cut their budgets.

His final outcry which has so embarrassed the President, despite the President's announcement of identity of views, reflected his intense frustration, his determination to impose his views on economic policy, and his violation of the principles of the American system. Never before had the Secretary of the Treasury repudiated the budget of his President and asked Congress to make it over.

In 5 years, despite his persuasiveness and determination, the Secretary has failed to achieve any of his fundamental objectives.

Federal expenditures are way above those of any peacetime year.

The rate of interest has gone sharply upward.

In the last year inflation has exceeded that of any peacetime year in the last 25 years and averaged several times that of the nonwar years (exclusive of immediate postwar years) under the Democrats.

In no area are the failures more evident than in the management of the national debt. The redistribution and the lengthening of maturities were "musts" for the Treasury. Yet despite the meteoric rise of rates, not since the latter part of the 19th century has the Government security market been in such bad shape as at present. It requires some genius to accomplish this, not when debt is rising as in World War II or in the 1930's, but when debt is falling.

We have every hope that the able new Secretary will not follow in the footsteps of the departing Secretary. Not the $72 billion budget, but the lack of comprehension of modern economics such as shown by Secretary Humphrey might conceivably bring a hair-curling depression.

SEYMOUR E. HARRIS.
CAMBRIDGE, MASS.

Segregation: Sauce for the Goose?

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Segregation: Sauce for the Goose?" from the July 1, 1957, issue of Newsweek.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEGREGATION: SAUCE FOR THE GOOSE?

There are more Italians in New York than in Rome, so the legend goes, more Irish than in Dublin, more Jews than in Israel—and more Negroes than in Birmingham, Ala. This compound of 8 million heterogeneous souls most of the time lives in peace.

But, last week, the melting pot was set to boiling.

The fire under the pot was started with a bill offered by New York City Councilman Earl Brown, a Democrat, and Stanley M. Isaacs, a Republican, aimed at barring all discrimination—on the basis of race, creed, or color—from all 1.8 million privately owned apartment houses and tenements in the city. (Previous bills had already outlawed discrimination in housing projects in which public funds were involved.)

The bill was regarded as a sure thing—so much so that organizations interested in its purpose did practically nothing about it. After all, Mayor Robert F. Wagner, Jr., himself has come out in favor of the bill at a dinner of the Urban League, and Joseph T. Sharkey, majority leader in the city council, had signed his name to it—a familiar New York City political maneuver to demonstrate that it was administration-sponsored and, therefore, should be passed without any back talk.

UNEXPECTED ATTACK

Then, just 4 days before the bill was to come up before the city council's committee on general welfare, property owners of New York woke up and rushed into battle with a vigorous campaign of newspaper advertisements and leaflets. The real-estate boards delivered a message to tenants:

"We abhor prejudice based on color and race and we abhor bigotry," the ads read. "But we strongly object to this wanton invasion of basic property rights. This proposed law would compel the rental of apartments and the sale of cooperative apartments to persons whose occupancy could make your homes less attractive to you."

The New York Times, unrelenting in its demands for desegregation in the South, devoted a column of type to deciding it was against the bill as "the wrong way to a right end." "Compulsion," the Times felt, "is a dubious substitution for education * * *."

The forces of nondiscrimination countered (40 organizations signed an advertisement, The Truth About the Fair Housing Bill, that appeared in the papers 3 days later), but it was too late. The mail flooding into City Hall was 3 to 1 against the bill. The council's welfare committee voted to shelve the measure indefinitely "for further study."

"What is sauce for the Dixie goose is not sauce for the Manhattan gander," wryly commented the Charleston, S. C., News and Courier, while the Evening Post (also of Charleston) remarked: "One's heart is apt to be wrung with compassion over the agony suffered by the New York Times."

The Situation in the Kremlin and in the Communist World

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. SPARKMAN. Mr. President, there are many different viewpoints regarding the present situation in the Kremlin and in the Communist world.

In the New York Times of July 20, 1957, a column by Mr. C. L. Sulzberger under the heading, "Can Communism's Melting Ice Pack Be Refrozen?" Mr. Sulzberger has given us a most interesting discussion of the present situation and some of the prospects of its outcome.

I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN COMMUNISM'S MELTING ICE PACK BE REFROZEN

(By C. L. Sulzberger)

PARIS, July 19.—There can now be no doubt that the great Soviet ice floe has broken and is floating cumbersomely downstream on an uncharted course toward some unknown ocean. Both physically and politically there is more movement in the Communist world than at any time since its glacial formation was extended to the Danube and the China Seas.

The wanderlust of Marxist leaders has become frenetic. Not only do Khrushchev and Bulganin continue their uninhibited voyages. Mao Tse-tung, the orbit's grand old man, is planning a journey to the U. S. S. R. and satellite Europe. Ho Chi Minh is on the first lap of a western tour. The Albanian and Bulgar bosses are in Russia. And Tito's two lieutenants, Kardelj and Rankovic, have gone to Moscow—a capital which 3 years ago regarded them as renegades. Presumably they seek more than healthful mineral waters.

At the same time there is creaking and groaning within communism's political structure. Soviet purges have certainly not ended. All the minor followers of Molotov and Kaganovich, of Malenkov and Shepilov, are bound to be displaced. Where they will end up—whether in prison or in anonymity—cannot be foretold.

SATELLITE PURGES

Dislocations at the Empire's heart are being mirrored on its peripheries. Dutiful Rumania has staged its own little purge, demoting one renowned Stalinist and his chameleonlike associate. Bulgaria has followed suit—but in paradoxical Balkan fashion. Three party chiefs were fired. But the upshot was to make Chervenkov, the country's outstanding Stalinist, stronger rather than weaker.

Nobody pretends to know where this drift will end. The Yugoslavs are happy because their battle against Stalin seemingly has been vindicated. They do not disguise their delight at Molotov's downfall. But they admit to no knowledge of total doctrinal reconciliation between their strange heresy and orthodoxy. Titoism insists one of its bases is the system of factory workers' councils. Khrushchev regards the idea as nonsense.

Czechoslovakia wants to establish order in the disintegrating pack before it crumbles and sweeps with it the survival capacities of Prague's present leadership. For they are the same men who, at Stalin's command, liquidated every reputable Titoist.

A NEW COMINFORM?

In an effort to refreeze the situation Czechoslovakia has suggested to the Kremlin that some new kind of Cominform be established. This idea is being chewed over among the divers Marxist travelers.

From Prague's viewpoint this is particularly desirable before the cracking ice engulfs the local administration, the only one outside of miserable Albania which has not been altered substantially since Stalin's death. If the Communist pattern can be tidied up, the Czechs think they can adjust to whatever new conformity is decreed.

Otherwise they fear the swirling current. Already they see to the north of them a Poland which, in the name of Marxism, is tolerating the Catholic Church, private land ownership, and small capitalism. To the south they see sulky, turbulent Hungary. And still further south is Tito's stubbornly sectarian Yugoslavia.

But what is the value of another Cominform? Eighteen leaders from nine national parties signed the communique creating that body in 1947. Now, 10 years later, seven of these are in prison, in exile or disgrace. Four are dead. Only seven survive in positions of authority.

THEIR PREDECESSORS' FATE

Any insurance company would consider rates prohibitive for a new batch of ideological censors. The Yugoslavs, who have reason to be cynical, think the most that should come from Prague's maneuver is a new magazine discussing dogma. But who would guide it, Moscow? Would Khrushchev accept the heretical views of Mao, Gomulka, and Tito?

The fate of Comintern and Cominform officials is small inducement for anyone to lend his name to a revived organization. Stalin's brutal murders took care of the majority of well-known Cominternists. As for the Cominform, abandoned only last year: Djilas, of schismatic Yugoslavia, is in jail. Poptomov, of Bulgaria, is dead. Rumania's Ana Pauker is under house arrest. Hungary's two signers, Farkas and Reval, are respectively in prison and in exile. Poland's Minc has been politically castrated. Czechoslovakia's Slansky was executed and his colleague, Bastovansky, disappeared 6 years ago.

Italy's Reale was fired from the party. Russia's Zhdanov is in the grave. Malenkov may soon wish he were. Only in France, where the obstinate Communist hierarchy remains both strong and Stalinist, are Duclos and Fajon, the two original Cominform signatories, alive, kicking, free, and respected by their comrades.

Nobody can tell whether Khrushchev, who released the ice jam, will try to again congeal the forces he has liberated. Nor can anyone foresee if he will endorse attempts to invent a neo-Cominform. Such a body could scarcely be conformist.

Oil Industry's Financing Problem

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. MARTIN of Pennsylvania. Mr. President, in our country governmental expenditure is not the only item in connection with which large figures are mentioned.

The oil industry states that it will require $73½ billion in new and improved facilities in order to meet the demands by 1965.

The subject is discussed in an editorial appearing in the Oil City Derrick of July 15, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OIL INDUSTRY'S FINANCING PROBLEM

When a figure such as $73,500,000,000 is mentioned, we automatically think of Federal spending.

But the $73.5 billion in this case has nothing to do with the Government. It's the amount of money, according to an official of a major oil company, that the oil industry must invest in new and improved facilities to be able to meet anticipated demands by 1965, a mere 8 years away.

There are three principal sources where the industry can get such funds. First, the industry has relied heavily on plowing back profits to finance growth. In the most recent year for which such figures are available, the industry spent a substantially higher part of its profits for this purpose than it did in paying dividends to stockholders.

Second, there are depreciation funds—money set aside to cover the cost of facilities that are wearing out. In this era of inflation, however, these funds are inadequate to meet replacement requirements, hence are of no help in expansion programs.

Third—and of growing importance—is new capital attained by selling shares in oil companies to investors. In other words, this new capital must come out of savings.

As the oil company official says, "the problem of savings is the keynote of the oilman's problem of where the money is coming from; he so desperately needs a financial climate that makes it possible to save and to provide the incentive for others to invest in his business."

Those who write our laws on taxes and other subjects should remember this

A Way Out in Algeria

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. HUMPHREY. Mr. President, the Senate's attention has recently been directed to the disintegrating situation in Algeria. Among the proposals for a constructive resolution of this explosive problem is the suggestion that there is a role for NATO to play in conjunction with the Sultan of Morocco and the Premier of Tunisia. This proposal is discussed in an article entitled "A Way Out in Algeria," which was written by Sal Tas and appeared in the New Leader magazine for June 24, 1952.

I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A WAY OUT IN ALGERIA

(By Sal Tas)

PARIS.—When Robert Lacoste took power in Algeria as Resident Minister 16 months ago, he told the French Assembly: "Give me 70,000 men and in 2 weeks I can settle the matter." There are now 400,000 French troops in Algeria, and peace is farther away than ever.

Guy Mollet, the Socialist Premier-designate, had appealed to Lacoste on February 6, 1956, in a state of nervous collapse. Appearing in the city of Algiers, Mollet had been greeted by a Fascist demonstration, which placed him in a mood for complete capitulation to the colonial elements in Algeria. He turned to Lacoste, and Lacoste's repressive policies gained the Mollet government the rightwing support that enabled it to set a record for longevity in the Fourth Republic. The rightwingers swallowed some courageous social measures, but they refused to pay the bill when Mollet finally presented it. Mollet was overthrown, and, after several others had attempted to rally support, Maurice Bourgès-Maunoury organized a new Cabinet.

Bourgès-Maunoury, a member of the Radical Party, had served in the government of Pierre Mendès-France, then in the Cabinet of Edgar Faure, Mendès-France's adversary, which succeeded it. He was Defense Minister in the Mollet government, a leading advocate of the Suez expedition, and supporter of Lacoste in Algeria. As Resident Minister in Algeria in his new Cabinet, Bourgès-Maunoury promptly named Robert Lacoste. And so the policy of armed repression which both Mollet and Mendès-France denounced during their electoral alliance in January 1956 will continue.

Yet the situation in Algeria seems as hopeless as 2 years ago. At Melouza, the rebel National Liberation Front (FLN) recently massacred 300 Arab men and boys, for the sole purpose of retaining its political monopoly among the guerrillas. The massacre showed again how cruel and reckless were the present leaders of the Algerian resistance movement, giving point to Mollet's question: How can one deal reasonably with such people and expect to protect the 1.3 million Frenchmen who live in Algeria?

Yet the solutions advanced by the loudmouthed leaders of the white minority in Algeria are of no help either. They not only boycott every measure of reform that might benefit the Arabs; they even strike against measures which would give Arab intellectuals a share in the civil and economic administration. The political power of the colon leaders must be smashed before any reasonable compromise can be attempted. For though the Algerian Arab community has been shocked by the Melouza massacre, it has not joined the French. The Algerian Moslems understand that a French victory in the present circumstances, with the colonial group in undiminished power, would condemn them to eternal subservience. They have no confidence in paper promises, even if the paper is that of the French Constitution.

How, then, can this terrible war be ended? It is doubtful that France can do it alone—first, because of its own political contradictions, and second, because it is not strong enough to enforce any deal it might make with the Algerians. Its 400,000 troops are already unable to protect both the French in the cities and the Arabs in the villages.

Of course, Algeria might be abandoned completely and its 1.3 million Europeans evacuated. But this would present the French state with huge problems of resettlement; it would cut France off from the Sahara; and it would mean economic catastrophe for Algeria itself.

Partition is another possibility. But this makes little sense, because Algeria is short of fertile land. To please the French, one would have to deprive the Arabs of almost every acre of decent land; and the Arabs would be fully justified if they refused such an offer.

Perhaps NATO channels offer the best possibility of solution. NATO has a stake in North Africa's military bases. It has the power to impose its decisions. And it has the funds to soften the economic effects (for both sides) of Algeria's separation from France.

But little can be done without the cooperation of Tunisia and Morocco. It is through the frontiers of these two countries that the men and material come to support the Algerian rebels. Without such assistance, the FLN would have had to capitulate long ago. On the other hand, the governments of Tunisia and Morocco are far more realistic than the present Algerian leaders and realize the ill effects of the continuation of the war. Therefore, they could well play the role of the Arab voice of reason in efforts toward a solution.

Perhaps one might try to create a North African Federation, with a ruling council, in which the leaders of Tunisia and Morocco would sit along with those of Algeria. All these together would then guarantee the new status of Algeria, including guaranties for the lives and goods of its 1.3 million Frenchmen. NATO would have great influence on such a council, because all three lands have economic deficits and Algeria is most deficient of all. In accepting a North African Federation (and this has long been a pet idea of Tunisian Premier Habib Bourguiba and Morocco's Sultan Mohammed Ben Youssef), the Tunisians and Moroccans would be taking on even greater deficits than they face today. This would make them most receptive to a broad program of NATO economic aid for the area on reasonable but decent conditions.

Bourguiba and the Sultan should work out such a solution together with representatives of France and of NATO. When a solution is formulated, the two North African leaders should present it to the Algerian Arabs. Surely they will persuade the reasonable elements among them, and quite probably the rebel leaders could also be induced to cooperate. At worst, the FLN would split, with its more reasonable leaders following Bourguiba and the Sultan.

The West, however, must take one important precaution: In inviting Bourguiba and the Sultan to work out a solution, it should be understood that they will stick to the solution they have worked out. In other words, should the rebels reject a proposal that bears the stamp of independent Tunisia and Morocco, then the Sultan and Bourguiba would have to break off relations with them and close their frontiers to them. For then it would be apparent that the rebels would reject any reasonable compromise. If stern measures then became necessary, the world would know who was responsible.

The solidarity of Tunisia and Morocco with NATO in evolving a joint policy for Algeria is essential. For only thus can the extremists in both camps be isolated. The problem cannot be solved unless NATO's policies command the support of a large group of Algerian Arabs. The way to win that support is to create a united front with the independent Arab leaders of Tunisia and Morocco.

The Tunisians and Moroccans are realistic enough to understand that we have no interest in listening to their counsels unless they themselves are willing to fight for the solutions they work out. Such a solution is, quite obviously, in their own best interest. It will become all the more obvious the more attractive we make a solution in economic terms. The Algerian war is so costly that a major effort is certainly justified.

The Government Bond Market

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. SPARKMAN. Mr. President, in the Washington Post of yesterday there appeared an article, originating with the Chicago Daily News Service, entitled "Prudent Man Pulls Props of United States Bonds." It is a very interesting article, and throws further light on what we are going through with the high interest rates in the Government bond market. One point the article makes clearly, as careful analysis shows, is that it is the little man who usually gets frozen out.

So it is in this instance. The E-bonds are sold, and have been sold over the years, upon the plea of patriotism. The people are told it is patriotic to buy them. Yet, it is the little purchaser of the E-bonds who is always frozen out when the high-rate bonds are issued by the Federal Government.

I ask unanimous consent that the column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

MYTHICAL FIGURE: "PRUDENT MAN" PULLS PROPS OF UNITED STATES BONDS

CHICAGO, July 20.—The "prudent man" has been quietly pulling the props from under the United States savings bond program. A mythical, legal figure, the "prudent man" is one who handles other people's money with the responsibilities of a trustee.

He may be the trust officer of a bank or an official of a pension fund, credit union, or savings and loan association.

He differs from the rest of us in that his legal liability is always judged by what a prudent man would have done under the same circumstances.

Because of this liability, he tends to be less influenced by emotions in handling money than others whose only responsibility is to themselves.

Bankers and brokers here report that in recent months they have been deluged with requests about savings bonds from the "prudent man." He will call up and say that he is holding savings bonds for his client.

ADVISERS OPPOSE CASHING

He wants to know how much of a gain he could make by cashing the savings bonds and investing the proceeds in the usual, open-market, coupon-type United States Government securities.

Many of the Nation's large banks and brokerage houses have an inviolable rule that no official or employee should ever advise a customer to cash United States savings bonds. Such a course might be considered "against" the Government, even unpatriotic.

This has helped prevent any rush to cash savings bonds. When the customer comes in proposing to cash bonds, the adviser generally fails to go along with the suggestion.

But the "prudent man" type is a more-than-average sophisticated investor. He isn't turned away easily.

So the bankers and brokers give him the information. They know he'll get it somewhere else if they don't provide it.

During the period of tight money the indicated gain by switching to open-market United States securities has been about one-half of 1 percent.

REDEMPTION FIGURES

That sizable amounts of funds, handled by this class of investor, have been deserting the savings bond program is indicated by redemption figures.

In 1956 redemption and maturities of series F, G, J, and K savings bonds totaled $3.4 billion, against sales of only $475 million.

Of the $2.3 billion of F and G series redeemed in 1956, $1 billion represented bonds that had not matured.

In April 1957, the redemptions and maturities of these series hit $237 million, against sales of only $18 million. Sales of the J- and K-bonds, which replaced the F- and G-bonds in 1952, were terminated on April 30, 1957.

In contrast, the series E and H bonds, sold by payroll deduction, had redemptions of $4.8 billion in 1956 against sales of $5 billion. In April this year the redemptions of these series were $469 million, against sales of $372 million.

On May 31, 1957, the Treasury had $14 billion of the F-, G-, J-, and K-bonds still outstanding. The redemption threat from these issues may have been enhanced by offer Thursday to pay 4 percent on 1-year Treasury certificates.

Railroad Service for Wisconsin and the Nation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 22, 1957

Mr. WILEY. Mr. President, one of the severe problems which is being encountered in many long established communities throughout the United States is that railroad service is being cut down, in instance after instance.

Anyone who has ever lived in a town which has suddenly found that the one passenger train coming to it has been withdrawn, or that rail service has been reduced in frequency each week, knows the problem that this can cause to an entire community.

I send to the desk now an article from the front page of the Milwaukee Journal of July 20. It describes an action by Wisconsin's State Public Service Commission in objecting to numerous applications for the reduction of passenger-train service. I cite this article because it is symptomatic of a problem being encountered throughout America.

Naturally, the decision of a State regulatory body such as the public service commission is a matter basically of State jurisdiction, and it is not for us, of the Federal Government, to interfere either pro or con. But the question of the economic health of America's railroads, their economic capacity to furnish service, is a matter for us very carefully to consider at the Federal level. Therefore, I hope that our colleagues of the Senate and House Commerce Committees will give this overall issue of the railroads' economic health and capacity to serve their careful attention.

The lead article in this week's issue of Business Week is devoted to the plight of the railroads.

We are not going to get back better railroad service by denouncing the railroads. Nor are we going to get better railroad service by closing our eyes to the fact that the rails themselves have not always been as foresighted as they should have been in modernizing their services and improving their help to the American public.

Nor are we going to get better railroad service by failing, in all fairness, to note the advantages which accrue to the Nation's air carriers or highway carriers.

This, then, is not a subject for abuse; it is a subject for earnest, fair, objective study. I am sure that would be the position of the Association of American Railroads, or that of any other group which is interested in solutions to this problem, and not in criticism.

I ask unanimous consent that the article from the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUBLIC SERVICE COMMISSION RAPS AT CUTS IN RAILROAD SERVICE—ROADS URGED TO RECONSIDER PUBLIC EFFECTS—STATE BODY "PUTTING FOOT DOWN" UPON AN INCREASING NUMBER OF REQUESTS

The State public service commission (PSC) in effect has put its foot down on increasing railroad requests to cut passenger services in Wisconsin. In an unusual action, the PSC urged railroads to reevaluate passenger train services with public interest as the primary consideration. The PSC statement, in the form of an opinion, was attached to an order Friday denying a Milwaukee road application to end passenger train service between Milwaukee and Berlin (Green Lake County) because of rising costs. Opinions of this kind are rarely issued by the commission.

George P. Steinmetz, Madison, chairman of the three-member regulatory board, said the statement dealt particularly with the Milwaukee road discontinuation case, but applied in some degree to all passenger train cases.

"PUTTING FOOT DOWN"

Steinmetz said there had been a great number of such requests in the last year, and blamed the decrease in service on both rising costs and lack of passengers. As an example, he said, there is now no train service between Milwaukee and Madison because travelers use their own cars or ride buses.

In effect, Steinmetz said, the board was "putting its foot down."

Advantages of adopting small, self-contained passenger rail units should be studied by railroads, the commission's opinion urged. Those units, powered by diesel engines, would require smaller crews and operate profitably on considerably less revenue, it suggested.

The law requires the Commission to consider whether proof that a more economical means of providing passenger service than the means used exists in train discontinuation proceedings. In some cases, railroads have cited bus service as an alternate for areas left without further passenger rail service.

MAY BE TURNING POINT

The statement of policy by the Commission may be a turning point in its attitude toward alternatives—pointing up to railroads the necessity of exploring fully the possibilities of providing alternate passenger rail service.

The Commission said it had found that crew wages comprised a substantial portion of the total cost of operating the trains which railroads sought to discontinue. It said that apparently was due to contract and operating rules provisions.

"The Commission realizes that it has no jurisdiction over contract negotiations between management and labor," the statement said, "nor does it intend to interfere with the fundamental rights to bargain."

Referring specifically to Friday's Milwaukee road discontinuation denial, the Commission said it had not been established to its satisfaction that possible use of alternate equipment had been fully explored. It said it believed that a single Budd diesel car, having a seating capacity of 71 passengers and a 17-foot express-baggage compartment, would serve the purpose.

PUBLIC INCONVENIENCE SEEN

Abandoning the service, the PSC said, would cause hardship and inconvenience to the public. Two weekday trains serve Horicon, Hartford, Waupun, Ripon, and intermediate points.

Need for continued service outweighs the financial loss of 70 cents a train mile which the railroad claimed it is suffering, the PSC order said.

There is no proof, the Commission noted in referring to this case, that a serious attempt has been made both by management and labor to negotiate a method under the unique circumstances prevailing, that would permit operation of present equipment or single unit self-propelled equipment.

This should be done at a level where revenues equal out of pocket expenses, it stated.

Steinmetz said the nationwide passenger train discontinuance problem was being studied by the National Association of Public Service Commissioners.

He suggested that both the men who run the trains, conductors and enginemen and all, should work together with the railroad owners to exhaust all possibilities of continuing present service before attempting to halt schedules.

MAY ORDER RECALLED

Steinmetz said Saturday he could not estimate the number of requests made of the PSC in the last year, but there had been a greater than average amount.

Many of the cases involved limited service between small communities. The biggest recent case was last May, when the PSC authorized the North Western road to drop 9 passenger trains in Wisconsin, partly eliminate or consolidate 5 and substitute bus service for 4 others. The trains affected represented about one-fifth of the road's passenger service in the State.

The city of Milwaukee, in that case, had asked for a Statewide study of rail passenger operations.

The Milwaukee Road was authorized to terminate its 103-year-old service between Milwaukee and Madison last January. North Western service between the cities was dropped in the May order.

Commenting on the PSC opinion, Leo T. Crowley, board chairman of the Milwaukee Road, said he would be very happy to cut operating costs. He said railroads had been continually studying the problem.

"It's not as easy as it sounds," he said. Railroads have been losing short-haul passenger business, Crowley said, because families prefer cars or buses.

CITES LANNON CREWS

"We can't hope to break even between Milwaukee and Madison," he said.

To the PSC's suggestion that railroads might run some schedules with smaller crews if it could be arranged with the unions, Crowley said that Wisconsin law provided for at least 5-man crews for any train with more

than 3 cars. That law, he said, would have to be modified and new arrangements made with unions.

Smaller trains are being studied now, he said.

Crowley said the Milwaukee Road had dropped 7 or 8 trains in Wisconsin in the last 2 years.

Ben W. Heinman, board chairman of the North Western road, declined to comment until he had read the PSC statement.

Death of Emil Syftestad

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. THYE. Mr. President, last Wednesday and Thursday, in the St. Paul Dispatch and the St. Paul Pioneer Press, Mr. Alfred D. Stedman wrote two articles on the death of Emil Syftestad, a great leader in our State. Mr. President, we have lost a great farm leader in the death of Mr. Syftestad. I ask unanimous consent to have the articles, written by Mr. Stedman, printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Paul Dispatch of July 17, 1957]

DIES IN AMBULANCE—EMIL SYFTESTAD, WHO HELPED FARMERS CO-OP, DEAD

(By Alfred D. Stedman)

Emil A. Syftestad, of St. Paul, 65, who as its general manager led in building the Farmers Union Central Exchange into one of the Nation's biggest supply cooperatives, died Tuesday night.

Death came to Mr. Syftestad in an ambulance on the way to the hospital.

He had suffered a heart attack at his home at 1724 Berkeley, Tuesday evening. An earlier attack of coronary thrombosis struck him down more than a year ago, putting him in the hospital for several weeks. Recently he had been working at the Farmers Union Central Exchange headquarters building in South St. Paul a couple of hours a day.

A native Minnesotan, Mr. Syftestad devoted his entire life to the cooperative movement. First he was a grain-elevator employee in Montana. Then he went with the Equity Cooperative Exchange, the embattled pioneering grain co-op of St. Paul. Finally he moved into the supply cooperative field.

A trained accountant, he moved naturally into the business and financial end of the cooperative. He grew up with the Farmers Union Central Exchange, practically nursing it himself from an infant in swaddling clothes to a giant.

At first he was manager of the supply division of the farmers union grain co-op. Then he grew naturally into general management of the Farmers Union Central Exchange when that was separately established 26 years ago.

He built this business of farmers in supplying themselves with oil, fertilizers, feed, seed, equipment, and other supplies up to a total volume of more than $66 million last year, or to a point where it surpassed even the Grain Terminal Association in total dollar volume. The farmers' total savings through the co-op he built to $22½ millions.

Mr. Syftestad was a veteran of World War I, in which he served as an enlisted man. He received his high-school education in New Rockford, N. Dak., and his training in accountancy in Seattle. He is survived by his wife and two daughters, Mrs. Katherine Wills and Mrs. Margaret Failes, both of St. Paul. Funeral arrangements have not been completed.

[From the St. Paul Pioneer Press of July 18, 1957]

SYFTESTAD DEATH NATIONAL BLOW

(By Alfred D. Stedman)

Northwest farmers lost in the death of Emil A. Syftestad of St. Paul an outstanding cooperative leader and his passing was described Wednesday by men who knew his work best as a national blow.

But they said that in the Farmers Union Central Exchange, which as general manager through most of its life he helped to build from a small business into one owning and operating itself or with other co-ops oil wells, pipelines, refineries and fertilizer deposits, Mr. Syftestad left an enduring monument.

Funeral services were announced for 2 p. m. Friday in the Willwersheid mortuary, 1167 Grand, and many identified with the cooperative movement are to attend. Gifts to the Heart Fund were suggested by those in charge in lieu of flowers.

President James G. Patton of the National Farmers Union was one who described the cooperative's loss through his death as profound. Mr. Syftestad, 65, died Tuesday night of a heart attack on the way from his home at 1724 Berkeley to the hospital. He had been hospitalized by a coronary thrombosis more than a year ago, but had considerably recovered and had been working part time to the day of his death.

Mr. Syftestad, a quiet, kindly man, exerted a steady and insistent leadership in building up Central Exchange. It became an institution through which many thousands of Northwest farmers have equipped themselves and cooperatively purchased their operating supplies. Its business volume exceeded $66 million last year. Central Exchange and Farmers Union Grain Terminal Association have been major members in the FU team of co-ops.

"Death of Emil Syftestad," President Patton telegraphed from national headquarters at Denver, "is indeed a great shock to me—first, because he was one of the greatest people I have ever known, and, second, because his passing will leave a great void in the Farmers Union family.

"I know that what he has done and created during his lifetime will be a standing monument to him."

The Case of Gerald Murphy

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. NEUBERGER. Mr. President, democracy and freedom are indivisible. That is why we must be as concerned about respect for liberty in countries of our own hemisphere as anywhere else in the world. The disappearance—and probable tragic death—of a young aviator from my State has focused attention on this great issue. The aviator was Gerald Murphy, of Eugene, Oreg., only 23 years old when he vanished on a flying mission in the Dominican Republic.

Representative CHARLES O. PORTER, of the Fourth Oregon District, is the Congressman who represents the father and mother of Gerald Murphy, and Mr. PORTER has relentlessly attempted to ferret out the facts about this disturbing and troubling case.

Recently, Representative PORTER undertook a journey to Latin America in further quest of truths about the fate of Gerald Murphy. He was accompanied by an outstanding and reliable newspaper reporter, Mr. A. Robert Smith, of Washington, D. C., who covers the National Capital for many leading Oregon publications, including the Oregonian of Portland, the Register-Guard of Eugene, the Statesman of Salem, the Mail-Tribune of Medford, and the East-Oregonian of Pendleton.

In the Mail-Tribune of Medford for July 9, 1957, Mr. Smith has discussed the ramifications of the Gerald Murphy case, with its impact upon the uneasy dictatorships of Latin America. The title of Mr. Smith's article is "Latin Leaders, Editors Convinced Gerald Murphy Didn't Die in Vain."

I ask unanimous consent that this informative story by A. Robert Smith be printed in the Appendix of the Record. There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATIN LEADERS, EDITORS CONVINCED GERRY MURPHY DIDN'T DIE IN VAIN

(By A. Robert Smith)

WASHINGTON.—Top political leaders and newspaper editors in two Latin American Republics are convinced that Gerry Murphy, the Eugene flier, did not die in vain.

In Columbia and Panama, where this reporter interviewed them about the case of Murphy and Dr. Jesus Galindez, the missing Columbia University lecturer, the editors and politicians reflected these thoughts:

1. Trujillo, the dictator of the Dominican Republic, who apparently called the shots in the Murphy-Galindez mystery, is the symbol in Latin America of what all democratic elements hate and seek to undermine. With 27 years of dictatorial rule behind him, Trujillo is now the senior dictator of Latin America.

Editors and democratic leaders in Colombia, who suffered during the dictatorial rule in their own country of Gen. Rojas Pinilla before his ouster in May, are looking anxiously to the United States to shift its policy of treating the dictators as fondly as the democratic governments of Latin America. They hope for continued pursuit of the Murphy-Galindez case by the State Department so as to reveal the Trujillo regime for what it is, a reign of terror that is abhorrent to all those who love freedom and individual liberty. The feeling is no less strong in Panama.

The Murphy case, because it was vigorously pursued by Representative CHARLES O. PORTER, Democrat, of Oregon, has helped crystallize anti-Trujillo sentiment. And this has also had the effect of making Congressman PORTER, a 38-year-old Eugene lawyer who had never before been south of Panama, a hero to democratic forces throughout Latin America.

2. When the late dictator of Nicaragua, Anastasio Somoza, was shot last fall, he was flown out of his country to a hospital in Panama, where a team of Army doctors from Walter Reed Hospital in Washington, D. C., was dispatched by President Eisenhower in an effort to save Somoza's life. Eisenhower also sent a note to Somoza in which he de-

cried this dastardly attack on the Nicaraguan leader.

Editors in both Panama and Colombia said Latins who favor democracy were indignant over the President's choice of terminology. "That was not a dastardly attack," said an editor in Bogotá. "It was courageous."

In Panama City, the newspaper El Dia found several days after the shooting was over, there was so much sentiment for Roberto Lopez, the man who shot Somoza, that the paper published a special edition with a big picture of Lopez. Everyone wanted to have his picture, one of the editors explained. He said many in this Catholic country wanted to mount it and burn candles for Lopez, who was killed immediately after firing on the dictator.

Mixed in with this strong feeling against Latin dictators is quite another feeling which was on full display in the Maxim Grill in Panama City, where a calypso singer has gained fame by mocking the dictators in calypso couplets. His number about Somoza has, of course, a happy ending when the dictator is killed—"ra-ta-ta-ta-ta-ta-ta—Somoza is dictator no more."

In his number about Trujillo the singer uses the Gerry Murphy affair to ridicule Trujillo's tenuous claim to international respect. And his hero is "Senator Porter" who he sings "wants to send Trujillo to the electric chair." The reaction of the crowd is perhaps more significant than his calypso artistry, for it roared and clapped for more, obviously enjoying this ritual of laughing at the dictators.

3. Finally, there is only one overriding political issue in Latin America—democracy versus dictatorship—which energizes students and statesmen alike and provides a most stimulating intellectual atmosphere for the visitor from Washington, where a type of political cynicism and superficial sophistication too often seems to dull sensitivity in official quarters to such fundamental concerns as now preoccupy our Latin American neighbors.

Democracy for the District of Columbia

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. McGOVERN. Mr. Speaker, one of the most frustrating struggles in our national history has been the effort of the people of the District of Columbia to secure democracy. It has always seemed ridiculous to me that the citizens of this country who live in the Nation's Capital are not permitted to participate in government as voting citizens. The following editorial from the Mitchell (S. Dak.) Daily Republic of July 19, 1957, points up the shallow arguments of those who would deny the extension of democracy to the District:

IKE'S STRANGE STAND ON WASHINGTON HOME RULE

When a delegation of citizens of Washington, D. C., called on President Eisenhower in the interest of home rule recently, the Chief Executive told them that they need more good arguments for self-government and franchise. This was a remarkable statement for the President of the Unied States to make to a group of citizens who are seeking the privileges and rights of citizenship.

What arguments could they possibly need other than the fact that our Constitution declares that "the right of the citizens of the United States to vote shall not be denied or abridged by the United States or by any State" by reason of race, color, and so on? It is inherent in the American tradition that the people have the right to govern themselves and that there shall be no taxation without representation.

There would seem to be a considerable paradox in the equanimity with which the Eisenhower administration views the withholding of the franchise from the people of Washington and its avowed concern that Negroes—those outside of the city of Washington, that is—shall not be deprived of the right to vote.

Incidentally, the administration has proposed for the National Capital a territorial government, with a governor and lieutenant governor appointed by the President, an elective legislative assembly over whose acts the President would have a veto, and a nonvoting Delegate in the House of Representatives. It offers that as a counterproposal to pending bills calling for an elective mayor and council.

And, speaking of taxation without representation, which did so much to bring on the Revolutionary War, Thomas Stokes points out that the Eisenhower proposal harks back to the Crown Colonies of the pre-Revolutionary era, with a governor appointed by the King, and the royal right of veto over the local assembly. (A rereading of the Declaration of Independence will refresh memories as to what this led to in the days before the formation of the United States of America.)

Home-rule bills have succeeded of passage in the Senate but they are always pigeonholed in the House by the District of Columbia Committee, which is packed to suit the southern viewpoint. Of its 14 Democratic members, 10 are from the South. All Chairman JOHN MCMILLAN, Democrat, of South Carolina, has to do is elicit the support of three Republicans, which has always been easy, and the bill is stymied. And the reason that the southerners are opposed to home rule in Washington is that they don't want the large number of Negroes who live in the Capital to have the vote. This, therefore, is in direct contravention of the 15th amendment to the Constitution, quoted from in paragraph 2, above.

But if the administration and the House at large were sufficiently aroused about this travesty on American principles, we are sure that the matter could be brought to a head successfully.

Stokes states that the futile efforts in the past 86 years to restore democracy to the Capital (which should be a showpiece of democracy) provoked one observer to raise the question whether, if our people had it to do over again, they would choose democracy as the form of government for our Nation—so unresponsive have Congress and our people been to the attempts to reestablish democratic government in Washington.

It's a sad commentary, but, in view of the record, an entirely reasonable one.

The American Taxpayer and British Rubber Production

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. GROSS. Mr. Speaker, the current column of the National Federation of Independent Business, written by the Federation's president, Mr. C. Wilson Harder, calls attention to what it is costing the American taxpayers to stockpile natural rubber. Mr. Harder points out that natural rubber production is a virtual British monopoly, and he raises the very serious question as to whether the taxpayers of this country, through the Government's stockpiling program, are being forced to support the price of British rubber.

What makes this situation all the more confusing is the fact that earlier this year it was announced in London that the British will build and equip in Communist Russia, the largest tire factory in the world outside the United States.

Mr. Speaker, I desire to include the Federation's column as part of my remarks:

There is a growing suspicion in Washington that a portion of the Government's program of stockpiling so-called strategic materials is merely a plan to give some foreign monopolies a surplus program such as afforded to the American farmer.

The Government now has stockpiled 1,200,000 long tons of natural rubber, acquired at a cost of $825 million, which is costing United States taxpayers an estimated $38 million per year to maintain, plus interest on the investment. That is the report in a recent speech by the president of the B. F. Goodrich Co.

What makes this situation all the more confusing is that last year's production of natural rubber totaled only 1,900,000 tons. Thus, the United States has almost a full year's production of natural rubber in storage.

It is also significant that the production of natural rubber is a virtual British monopoly, and that it was not too long ago British rubber interests publicly complained profits for year had fallen to slightly below 35 percent.

As a matter of fact, with the great developments made in synthetic rubber, natural tree rubber has become almost as obsolete as the buggy whip. There are a few minor uses where natural rubber is best, but by far, in most applications such as tires, hoses, other uses, synthetic rubber does job better.

Actually, without Government buying up natural rubber and storing it away, price of the natural product would undoubtedly drop to quite a low level.

American rubber industry leaders say that in event of a national emergency of serious proportions, Nation could be entirely independent of foreign rubber.

Last year, when due to a heavy worldwide demand of rubber, the price of natural rubber was being boosted, an effort was made to get Government to release a part of this vast store as it would have been the most logical time for the taxpayers to get back a reasonable share of the money that has been poured into an excessive stockpile. Government refused to do so.

But so far this year, reduced demand for rubber has brought the price of natural rubber down, so that it would be hard for Government to get back a fair share of the investment.

It very much appears that natural rubber bears the same relation to synthetic rubber that silk does to nylon. In other words, premium price is paid for synthetic because of its better qualities, and natural product is considered secondary in value.

Thus, there is no telling what price levels natural rubber would have dropped to by this time, to the detriment of the British monopoly, had not the United States been price supporting the product with huge stockpiles.

At the present time, when not only Congress, but the entire Nation, is appalled over the extraordinary high Federal budget, it would perhaps be the logical time to launch a probe to get at the bottom of this situation.

Obviously, the American taxpayer is paying huge sums to price-support American farmers.

It would be quite ironical if it developed United States taxpayer is also being assessed to price-support British rubber tree farmer.

Knoxville Chamber of Commerce Member Objects to National Chamber of Commerce Becoming Tail of the Kite of Private Power Interests

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. EVINS. Mr. Speaker, Hon. George R. Dempster, prominent businessman, former mayor of Knoxville, and director of the Citizens for TVA, has sent to me a most illuminating letter which, under unanimous consent, I include in the RECORD.

Mr. Dempster, it seems, is awakening to that which other businessmen are rapidly learning, namely, some of them are working at cross purposes in paying dues to the National Chamber of Commerce, which dues, in turn, are used in propaganda campaigns against the Tennessee Valley Authority and other great developments in the public interest. Mr. Dempster expresses the matter very vigorously when he says that he "objects to having the chamber of commerce become the tail of the kite of the private power interests."

I believe the letter should have the widest possible circulation.

Mr. Dempster's letter follows:

DEMPSTER BROS., INC.,
Knoxville, Tenn., July 9, 1957.

Hon. JOE L. EVINS,
Congressman, House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Please accept my sincere congratulations on your exposé of the background of one Louis V. Sutton and his opposition to the TVA. I wrote the chamber of commerce about this gentleman and was advised by letter that the members of the United States Chamber of Commerce staff had prepared the article which Mr. Sutton read before your committee. As a member of the chamber of commerce I had objected to having that organization become the tail of the kite of the private-power interest and the party who wrote to me vigorously defended the attitude of the chamber.

It has occurred to me that perhaps I am working at cross purposes here by, on one hand, supporting the Tennessee Valley Authority and on the other, contributing to the budget of the chamber of commerce which uses most of their dues and contributions to hammering the TVA. I intend to drop the membership. We perhaps will continue our membership in the local chapter if I can find that none of the money sent locally will be funneled into Washington to continue their unfair battle against public power.

Your defense of TVA is the most able I have ever read. Were it not for such friends as you, of course, TVA would have gone down the drain many years ago. I wish that our Tennessee newspapers would give more prominence so much articles as yours in order that our people might become more fully aware of the insidious efforts being made to first discredit the TVA and then abolish it altogether. Many of our new voters know nothing of the pre-TVA days and can easily be misled by the vicious propaganda put out by the private-power people at the expense of their subscribers.

The average citizen has no conception of what these tax writeoffs mean to the very people who are the greatest opponents of TVA. At the very time the power companies in the Northwest were getting great tax writeoffs on the theory that they were producing something for the benefit of the defense effort, my own company was denied a similar concession for a building we were erecting even though a considerable portion of our product was being absorbed by the Armed Forces. There is no doubt but what the power people are the favored children now. I yet hope that there will be some way of bringing the power companies to task on the large amounts of money they have spent for propaganda purposes without the knowledge and consent of many of their stockholders.

With all good wishes and many thanks for your vigorous stand, I remain,

Sincerely,

GEO. R. DEMPSTER,
President, Dempster Bros.

Amendment of Internal Revenue Code Relating to Deduction From Gross Income of Certain Teacher Expenses

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. LIPSCOMB. Mr. Speaker, on February 28, 1957, I introduced H. R. 5390, which is to amend the Internal Revenue Code of 1954 to allow a deduction from gross income for certain amounts paid by teachers for their further education. Numerous similar bills have been introduced, among them being H. R. 4662 by Mr. KING, and H. R. 6105 by Mr. TEAGUE, both fellow Californians.

If enacted, this legislation could make a significant contribution toward alleviating hardships existing under the income-tax laws concerning teachers continuing educational expenses. It should, therefore, receive the serious attention of all Members of Congress.

Under leave to extend my remarks in the RECORD, I include a statement I have prepared on H. R. 5390, which goes into the matter in more detail. The statement follows:

H. R. 5390, a bill which I introduced on February 27, 1957, 1st Session, 85th Congress, would amend the Internal Revenue Code of 1954 to allow teachers income tax deductions for certain educational and travel expenses. There has long been a need for more equitable income tax treatment of teachers in this regard and consequently there is a pressing need for enactment of this legislation.

Today more and more educational institutions and systems are requiring teachers to continue their studies as a normal occupational requirement. In addition, the nature of teaching is such that additional expertness and proficiency through further education are highly desirable. However, as matters stand, teachers who spend their own money to acquire additional education in most instances are unable to gain meaningful recognition of such expenditures under the Federal income tax laws and regulations.

For a number of years, various groups and individuals have endeavored to have teachers' continuing educational expenses recognized in the income tax regulations as a deductible item of business expenditure for income tax purposes, first under the Internal Revenue Code of 1939 and then under the Internal Revenue Code of 1954. The results, however, have been very discouraging and largely unfruitful.

In 1950, a Virginia schoolteacher, Mrs. Norah P. Hill, did succeed in obtaining a favorable court ruling allowing her to deduct the expenses of a summer-school course on the ground that the expenses were necessarily incurred by her to maintain her teaching certificate in Virginia. However, though the Bureau of Internal Revenue then modified its regulations to permit such deductions, it restricted the scope of the regulations to the ruling in that particular case, ruling that only when summer-school expenses are incurred by a public school teacher to maintain the teaching position were they deductible as ordinary and necessary business expenses, or when the facts were similar to that case. As it turned out, little relief was afforded to teachers.

Many teachers residing in the 24th Congressional District have contacted me, expressing grave concern over what they considered gross inequities in the treatment of teachers as compared with deductions available to other individuals who are in the trades, businesses, or the professions. As a result of these protests, I have been in touch with the Bureau of Internal Revenue concerning this matter over the course of many months.

In July of 1956, the Internal Revenue Service, Department of the Treasury, proposed new regulations relating to expenses for education under the Internal Revenue Code of 1954 (published in the Federal Register, July 10, 1956, page 5093, Vol. 21, Numbered 132.) It was anticipated that the new regulations would contain more liberal provisions relative to teachers' educational expenses. However, the regulations as proposed appear to be even more restrictive than those presently in effect.

Briefly, under the regulations as proposed, a teacher's expenses for education would generally not be deductible if the expenditure is made, or would have the result of obtaining a position for the taxpayer, establishing or enhancing substantially his reputation in trade or business, substantially advancing him in salary, earning capacity, status, or position, or primarily fulfilling the general cultural aspirations or other personal purposes of the teacher.

Among the so-called exceptions to the general rule is that an expenditure made by a teacher for education which is a prerequisite to continued employment is deductible. This exception is so qualified, however, as to render it practically meaningless. Thus, it would be provided that a teacher would deduct education expenditures if the education is a prerequisite to his continued employment even though academic credit accrues (which under another part of the section would be a factor weighing against a taxpayer's deducting educational expenditures) but it is provided that, even so, the expenditures are not deductible if they have the result of obtaining a different position for the taxpayer, establishes or enhances substantially his reputation in his trade or business, or substantially advances him in earning capacity, salary,

status, or position. Therefore it would appear that under the proposed regulations, even if a school teacher were required to take a summer-school course to retain his or her position, if at the same time it would qualify the teacher for a raise in salary, there could be no income-tax deduction.

In September 1956 I filed a statement with the Internal Revenue Service for consideration at the hearing on the proposed rule-making, stating that the rules as proposed would unduly discriminate against teachers, and stating that the obstacles interposed by the rules are so formidable that in practical effect, few if any teachers, could ever qualify for tax deductions for education and travel expenditures. The proposed regulations are still pending, and there is no indication that when they become effective they will provide for more equitable tax treatment for teachers' education expenses.

To correct this situation, I have introduced H. R. 5390 to amend the Internal Revenue Code of 1954 to provide that established teachers may be allowed an income-tax deduction of not to exceed $600 in any taxable year for expenses incurred for further education. Items that would be included as expenses are tuition, books, other equipment, travel, and living expenses while away from home, to the extent they exceed normal living expenses, and to the extent such expenses are paid during the taxable year in connection with a teacher's enrollment at an accredited institution of higher learning.

It is my hope that this measure will be enacted at an early date to provide necessary tax relief for members of the teaching profession.

A Free Society

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times, Friday, July 19, 1957:

A FREE SOCIETY

The Fund for the Republic is embarking on an important study of one of the great problems facing our democracy: the effect on freedom and a free society of the large-scale organizations and institutions that have grown up in the last half-century and that were as unknown to the Founding Fathers as the jet airplane and the atomic bomb.

Big business and big labor, to name two major forces of the new age, inevitably affect our life as a nation and our freedom as individuals. These new groupings—in industry and in labor, in voluntary associations and in pressure groups—have helped change our society from the relatively simple association that it was to the highly complex network of interrelationships that we see around us. Their profound impact on personal freedom and on the structure of the state must first be understood before it can be properly coped with. In announcing the new study, Robert M. Hutchins, president of the fund, said: "We must find out how these developments affect freedom and justice. We must discover the basic issues they present."

This "basic issues" program is described as a principal part of the present phase of the fund's operations, which began with a grant from the Ford Foundation over 4 years ago. The fund has been spending its money by and large in some exceedingly useful directions despite ill-informed and often irresponsible criticism that has been directed against it. In so doing, the fund has helped strengthen American democracy, and the new study just announced gives every indication of being a major contribution to this end.

Force Bill Repugnant: Brownell Should Be Told Face to Face

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. LOSER. Mr. Speaker, under leave previously granted, I want to insert in the RECORD an excellent editorial which appeared in the Nashville Banner, Nashville, Tenn., on July 18, 1957, concerning the authority being sought by the Attorney General for the President in the so-called civil rights bill.

I think all Members of the House will be interested in this editorial and I suggest that you give it your close attention.

The editorial follows:

FORCE BILL REPUGNANT: BROWNELL SHOULD BE TOLD FACE TO FACE

Attorney General Herbert Brownell should not have to learn by reading the newspaper that his boss, the President of the United States, is against the force provision of his so-called civil-rights bill.

The place for him to have been told that was the White House. It still is. With whatever emphasis is necessary to unequivocally instruct this department head who is, after all, a subordinate of the Chief Executive.

President Eisenhower again has said, and this time most specifically, that he cannot imagine any set of circumstances that ever would induce him to send Federal troops to enforce Federal court orders in the South.

Nobody can doubt the sincerity of that assurance. As the soul of honor and truthfulness, Dwight D. Eisenhower's word is its own bond of integrity.

He cannot bind that assurance on some future incumbent. If this measure were enacted, a successor in the White House could invoke it.

The point is that somebody has written into a bill in the administration's name, and bearing ostensibly its blessing, methods of enforcement foreign to the President's intention—and concerning which, as stated, he holds views of personal opposition.

Facing the fact of reconstruction devices in that piece of legislation, Lyle C. Wilson, chief of the United Press Washington bureau, has suggested that Mr. Brownell be asked who in his Department drafted this bill and who (outside the administration) helped.

These are questions the President might well be concerned about, too; for as has been pointed out to him, somebody loaded these dice for a dangerous public gamble. Somebody reached a long way back into the most vicious era of national history to borrow reconstruction measures. Far from the liberal premise that the Constitution, in salient points, needs a "modernized" interpretation, these harked to an ancient footing from which hate poured out its anathema on the South nine decades ago.

The President has learned, because some candid southern men told him, that these provisions are in the bill. They will be there throughout the interval of Senate debate, and, unless defeated, until by Executive order they are stricken from it.

The Chief Executive is boss of his Cabinet. As such, he certainly does not have to accept the ideas and recommendations and legislative excursions of Mr. Brownell.

Obviously, the authority solicited for him in this bill is repugnant to him, and just as repugnant to him for any President to possess—or for any official of the Government, executive or judicial, to toy with.

The time and place for telling Brownell that is now and in the White House.

He should be told to withdraw this bill, for purposes of rewriting it without the force implications—fitting the President's specific views—or tender his resignation.

The American Legion Department of California Convention Forwards Six Resolutions Adopted by Convention June 27 to 30, 1957

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent, heretofore granted to me so to do, I am pleased to present herewith communication to me just received from Gordon A. Lyons, department adjutant, American Legion, Department of California, in which he forwarded me the text of the six resolutions identified in his letter of July 18, 1957.

I am sure that every Member of this Congress appreciates receiving the considered opinion of the distinguished veterans of our beloved Nation:

THE AMERICAN LEGION,
DEPARTMENT OF CALIFORNIA,
San Francisco, July 18, 1957.

Hon. CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR SIR: Attached for your attention is a partial group of resolutions which were adopted by the American Legion, Department of California, in convention assembled at Long Beach, Calif., June 27-30, 1957:

Resolution 7, Civil Defense Reorganization Act (H. R. 2125).

Resolution 23, San Diego Veterans' Administration regional office.

Resolution 24, Construction of a Veterans' Administration hospital.

Resolution 27, Chapel at Veterans' Administration hospital in San Francisco.

Resolution 45, Retain without amendment Walter-McCarran Act.

Resolution 63, Protest removal of Letterman Army Hospital from Presidio of San Francisco.

Kindest personal regards.

Sincerely yours,

GORDON A. LYONS,
Department Adjutant.

THE AMERICAN LEGION,
DEPARTMENT OF CALIFORNIA,
San Francisco.

CIVIL DEFENSE REORGANIZATION ACT (H. R. 2125)

Whereas the American Legion of California disaster relief and civil defense program has been in operation for the past 30 years and Legionnaires have participated in all major

disasters in California during that period, rendering assistance in time of emergency; and

Whereas such participation has been on a voluntary basis by legionnaires, in cooperation with the civil authorities (State, county, cities) and in augmenting law enforcement agencies; and

Whereas, there is now a bill H. R. 2125, cited as the Civil Defense Reorganization Act submitted by Congressman CHET HOLIFIELD and referred to the Committee on Government Operations, which includes in section 407 the following, "utilize such voluntary and uncompensated services by individuals and/or organizations as might from time to time be needed; and authorize the States to establish and organize such individuals and organizations into units to be known collectively as the United States Civil Defense Corps": Now, therefore, be it

Resolved, That the American Legion, Department of California, in regular convention assembled in Long Beach, Calif., June 27–30, 1957, does hereby go on record in support of that portion of the bill pertaining to the United States Civil Defense Corps which encompasses organizations comparable to the American Legion Emergency Corps and should such bill be enacted by Congress, the American Legion Emergency Corps would qualify as a United States Civil Defense Corps unit.

SAN DIEGO VETERANS' ADMINISTRATION REGIONAL OFFICE

Whereas it has now been almost 2 years since the consolidation of many of the functions of the San Diego Veterans' Administration regional office with the Los Angeles Veterans' Administration regional office; and

Whereas the difficulties of efficiently serving the veterans of San Diego and Imperial Counties in veterans matters when their claim files, financial records, and the rating boards are located in Los Angeles have proved such as to far outweigh any potential savings accomplished by the consolidation; and

Whereas the veteran population of San Diego County is continually growing and is now such as to well justify a full regional Veterans' Administration office for that area: Now, therefore, be it

Resolved by the American Legion, Department of California, in regular convention assembled in Long Beach, Calif., June 27–30, 1957, That a full regional office of the Veterans' Administration should be restored to San Diego in order to better serve the veterans in that area; and be it further

Resolved, That copies of this resolution shall be furnished all California Congressmen, its two Senators and the Administrator of Veterans' Affairs with a request that they take every action possible to restore a full regional Veterans' Administration office to the San Diego area.

CONSTRUCTION OF A VETERANS' ADMINISTRATION HOSPITAL

Whereas the Veterans' Administration has been authorized to construct a new Veterans' Administration hospital to replace the existing Oakland Veterans' Administration Hospital; and

Whereas the Congress of the United States has failed to appropriate funds for the construction of such hospital as requested by the Veterans' Administration; and

Whereas the American Legion, Department of California, believes that the failure to appropriate and authorize such funds as requested constitutes an unjustifiable delay in the construction of this badly needed hospital: Now, therefore, be it

Resolved, That we deplore the present plan to replace this 712-bed hospital with a 500-bed hospital because of the terrific and continuous increase in the veteran population in California; and be it further

Resolved, That we urge that the plans be changed to provide for construction of a 1,000-bed hospital to replace the Veterans' Administration Hospital at Oakland; and be it further

Resolved, That the Department of California urge the California congressional delegation to assist in every way possible in securing the immediate construction of this hospital.

CHAPEL AT VETERANS' ADMINISTRATION HOSPITAL IN SAN FRANCISCO

Whereas patients in Veterans' Administration hospitals need spiritual as well as medical care; and

Whereas there should be a place of worship in a proper atmosphere, used for religious purposes only; and

Whereas the Veterans' Administration Hospital in San Francisco, Calif., does not have a suitable place of worship. Religious services are now being conducted in a portion of the chaplain's office or the auditorium day room: Now, therefore, be it

Resolved, That the American Legion, Department of California, in regular convention assembled in Long Beach, Calif., June 27–30, 1957, does petition the Administrator of Veterans' Affairs in Washington, D. C., to provide funds to the Veterans' Administration Hospital in San Francisco, Calif., for the purpose of building a chapel within the hospital grounds, to be used only for the purpose of religious services of all faiths.

RETAIN WITHOUT AMENDMENT, WALTER-M'CARRAN ACT

Whereas the Walter-McCarran Immigration and Nationality Act is the result of more than 5 years of intensive investigation and research; and

Whereas pending amendments would destroy the security provisions by which the present law keeps all groups and individuals opposed to our American form of government away from American shores: Now, therefore, be it

Resolved, That the American Legion, Department of California, in regular convention assembled in Long Beach, Calif., June 27–30, 1957, does hereby oppose any and all further attempts now being made to repeal, weaken, or destroy the Walter-McCarran Immigration and Nationality Act, either by direct weakening amendments to the act, or by any other legislative procedures; be it further

Resolved, That copies of this resolution be sent to all California representatives in the Congress and to the national commander of the American Legion.

PROTEST REMOVAL OF LETTERMAN ARMY HOSPITAL FROM PRESIDIO OF SAN FRANCISCO

Whereas considerable publicity has recently been circulated that the United States Army contemplates the removal of Letterman Army Hospital from its present site at the Presidio of San Francisco; and

Whereas the proposed new location of the aforesaid hospital is alleged to be approximately 140 miles from its present location; and

Whereas there resides in or adjacent to the city of San Francisco approximately 2,500 families, comprising at least 5,000 persons, who, because of retirement privileges of the United States Army, are entitled to and depend upon medical care at Letterman Army Hospital and would be deprived of this medical care in the event of such removal of the hospital; and

Whereas it is our opinion that the staff and facilities of Letterman Army Hospital are materially augmented when necessary by highly trained personnel and modern medical equipment from civilian institutions in and adjacent to San Francisco which would not be immediately accessible at the proposed new location of the hospital: Now, therefore, be it

Resolved, That the American Legion, Department of California, in regular convention assembled in Long Beach, Calif., June 27–30, 1957, does hereby protest the removal of said Letterman Army Hospital from the Presidio of San Francisco, Calif.

The above resolutions were adopted by the American Legion, Department of California, in regular convention assembled in Long Beach, Calif., June 27–30, 1957.

What Is Life Really Like in Red China? Firsthand Report by GI Returnee—IV

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fourth of five interviews conducted by U. S. News & World Report with American soldiers whom the Reds captured in Korea and persuaded to go to Communist China and who have now returned to the United States.

The interview follows:

FOR GRIGGS, A "NIGHTMARE" HAS ENDED—IN CHINA, A PERSON "DOESN'T EVEN TRUST HIS OWN FAMILY"

Lewis W. Griggs, son of an electrician, grew up in Neches, an east Texas village, and went to school in Palestine, 12 miles away. In high school he was absent a good deal, joined the Army at 17 without getting his diploma.

In the Army Griggs became a medic—a stretcher bearer—and served 9 months in Korean battles before he was captured in April 1951. Griggs took the same path as the rest of the 21 who stayed in China—rejected a chance to come home, entered China in January 1954, and was assigned a job after finishing his course in communism.

Griggs was assigned to a state farm in the Yellow River Valley to work in the cotton gin and flour mill in the farm's processing center. He came back at the same time Bell did, in July 1955, caught up on his missed schooling, and now has just finished his freshman year at Stephen F. Austin State College in Nacogdoches, Tex. This summer he is staying in school, trying to finish his education as quickly as possible.

The interview which follows was recorded in Grigg's room in the college dormitory:

"Question. Are you glad you came back home?

"Answer. Definitely. Yes, sir, I'm glad.

"Question. What was your first impression of the States?

"Answer. I went walking down the streets of San Francisco and I was able to look in the windows of shops and you could see things which you haven't seen in so long, and see people dressed like you remembered them in the past. It was just like waking up out of a nightmare back into real life again.

"One of the first things I saw that I hadn't seen in a long time, which looked awful good, was seeing a woman dressed up like a woman instead of a man. The new automobiles, and the television—everything was strange.

"Question. What was so impressive about looking in store windows?

"Answer. One of the main things—the thing I remembered most that interested me a lot—was passing nice restaurants and looking in and seeing people eating decent-looking food and enjoying themselves.

"Of course, I noticed the clothes in the windows, especially the shirts. I like good-style clothes and I noticed that quite a bit. You couldn't get but one kind of shirt over there.

"Question. Is that the main difference—the things you can buy?

"Answer. Oh, no. The main difference is the way you feel. Over there your life is just study and work and wait for the next day. You have an occasional chance to go somewhere but you really haven't got much freedom. It is just an entirely different concept of life, and over there you feel no different than when you live in a prison.

"Over there I didn't feel much different than when I was in their prisoner-of-war camp. But here I went into military confinement for a while and I would even consider confinement here much better than being loose over there.

"And since I have come out, I still haven't completely gotten used to the idea of being free to do what I wish to do. I just do the same things I was free to do over there.

"Question. What are some of the things you don't do any more?

"Answer. Like going to a good ball game and getting out there and yelling and cheering like a normal student does, like I used to do when I was a kid. Or maybe going out with a bunch of the guys on a big hunting trip and spending the night out by the river, hunting and fishing. Or maybe going swimming at the beach or going to parties—things of that nature which I used to do all the time.

"But now, I'm just not used to it and I don't do things of that nature.

BROKEN PROMISES

"Question. When you got to China did you have any say-so about where you would settle down or what kind of job you would get?

"Answer. The way that ran—in my case, I was promised from the very beginning that I would be sent to the university, and I later specified Peiping University, and I was going to take foreign languages and journalism. But when the time came, some men got what they wanted but a large percentage of us didn't. In my case, I didn't want the state farm, but I got it—a state farm down on the Yellow River.

"Question. How big was this farm?

"Answer. There were a little over 900 workers there. I don't know the exact acreage of the farm—it was scattered in numerous places—but I understood it covered parts of 3 counties.

"Question. Did the farmers make a profit?

"Answer. If there was any profit it was made by the Government. The Government owns the land and the tools. The actual farmers—the farm workers—are hired strictly on a wage basis, from the highest official down to the lowest.

"Question. How much did they get paid, in wages?

"Answer. An average worker at this particular farm got about 200,000 yuan a month, which would be about 8 United States dollars.

"Question. How do they get farmers to work for that kind of money? Do they draft them?

"Answer. In a lot of cases they came there because they could make better wages than they could on a small farm. A lot of them were poor peasants, and after the redistribution of land they lost what they had, so they came to the state farm because they could get better wages.

"And then there were some sons of former landlords. In the case of this one I knew, he came there because the Reds had pretty well confiscated all his family's belongings. They turned the peasantry against the old landlord class, and this man was trying to rebuild his reputation under the Communist system.

"Question. Was farming pretty highly mechanized on that farm where you worked?

"Answer. I would say in some respects it was fairly mechanized. For example, they had a number of tractors—the majority of them were American tractors, old Allis-Chalmers and Fords, and they had a number of American combines. They had quite a few Russian combines and tractors—the Joseph Stalin tractor, for one.

"But picking cotton and stuff of that kind was all done by hand. I believe they did have one cottonpicker, which wouldn't work half the time. They weren't mechanized by the standards of a good farm in the United States.

"Question. Did they take good care of the machinery?

"Answer. Oh, they were always working on it constantly, but most of the workers did the repair work right in the fields and they were usually fairly poor at it. The result was a large number of breakages, and repair was always going on—on all the different machines.

"Question. What kind of houses do they have on the farms?

"Answer. The house I lived in on the farm was a hut, a type of old shed. It had mud walls and a straw roof. The roof leaked. All but 1 or 2 windows, including the windows in the door, had the panes knocked out of them. The floor was made of mud—and that was about the way it was. Of course, the walls were very crude. It was more like an old shed out in some very poor farming area in the States.

"We had two stoves in the hut, but neither one worked well enough to let you get any heat or keep warm.

"Question. Did the Chinese live in the same kind of quarters?

"Answer. Yes; they did. In fact, the place where we were living—there was also Chinese living in the same hut. And the other houses were all about the same.

FIFTEEN OR TWENTY LIVING IN A SHED

"Question. You lived right with the Chinese? Was it crowded?

"Answer. In our shed there were about 15 or 20 Chinese living with us. It was very crowded—the beds were practically against each other on all four of the walls. This was only a one-room house. I would say it was about 20 feet wide and maybe 40 feet long.

"Question. What were the roads like, out there in the country?

"Answer. The roads were all dirt and there was a lot of sand in it, and in the summer when a truck would go by—which wasn't very often—it would knock up a huge amount of dust. In the winter months, when the snow and ice and rains would come down at different periods, the road would get so gummy that a truck couldn't go on the road at all. It was difficult even for a mule cart and, therefore, except for a few mule carts which just had to be used at that period, there wasn't any transport on any of the roads.

"About the most common way of traveling in the winter is on foot. Sometimes the mud is so deep it comes up to your knees.

"Question. Suppose a worker wanted to quit working on a place like that? Could he do it?

"Answer. Oh, no. That is impossible. You can't just get up and leave a place like that.

"You have to have permission to leave and it's very hard to get such permission because, the way they look at things, the needs of the state are ahead of the needs of the person—the individual—and therefore if the state needs you there, then you stay. But if the state agrees that your needs can be coordinated with the state's, they will allow you to leave. But usually this isn't the case.

"Question. Did the people get enough to eat? Did you see any signs of the kind of famine we often hear about?

"Answer. I didn't observe any of what you could term 'famine,' but I noticed that in Chenghow, the main town near this farm, there were large numbers of beggars, all the way from small children to old men and women. They were all over the place, crawling on all fours with cans on their necks. Just any time, you could see 50 or 100 of them in this town.

"Question. Were they starving?

"Answer. Well, they were begging for food—that was the main thing they were after—but they would take anything you gave them.

"Question. But the Communists always say they don't have beggars in Communist countries——

"Answer. I know. They told us that beggars had been done away with in China, that there weren't any more beggars. And then after we saw all these beggars, the explanation was that these were people who were too lazy to work.

"Of course, I would say that some of them, those that were crawling on all fours, were abnormal. It couldn't be that they were too lazy to work. They just weren't taken care of by the state as they were supposed to be.

"Question. What were the crops on this state farm?

"Answer. They raised wheat and cotton and some kind of beans. There was also a lot of grapes.

"Question. Didn't they have any animals?

"Answer. They had two cows. I believe they had a bull, a Holstein bull, and they had a number of pigs. I believe they had a few chickens, and they had some goats—not too many goats. And they had a number of work horses and mules which they used for transportation.

"To take care of them, they had animal-husbandry sections, and I would say they took very good care of their livestock because they are so scarce.

"Question. Did the animals look pretty good?

"Answer. On the state farm the animals were in pretty good shape because a lot of these animals were imported from England, Holland, or Czechoslovakia—some foreign country. They did have a few Chinese hogs, but the rest were brought in from foreign countries and were in very good shape.

"Question. The animals seem to get a better break than the people, from what you say——

"Answer. That's right. They take better care of the animals than the people, because the animals were so much harder to get and they were overpopulated with people.

"Question. Did you stay at this farm until you left China?

"Answer. No. In the last weeks over there we were sent to a factory."

ESCAPE, THEN ARREST

"Question. How did that happen?

"Answer. We were transferred after we had escaped from the farm.

"Question. You didn't get away with it? You still had to go to the factory?

"Answer. We were arrested by a large number of militia and they marched us to the capital of that country, which was quite a distance away, west of there. After a few weeks we were forcibly removed to Kaifeng to go to work in this factory and, as they claimed, to earn our keep until our permission to leave came through and all arrangements were made.

"That is when we were taken to Kaifeng to this factory that made plows—horse-drawn plows, and things of that nature—and were put to work there.

"Question. How did you like it there, in Kaifeng?

"Answer. Well, it was a pretty large-sized town, and the workers in the factory thought more like we did—they were a lot like us. They were either young people who had been working in Shanghai and these larger places

which were used to good American clothes and were used to living a lot like Americans—they were pretty Westernized and didn't like the Reds at all—or there were people in there who had come from foreign countries.

"Some were Chinese Nationalists with foreign dependents, wives, from Japan, Vietnam, and even a few from the United States. They had other foreigners there, plus us, and we got along fairly well. In fact, the whole group of people in this factory were mainly people who really opposed the regime in some way or other, except for about 1 percent, who were the Communist leaders—the cadre—at this place.

"Question. What did the workers say about the regime?

"Answer. They spoke very frankly about it. Some of the things they didn't like: They didn't have enough freedom; they couldn't go home; they couldn't work where they wanted to, and they couldn't do what they wanted to. They didn't like the food.

"And they refused to study—they hated the course in indoctrination—and some of them would hit their head and they would say it gave them a headache to study—might drive them crazy.

"SURROUNDED BY POLICE"

"Question. Was the discipline pretty strict at the factory?

"Answer. Where we lived, in a dormitory, we were in a little compound surrounded by the industrial-police compound, and it was not much better than the farm.

"Question. Did you see lots of police?

"Answer. The police were everywhere. They were constantly on patrol. They guarded theaters, stores, factories—they were all over the place.

"Question. You had already decided to try to get out of China before they sent you to this factory. What made you want to leave?

"Answer. The main thing was the discovery that the Communist system, as practiced in China, was in reality not a truly Socialist state, or a "people's state," as they referred to it. It was strictly a slave state. I suppose the main thing is that I started to believe in individualism and the right of privacy of the human being—and that's something which just cannot exist in that type of society.

"Question. The individual has no privacy over there?

"Answer. That's exactly what I mean. Actually, the people never know who to trust—children, mothers, fathers, husbands—you never know who is actually a spy for the state, and it gets down to where a person never expresses his own thought, even to his own family. He doesn't even trust his own family. And when a person can't even trust his own father or his own mother, then it's really getting pretty bad. It's certainly not a very decent place to have to live in.

"Question. Individualism—you mentioned that. Do you mean you can't have a life of your own under communism?

"Answer. I just wanted to do the little things in life, like having a job, going to school, having a family—that's something that's just practically out of your reach there. You were supposed to develop your ideology toward their way, but the things which were really necessary for a person's happiness, you just didn't have.

"For example, the idea of settling down and having your own home, your own family, going to school, working on a job that you're interested in, having your own hobbies, going on vacation like a person looks forward to in the United States—things of this nature you just can't look forward to there.

"All you've got is what they place before you—it's the life of the masses, they call it."

Is It Un-Christian To Believe in Segregation?

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. GRANT. Mr. Speaker, Walter B. Jones, presiding judge, 15th Judicial Circuit of Alabama, recently delivered an address, "Is It Un-Christian To Believe in Segregation?" before the Baptist Laymen of Alabama.

Judge Jones' father was a gallant soldier, a distinguished Governor of Alabama and an outstanding Federal Judge.

Judge Jones is a deep student of the Bible and is one who for many years has taken an active interest in the religious, social, civic, and business life of Montgomery. He is the president of the Alabama Bible Society, Jones Law School, past national archon—president—of the SAE Fraternity, an author of lawbooks, writer, and has had many honors—too numerous to mention—bestowed upon him. It can, therefore, be said that he knowns whereof he speaks.

IS IT UN-CHRISTIAN TO BELIEVE IN SEGREGATION?

(Remarks of Walter B. Jones, presiding judge, 15th Judicial Circuit of Alabama, before the Baptist Laymen of Alabama, at Montgomery, July 11, 1957)

It is a distinguished privilege to be here this evening and to speak before you, the Baptist Laymen of Alabama, your friends and guests.

You stand unflinchingly for the ancient principles of separation of church and state, segregated schools and churches, local self-government and of race. You are doing a man's part in preserving for your people the true teachings of the Bible and to keep pure the blood of the white race.

You seek to promote the active participation in the affairs of your churches of all good men, and you repudiate and reject all philosophical and sociological rules laid down by modern, so-called prophets, of whom the Prophet Earl is the archetype.

It is good for our State and her people that you Baptist Laymen of Alabama have organized for action. Plato, the Greek philosopher, said many years ago:

"All that is necessary for the triumph of evil is that good men do nothing."

You realize the truth of the statement and you are doing something to block the forces of evil and discord in religion.

The times and conditions in which we live make it necessary that all church people, who insist upon their rights to worship their God according to the dictates of their conscience, must organize. We must wage, at all times, the Christian and honorable struggle for religious freedom. Liberty-loving Americans must stand up for the rights of their churches. We must speak the truth and "if an offense comes out of the truth," wrote St. Jerome, "it is better that the offense come than that the truth be concealed."

SEGREGATION DOES NOT CONFLICT WITH TEACHINGS OF CHRIST

In all the discussion today about integrating the white and Negro races in the public schools, in all public recreation facilities, and in the churches, we hear it constantly said, day in and day out, by vast numbers of deceived and misguided people, that it is unchristian to believe in the ancient and time-honored doctrine of separation of the races, that segregation is in conflict with the spirit and teachings of Christ and the Apostles.

It is dinned into our ears that those who conscientiously oppose integration in our churches are acting contrary to the Gospel of Jesus Christ and lack Christian sympathy and Christian idealism.

It is always safe to follow the dictates of one's conscience, and conscience is a knowledge or feeling of right and wrong, with a compulsion to do right. Conscience has been defined by Browning as:

"The great beacon light God sets in all,
The conscience of each bosom."

And, of course, the very first step to having a religion is that there must be liberty of conscience.

Others, who have never experienced life in communities where a large part of the population is of the Negro race, tell us that, "integration is the Christian way," and that the believers in segregation are identifying themselves with the forces of iniquity. We are asked to believe that, "the segregation pattern is out of harmony with the spirit and teaching of the Bible."

The World Council of Churches says segregation is, "abhorrent to God"; that "segregation is essentially and necessarily a sin."

It is regrettable, too, that many of our great Protestant denominations are using as reference material in their church schools pamphlets of the United Nations which are frequently void of Christ and his teachings, and some of our denominations are using pamphlets and material of the National Council of Churches, which have been condemned as being "frequently socialistic and political."

NAME CALLING

Whenever name calling is resorted to, this is an unfailing sign that the ideas of the name callers are without merit—that their reasoning won't stand examination and analysis.

Washington, the Father of our Country, was called a rebel; Jefferson and Tom Paine were called atheists; Lee and Jackson were called traitors; people who lived in the North and sympathized with the Confederate States when the South was fighting for its independence, and did not cheer Lincoln's invasion and subjugation of the South, were called copperheads; and back in the eighties those who bolted the Republican Party because they believed in independence in political thought were called mugwumps.

And so today, those who have suddenly become disciples of the prophet Earl the First, realizing how untenable their position is, seek to terrify and frighten true Christians from their conscientious convictions by branding them as un-Christian, that is, lacking in the Christian spirit.

According to the base standards of these self-righteous critics, a person may love justice, do mercy, walk humbly before his God, and follow the teachings of the Master; and, yet, because the beacon light God set in his bosom, all the teachings of history, all the experiences of mankind, will not permit him to believe in integration, he is denounced as un-Christian by people who would lead their race, and their Nation, to destruction.

Their touchstone disregards all of Christianity's teachings: you are Christian or un-Christian as you accept or reject integration.

UNKIND CONDEMNATION

Others who pretend to believe that the Negro race is the equal in all respects, if not the superior, of the white race, tell us

that Christians and church groups who believe in segregation, stand condemned because of their honestly held beliefs.

It will come as no surprise to you to learn that the National Council of Churches and its predecessors, the Federal Council of Churches, have for many years made racial integration in the churches of our Nation, one of its main objectives, and it is a deep regret to know that nearly every religious denomination in the United States, some in a small degree, and yet others in a larger degree, are using their central organization to work for integration. Many of our religious denominations, the NAACP, and it has the financial and moral backing of the American Jewish Congress in New York, committees of labor unions, and the Supreme Court of the United States, and both of the Nation's chief political parties, are all working together to achieve complete integration of the races, and this we know is the first step toward amalgamation, the consolidating and fusing into 1 race the 2, the white and black races.

One of the world's best known evangelists, Billy Graham, now conducting a revival in New York City, recently said that "He believes the church in the South 'should lead the way toward bettering racial relationships' and that ministers should take a 'very firm stand in teaching their people along these lines.'

"Graham said he tries in his own evangelistic 'crusades' to 'set an example' and permits no racial segregation at such meetings."

In Minneapolis, May 1956, the Methodist Church condemned racial segregation by any method or practice. At Kansas City, May 1956, it was noted that the Southern Baptist Convention had 2 years before expressed its approval of the Supreme Court's decision banning segregation in public schools. In May 1956 the general assembly of the Presbyterian Church in the United States adopted a report calling for "total elimination" of racial segregation in the United States. In July 1955 one of the Presbyterian synods voted 283 to 151 in favor of desegregation in all its schools and churches.

It is almost unbelievable, yet it is true, that the Presbyterian Church in one of our Southern States, underwrote the race-mixing activities of the Communist-dominated NAACP, and advanced $10,000 in cash to "relieve pressing obligations" of the NAACP.

In May 1956 the delegates to the annual convention of the Protestant Episcopal Chuch in North Carolina, voted overwhelmingly in favor of gradual integration in the churches; and an executive council report, urged the Episcopalians of North Carolina to abolish segregation in all public schools and to work diligently "in an effort to effect an orderly transition toward an integrated public-school system in the diocese of North Carolina."

The Fund for the Republic, an organization which often follows the Communist line and is being investigated by a congressional committee, recently made a grant of $50,000 to the legal defense and educational fund of the NAACP.

It has organized a committee of social scientists to educate the Negroes as to their equal rights. This same Fund for the Republic also granted the Christian life commission of the Southern Baptist Convention $15,000 to support interracial programs to ease racial tensions, in the North and South.

CONSCIENCE CANNOT BE FORCED

The church should remember that conscience cannot be forced even by fat grants of money from the Fund for the Republic.

It is more than passing strange that this new liberal doctine of integrating the white and black races in all the churches never reared its ugly head until recent years, and then not until the black Monday (1954) decision of the Supreme Court of the United States at Washington, a Court headed, as Vice President NIXON called him, "a great Republican Chief Justice." The Vice President didn't say headed by a great judge. The rest of the Court dominated by Mr. Warren owe their appointment and office first of all to political considerations.

Not since reconstruction days when the Supreme Court cringed before the clamor of the mob have the people had less confidence in its judges and rulings than they have today.

In days now "gone with the wind," Americans could depend on the judgments of the Supreme Court when its decisions were generally based on settled constructions of the Constiution and followed known legal precedents.

Where, during the past century, were those who are now so anxious for the integration of the races? Why, all these years, did their convictionss trouble them so little? Is it possible that only the Prophet Earl could summon them to repentance?

If it is today regarded by many so highly unchristian to believe in the separation of the races, why wasn't it so generations and generations ago? Times and conditions change, but great fundamental principles are the same today as they were years ago.

IMPERISHABLE NAMES

Look back over the list of the justices who have sat on the United States Supreme Court. You find illustrious names like James Wilson, John Rutledge, John Marshall, Joseph Story, Roger B. Taney, Stephen J. Field, Horace Gray, Melville W. Fuller, David J. Brewer, Oliver W. Holmes, Charles E. Hughes, and William H. Taft. Many of the justices named served terms ranging from 10 to 30 years. They were not only wise jurists, but they were men who cherished the American way of life and reyered the principles of our Constitution. Did any one of them ever suggest that it was un-Christian to believe, for the good of both races, and in the interest of law and order, that the separation of the races was un-Christian and should be done away with?

Recall the men who have served as Presidents of the United States, and who have left imperishable memories, do you find any word from them stigmatizing believers of segregation as un-Christian? Washington, Adams, Jefferson, Madison, Jackson, Lincoln, Cleveland, Theodore Roosevelt, Taft, and Wilson—did any of these great American statesmen condemn the millions and millions of their own race in America, who, in their day and time, believed in the wisdom of the separation of the races?

BIBLE PROOF FOR SEGREGATION

So, now, let us reason together and see if we who believe in the time-hallowed separation of the races, in our schools and in our churches, and who stand firm for our conscientious beliefs, are doing things that are unworthy of a Christian and abhorrent to God.

Let us go back to fundamentals. A Christian is one who bases his life on the teachings of Jesus Christ; and Christianity is a religion which adopts the doctrines taught by Christ. So let us turn now to the fountainhead, to Jesus Christ, to study His teachings and see if the separation of the races is un-Christian or was ever condemned by Him during His ministry here on earth.

Dr. J. E. Flow, of Concord, N. C., in a recent sermon, answered the question: Is segregation un-Christian? by stating that he believes in segregation for three reasons:

1. It is in harmony with the plan and purpose of God as the best means to prevent the amalgamation of the races;

2. It is in harmony with a well-known law of nature, stated in the proverb, "Birds of a feather will flock together." Sparrows will not flock with robins, nor crows with quail; and

3. Because experience has shown that race segregation contributes to harmony and peace among the races.

These words from Dr. Flow are worthy of keeping before us:

"Segregation was decreed by God Himself in one historical instance. God called Abram out of Ur of Chaldees, to go into the land which he should afterward receive as an inheritance. The patriarchs, Abraham, Isaac, and Jacob, lived in that land for many years. Jacob's clan, because of famine, went down into Egypt, and were settled in the land of Goshen, where they remained 400 years. Then God sent Moses to lead the tribes of Israel out of Egypt into the wilderness for 40 years, and Joshua led them into the land of Canaan, where the various tribes were settled. For 1,500 years till the birth of Christ they were a segregated nation. They were forbidden by God to mingle socially, to intermarry or to amalgamate with the nations around them. They did not always obey God, but nevertheless God commanded it, and many times punished them when they disobeyed His command. If allowed to mingle socially with each other the inevitable result would be amalgamation either with or without marriage. Then he notes:

"Out of that segregated nation, through inspired prophets from time to time, from Moses to Malachi, came the revealed will of God in the Old Testament. Out of that segregated nation came the Saviour of the world, and the New Testament which tells us of Him. Does anyone dare to say that God made a mistake in segregating the Jewish nation? Does anyone dare to say that segregation is wrong and un-Christian when the Almighty Himself did it?"

NO APPEASEMENT TO ATHEISTIC COMMUNISM

Recently, the Right Reverend Albert S. Thomas, retired bishop of South Carolina, wrote an article on Development or Obliteration, in which he expressed the view that many integrationists seemed to have the motive of appeasing atheistic communism abroad, and this, wrote the bishop, seems more important to them than the happiness and well-being of a large portion of our own land which would be made secure by the ancient and accepted principle of the separation of the races. The bishop, continuing further, said: "There is virtue, rather than sin, in the maintenance of the integrity of every race as it has come to be in the providence of God. Do we not read in Acts (17: 26, RSV) that God 'has made from one every nation of men to live on all the face of the earth, having determined allotted periods and the boundaries of their habitation?' These words seem clearly to indicate a divine purpose for every race. The plain implication is a racial separation, not inconsistent with love, but rather the appointment of God. It is a wonderful thought in keeping with divine revelation that in the increasing purpose of God through the ages there is a part to be played by each separate race, through the maintenance of its own integrity, especially with its accomplished self-realization. The unity of all men in the Body of Christ, their personal equal value in the sight of God, is not denied by such a conception, but rather assumed."

Frequently, you hear a lot of clap-trap and expressions from some of the Negro preachers, designed to gain applause, that, "I don't want to be your brother-in-law: I want to be your brother." Of course, all Christians are brothers in Christ and in Him there is no east nor west. But there is no principle of Christian brotherhood which implies any sort of equality, over and beyond this; and, surely there is none which gives a person a "preemptive right" of intrusion where his

presence is not wanted. It is unreasonable that the concept of brotherhood should be used to describe a condition of worldly equality.

WHAT IS BROTHERHOOD?

Dr. C. K. Brown of Davidson College, in a very interesting address, The White South is a Minority Group, tells us that:

"Brothers are not equal and cannot be; brotherhood is status in a family. There are big brother and little brother, each with duties of his own and responsibility to the other. Nowhere in the New Testament can I find that it is the purpose of Christianity to wipe out the differences that exist among men. It deals not with the many points in which they differ, but with the one point in which they are all alike. Some men have black skins, but all have black hearts. In dealing with this common characteristic, Christianity does not destroy the differences of men. It does something grander than that; it makes those differences irrelevant. If Jesus had intended to endorse the struggles of men for worldly position and prerogative. He could never have said that the meek shall inherit the earth. And if all the differences were to be wiped out, little room would be left for the charity enjoined by the rich 13th chapter of First Corinthians."

We Christians, who stand unawed by the insulting epithet of "un-Christian" and remain firm for the principle of segregation, find support in the Bible, Acts 17: 26, which reads:

"And hath made of one blood all nations of men for to dwell on the face of the earth, and hath determined the times before appointed, and the bounds of their habitation;"

The words, "hath made" mean that the Lord was acting in a sovereign will, power, wisdom, and disposal in setting the bounds of the habitation of the different races.

The word "nations," if you remember your Greek, comes from an ancient word "ethnos," meaning a multitude, whether of men or beasts, associated or living together of the same nature or genus, and this latter word "genus" means: "A category of classification between family and species, a group of structurally related species or an isolated species exhibiting unusual differentiation."

The writer of Acts, in using the word "nation," refers to the different races of the world, and not to the geographical boundaries of certain empires, nations, or republics.

The misguided integrationists, the people who want to destroy God's work in making and setting apart the great races of mankind, who want only one blood on the earth and that a mixture and amalgamation of white, black, and yellow, argue that their main support for integration of the races is the Golden Rule ("as you would that men should do to you, do you even so to them"). In the light of the verse I have just discussed from Acts, the race-mixtures have nothing upon which to stand. In the Golden Rule, Jesus was upholding the fair and just treatment of our fellow human beings. He was not thinking of the integration of the races, of destroying the work of His Father.

This new religion, which was revealed to us on black Monday, by Prophet Earl Warren, is gradually destroying many of our churches. Many Christians are leaving the integrationist churches and are staying at home.

A RELIGIOUS FRAUD

Prof. W. C. George, a native North Carolinian, connected with the School of Medicine at Chapel Hill, made a telling point in a recent address made at Dartmouth College, "Human Progress and the Race Problem." In this address he said:

"It is asserted that integration is the Christian way and that separation of the races is un-Christian. It is not clear why anything should be accepted as Christian when its virtue has not been demonstrated. Strange connotations have been given to words nowadays. I believe you will join me in saying that it is a religious fraud to claim that Christianity would require us to adopt a public policy that would lead to destruction of our race."

Later on in this splendid address, made in the heart of the integration country, Professor George tells us that many strange and evil things have been advocated in the name of religion. He recalls that there was a time when Abraham thought that his religion required him to sacrifice his son, Isaac, as a burnt offering to God. So today, the integrationists are telling us to sacrifice our children on the altar of integration.

When people ask you: Is it necessary for a Christian to support integration? You can answer with all confidence: No.

Is it our Christian duty to preserve the integrity of our race and the purity of its blood strain as God Almighty created it? If we do not, we will become a hybrid race, and that, of course, is an inferior race.

WHY GOD CREATED THE RACES OF MANKIND

The Reverend James P. Dees, rector of Trinity Episcopal Church, Statesville, N. C., recently asked this question and answered it:

"How can this be the will of God or of Christ? or even the natural product of natural processes or natural law? Even if there were no intermarriage—though I am convinced that that is what is intended—it is contrary to and violates principles intrinsic to the created order and to apparent universal moral law. Races, I believe, were created by God to witness to Him as races, as well as individuals were created to witness as individuals. Every race, I believe, should have something to contribute to the eternal plan."

Mr. Dees stated that his view that integration is contrary to the moral law, finds support in commonsense as you look around you. He says:

"Do blackbirds intermingle with the bluebirds? Does the redwing fly with the crows? Would it make sense for my senior warden to mix Black Angus cattle with his purebred Herefords? Commonsense, knotty-headed commonsense, cries out against it, 'No.' It is abhorrent to the natural created order. * * * I cannot conform my intellectual integrity to any other position than that the integration of the races is contrary to natural law, which natural law, even though corrupted, is the product of the hand of God."

PRESERVING RACIAL INTEGRITY

The North Carolina clergyman notes, as I stated at the beginning of this talk, that those of us who, true to the dictates of our conscience, believe in segregation are branded un-Christian and anti-Christian. He denies this false charge and says:

"I believe, to the contrary, that this position is more in harmony with the ultimate Christian position in this particular situation, than is the position of those who are pushing the contrary position, and certainly more in accord with natural law. * * * It is argued, and rightly so, that segregation discriminates against the Negro race in many areas. Where this is so, the answer is not unification, but rather a bettering of the discriminating situation. As one southern governor has stated: 'When schools are unequal, the remedy is not to destroy the schools or the law. The remedy is to require that the schools be made equal.' And with this I heartily concur. As the retired bishop of South Carolina, Rt. Rev. Albert S. Thomas has said: 'Where segregation is un-Christian, this is due to man's fallen nature, not to segregation itself.' The supreme command is 'Love thy neighbor.' I recognize my neighbor in the Negro. Carrying out this command implies helping him to attain to the fullest stature possible as a child of God, both as an individual and as a race. I am compelled to conclude that he can come to his fullest development when his racial integrity is preserved. The destruction of his racial integrity seems to me to be contrary to the natural primal creation of God and to natural law and to enlightened commonsense."

In the name of conscience, what is it that makes it so un-Christian, in the United States above all lands, where we stand for freedom of association and against association forced by law, for a person to sincerely desire to worship God according to the dictates of his own conscience, among his own people, among the people of his own race and moral standards?

Always remember that God created us as free agents and our right to select our associates is of vital importance to our happiness. No government and no court has the the right to demand of us what people we must associate with and make our companions. This principle holds good in all conditions of life, especially in our social and religious relations.

I cannot find anything unchristian in a group of loyal American people, sincere followers of Christ, building through their own efforts and sacrifices, and with their own money, a church where they may worship God—a temple into which their money and sacrifices are builded and a church which no other race has contributed 1 cent to its building, and nothing whatever to its maintenance and desiring to worship there without intrusion.

THE RIGHT TO WORSHIP WITHOUT INTRUSION

Is it un-Christian for members of the white race, created by God himself, and who have always aided the Negro race, to better itself, to wish to remain members of the white race and to preserve the race as God created it? What is wrong with those whose conscience, and conscience, remember is the voice of God, tells them that their high moral duty is to preserve the integrity of the white race, wishing to worship God in temples builded by their own hands, in their own way, according to their conscientious convictions and wishing to follow countless centuries of custom and practice.

HOLDS FAST TO GOD-GIVEN CONVICTIONS

And now, my friends, may we who believe in the Constitution of the United States as so soundly construed by upright and patriotic judges of wiser and happier times; we who worship God according to the dictates of our conscience; we who believe it to be a sacred duty to preserve the integrity of our race as God created it, and we who love our churches and who do not wish them disrupted, our church people torn and divided by dissension and discord—may we hold fast to our God given convictions, cling with fortitude to our beliefs and the ancient beliefs of our Anglo-Saxon ancestors, and having taken our stand, may we be "steadfast, unmoveable, always abounding in the work of the Lord, knowning that our labor is not in vain in the Lord."

INTEGRATION IS NOT INEVITABLE

Do not be deceived by all the talk that integration is inevitable; that it is bound to happen; that do what we may against it, integration is certain to come. Do not accept this defeatist attitude, do not swallow this deadly opiate.

Have faith in the commonsense of our people and in the final triumph of our right to worship God according to the command of our conscience. Let us pray that it is our God's will that this struggle for freedom of conscience and liberty of association will be won. Let us stand steadfast, yield not 1 inch, not be terrified and beaten back by the sinister forces of evil now rampant throughout the land, if we will do these things, then the victory will be ours:

"Ye that have faith to look with fearless eyes
Beyond the tragedy of a world of strife,
And know that out of death and night shall
Rise the dawn of ampler life:
Rejoice, whatever anguish rend the heart,
That God has given you the priceless dower
To live in these great times and have your
Part in Freedom's crowning hour,
That ye may tell your sons who see the light
High in the heavens—their heritage to
take—
I saw the powers of darkness take their flight;
I saw the morning break."

Washington Report by Congressman Bruce Alger

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my weekly newsletter of July 20:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

JULY 20, 1957.

The Veterans Beneficiaries Act (amending World War Veterans Act, 1924) (H. R. 72, is remembered by some of us as an example of the frequent "painful responsibility" versus "political demogogic" legislative choice in the job of being a Congressman. This act is a credit to the Veterans' Affairs Committee since their majority vote brought before the House this bill to get approximately $200,000 back to the Federal Treasury. The bill provided that Federal payments of gratuities to guardians of veterans who have legal disability (mental incompetence) shall revert to the United States Treasury if the veteran dies leaving no spouse, child or dependent parent. Gratuities are defined as: (1) Compensation for service-connected disability or death; (2) pension for non-service-connected disability or death; (3) emergency officers retirement pay; (4) serviceman's indemnity; and (5) retirement pay—these as distinguished from United States Government life insurance or national service life insurance. Further, the money would revert only after payment of debts and satisfaction to all creditors including expense of death and administering the estate. It was never the intent of Congress that veterans' benefits should be accumulated for the enrichment of uncles, aunts, nieces, nephews, cousins, and other distant relatives who had little, if any, to do with the veteran. By intention, no provision of the bill would have affected any veteran adversely. Could we pass this eminently responsible piece of legislation? No; it was defeated 191–161 and left some Members with a feeling of "what's the use of being fiscally responsible anyway." Here's another example of legislation which would become law if the people know the facts and kept the pressure for economy on Senators and Representatives. It also is additional proof that, except for political speeches, the "cut the budget" effort in Congress is almost forgotten. The people, if enough were vocal, could change this by demanding economy—but won't. And so we drift on into bigger Government expenditure and control.

The Mutual Security Act of 1954 amendment, known as foreign-aid authorization for 1958, came to us as a bill of 33 pages, accompanied by a 108-page report, based on 7 volumes of hearings, explaining the need for $3.242 billion financial aid to 59 countries. Ten countries get military assistance, 28 get military and economic aid, 21 get economic aid only. This continues the program under which, between 1945 and 1956, $69 billion have been given away (an amount equivalent to all real and personal property of our 17 largest cities, including Dallas). Argument for: To keep peace through military strengthening of our allies and through helping backward areas develop economically. Has it succeeded? There's the debate. Some say the proof is that "we are not fighting" and "communism's spread has been decelerated." Hence, it is successful. This is a powerful argument, not to be dismissed lightly. Others hold the program is self-defeating, wasteful, mismanaged, even unconstitutional.

As for me, I have opposed foreign aid repeatedly and have clearly stated why, for any and all to hear. In this and every legislative matter, an open mind is a must. Facts and principles, not blind prejudice, should hold. I have tried to be objective, but some criticisms of the program are so damaging that my opposition has been strengthened. They include: (1) Congress (the taxpayers' representatives) is now asked to surrender control in blankcheck fashion, (henceforth the military will control all defense expenses, the executive the revolving loan program); (2) too much money—there is now $6.2 billion appropriated but unspent, plus $2 billion of agricultural surplus gifts (Newsletter, June 22) and now $3.2 billion which totals $11.4 billion (plus $1.275 billion for 1959 and 1960); (3) better correlation and efficient planning of various programs is needed (military, economic, food disposal, etc.); (4) the national debt may be increased by the new loan fund, particularly dangerous since no loan plan has been developed and presented; (5) six nations have paid down their public debt with United States money.

Basically, we have failed to convey American belief and ideals because of contradictions and inconsistencies. We are a paradox to others, defeating our purpose "to win friends and influence." We attempt by dollars, strict materialism, to help others, contradicting our own historical development, a Christian society which succeeded because of individual effort based on private enterprise, individual freedom under a Declaration of Independence which guaranteed nothing but the right of life, liberty, and the pursuit of happiness. Now we try to support and secure for others a higher standard of living which can happen, not by our gifts, but only if and when others want to work for it, as did and do United States citizens. Indeed, we are supporting communism (Yugoslavia) and socialism (in India, Italy, France, and even England), idealogies denying people the freedom from which resulted the United States wealth. We are subsidizing alien philosophies at a time when the world is locked in a deadly struggle testing which philosophy will win.

Court's Backing of Girard Deal Sets an Ugly Precedent

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. LOSER. Mr. Speaker, on Friday, July 12, 1957, there appeared in the Nashville Tennessean an editorial concerning the unanimous decision handed down by the Supreme Court in the Girard case.

As the editorial points out, the opening of this Pandora's box may well lead to the GI becoming a pawn to be sacrificed at will in the game of international politics and diplomacy.

The editorial follows:

COURT'S BACKING OF GIRARD DEAL SETS AN UGLY PRECEDENT

The Constitution does not follow the American soldier overseas, according to a unanimous decision of the Supreme Court in the Girard case, and the Eisenhower administration is said to be happy over the news.

Boiled down to its essentials, the Status of Forces Agreement between Japan and the United States left the way open, in the Court's view, for our country to give up its primary jurisdiction and waive its rights when this was of particular importance to the other nation involved.

The GI therefore becomes a pawn to be sacrificed at will in the game of international politics and diplomacy.

This is true, not only in Japan, we learn, but in other countries.

Like Judge Joseph McGarraghy of the Federal district court, the Supreme Court concedes that Sp3c. William S. Girard was on official duty at the time of a Japanese woman's untimely death at Camp Weir range in Japan. In firing an empty cartridge case from a hand grenade launcher the GI was guilty of reckless and stupid behavior which unquestionably deserved punishment.

But whereas Judge McGarraghy held that jurisdiction lay with the American military command by reason of the Constitution, and that this was something that could not be bartered away, the highest court abruptly declares "delivery of Girard is not prohibited by the Constitution," and "in the absence of such a ban, the judgment of the executive department should be upheld."

There is nothing in the opinion to indicate that if the executive department had refused to deliver Girard to Japan, and the case had been brought on this issue, the court would not just as readily have ruled that the administration was right for constitutional reasons.

There are, of course, certain spheres of activity beyond the line of duty in which soldiers overseas should be subject to the laws of guest nations. This has traditionally been the case. But there are shocking implications that duty, however wrongly carried out, does not prevent the deprivation of hitherto accepted rights when some other nation claims it is of particular importance.

This, we think, is playing fast and loose with the rights of American boys who go overseas as defenders of democracy.

Carrying weight with the Supreme Court, it is clear, was the stand of the President of the United States and Commander in Chief of the Armies, in company with his Secretary of State, that Girard must be tried in a Japanese court in furtherance of national security.

We are in this case appeasing Japan, but at the same time we are opening a Pandora's box of troubles.

For who can doubt that the pattern set by the administration will be marked down by Communists and leftist troublemakers in all countries where our troops are quartered? Instead of less incidents of this kind, more can be expected.

The fate of GI Girard, who long since should have been firmly dealt with by court-martial, now bids fair to become symbolic of what to expect from the United States Government if enough furore can be raised through riots and threats.

We, too, are inclined to think that Japanese courts will try to deal fairly with Girard in what is equivalent to a manslaughter case. But that is beside the point.

It is a grim development when an American soldier is traded off to a foreign nation for an uncertain good will, and when eight members of the highest Court (one is absent on vacation) are so quick to give this their stamp of approval.

Our respect for the incisive reasoning of District Judge Joseph C. McGarraghy on this issue grows by leaps and bounds.

International Woodworker

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. WIER. Mr. Speaker, under permission to extent my remarks in the CONGRESSIONAL RECORD, I include an article from Labor's Daily of July 20, 1957, which is a reprint from the International Woodworker on Federal aid to education.

The article follows:

INTERNATIONAL WOODWORKER

Critics of Federal aid to education—especially those from Minnesota and Oregon—should take another look at the facts that bear on this quesion.

Politicians and chambers of commerce who rant and rave and in certain instances drive themselves almost to the point of frothing at the mouth about the alleged "evils" of such aid are apt to find themselves in a poor position if they come from either Minnesota or Oregon.

If they hail from South Carolina or Mississippi, they are probably in a pretty good position.

Why, you ask, should this be true?

Well—just for a minute—put yourself in the position of a Congressman or Senator from either of the two southern States.

If you oppose Federal aid to education, you can, as a southern representative, go before your electorate and proclaim—with a great decree of honesty and truth—that Federal aid will educate the young folks to the point that almost two of them will go to war in the next one for every one that went last time.

The reason for this is that the educational level of South Carolina (the Nation's worst) and Mississippi (the Nation's second worst) was so low that their young men failed to qualify for service in the Second World War by a far greater percentage than any State north of the Mason-Dixon line.

Even the Army's skimpy educational requirements were high enough that only a little more than half of the young men from South Carolina and Mississippi were acceptable for service in any capacity—including that of yard-bird.

On the other hand, in Minnesota (the Nation's best) and in Oregon (the Nation's No. 2 State) 97 percent of the young men called up by the armed services were acceptable. Minnesota topped the Nation with a rate of 97.4 percent acceptance and Oregon followed with exactly 97 percent.

Thus, Minnesota and Oregon subsidized the need of the country for its warriors by a rate of almost 2 to 1 over what South Carolina and Mississippi did.

A Congressman or Senator from either of these two Southern States—if he wants to continue the practice of letting the North do the South's fighting—should oppose Federal aid to education.

Those who oppose Federal aid to education—and the improved educational level that would follow—must bear in mind that the educational requirements of a modern army will go up even more in the future. If this happens, States like Mississippi and South Carolina will fall even further behind.

However, if you hail from Minnesota and Oregon, and represent as you would, the most literate people in the Nation—you had better work for Federal aid to education—so that the sons of your constituents won't be sent out as cannon fodder at the rate of almost 2 to 1 over the men who lack enough book learning to qualify as infantrymen from the Deep South.

The North and West should take another look at the manner in which they are subsidizing ignorance and the Surgeon General's annual report, page 329, for the calendar year 1953, will prove to be a fine source.

We think it is high time that the Nation woke up and demanded a program for education that will make it necessary for States like South Carolina, Mississippi, Louisiana, Alabama, Arkansas, Georgia, Virginia and North Carolina, in that order, to carry their share in selective service quotas.

Local Communities Are Meeting School Needs

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an editorial from the Beloit (Wis.) News reporting on new schools going up. It is obvious that local communities can meet the need for public schools. They will continue to do so unless Uncle Sam becomes involved. There is no need nor would it make sense to spend taxpayers' money on a Federal aid to education bill.

MEETING SCHOOL NEEDS

While millions of youngsters were trooping out of schools across the land in June for their summer vacations, school officials and taxpayers were making preparations for an ever-increasing enrollment expected during the next few years.

In fact, it was a rare day in June when some State, county, municipality, township, school district, or State authority didn't do something about building new schools or planning additions to existing ones.

June bond sales, the Investment Bankers Association of America statistical bulletin reports, amounted to $134 million for elementary and secondary schools. The sum brought the total school bonds sold in the first 6 months to $1.2 billion, described as "an alltime first-half record."

The report reveals that the $134 million school bonds sold in June amounted to something more than one-third of the total municipal bonds sold for all purposes.

During the next 5 months, taxpayers across the Nation will vote to tax themselves to provide for their needs to the tune of some $502 million, of which $296 million will be exclusively for education, which means more schoolrooms.

These figures would tend to prove that communities are aware of their obligations to furnish school facilities, despite Federal claims to the contrary.

Meeting of International Confederation of Free Trade Unions in Tunis

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 22, 1957

Mr. HUMPHREY. Mr. President, the International Confederation of Free Trade Unions is meeting this month in Tunis in one of the most important international events of the year. The consequences for the future of freedom and democracy everywhere in the world are tremendously enhanced by this kind of close international contact among free trade unions.

I ask unanimous consent that the text of an article "The ICFTU Meets in Tunis," written by Mr. Al Zack, and appearing in the current issue of the AFL-CIO American Federationist, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ICFTU MEETS IN TUNIS
(By Al Zack)

TUNIS.—The uncompromising opposition of American labor to totalitarianism and all forms of oppression and exploitation was demonstrated clearly at the fifth world congress of the International Confederation of Free Trade Unions, meeting in one of the world's newest free nations.

Each AFL-CIO delegate addressing the convention and participating in committee discussions reiterated unswerving determination to aid all workers in realizing freedom, decent living standards, security, and brotherhood.

Arne Geijer, of Sweden, was elected president, succeeding Omer Becu, of Belgium. J. H. Oldenbroek was reelected as general secretary. The new president of the ICFTU is the head of Sweden's LO, or the Confederation of Trade Unions, and was formerly the president of the Swedish Metal Workers Union.

AFL-CIO Secretary-Treasurer William F. Schnitzler presented to the congress a major six-point program to achieve the ICFTU goal of bread, peace, and freedom.

Based on fighting communism and other forms of totalitarianism into the ground, the program proposed the exploitation of political and economic weaknesses in the Soviet empire, elimination of social injustices and all forms of discrimination, eliminating colonialism and helping new countries to develop, building up enough military strength to quell aggression, eventual disarmament, and the cooperation of free peoples for common goals.

Mr. Schnitzler denounced the leaders of Soviet Russia and pointed out that in the Communist system colonialism has now taken on a new and more vicious form. He emphasized the AFL-CIO's uncompromising hostility to every form of totalitarian tyranny.

The delegates representing 55 million trade unionists in 93 countries, at the closing session of the congress, unanimously approved a resolution warning that a disarmament agreement without an adequate system of international control and inspection would involve the greatest dangers for the security of the free world.

Another resolution called for cease-fire negotiations between the French and the Algerian independence forces. There were

no dissenting votes, but the French delegates did not vote.

A major human-rights speech by AFL–CIO Vice President A. Philip Randolph was enthusiastically received by the congress. In a virtually unprecedented move, the congress unanimously and enthusiastically extended his speaking time.

Mr. Randolph said racial discrimination in the United States is steadily, though slowly, fading. He hailed the Supreme Court's school desegregation decision as momentous and monumental.

Thunderous applause greeted his plea that the congress support the African workers' efforts to build free-trade unions so that Africa will not be lured into the trap set by the Soviet Union, which stands against freedom for workers and dignity for the human personality, and would make slaves of all men, regardless of race, creed, color, national origin, and ancestry.

AFL–CIO Vice President James B. Carey told the congress that labor in the United States has been greatly strengthened by the recent merger. Unity means that new advances are possible legislatively and organizationally, Mr. Carey said. He also pointed out that the merger means new strength is available in the international arena.

Mr. Carey said that United States unions are engaged in a cleanup operation which will not be halted until the job is completed. He promised complete defeat of the forces of corruption through the same democratic process by which the Communists were driven out of the American labor movement.

Irving Brown, AFL–CIO representative in Europe, urged the International Confederation of Free Trade Unions to redouble its efforts on behalf of Algeria before the United Nations. Emphasizing the need for an early solution, he recommended that all ICFTU affiliates put pressure on their governments to back the Algerian cause.

A blistering attack on Soviet Russia's savage suppression of the Hungarian democratic revolution was unanimously voted by the delegates after they had heard a moving and inspiring report by Miss Anna Kethley, who was a member of the shortlived government of Imre Nagy.

A hushed congress listened intently as Miss Kethley, in quiet, almost desperate tones, described the intolerable conditions imposed by the Soviet slave world which led to the October revolution in Hungary. She spoke warmly of the AFL–CIO's support of the cause of freedom in her country and praised Austrian labor's hospitality to the Hungarian refugees.

American labor's six-point program, which Mr. Schnitzler described as "a positive composite program nonmilitary in character and designed to supplement the military strength of democratic, peaceful nations," included:

1. Improvement and strengthening of our social fabric by eliminating economic and social injustices, and racial and other discriminations.
2. Extending the area of freedom by eliminating colonialism and giving generous economic and technical assistance to underdeveloped countries.
3. Exploitation of the political and economic weaknesses of the Soviet Empire.
4. Adequate military strength to deter and, if need be, to defeat any aggressor.
5. Continuous and expanding cooperation of free peoples for preserving peace and freedom.
6. Efforts to secure even limited disarmament, with a view toward furthering disarmament, coupled with an effective international inspection system.

The AFL–CIO delegation arrived in Tunis on a symbolic day—symbolic not only of the primary issue before the fifth world congress of the ICFTU but as well of the unquenchable desire which is today changing the African continent.

It was the Fourth of July—America's Independence Day.

Only a few hours after landing in Tunisia, Mr. Schnitzler led the delegation to the residence of the American Ambassador, G. Lewis Jones. The Ambassador, in keeping with the custom in United States embassies throughout the world, was holding a Fourth of July party celebrating America's own fight for freedom.

Among the other honored guests were Premier Habib Bourguiba, the dynamic leader of the Tunisian people and a stanch friend of the United States. Premier Bourguiba greeted Mr. Schnitzler and the American delegation warmly, recalling with delight his visit with the leaders of the AFL–CIO a few months ago.

That celebration of America's independence launched the 8-day conference which devoted a major share of its attention to the problems of freedom for all people seeking escape from the yoke of oppression.

Mr. Schnitzler paid tribute to newly independent Tunisia in his speech at the opening session.

"Throughout its struggle for national independence," he said, "Tunisia had an outlook which extended far beyond its own limited territory and the bounds of the Arab world. The democratic aspirations of the new Tunisia and its inspiring leadership are a pivotal rampart of human freedom now gravely imperiled by Soviet imperialism with its new and savage colonialism masquerading as a liberator of colonial peoples and as a movement of profound social reform.

"The democratic forces in the Arab world can only draw inspiration and strength from young Tunisia's firm devotion to genuine social reform. It has shunned narrow nationalism and religious bigotry. Free trade unionists and other liberty-loving people everywhere can only view with the greatest satisfaction the fact that there is nothing fanatical or jingoistic in the Tunisian Government's extensive development program."

Mr. Schnitzler said that the people who prize liberty, equality, and fraternity should welcome the solidarity between Tunisia and the Algerians, "now in the decisive stage of their heroic struggle."

"There can be no better guaranty for north Africa becoming a fortress of freedom and social progress than close cooperation between the free and independent peoples of Tunisia, Morocco, Libya, and Algeria," he declared.

He noted the rising pressure of French domocratic forces to have their government pursue toward Algeria "the same enlightened and liberal policy" it had applied to Tunisia and Morocco. He expressed confidence that the French people will play a decisive role in promoting "independence, liberty, equality, and fraternity, and social and economic progress" in north Africa.

SAK, the trade-union confederation of plucky Finland, was accepted as a member. Its delegates were seated amid vigorous applause.

Is the Attorney General Trying To Imitate Sam Slick?

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. BURDICK. Mr. Speaker, when the civil-rights bill was before the Judiciary Committee, of which I am a member, nothing was said or intimated that this present bill, now before the Senate, contained provisions to enable the Federal Government to enforce the decision of the Supreme Court banning segregation.

The Attorney General this morning is quoted in the Washington Post as saying that one of the purposes of the bill is to give the Federal Government more power than it now has to enforce the decision of the Supreme Court. Senator RUSSELL has been saying this right along, but I was sure that no such purpose was intended.

If this is the situation, then there was an undisclosed purpose behind the bill, and if it means what the Attorney General now says it means, I would not have voted for the bill. Not a word was said about this purpose by the Attorney General when he testified before the committee. Congressman KEATING, of New York, in charge of the bill, never intimated in any of his frequent statements that this was the purpose, or at least one of the purposes, of the bill.

Somebody has failed to disclose that which should have been disclosed, and it looks very much like the Judiciary Committee has been deceived. I don't believe this hidden purpose was disclosed to Congressman KEATING. If he had known it, I am certain he would have disclosed it. Narrowing the investigation down as far as I can go, the conclusion is unescapable that there was a Sam Slick working on the matter, and who Sam Slick is, appears now to be the Attorney General.

Address of Representative Francis E. Walter, Democrat, Pennsylvania, at the Commanders Banquet, 13th Annual Department Convention of AMVETS, Hotel Easton, Easton, Pa., July 20, 1957

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADDRESS OF REPRESENTATIVE FRANCIS E. WALTER, DEMOCRAT, PENNSYLVANIA, AT THE COMMANDERS BANQUET, 13TH ANNUAL DEPARTMENT CONVENTION OF AMVETS, HOTEL EASTON, EASTON, PA., JULY 20, 1957

It is a distinct pleasure to be here with you this evening. As one of the godparents, so to speak, of your organization, I have always been keenly interested in your affairs and I have felt a personal pride in watching the AMVETS grow into an important national enterprise.

It was just 10 years ago, on July 23, 1947, that the United States Congress issued a charter for the AMVETS. I can still remember—and I am sure that you can, too—the great hopes and prospects which moved us after World War II as we looked forward—soberly and without delusions, we thought—to a new era of international accord; to the establishment of an ideal way of life for all mankind, to the flowering of the traditions and institutions of our own country, which we had purchased anew at such great cost in battle.

I would like to read the preamble to the AMVETS constitution. It expresses eloquently our thoughts of that time:

"We, the American Veterans of World War II, fully realizing our responsibility to our community, to our State, and to our Nation, associate ourselves for the following purposes: To uphold and defend the Constitution of the United States; to safeguard the principles of freedom, liberty, and justice for all; to promote the cause of peace and good will among nations; to maintain inviolate the freedom of our country; to preserve the fundamentals of democracy; to perpetuate the friendship and associations of the Second World War; and to dedicate ourselves to the cause of mutual assistance, this by the grace of God."

The values and the objectives that were set forth in the preamble seemed capable of clear definition then: The Constitution, principles of freedom and liberty, the cause of peace and good will among nations—all of these were concepts toward which everyone of us could proceed, sure of our course and our direction.

When we look at these words again today, however, they seem to emphasize the momentous crises which confront us. The very words around which we rallied have now become sources of division instead of unity.

The great problem of our time, of course, is the Soviet Union and its vehicle of conquest—international communism. We have tried to deal with this problem by a variety of means: We have entered into far-reaching international security alinements; we have poured vast sums of money into potential Communist target areas; we have met force with tentative force in at least one place; we have participated in endless conferences and negotiations with our adversaries. We have even tried to wish away the specter of communism and the Kremlin—to delude ourselves into thinking that they represent a passing threat which will disappear without struggle on our part.

It must be obvious that none of these efforts have won any substantial degree of success. In the span of time since the AMVETS were founded, the banners of communism have been carried into the satellite nations of Eastern Europe and to China. Nearly half the people of the world now are slaves of Communist regimes; and a host of so-called neutral nations eagerly curry the favor of Soviet Russia.

Here, in the United States, we have made attempts to repress the Communist movement. But while the Communist Party has lost some of its membership, its influence has spread far beyond what its founders ever dared contemplate.

It would be tragic enough if we had to blame this situation upon the superior might of the enemy, if the legions of the Soviet Union camped upon our borders and compelled our submissiveness. By the same token, such circumstances might be easier to meet, for throughout our history we have been able to rise up almost miraculously when threatened directly. We did this after Pearl Harbor and we may hope to do it again if the occasion presents itself.

The danger does not derive from superior force, it derives from the fact that we are basically uncertain of who the enemy is.

I say frankly that the developments which I observe from day to day in Washington are frightening. I do not think there is danger of a Communist revolution, or of the Communist Party as such, suddenly stepping into positions of power, but if the present trend of events continues we may find our status as a free nation extinguished even without such extreme developments.

We are progressing toward the time when our scientists assure us we shall have the latest rockets and guided missiles and the most advanced weapons that modern technology can produce and yet we may find them without value. We may not even get to use them in our defense.

Several months ago, Archibald Roosevelt, whose father, Theodore, was one of the country's great Presidents, testified before the Committee on Un-American Activities in the course of its investigation of Communist political subversion. Mr. Roosevelt has spent a lifetime in studying the menace of communism in the United States, and in trying to awaken the American people to an awareness of that menace. "Most people," he declared, "do not realize that the Kremlin has already invaded America." Let me continue his words for a moment:

"The reason that most Americans are not conscious of this invasion is due to the fact that it has been going on gradually for 39 years. The Soviet leaders have moved entire divisions of their political army into our country unnoticed by all except a few security-minded citizens. These Red forces are a political army which is civilian in appearance and walk the streets of America indistinguishable from the rest of the population. Their weapons of war consist of infiltration into Government, education, finance, and communication by subversion, disruption, poisonous propaganda, and espionage. They are largely an invisible enemy acting behind fronts and, therefore, difficult to pinpoint. Operating as a disciplined and dedicated force they insinuate themselves into various sensitive and key areas of our society."

As chairman of the Committee on Un-American Activities and the Subcommittee on Immigration and Nationality, I am acutely conscious of the eventualities that lie in store. If the present trend continues, it will be impossible to expose and punish members of the Communist conspiracy who are working day and night for our destruction; it will be impossible to keep Soviet agents outside our borders and it will be impossible to get rid of those that we uncover.

Let me emphasize this point again: These things will happen not because Khrushchev or Bulganin are able to impose their wills upon us, but because we, through confusion and indifference, are steadily robbing ourselves of our internal defenses.

In just the past few weeks, the United States Supreme Court has conferred a virtual immunity upon treason. Conspiracy has been decreed an acceptable mode of political life, and those who seek to combat it are themselves stigmatized. Foreign born who come to our shores are free to abuse our hospitality, and work for the annihilation of our Government, and everyday it becomes more and more difficult to take any counteraction whatsoever.

These recent Supreme Court decisions dealing with so-called individual rights have provoked a nationwide controversy. I do not want to go into the legal arguments which demonstrate how they violate the constitutional separation of powers of the various branches of the Government. I would just like to put the issue on the basis of commonsense. I do not see how anyone could consider it commonsense to tie our hands so that we cannot bring into public scrutiny persons who are in the service of a foreign power dedicated to the conquest of the United States.

No one has more concern for individual rights than I have. No one is more opposed to tyrannical excesses of government than I am. But let me say this: I have presided at many hearings of the Committee on Un-American Activities and I have had ample opportunity to observe the type of persons who have been summoned before the committee in its investigation of subversion. These people are not innocent men and women, who have been seized from their homes and jobs and subjected to an invasion of their private lives without reason. Everyone of them has been a part of the Communist conspiracy and in defying the committee they have chosen to side with that conspiracy rather than with the people of the United States.

I am at a loss to see how they merit any sympathy, yet by bringing them forward in the hope that we may obtain information about their activities, it is, we, who stand accused of trespassing against their constitutional freedom.

Last fall, the Committee on Un-American Activities held hearings in Los Angeles, as part of a nationwide inquiry into Communist political subversion, namely, the attempts of the Communists to destroy our entire security system. Several of the lawyers who represented witnesses before the committee, had to be ejected from the hearing room because of their conduct. They had been permitted to appear with their clients as a privilege extended to them under the rules of the Congress—a privilege, let me remind you, not a right. It became apparent, however, that their real function there was not to aid their clients but to disrupt the hearings. The California Bar Association severely criticized the committee for having these lawyers removed from the hearing room. One of the most vehement of the group was a secret member of the Communist Party and was identified as the Party's legal advisor in Southern California. Now by any rule of commonsense, who should have been rebuked by the California Bar Association—the Committee on Un-American activities or the Communist Party lawyers.

The No. 1 Communist target today is the Immigration and Nationality Act of which I am proud to have been a cosponsor. At its national convention in February, the Communist Party assigned the highest priority to a nationwide campaign to smash the law.

Now, the Communists by themselves, member for member, would not be able to bring about the destruction of the Immigration Act; but they have been gaining a great number of Allies, some of them deluded by the fraudulent propaganda appeals of the Communists, others who find it expedient to espouse the same objectives as the Communists.

At this moment in Washington, a new assault upon the immigration system is taking shape. It is led by the professional panderers of the minority interests, who are willing to sell the national welfare for a vote for themselves. If this attack is successful, it will mean the end of our last barrier to an influx of subversives from abroad.

If this happens, the greatest jubilation will be heard in the ranks of the comrades. The Communists have good reasons for wanting to destroy the immigration system. There are no humanitarian impulses involved, let me assure you. The Communist efforts are directed solely at enabling the Kremlin to move its army of spies and saboteurs into the United States and to keep them here after they have been exposed.

It is amazing how many citizens accept the Communist claim that action against Communists is an attack upon the rights of all Americans. When pro-Nazis were ordered out of the country, there was no outcry that the deportation of these totalitarians represented a blow against liberty. When Italian Fascists were expelled, no one seriously argued that America would suffer because of it. Under the Walter-McCarran Act many dangerous criminals have been deported, and no one ventured to say that this threatened our 14 million foreign-born. Curiously, it is only the deportation of Communists that excited alarm about the rights of noncitizens.

It is equally curious that no one ever mentions the generosity of the United States in providing a new home for millions of dis-

placed and dispossessed persons. I, myself, have worked actively for the legislation which has brought many of the homeless Europeans to these shores and given them the opportunity of a new life.

The Immigration and Nationality Act, as a matter of fact, has enlarged the quotas for immigration and removed the last racial tests which had discriminated against prospective immigrants because of color or origin. But when we seek to remove persons, who have come here fraudulently in order to work in the interests of the Communist conspiracy, we are accused of inhumanity.

Of course, anyone who has studied the Communist program knows that they don't really care about minority rights. Some of the most brutal programs the world has ever known have been carried out by the Kremlin against minority groups. Millions of Lithuanians, Ukrainians, Jews, and other nationality groups in the Soviet Union have been deliberately slaughtered to implement official state policy.

The hypocrisy of the Communist concern of minority and national rights was brought out vividly in the hearings on political subversion that I referred to a few minutes ago. A number of the witnesses, who had been active in the Communist Party nationality work, were asked how they felt about the fate of the Hungarian freedom fighters when the Russians marched back into that country. Not a single one of them voiced a protest against the brutality of the Red army and the wave of terror and executions and mass arrests that followed the suppression of the revolution there. On the contrary it was the Government of the United States which these collaborators condemned for its efforts to rid the country of undesirable subversives.

A few weeks ago, we had as a witness before the Committee on Un-American Activities, Dr. Frederick Schwarz, an Australian physician and psychiatrist, who has spent many years in research into the basic philosophy of communism. Dr. Schwartz is also executive director of the Christian Anti-Communist Crusade, a worldwide movement dedicated to the exposure of the ideology of communism. The first step of Communist conquest, Dr. Schwarz warned, is the conquest of the mind. If the Communists can succeed in capturing the minds of the free people of the world, then, he said, the Kremlin will be able to achieve its goal of world rule without another war.

It is this battle which we are losing, and the Communists know it better than anyone else. If you want confirmation, just ask Abner Green. Green is one of the chief Communist agents in the United States, and is head of the notorious American Committee for the Protection of Foreign Born, the Communist Party's action organization in immigration and minority affairs.

At a recent national convention of the American Committee for the Protection of Foreign Born, Green boasted that the Communists were becoming increasingly successful in creating what he described as a new atmosphere in which the Communist program could thrive and in which an effective anti-Communist action would wither.

It is easy to see this new atmosphere: Tolerance of communism has become the mark of the reasoning man free of emotion and prejudice. Communism itself, which the Supreme Court once denounced as a foreign-controlled conspiracy, has now become, in the current view of the Court, merely a political belief. We deal with the gangsters of international communism as if they were men of good faith and sit by as the Hungarian people plead in vain for our help. Communist sympathizers are returned to their jobs in the Government and Communist authors and directors, once banned from Hollywood are again introducing their poison into the motion pictures and into stage plays and television programs.

The new atmosphere extends to the highest levels of leadership; for years we were under the impression that Poland was a Communist satellite. Now we learn from the Secretary of State, in a letter dated December 28, 1956, that, and I quote, "Poland is not now dominated or controlled by the U. S. S. R." At that very moment the leader of Poland, Gomulka, was in Moscow pledging his solidarity with the Soviet Union. On October 15 of last year, President Eisenhower said, and I again quote, "that Yugoslavia does not participate in the world Communist movement led by the Soviet Union." And as he said this, Tito was busy as one of the Kremlin's chief emissaries, wooing neutralist nations into the Communist camp.

In a similar vein, we are told that communism in Red China is just a passing phase; and in London we find our representatives earnestly negotiating a disarmament agreement, although we know that the Soviets have violated every single treaty they have ever entered into.

Throughout our history, we have been exceedingly fortunate; we have never been defeated in war. We have been separated from foreign conflicts by almost impassable distances, and we have been imbued with a buoyant optimism which holds that we can never suffer serious reversal. It is well to remember that no nation has a guaranty of its survival. Other civilizations, as stalwart in their time as ours is today, have crumbled and vanished. We cannot dissipate our strength; we cannot spend away every principle that has made us great, and still expect to keep our freedom.

If we cast away our heritage, future generations will place the blame not upon the leaders of the Kremlin, but on us.

The Girard Case

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. SMITH of Kansas. Mr. Speaker, the Girard case may be off the first page of the daily press, but people back home still write their Congressmen in regard to this decision of the Supreme Court.

We are sometimes prone to believe that many of our so-called vital questions of the day are new and different than those of our ancestors. The Girard case is a good example, because the Supreme Court—"guardian" of Communists' liberty, has spoken. It is said, "There is no constitutional or statutory barrier to the administration waiving jurisdiction."

But there are still quite a few persons in the United States who do not believe that American soldiers should be turned over for trial by a foreign court for the mere convenience of the Federal Government.

The Supreme Court is supposed to be—and at one time was well versed in English common law—the foundation upon which our system of jurisprudence was built. The Supreme Court at one time gave great weight to precedence. It is suggested from one who has studied, read, and practiced law—that the honorable Court ask their law clerks to again read Blackstone's Commentaries—they will find one careful reading that in ancient days in Britain it is proclaimed in Blackstone "that no naval or army officer may turn over to a foreign government any British soldier or sailor for trial on any charge without subjecting himself to a fine of £500 and a jail term." That is what Britain thought a few hundred years ago.

Let us examine a few comments from nonlawyers back in my district and get their viewpoint on issues:

[From the Norton Daily Telegram]

THE GIRARD CASE

To quite a few people who regard the Constitution of the United States as sort of a blanket protection policy for American citizens with the Supreme Court as a hallowed body dedicated to enforcement of the Constitution, yesterday's Court decision on the Girard case comes as more or less of a shock.

The Court voted without a single dissenting opinion to order GI William S. Girard turned over to a Japanese court for trial on an offense committed while he was on duty with the United States Army.

Something is wrong.

The young soldier might be guilty. But his guilty or innocence should not be the determining factor concerning the scene of his trial. If the status-of-forces agreement requires turning Girard over to the Japanese under the circumstances involved, the Court decision might well have been to declare the status-of-forces agreement itself unconstitutional.

It would appear that the Nation is much closer to war than quite a few of us have been led to believe. It would appear that the Nation is so close to war that our leaders are afraid. It would appear that our leaders managed to convey some of that fear to the United States Supreme Court.

American leadership is stripping the country's pocketbook in an effort to buy foreign friendship. Interpretation of the status-of-forces agreement, and the agreement itself, indicates that the leadership is willing to augment its cash outlay with khaki-clad sacrificial lambs.

The waste of money in foreign appeasement has drawn some protest. But that protest has been but a whisper in a tornado to the protest that is likely to come the day Japanese court issues judgment in the case of Soldier Girard.

Mother, where art thy apron strings?

[From the Norton Daily Telegram]

POOR CHOICE OF MARTYRS?

Regret has been expressed in this column concerning the handling of the case of the American soldier who is to be turned over to the Japanese for trial on his part in the shooting of a Japanese woman while he was on guard duty in Japan.

William Girard stands accused of enticing the woman to come out onto an American rifle range, then taking a shot at her by firing a cartridge case from a grenade launcher. The blow from the cartridge case is alleged to have caused the woman's death.

The opinion expressed here should not be construed as defense of Girard's alleged action. The criticism is directed toward a situation under which the United States feels required to turn one of its soldiers over to a foreign power for trial concerning an act which he was supposed to have committed while on duty.

The United States Army should try its own cases. The United States Army should punish its own people found guilty of

wrongful acts. It is quite possible that if the Japanese court finds Girard guilty its sentence will be milder than that of a United States military court.

The Army has a real good problem in dealing with some of its members, ranging from sadistic hooligans to thoughtless punks, who insult, abuse or commit crimes against the citizens of foreign countries in which the Army is stationed.

But stern measures by the Army itself would do more good in curbing their actions than turning them over to foreign courts. More concentrated instruction concerning public relations before sending soldiers overseas also would help.

Harsh as it might be, the justice of a military court should not be denied any American soldier accused of a crime in a foreign land.

The Girard case points up the contradiction to Americanism in turning American soldiers over to foreigners. The Girard case is expected to bring forth a wave of public opinion which may rectify the situation making such action necessary in the eyes of at least the Army, the administration and the Supreme Court.

Question mark in the case is the choice of martyrs. Is William Girard the kind of a young man who deserves elevation to the role of a hero in the public eye?

Probably not.

A Kansas mother writes a letter to the President:

President DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: These are the times that try women's souls.

I write as the mother of four young sons who will one day be in the service of their country. I am teaching them to love their country as I love it. I am hoping that, by protesting today in the strongest terms of which I am capable, I can avoid tomorrow a bitter and tragic disillusionment for them and for me. I speak with only one voice, but I am sure that the voices of mothers everywhere will echo what I say.

It would be presumptous of me, a layman, to attempt to lay out a legal case for Girard. Especially so after the Supreme Court has ruled. But there is a profound feeling of uneasiness and dissatisfaction with the utter inadequacy of both the administrative and the judicial actions. Nothing has really been answered.

The position of our administration and the decision of the Supreme Court notwithstanding, I believe that soldier Girard's constitutionally guaranteed rights as a United States citizen have been sacrificed—and with them our Nation's most priceless contribution to mankind. I believe this because of the findings of other men in other times. Let us compare:

1. The administrative position:

Today's State and Defense Departments in their official statement reported that our representative at the negotiations was authorized to waive jurisdiction of Girard's case to Japan. We can not waive jurisdiction that we do not have in the first place.

When Daniel Webster was Secretary of State, however, he established the American doctrine regarding the men on our merchant ships: The flag of the ship protects its crew and determines its nationality. If the crew of a merchant ship is protected by its flag, how much more so the personnel of the Armed Forces when on official duty.

2. The judicial decision:

Today's Supreme Court ruled: "We find no constitutional or statutory barrier to the provision as applied here."

A former Supreme Court (in 1866) in reprimanding the military high command for overstepping its authority, had this to say: "The Constitution of the United States is a law for rulers and people, equally in war and peace, and covers with the shield of its protection all classes of men, at all times, and under all circumstances. No doctrine involving more pernicious consequences was ever invented by the wit of man than that any of its provisions can be suspended during any of the great exigencies of government. Such a doctrine leads directly to anarchy or despotism."

We are told that it was necessary to surrender Girard "to preserve the integrity of the pledges of the United States." To preserve their relations with their pagan gods, it was "necessary" for the ancient peoples to toss their living babies into fiery furnaces. To preserve wholesome German race, it was "necessary" for Hitler to exterminate the Jews. "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety"—Benjamin Franklin.

We cannot effectively lead the opposition to totalitarianism by creating a totalitarianism of our own. Our Nation's strength lies in the hearts and minds of its citizens. Our military security will be found in the loyalty and trust and the stand-for-something spirit of its Armed Forces, not in the half-hearted support of reluctant allies.

I believe that our solution to this age-old conflict—is it within the power of governments to sacrifice individual human beings "for the general welfare"?—will decide the fate, not only of our country, but of the human race. If individuals mean nothing, then nothing means anything; and we have already succumbed to the godless doctrines of communism.

Very sadly yours,

MAJORIE C. WEISS.
(MRS. L. E.).

AUGUSTA, KANS., *July 15, 1957.*

I have been reading a lot in the newspapers, and hearing a lot from news commentators re the 49-cent dollar. That is a pure myth, there is no such thing. This paper dollar we are carrying around is worth 12½ cents and no more. For instance, when I was a child, my father hiring a carpenter would pay him $1 for 4 hours work. When I hire a carpenter now, I pay him at least $1 for each half hour's work. In my book that makes my dollar worth 12½ cents. Also my father used to buy his whisky by the gallon in Kansas City. It cost him $4 per gallon delivered in our hometown. I buy my whisky by the gallon now and it costs me $41 per gallon. That makes my dollar worth 10 cents. My father used to buy a wheat drill for $75, I pay $500. That makes my dollar worth about 17 cents. However, I think taking every thing into consideration the dollar is worth about 12½ cents. That is getting pretty low and according to all reports it is still going down.

If Congress would only pass one piece of constructive legislation, it would be so encouraging. For instance:

Repeal my three pet peeves, or abolish the International Labor Office in Geneva, or reduce the guided-missile project by 50 percent, or reduce the aviation development project by 50 percent, or kill the bill authorizing the international development corporation, or reduce the President's budget by about $7 billion, or abolish the Federal income tax, or abolish the soil bank, or return unemployment relief to the States, who in turn could pass it on to the counties, where it belongs, or amend the social-security law so that employees would pay all the tax. If Congress believes that our people have deteriorated so far, are so profligate and are such spendthrifts that they cannot be depended upon to provide their own security, then make it compulsory that they pay, but lets stop sucking blood-money out of employers, or tear down the trade barriers and make it possible for us to sell, trade or barter our wheat, corn and cotton where , when and as we will, importing the products we receive duty free.

Any of the above would give us courage and restore the will and desire to do. As it is we only sit out here and pay and hope. (I mean pay not pray.)

I listened to Mr. Cordiner in his Meet the Press interview last Sunday evening. It is quite obvious that he was asked to do a job for which he was wholly unqualified. He is undoubtedly a fine man, a wonderful business executive and so on, but he knows nothing of the basic essentials necessary in building a strong defense force. Any time you start promoting people or raising their pay on the whim and fancy of any individual or group of individuals, ignoring the principle of long and faithful service, you undermine the whole structure. Selective promotion took the morale out of the Army and it will not come back until that invention of the devil is removed.

The Girard case leaves me cold. Shortly after World War I, doctoring the Manual of Court Martial became a hobby. Down through the years since then it has been changed and modified, until, in my opinion, it no longer serves the purpose for which it was intended. Turning over members of the armed services to foreign countries for trial is a byproduct of the doctoring which has taken place. In my opinion it is all wrong. I believe that members of the armed services and their dependents, also civil service employees on duty with the armed services providing a new home for millions of disany offense committed in a country in which they are serving. My opinion is based on 35 years' service in the Army and occupational duty in several countries.

These times are very critical and trying. As I see it we are rushing into a dictatorship as fast as we can go. (Just listened to a radio broadcast in which Senator BYRD was quoted as saying that if the civil-rights bill passed as now written, it would make the Attorney General a dictator.) I do not know what the nature of the dictatorship will be. It might be Nazi, it might be a form of fascism, or it might be communistic. It looks to me as though it will be a triumvirate on the order of the first triumvirate in Rome. God forbid that any of it comes to pass.

LESTER A. SPRINKLE,
Colonel, United States Army, Retired.

[From the Omaha (Nebr.) World-Herald of July 13, 1957]

WITHOUT JUSTICE

The day politics took over in the Girard case, all hope for justice virtually disappeared.

If Girard were given the protection of the Constitution and tried by a United States Army court-martial, he would be almost certain to receive the stiffest possible sentence in an attempt to soothe Japanese feelings.

If, as has happened, he were delivered to the Japanese he might expect extraordinary lenient treatment. Having won their point, the Japanese are not now likely to be vengeful.

But getting off easy should not be confused with justice. Justice means a fair trial, and in Girard's case that is now manifestly impossible.

Injustice to Girard, however, is not the end of this matter. Hundreds of thousands of other Americans are in military service overseas.

And where status-of-forces agreements prevail these Americans, like Girard, are now at the mercy of foreign courts if they are accused and if their military superiors choose to make them pawns of State Department policy.

For all such men and women the Supreme Court's ruling has ominous significance. And once the implications of this sellout of their constitutional rights are fully apparent to them, what a morale booster that will be.

Men and women in uniform overseas won't like it. And we can guarantee that their relatives and friends in the United States won't like it either.

Moves are under way to revise the United States Military Code of Justice by congressional amendment. One such measure would provide that no serviceman shall be subject to the criminal laws of any foreign nation. Representative Bow, Republican, of Ohio, leader of the House fight against the status-of-forces agreements, is trying to tack his amendment onto the foreign aid authorization bill.

However the think is done, it must be done, and quickly. The American people are demanding that the protections of the Constitution be returned to their men and women overseas.

Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

RESOLUTIONS PASSED AT YOUNG REPUBLICAN CONVENTION, 1957

Be it hereby

Resolved, That the Wisconsin Federation of Young Republicans in convention assembled in Stevens Point, May 12, 1957, hereby extends its deepest sympathy to Mrs. Joseph R. McCarthy and Tierney Elizabeth on the untimely death of our deeply beloved Senator, Joe McCarthy.

Whereas Wisconsin and the Nation has lost a valiant fighter for the cause of the American Republic and for the long-standing principles of the Republican Party; and

Whereas Senator Joseph R. McCarthy has paid the supreme sacrifice for opposing those who would subvert and destroy America: Therefore be it

Resolved, That we, the Wisconsin Federation of Young Republicans in convention assembled at Steven Point, Wis., on this 12th day of May, 1957, do hereby go on record as strongly urging our Senator, ALEXANDER WILEY, to immediately introduce a resolution in the Senate to strike from the record of that body the unwarranted condemnation that cannot but serve as an extremely dangerous precedent for future thought control in our legislative halls.

To the honorable the Board of Supervisors of Outagamie County:

GENTLEMEN: Whereas Senator Joseph R. McCarthy was born in the town of Grand Chute on November 14, 1908, attended school in Outagamie County and began a career as a businessman-farmer here, and

Whereas it was the people of Outagamie County who contributed heavily to his victory margin when he first successfully sought public office and became one of the youngest circuit court judges in Outagamie County at the age of 30; and

Whereas Senator McCarthy served his Nation faithfully, energetically, and in the best tradition in the Marine Corps in the South Pacific during World War II during which time he received several commendations for the manner in which he assumed his duties and fought for his country; and

Whereas Senator McCarthy was elected to the United States Senate in 1946 and there carried forward his fight against the enemies of his country against great odds and at great personal sacrifice; and

Whereas the people of Wisconsin and Outagamie County in particular showed their faith in Senator McCarthy and their desire that he continue his crusade to rid the United States of enemies from within by returning him to the Senate by a substantial margin in 1952; and

Whereas Senator McCarthy kept the welfare and safety of his Nation and his State foremost in his mind as he served the people of Wisconsin and Outagamie County long and well until his untimely death on May 2, 1957: Now, therefore, be it

Resolved by the Board of Supervisors of Outagamie County, That it expresses its heartfelt sympathy to Mrs. Joseph R. McCarthy, their daughter, Tierney Elizabeth, and other members of the McCarthy family in their personal loss and also feels profound sorrow at the death of a great American and our good friend; be it further

Resolved, That the Outagamie County Board of Supervisors commends Senator Joseph R. McCarthy for a job well done for service to his country above and beyond the call of duty both in wartime and in peacetime, for his courageous devotion to duties in making his country alert to the great menace of communism and for his untiring efforts on the bench and in the United States Senate while serving the people of Wisconsin and Outagamie County; be it further

Resolved, That this resolution be spread upon the minutes of this meeting as a memorial to Senator Joseph R. McCarthy and that a certified copy of this resolution be delivered by the clerk of this board to Mrs. Joseph R. McCarthy, her daughter, Tierney Elizabeth, and to the Messrs. William, Howard, and Stephen McCarthy, Mrs. Roman Kornely and Mrs. Anna May Long, the brothers and sisters of Senator McCarthy.

Dated this 14th day of May 1957.

Respectfully submitted.

Alvin Fulcer, Fred Hill, George Kroes, Emmett Root, Irvin Paul, Doug Evans, Ervin Conradt, Peter Farrell, Al C. Fischer, Walter F. Fredericks, Edward Peotter, John Fuhrman, Tom Duffey, Claude Bomier, Cecil Carpenter, Armin B. Scheurle, Steve L. Otis, Chris Roepcke, Michael Jacobs, Gordon A. Schultz, John R. Schreiter, Oliver Kloehn, George Miller, Sylvester Esler, Harry J. Cunningham, Patrick J. Heenan, Matt Verfurth, William P. Kopish, Max Kuehnl, Arthur Lecker, Erwin F. Teflock, Gerhard Ruhsam, Fred Krause, Leo Bleck, Norman M. Helms, F. R. Appleton, J. W. Weyenberg, Irving A. Grunwaldt, Desmond G. Schade, Lawrence J. Rebman, Fred Kranhold, Cornelius Crowe, Paul Kostka, Russell De La Hunt, Walter Laedtke, Walter Stearn, Jos. J. Weyers.

STATE OF WISCONSIN,

Outagamie County, ss:

I, Mollie E. Pfeffer, County Clerk in and for Outagamie County, Wis., do hereby certify that the attached resolution is a true and correct copy of resolution No. 27 which was unanimously adopted by the County Board of Supervisors on May 14, 1957, by a rising vote.

Miss MOLLIE E. PFEFFER,
County Clerk.

Dated May 15, 1957.

Who Teaches Your Children?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting and enlightening article with some factual information that is worthy of the attention of every Member of the Congress. I am satisfied that the writer, Mr. Carl J. Megel, as president of the American Federation of Teachers, has a vast knowledge of the subject matter gained over years of experience in his chosen field.

The following article appeared in the AFL–CIO American Federationist for August 1957:

WHO TEACHES YOUR CHILDREN?

(By Carl J. Megel)

Every union member, whether he be in the professions, trades, or occupations, is generally conscious that he would like his children to have a better education, including better teachers, than he did. But bluntly, realistically, except in some areas where labor has been successful in raising educational standards in terms of better teachers' pay, job security, and fringe benefits, his children may not be getting the kind of schooling he thinks they are, while even a greater shortage of qualified teachers is anticipated when the public schools throughout the Nation reopen after Labor Day.

When today's adult realizes that, while he studied for this mechanized age, his children must in the immediate future face the atomic age, conditions in our public schools become quite ominous.

The research department of the American Federation of Teachers recently undertook to examine teaching standards and teacher welfare in the approximately 1,345 school districts of more than 10,000 population in the United States.

The survey was conducted against the backdrop of knowledge that in these schools, as elsewhere, the crux of education is the teacher-pupil relationship. This presumes that the teacher is a competent, adequately trained teacher, and that all children are entitled to receive equal opportunities for learning.

There are yardsticks by which adequate teacher training and competency may be measured. To these can be added the value of teaching experience gained only from continuing years in the classrooms.

Generally, in recent years, it has been presupposed that an elementary schoolteacher should have a bachelor's degree, obtained from a college of education in 4 years of successful study beyond high school. A master's degree, ordinarily requiring an additional year in college, is the proper prerequisite for qualification as a high school teacher. The doctorate, calling for 2 more years of college study and a thesis, is the supposed yardstick for a college teacher.

These teachers' qualifications may be safely accepted as to what every American child is entitled to and should have. But replies of 71 percent (965) of the 1,345 school districts to American Federation of Teachers' questionnaires show that teachers with less than a bachelor's degree are currently being employed in 57 percent of school districts

(cities) having more than 100,000 population, 61 percent of districts with 25,000 to 100,000 population and 52 percent of districts of from 10,000 to 25,000 population.

If this condition exists in the larger and wealthier urban areas, what is happening in the 58,655 smaller city and rural districts? An estimate that more than 300,000 of the 1,100,000 teachers in grade and high schools hold less than a college degree is conservative. A report of a new Harvard survey estimates that less than 70 percent of grade school-teachers are college graduates.

Such a collapse is obviously due to refusal of school boards to find ways of paying salaries sufficient to attract and hold properly qualified teachers. Teachers' unions and State superintendents of schools in California, Michigan and Georgia estimate that these States have as many degree teachers not teaching as there are teaching—because of better pay in business and industry. Similar situations exist in other States.

Instead of providing State-supporting salary laws adequate to attract and keep qualified degree teachers, the legislatures of 29 States have laid the groundwork for the educational short-changing of their children by authorizing lower State-supported salaries for nondegree teachers than for degree teachers.

These States are Alabama, California, Delaware, Florida, Georgia, Idaho, Illinois, Indiana, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Mississippi, New Jersey, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Vermont, Virginia, Washington, West Virginia, and Wisconsin. Additional States with districts shown by the survey to be also employing teachers with only 1 to 3 years of college training include Arkansas, Colorado, Connecticut, Iowa, Kansas, Michigan, Minnesota, Missouri, Nesbraska, New Hampshire, North Carolina, North Dakota, South Dakota, Utah, and Wyoming.

Other States having no minimum salary laws for teachers include Arizona, Montana, Nevada, and New Mexico. What school conditions are in the rural areas of these non-minimum States can only be imagined.

The employment of nondegree teachers is comparable to the licensing of medical or dental undergraduates to practice or to the employment of partially trained apprentices as full-fledged master craftsmen.

Salaries paid the nondegree teachers by school districts employing them are pitifully low, and in many area are under and in violation of even the bargain-basement State schedules. Mississippi has a nondegree pay schedule of $1,600 to $1,800 in five steps for cities of over 10,000, but one Mississippi district reports starting such teachers as low as $787 a year, another at $831.

Starting salaries for nondegree teachers in most of the school districts employing them are less than $2,500 a year, with up to 10 to 20 years required to reach a low maximum salary. Actual salaries paid in many areas are below the State-supported minimums.

Arkansas, Alabama, Idaho, Illinois, Kentucky, Louisiana, Tennessee, and Texas have laws authorizing the certification of teachers with 1 year or less of college training. In other areas the need for adequate certification standards is manifest in the absence of any kind of such law.

This trend in education under the label of emergency need is used as a club over qualified teachers to make them accept low salaries. Along with traditional inadequate pay of degree teachers it creates a situation that should be looked into, if it exists, by central labor councils in their communities.

The employment of nondegree teachers is less prevalent and the standards as well as salaries of degree teachers are generally higher in cities where there are strong locals of the American Federation of Teachers. But uniformly higher salaries, along with strong State tenure laws, are still the top prerequisites to an adequate teacher supply.

The American Federation of Teachers research statistics from the 970 school districts of over 10,000 population show the salaries of degree teachers less uniform over the country than are the incomes of any others of the employed professions.

Pay of beginning teachers with bachelor's degrees range from a national low of $2,000 in Fayetteville, Ark., which has no A. F. of T. local, to a new $4,902, the highest, in East Chicago, Ind., where the East Chicago Teachers Federation, local No. 511, is strongly backed by organized labor, and a new second highest $4,800 negotiated by the new Niles Township High School (Skokie, Ill.) Federation of Teachers, local No. 1274.

Maximum bachelor of arts pay varies from Fayetteville's $2,500 deadend after 5 years of teaching to $7,900 a year in Long Beach, N. Y., after 15 years.

Fayetteville also has the dubious distinction of starting teachers with master's degrees at $2,100, the lowest for high-school teachers in the country, while Hempstead, N. Y., pays its beginners with master's degrees $5,300, the highest.

Maximums for masters range from $2,770 after 11 years in Camden, Ark., to $8,500 in Garden City and Great Neck, "silk stocking" New York suburbs, after 19 and 24 years. Anderson, S. C., offers doctors of philosophy $3,956 and Hempstead, N. Y., $9,400. The salaries for doctors of philosophy in all public grade and high school schedules are, however, mostly window dressing, since few are actually employed.

Somewhere between these minimums and maximums are the great majority of the Nation's qualified teachers, with regional pay averaging as follows: Bachelors—northwestern area, $3,243 minimum to $5,179 maximum; north central, $3,462 to $5,124; southern, $2,874 to $4,103; and western, $3,670 to $5,227. Masters' maximums for the same areas average: northwestern, $5,412; north central, $6,090; southern, $4,486, and western, $5,626.

It should be kept in mind that these averages are for cities with 10,000 or over population and are before income tax. The goal of the American Federation of Teachers is a bachelor's starting salary of $5,000, reaching $10,000 in 8 or less annual steps, with a spread of $500 for training above the bachelor's.

Highest salaries are paid in the so-called tenure States, where State tenure laws enable teachers to go under tenure after 2 or 3 years' probation and become subject to discharge only for formally proven cause.

Not too many tenure laws are worthy of the name, but the American Federation of Teachers has helped finance court cases in recent years that strengthened the statutes. Without tenure protection, a teacher may be and generally is subject to discharge from year to year without explanation or reason.

This means that, in the absence of tenure, the classroom teacher is subject to contract insecurity and sandbagging from the front office. The school administration is free to create situations intended to make the teacher with an idea of bettering her lot "come crawling."

Result: The dedicated teacher hangs on, while upwards of 100,000, or 10 percent, of all the country's teachers decide every year that their jobs are not worth the price, and quit teaching to take other jobs.

Few union men and women whose unions long ago gained them status, security, and respect can conceive of the conditions under which American teachers often work. State labor federations were shocked this year to learn that State laws would be necessary to provide teachers with as much as 30- or 40-minute duty-free lunch periods, and backed bills to make the lunch periods mandatory.

Principals uncurbed by strong teachers' unions traditionally assign teachers during their supposed lunch hour to hall duty, call them in for conferences, and so on. State labor federations took over the sponsorship of the lunch-period bill against opposition from organized school administration in many States.

Collective bargaining by teachers' unions is being successfully done in some cities, but it is still in the pioneering state as compared with progress by other AFL–CIO affiliates. Farsighted leaders of the American Federation of Teachers know that collective bargaining, plus tenure, is the key not only to a stabilized teaching profession but also to uniformly adequate education.

Pioneering locals of the American Federation of Teachers have been successful in initiating collective bargaining for salaries and other benefits, quite frequently and most effectively with the support of their central labor unions.

In Montana, the Butte Teachers Union, Local 332, is defending its union security clause, one of the first in the country, in the district court, against attack by non-union teachers backed by the Montana Education Association. The A. F. of T. is supporting local 332, as is the Montana AFL–CIO.

Gains have been made in fringe benefits—such as sick leave, pensions, health insurance and so on—but only in a relatively small percentage of the Nation's school districts. Negotiations for these benefits, as compared with the fringe gains achieved by other international unions, are still in the pioneering stage.

Summed up, progress, steady and certain, is being made by A. F. of T. locals in salary negotiations and collective bargaining, academic freedom and political action, and grievance procedures.

Community struggles for better schools and better teachers against reactionary politicians and school administrators that the reader may have witnessed on television are not fiction.

Unbelievably, while the general public is agreed on the need for better schools and higher-paid teachers, numerous education gimmicks highlighted today in many areas include:

The merit rating system of pay for teachers, in which supposedly superior teachers are paid more than others.

Teacher aids, in which housewives are employed to help teachers in the classroom.

Double and triple shift classes which short-change children, some because of the teacher shortage.

Attempts to teach classes by television, with the student unable to ask questions and get answers from teachers.

Attempts to eliminate such things as kindergarten, physical training, driver training, art and playground and recreation supervision, to cut school costs.

Probably the most vicious of all gimmicks—since there is no way of rating one teacher about another of equal experience on a dollars-and-cents basis—is the so-called and misnamed merit rating system now being promoted over the country. Suffice it to say, this system was tried and found wanting, to the extent that it disrupted the teaching staffs in numerous localities in the late twenties and early thirties.

Strong teachers' unions have been successful in defeating also the harassment and restrictions attempted upon them by superintendents and principals. These range all the way from a school board order in San Francisco forbidding teachers to take part in politics to bans on the use of school mailboxes for union mail.

The San Francisco taboo resulted in an act by the legislature guaranteeing political freedom of teachers, and our Local 781, in Kingston, N. Y., has just won a 2-year fight

for the right to use the school mailboxes and bulletin boards as do other teachers' organizations.

The fight of the American Federation of Teachers for better educational standards and to organize and protect the good teachers that we now have has become a continuous running battle across the country, in the courts, in the schools, in the State legislatures and in the communities.

A bitter opponent of the American Federation of Teachers and its State and local federations is the National Education Association which, while impotent in union techniques, battles the A. F. of T. as a competitor for its members.

It will surprise most union members that, while professing to be a classroom teachers' organization the NEA is comprised of both administrators and teachers, or anyone else who applies and pays the membership dues.

In a recent issue of Time it was said:

"The NEA is fiercely opposed to the AFL-CIO's efforts to organize a teachers' union, considers the NEA's own methods far sounder in helping teachers improve their lot.

"'The American people,' says the NEA's executive secretary, William G. Carr, 'do not want their teachers to become a part of a particular segment of American life.' Should organized labor ever get a real hold on the profession, 'the whole character of American education would change.'"

Against this background, unbelievable to union leaders, the American Federation of Teachers is constantly gaining. Every union member has a stake in the battle, because it is a battle for his or her children.

Using the trade union armor, it is a drive to attract and keep good teachers in America's classrooms to teach your children and mine so that they may be able to build a better world and live better lives. Labor leaders will hear more about this from the A. F. of T.'s 41st annual convention, to be held August 19 to 23, in Chicago.

Communist Threat in United States "Backyard"

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. PORTER. Mr. Speaker, the Sunday, July 21, 1957, issue of the Washington Post carried a review of Robert J. Alexander's new book, Communism in Latin America. The author, a professor at Rutgers University, is well versed in this field. He has long been concerned with labor and social questions in Latin America. I respectfully call to the attention of the Members of Congress this review written by Mr. A. Irwin Rubinstein.

Author Alexander names names and documents facts and figures in this definitive study which took 10 years. His book shows how communism has developed in Latin America. He points out that a country under dictatorship is not safe from communism, and also notes where the communistic grip has been thrown off. I agree with the reviewer that Professor Alexander's study is "indeed a noteworthy contribution to a field where there are all too few voices raised in defense of liberty and democracy 'in our own backyard.'"

The review follows:

COMMUNISM IN LATIN AMERICA

(Reviewed by A. Irwin Rubinstein, Chief of CARE mission in Honduras and a political scientist specializing in Latin American affairs)

The Communist-controlled Argenz government overthrown 3 years ago in Guatemala, opened many North American eyes to the possibilities and dangers of the threat of communism in Latin America. Robert J. Alexander, in a definitive work, presents those possibilities and dangers to those of the American reading public interested in knowing who the Latin American Communists are, what their history is, and how they function.

Alexander names names, gives places, cites publications, and lists dates because he has spent 10 years in compiling facts, studying and working throughout Latin America, interviewing Communists, rightwing dictators, labor leaders, socialists, military men, and every other type of person who influences or has influenced the political and ecenomic life of our 20 southern neighbors.

This is not a quick-reading book. It is a documentary presentation of fact upon fact in the development of communism in Latin America via a carefully exposed country-by-country analysis.

The claim that Latin American Communists are somehow "different," that they are "indigenous social reformers" or "anti-imperialists," or "agrarian reformers" must not be accepted, says Alexander.

"The Latin American Communist Parties are an integral part of the international Communist movement," he states, "and their role in Latin American affairs cannot conceivably be assessed with accuracy unless this basic fact is recognized."

That is the heart of the book. That statement, together with the Alexander prescription (though he does not present it as a cure-all) for removing the causes of communism, is the why and wherefore for the presentation of his documentary evidence.

Alexander explains that "the salvation of the region from Communists lies precisely in the real indigenous social reformers, agrarian reformers, and radical nationalists or anti-imperialists. For it is characteristic of the Communists that they have grown to important proportions in exactly those countries where there have been no local, native, radical movements which could catch the imagination and arouse the loyalty of the workers, students, and intellectuals of the nation."

Military dictators are transitory, and physical repression of either communism or social revolution is merely a stop-gap measure. The irony is that the very dictators who today claim to be the strongest supporters of the United States and the strongest enemies of communism in Latin America have, at one time or another, struck accords and alliances with the Communists to improve their own personal position.

Alexander feels the most effective opponents of communism in Latin America are "those elements of the democratic left (the Venezuela Accion Democratica, the Apristas of Peru, Figueres' National Liberation Party in Costa Rica, the Batallistas in Uruguay, the liberals of Colombia, Ecuador, and Honduras, and others) which are trying in a democratic way to bring about the social revolution which is so necessary to the future of Latin America."

He is strongly opposed to United States military aid to Latin America, which would be useless against a major enemy but is sufficient to "rivet existing tyrannies on the helpless civilian populations."

It is indeed a noteworthy contribution that Professor Alexander has made to a field where there are all too few voices raised in defense of liberty and democracy "in our own backyard."

Do Not Hamstring TVA

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. JOHNSON. Mr. Speaker, the Senate will soon consider the appointment of Arnold B. Jones as a Director of the Tennessee Valley Authority, by the President. The Milwaukee (Wis.) Journal of July 16, 1957, comments editorially upon the significance of the appointment and notes that "under the law a Board member must take an oath that he believes in the 'wisdom and feasibility' of the TVA and in public development of the entire river for everyone's benefit." Under leave to extend my remarks, I would like the full editorial submitted for the consideration of my colleagues in the CONGRESSIONAL RECORD.

DON'T HAMSTRING TVA

Arnold B. Jones, President Eisenhower's new appointee as a Director of the Tennessee Valley Authority, still hasn't had his innings before the Senate which must approve his appointment. His views on TVA are not known. But supporters of TVA are understandably worried by the appointment.

Jones is Deputy Director of the Bureau of the Budget, which has been most unfriendly to TVA and its needs. But even more, he is the candidate of the same group which supported President Eisenhower's first appointment to the Board, Gen. Herbert D. Vogel, the present TVA Chairman.

Under the law, a Board member must take an oath that he believes in the wisdom and feasibility of TVA and in public development of the entire river for everyone's benefit. General Vogel took that oath, but he has spent his time since trying to hamstring TVA in even its most urgent needs for growth. He was deeply involved in the Dixon-Yates mess. He has opposed legitimate need for funds—standing against both congressional appropriations and their alternative, adequate bond issuing authority under which TVA could raise its own funds.

General Vogel has been outvoted 2 to 1 on the Board time and again, but his influence with the administration has enabled him to block progress. He has said airily that the time would come when a new appointment would change Board membership and he would get his way. TVA backers fear that in Jones the change has come. One reason for thinking so is that Senator JOHN SHERMAN COOPER, Republican, Kentucky, ardent TVA supporter, wasn't even consulted on the Jones appointment as tradition would require. His own recommendations were ignored by the President.

A Board director need not be a backer of public power. But he should at least be objective. TVA has developed a huge area for private industrial use. It also has one important public customer—the Atomic Energy Commission. The customers are running short of power. Some of TVA's powerplants

need to expand to supply that power. To refuse expansion is to prevent industrial growth.

There is no longer the excuse of depression days for TVA serving as generous sugar daddy to its region. The Tennessee Valley can stand on its own feet now. And pretty largely it is doing just that. It is desirable that TVA's power production be run on a businesslike basis. Increasingly it is. But to be businesslike it must be able to meet customer needs—it must be allowed normal expansion, not of area but of capacity in the area it now serves.

The Senate has a duty to make sure that the Jones appointment means a businesslike approach to TVA and not the scuttling approach of General Vogel.

New Schools Going Up—No Need for Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Janesville (Wis.) Gazette, which states that there is no need for Uncle Sam to become involved in local school matters. The editorial follows:

NEW SCHOOLS GOING UP

Reports on a score or more of annual school meetings in the Janesville area this week have one thing in common. They demonstrate without any doubts that each separate local community is going ahead with its building plans without any regard to the possibility of Federal or increased State school aids. If there were any such thinking, most districts would be dragging their feet awaiting such grants. The fact is, however, that building discussions seldom take such possibility into account. The programs are being home planned, and are or will be home financed.

Clinton, which has completed building arrangements for a new community high school, authorized borrowing of an additional $125,000. In Elkhorn, approval was given to a $175,000 bond issue to get started on 2 new elementary schools. Williams Bay authorized $120,000 for an elementary building. Brodhead has set August 5 for its adjourned annual meeting to discuss new building plans.

In the rural areas, the Hebron area in Jefferson County proposes a new $100,000 building for a consolidated building. Newville, in the Edgerton vicinity, has spent $50,000 for school building since 1955, and now proposes to build 2 more rooms.

In Lake Geneva, those attending the school annual meeting considered setting up a sinking fund to meet long-range school-building needs. Milton electors discussed building needs for the coming few years and studied merits of a possible consolidation with its neighboring village of Milton Junction to meet a community problem. In Fort Atkinson, the annual school meeting heard without any consternation that three or four additional classrooms per year must be added to school facilities yearly for at least 5 years into the future.

The list is impressive, and it is not less impressive in the way that the public accepts the responsibility for big school budgets and the immense building demands. One reason, of course, is that taxpayers anticipate community growth and a broader tax base. The fact that such school-building needs exist is in itself proof of population growth and an assurance for the future. The communities which do not have to worry about school-building programs have a much greater worry—they are the ones which are in great danger of slipping backward.

The other great stimulus to school building is the changing pattern of education in rural areas. Consolidation was a theory rather than a fact for many years. It had to await adequate roads and transportation facilities and a change in educational methods before coming into flower. The progress in the 1950's has amazed even its most enthusiastic supporters.

While the many decisions to get ahead with building plans on a strictly local basis gives proof that there is no grassroots demand for Federal building aid, there are other proofs that such aid is unnecessary from an economic standpoint. It ought to be noted that the school-building boom is going ahead at the same time that taxpayers are burdened with excessively heavy Federal taxes and are also financing a wide variety of other municipal improvements. While paying for all this, the hard-pressed businessmen and wage earners have also managed to put money aside for the erection of more new church buildings than has been seen in generations as well as financing one of the biggest home-building booms.

It will take more arguments than so far voiced by Federal aid supporters to overbalance the evidence which any citizen can see with his own eyes. Home planning for school needs, so evident at the school meetings, shows how the average community is ignoring the attempts to first take tax money to Washington and then dole it out again in the form of aid.

The Shelbyville Chamber of Commerce Denounces Political Activity of National Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Mr. J. M. Tune, president, Shelbyville, Tenn., and Bedford County Chamber of Commerce, which is typical of many of the chambers of commerce in the Tennessee Valley area, and which is most critical of the political activity of the national chamber of commerce in its underhanded campaign against the Tennessee Valley Authority. The letter is of such significant importance that I think it should be read by the Members, and I am asking that Mr. Tune's letter be reproduced in the RECORD.

The letter follows:

SHELBYVILLE AND BEDFORD COUNTY CHAMBER OF COMMERCE,
June 8, 1957.

CHAMBER OF COMMERCE OF THE UNITED STATES,
Washington, D. C.

(Attention: Arch N. Booth, executive vice president.)

DEAR MR. BOOTH: We note that in your meeting of recent date that Mr. Sutton has made a vigorous speech advocating the sale of the TVA and indicated that his program had been approved by the National Chamber of Commerce.

I am at a loss to understand how such a program could be approved by the United States Chamber of Commerce when the members of your organization had not been given a voice in same.

We are bitterly opposed to Mr. Sutton's program and to any program that you might be sponsoring advocating the sale of the TVA.

It is our recommendation that you and all other associations leave TVA alone as it is at the present time.

I do not think any chamber of commerce should sponsor political activity for or against anything that is functioning as this agency is and if it is your thought to sponsor activities against the TVA I would like to advise that you have one less member in your organization.

Very truly yours,

J. M. TUNE, *President.*

Eisenhower Administration Peace Efforts Impressive

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. HOSMER. Mr. Speaker, if there is one thing this counrty is not short on, it is people who consider themselves experts on international affairs. It is such a big subject that almost anybody can pose as an expert on it without too much fear of challenge. Additionally, most self-styled experts are so busy carping at those who actually have to deal with the subject that there is little opportunity left for lateral criticism between them.

These people accomplish little, if any, good because their efforts are directed at criticizing the actions of others, rather than posing constructive courses of action themselves. That naturally leads to the conclusion they have in mind no such courses and therefore are not experts at all.

The idea is summed up somewhat more gently than I have done by the following editorial from the Long Beach Press-Telegram written by Harry Karns:

RESULTS ARE WHAT COUNT

Most sensible people go fishing or sit under a tree in weather like this.

But editorialists and Congressmen just take off their coats and keep on talking.

This is an elongated "Editor's note" on a remark by Columnist Doris Fleeson. Her remark:

"Senator MIKE MANSFIELD has literally begged the Eisenhower administration to embark upon a rational and frank search for ways to peace and has promised bipartisan support for it."

The obvious implication—Miss Fleeson's if not Senator MANSFIELD's—is that the Eisenhower administration has not been conducting a rational and frank search for ways of peace.

We don't accept that.

Sure, mistakes—many—have been made. But the net results have to be credited.

A rational, frank search for peace is exactly what Mr. Eisenhower and Mr. Dulles embarked on in 1952.

The end of the Korean war was negotiated at the beginning of this administration.

Other advances and explorations in the field of peace:

Eisenhower's "atoms for peace" proposal at Bermuda.

Eisenhower's "open skies" proposal at Geneva.

Eisenhower's refusal to condone aggression by Britain, France, and Israel in the Middle East, though they were America's friends.

The Eisenhower doctrine for aid to the Middle East.

America's disarmament proposals at the London Conference.

We cannot see where there has been a lack of candor in the pursuit of these policies. What could have been franker than Ike's television-radio speech on the Middle East at the height of the crisis?

As to whether the program has been rational, we can only ask:

Would it have been rational to continue the bloody war in Korea which was getting the world nothing but dead men?

Would it have been rational to condone the attack on Egypt, thus sacrificing all future hope of appealing to Middle Eastern nations on the basis of principle?

Would it have been rational to leave a vacuum in the Middle East, instead of promoting the Eisenhower doctrine, which has proven its value already by winning us a solid block of friends among the Arab States?

Would it be rational for the free world to negotiate disarmament agreements without protective provisions for inspections, which Russia refuses to accept?

Perhaps the crusade for peace could have been conducted more effectively by someone other than Eisenhower. But we don't see that someone among his critics.

Let the carpers remember that the Eisenhower policy has been effective enough to keep us out of war.

That's what counts to mothers and fathers. Not the hairsplitting political arguments about diplomatic technique.

Closing of Corona Naval Hospital Points Out Humane Need for Naval Hospital Facilities at Long Beach-Los Angeles Harbor Area Where Sizable Portion of United States Fleet Operates

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. HOSMER. Mr. Speaker, following the announced closing of the Corona Naval Hospital, Washington Columnist Virginia Kelly devoted one of her columns to a penetrating analysis of the dire necessity for naval hospital facilities in the Long Beach-Los Angeles Harbor area where a substantial part of the United States fleet is operating.

One of the most serious problems of the services today is that of retaining qualified personnel. Volumes have been written on the cost to the taxpayers of the large turnover in service personnel. One of the major reasons given for this is inadequate attention to the needs of the families of servicemen.

In contradiction of this need and necessity the Bureau of Medicine and Surgery of the Navy has never aggressively pursued the problem of providing adequate hospital facilities for both active duty and retired personnel or dependents in the important Los Angeles-Long Beach Harbor area.

Since the closing of the Long Beach Naval Hospital in 1949, admittedly without the concurrence of naval authorities, the Bureau of Medicine and Surgery has done little to allay the humane need for hospital facilities in the area. Although a hospital was authorized by Congress in 1950, funds have not been requested to implement the authorization. Rather, facilities some 40 to 50 miles distant at Corona, Calif., were deemed sufficient to fill the need. Now those facilities have been ordered closed.

It is high time that naval authorities in the Bureau of Medicine come to Congress and recite the need for hospital construction in the area where the people are who need it. I am certain from conversations with my colleagues that this humane need would not be regarded impersonally.

Further details are contained in the Kelly column as follows:

(By Virginia Kelly)

Would it be practical to ferry expectant mothers by helicopter from the Long Beach area to San Diego Naval Hospital when the Corona Naval Hospital closes?

This question is asked by an admiral who recently commanded ships stationed in Long Beach and who knows the hardship that will come to naval facilities when the Corona hospital closes.

Other admirals point out that the Marines have helicopters at El Toro.

A high-ranking Bureau of Medicine and Surgery officer states that the hospital will close: that chronically ill patients in the San Diego Naval Hospital are now being transferred to veterans hospitals and that Navy families, in general, will use San Diego Naval Hospital facilities. He pointed out that active duty dependents may use the part-payment civilian medical-care plan in their home area. Although the law allows it, the Defense Secretary did not include service widows and their children in this part-payment plan. Retired personnel and their dependents are excluded from the civilian part-payment plan.

Navy families everywhere would be worse off if it were not for the rugged assistance of Vice Adm. Herbert G. Hopwood, DCNO for logistics. When the Bureau of Medicine and Surgery meekly accepted, without a protest, a congressional appropriations cut of more than $8 million, Admiral Hopwood sternly advised the doctors to "reclaimer" Congress. After some argument, the doctors put up a fight and the money was restored.

Admiral Hopwood believes—as do other line officers—that the Congress has never failed to provide for the health needs of servicemen.

Other line admirals say bluntly that the Bureau of Medicine and Surgery did not ask for enough funds for their needs. The most amazing aspect is that the Corona Naval Hospital is evidently being closed to provide funds for the badly needed new influenza vaccine—which Congress would have certainly consented to.

Recently, Representative CRAIG HOSMER, Republican, of California, wrote Navy Secretary Gates urgently requesting that the Navy ask for funds to build the Long Beach Naval Hospital (which was authorized back in 1950 by the ardent efforts of Representative CLYDE DOYLE). The reply came from the Navy's Deputy Surgeon General, Rear Adm. B. E. Bradley, who made these points:

1. That an unbudgeted requirement of $775,000 for Asian-type influenzal vaccine plus other unbudgeted requirements plus personnel reduction compel the closing of the Corona and Mare Island Naval Hospital.

2. The Navy agrees there is grave difficulty in providing adequate treatment for active and retired personnel and dependents (he did not mention the widows and orphans) in the Long Beach area.

3. The Defense Department deferred plans for the Long Beach triservice hospital until a positive need was demonstrated.

4. The new San Diego Naval Hospital has not detracted from the Navy position that Long Beach needs a Navy hospital. Nevertheless, Navy BuMed's limited funds demand priority for hospitals that more directly support the operating forces.

5. When the Corona Hospital closes, more outpatient care will be offered at Long Beach Naval Station Dispensary and the "Haven." Some strictly emergency inpatient care will be given at those facilities but most of the Corona dependent inpatient load will go to Camp Pendleton or San Diego.

In Washington, Representatives CRAIG HOSMER, CLYDE DOYLE, JAMES UTT, CECIL KING, CHET HOLIFIELD, and D. S. SAUND held an emergency meeting to question Bureau of Medicine and Surgery officials: Rear Adms. B. E. Bradley, F. B. Gilmore, and I. L. V. Norman.

Stressing the need for the Long Beach Naval Hospital, Mr. HOSMER explained the compelling needs of service families plus the lowering of Navy morale that will hamper reenlistments.

Mr. DOYLE said he was incredulous that the Navy would close the Corona Hospital to save $890,000 in the first year—when the need for the hospital is so great. He demanded that the Navy give Congress the facts on how many patients died en route to distant hospitals and how many babies were born in automobiles with great misery and danger to their mothers.

Judge SAUND said he was amazed that the Navy would—to save $890,000—close the hospital leaving the large Long Beach area with no service hospital facilities except the driblet to be offered in the "Haven." He demanded that the Navy ask for additional funds to keep the Corona Hospital open. Congress, he said, asked the Navy to cut away fat not to slash medical care.

Wilson's Creek

EXTENSION OF REMARKS

OF

HON. CHARLES H. BROWN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. BROWN of Missouri. Mr. Speaker, I call to the attention of the Congress a matter of great importance to the people of the Ozarks, in south Missouri, well expressed by an editorial in the St. Louis Post-Dispatch July 18 of this year.

The editorial follows:

For 50 years and more Missourians—even Union and Confederate veterans together—have tried to get the Federal Government to make a national park of the site of the Battle of Wilson's Creek, south of Springfield. Now Senator HENNINGS and Congressman BROWN, of Missouri, say the Budget Bureau contends that the battle was a "secondary engagement" of no national significance.

The Budget Bureau's strategic thinking here seems both inaccurate and tardy. It is

a little late to tell 10,000 or more Confederates and 5,000 Federals that their bloody 6-hour engagement of August 10, 1861, was really not very significant. The fact is that while the South claimed the field, and the victory, the larger Confederate force suffered as many casualties as the Union. The strategic result was that Gen. Sterling Price never again mustered so powerful a force for an effort to seize Missouri for the South.

There is one other significant aspect of the Battle of Wilson's Creek, too. This is perhaps the only engagement of size in which the confederacy would admit to outnumbering the Union, and outnumbering the Federals 2 to 1. The dogged fight of the outnumbered Federals was a credit to them and to Gen. Nathaniel Lyon, who was killed in action.

Today there are more than 800 acres of scenic rolling land which bore the battle and have changed remarkably lit'le since. The tract should at least be marked adequately. In time, we suspect, the Budget Bureau is going to lose the second Battle of Wilson's Creek.

The Boston & Maine Railroad

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. MACDONALD. Mr. Speaker, the Boston & Maine Railroad again has proposed cutting back its local passenger service advancing as a reason that this will materially reduce its overhead.

This proposal comes at a time when the Interstate Commerce Commission is preparing an investigation of this railroad on other complaints.

This bid for reduced services to the public also has come less than 3 months after State authorities have granted a 35-percent increase in passenger fares to the Boston & Maine. If this contemplated cut were put into effect, at least four communities in my congressional district would be left without fast and direct service to Boston. This seems to me to be a blatant disregard by the railroad of its responsibilities to the public interest.

On April 10, the president of the road told his board of directors, at an annual meeting in Boston, that his railroad's primary function was to serve industry, not the public and that this would be done, to quote the words used at that time, "at whatever the cost to the passengers." This would appear to be another in a series of moves to discourage hard-pressed commuters from using Boston & Maine Railroad facilities in order that commuter services might be cut down completely and the more lucrative freight business be given even further priority in the conduct of Boston & Maine affairs.

For instance, the railroad is seeking to discontinue service to four stations in Medford, Mass., and in addition to other such populous communities as Malden and Everett also in my congressional district.

I think it is significant to see that eliminating these stops does not save the railroad money in form of employment compensation, as the trains all go through to further points. Of course, loss of employment to ticket sellers and baggage exchange employees in my district will follow. In other words, the railroad is reducing its revenue and yet gaining only a few minutes saved between Boston and points further along the line. This would seem to be false economy. A railroad that wants to make money by giving service to its passengers does not logically cut service for the sake of a minute or two.

The railroad says that Boston's Metropolitan Transit Authority should carry these passengers. I wonder if the officials of the railroad know the MTA has only bus service to the communities where the B. & M. intends to cut service. These buses are few and as all of us know are already overcrowded. This means the MTA would have to provide additional buses to take care of these railroad-stranded passengers. This would also mean that even more congestion on streets already overtaxed with private and commercial traffic would result. It would mean further delays and inconvenience for the thousands of persons in my district who now depend on the Boston & Maine Railroad to reach Boston.

In recent months the management of the Boston & Maine has obtained permission from State authorities to reduce the frequency of train service to many cities and towns surrounding Boston. I understand even more cuts are to be proposed. But on three occasions, the State department of public utilities has rejected these attempts to reduce service as incompatible with the public interest. The chief reason advanced by the road on 2 of these occasions was that the trains were running 6 minutes late. Obviously this would seem a highly questionable reason for reduction. Additional evidence of bad faith with the traveling public is the fact that commuter fares have been rigged to penalize the Massachusetts commuter of service.

This is most clearly illustrated by the situation that follows: It is a fact that a person buying a commuter 20-trip ticket to Newburyport, Mass., pays $3 more than a commuter to Atlantic, N. H., is charged, even though Atlantic is some 3 miles farther from Boston than is Newburyport and one must travel through Newburyport to get to Atlantic.

In view of the utter lack of consideration for the comfort and convenience of the revenue-producing public already evidenced by the Boston & Maine, I intend, as a member of the Subcommittee on Transportation of the Interstate Commerce Committee here in Congress to ask the Interstate Commerce Commission to include these aspects in its current investigation of Boston & Maine Railroad activities.

Only recently it has been charged that the president of the line has diverted railroad employees from their normal jobs to his personal use. It also has been charged that the public safety has been sacrificed in B. & M. Railroad maintenance for the sake of false economy.

I know nothing of the merit of these charges. The ICC, I understand, is looking into them and will determine the factual situation. However, it is apparent that the management, by the words of its president, does not particularly care about the interest of the traveling public. It also is apparent that a series of devices are being utilized as an excuse for reducing the line's current passenger operations. This clearly is a violation of our railroads' responsibility to the public and should be stopped. I intend to do my utmost to see that these abuses do stop.

New Army Division Is Kept Battle Ready

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. FLOOD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Washington Star of July 21, 1957:

NEW ARMY DIVISION IS KEPT BATTLE READY

(By Bem Price)

FORT CAMPBELL, KY.—For the first time since the dawn of atomic warfare, the United States has a revolutionary new Army division—fully trained and able to move into a nuclear war on 4 hours' notice.

In organization and battle tactics, the new pentomic Army, of which this division is the forerunner, will be almost totally unrecognizable for survivors of any American war, whether Spanish-American or Korean.

Although there is only the 1 division trained now—the 101st Airborne—the Army plans to have all divisions converted to the new command and combat doctrine within 2 years. It has already begun the 82d Airborne at Fort Bragg, N. C.

The 101st is a five-sided division of parachutists, packing its own atomic punch. That's where the name pentomic comes from: "Pent" for pentagon, or five-sided; "omic" from atomic.

Gone are the old battalions and regiments. In their place is a new unit called the battle group. Five battle groups make up the division; each battle group has five companies. The same general outline will apply eventually to all divisions, airborne, infantry, or armored.

The 101st, famed as the Screaming Eagles of World War II, was reactivated last September. It is totally transportable by air, ready to begin moving anywhere on the globe within 4 hours—assuming planes are available.

It will carry four Honest John rocket launchers and rockets with atomic warheads. The payload of an Honest John is reported to be about 2,000 pounds of TNT, or an atomic warhead with a destructive capacity of between 10,000 and 30,000 tons of TNT.

FOR THE MISSILE AGE

In the 101st, the Army has designed a division which looks forward to the end of the air age and the beginning of the missile age. Implicit in this is the employment of atomic weapons, missile destroying rockets and the use of launching sites as far as 1,500 miles away from target. These missiles would be used as long-range artillery and tactical aircraft.

The new battle groups call for distribution of 1,500- to 1,700-man formations over an area 30 to 35 miles in diameter. Two major combat techniques have evolved with this development:

First, since wide dispersion invites enemy infiltration, the Army has a family of atomic warhead missiles of varied power which can be used relatively close to our own troops.

Second, the Army has developed the air-burst technique for its atomic shells and missiles. This minimizes the radioactivity in a blasted area, permitting our own troops to move into the area.

Right now the 101st is capable of fighting three types of wars:

The so-called brush-fire war of limited aggression, using conventional weapons, as in Indochina and Korea.

The limited war, calling for atomic weapons only in and around the battlefields.

The all-out war in which everything goes, including the hydrogen bomb.

MORE FIREPOWER

By eliminating assorted headquarters, supply, and special troops, and shortening the chain of command, this new division manages to reduce overall manpower but puts more men on the firing line.

The current infantry division contains 17,460 men; the new type, 13,748. Yet the latter contains 450 more riflemen.

Despite the availability of small rockets, artillery still remains the weapon used against targets where pinpoint accuracy is necessary. If the 101st went into battle, it would carry with it 5 batteries of 105-millimeter howitzers of which 5 pieces each—the only 5-gun batteries in the Army today. Four is normal. Battle groups would always be close enough to support each other.

Because the essence of the 101st is mobility and flexibility—in and out by air, hit hard, and hit fast—the division has no tanks and few trucks. Maj. Gen. Thomas L. Sherburne, who put the 101st in its new format, listed some of its accomplishments in less than a year in an Army Digest article:

Making more parachute drops in formation and airlifting more personnel for redeployment than all other Army units combined.

Development of revolutionary engineering methods for rapidly putting rough landing strips into shape.

Mastery of laying telephone lines by helicopter until the operation is now routine.

Elimination of much heavy equipment and vehicles, so that the new division needs only a little more than half the number of planes required by a conventional airborne division.

ATOMIC MODIFICATION

Fundamentally the tactics to be used by the new divisions are a combination of the perimeter defense always used by airborne troops and dispersion to meet the atomic threat.

The theory behind this is to force the enemy to concentrate his forces if he is going to knock out any one of the dispersed battle groups. Presumably this concentration on the part of the enemy would set him up as a favorable target for an atomic missile.

This is, of course, a two-way street. The 101st is now working out battle tactics of a highly mobile sort to cope with an enemy employing the same formations.

Officers explain that in the conventional airborne division there would be three regimental combat teams, a fact which would not permit wide dispersion.

An atomic weapon, they say, could account for a third of the current airborne division as casualties, whereas this division would lose perhaps less than a fifth of its fighting force to the same type weapon—and they think that even that is too extravagant an estimate because the units would offer a much less likely target for atomic attack.

To assist its mobile tactics, the 101st is equipped with airborne television and radar to keep tabs on the enemy, including infrared ray equipment to spot troop concentrations at night.

Further, it has a ground radar unit, easily carried by two men, which guards against enemy surprise attack.

READY FOR ACTION

Since it was reactivated last September the 101st has acted precisely as if war were going to break out tomorrow.

Every man in the outfit has, or shortly will have, all the required shots and vaccinations for overseas duty. He has made out his will, signed a power of attorney for his next of kin and made arrangements for disposition of his personal property.

The battle groups within the division take turns at standing by on the alert. When a preliminary alert is sounded for a battle group, all men who live off the post must move back to barracks.

During my visit to Fort Campbell, the battle group commanded by Col. George I. Forsythe, was on standby alert when somebody hit the panic button just for practice.

It was an amazing demonstration of orderly confusion. Men out for physical training came racing into barracks to change into battle dress. Jeeps pulled up to the quarters. Live ammunition, machineguns, and bazookas were loaded aboard.

Across the street, in the unit's vehicle area, radio-equipped jeeps kicked over to provide power and in less than 5 minutes, Colonel Forsythe was in touch with the commanders of all his 5 companies.

Military police raced to block off roads leading to the airport. Buses to transport the troops rolled up. In less than 4 hours the troops were ready for combat.

AIRLIFT A SORE POINT

This brings us to a sore point: Airlift. On the basis of 1 airplane taking off from 1 airport every 15 minutes, Colonel Forsythe figures the head and tail of his column would be separated by 13 hours. The Army wants the troop-carrier command planes of the Air Force ready for immediate use because, it contends, more than one airfield could be used and the time for transporting the battle groups shortened considerably.

The Army men here advance the argument: What good is it for us to be ready, if the Air Force's troop planes are scattered all over the world hauling supplies and spare parts for Air Force operations?

In Colonel Forsythe's words, the 101st is now a fire brigade without fire engines.

But even without the engines, Colonel Forsythe and his men go through an almost constant fire drill.

"We've reached the point," he said, "where we can slide down the pole and hit our pants nearly every time."

Florence, Ala., Chamber of Commerce Denounces as "Bias, Unfair and Untrue" Statements of the National Chamber of Commerce With Respect to TVA

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. C. H. Jackson, manager, Chamber of Commerce, of Florence, Ala., be reproduced in the RECORD.

The letter follows:

CHAMBER OF COMMERCE,
Florence, Ala., July 20, 1957.

Hon. JOE L. EVINS,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN EVINS: Your thoughtfulness in sending us a copy of your speech, made in the House of Representatives Wednesday, May 22, entitled "The TVA—A Great National Asset—Defended Against Tirade of Misrepresentation" is appreciated.

We are indeed happy that you so forcefully and effectively brought to the attention of your colleagues in the Congress the misrepresentations made by Mr. Louis V. Sutton when he testified before the House Public Works Committee. His statement was completely bias, unfair, and, we believe, untrue, nor are we as tolerant toward the Chamber of Commerce of the United States as you seem to be. We feel that the Chamber of Commerce of the United States is knifing the TVA in every way that they can.

We are deeply grateful to you and our other friends in Congress, such as our own Bob Jones who continually fights so valiantly for the preservation of TVA. Please know that if we can ever be of service to you, it would afford us real pleasure to render it.

Yours very truly,

C. H. JACKSON, *Manager.*

Ernest Roedel, 1957 Driver of the Year

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. MOULDER. Mr. Speaker, each year the trucking industry honors a driver of the year for outstanding safety record and acts of heroism.

It is my pride and pleasure to congratulate Mr. Ernest Roedel, of New Franklin, Mo., the man who so rightly merits the title of "1957 Driver of the Year." The people of Missouri and the 11th Congressional District are proud of Ernest Roedel. He was chosen from approximately 7 million truckdrivers whose tremendous task is that of transporting the necessities of life to and from every part of our great country. Ernest Roedel has operated a big-carrier truck over half a million miles without accident. His father, who also drives for a trucking firm, Freight Ways, has been driving a truck over the highways of America since 1940 without a single accident—like father, like son. The Roedels are outstanding citizens of Howard and Cooper Counties of Missouri; the kind of citizens who make America great and strong.

This year, when the judges considered the fine records of truckdrivers nationwide, they were impressed with the heroism and quick thinking of Ernest Roedel, who is credited with saving the life of a small child.

The particular incident I refer to happened last September on Highway 40, near Boonville, Mo. Ernest saw a station wagon go out of control and plunge over a 75-foot embankment. He stopped his truck, sent a passing motorist for help, and then ran to the assistance of the victims.

The driver was dead. Two children were in a drainage ditch. Ernest Roedel pulled them from the water and danger of drowning. His prompt action is credited with saving the life of the 3-month-old child. The other child was severely injured and our driver administered first aid and kept her quiet, preventing further injury. The mother of the two children died before she could be taken to the hospital.

I want to spare you further details of this horrible accident—but it is men like Ernest whom we are so proud of—truck-drivers who consider safety and rendering aid on the highways as part of their job.

California Legislature Commemorates Memory of Harry Lundeberg

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. SHELLEY. Mr. Speaker, in January of this year Mr. Harry Lundeberg, an outstanding leader in the field of maritime labor for many years, passed away as the result of a heart attack. His passing left a deep void in the American labor movement and particularly among organizations of American seamen, since it was to Harry Lundeberg that our seafarers owed a great deal of the credit for the security, the better living, and the vastly improved working conditions which they enjoy today.

I knew Harry Lundeberg personally through the greater part of his career in the labor movement and I can testify to the great vigor with which he led the battle for the rights of American seamen and against the inroads of communism on the waterfront and on the seas. It was through those efforts that we can now feel secure in the knowledge that our American Merchant Marine is not under the domination of disloyal elements and that we can count on it for complete support in our peacetime economic life and in times of war and national crises.

For these reasons I am gratified to learn that the California State Legislature recently passed a concurrent resolution honoring the memory of Harry Lundeberg and commemorating his contributions to the life of the Nation. Under unanimous consent, I include this resolution in the CONGRESSIONAL RECORD as a mark of the respect in which the United States Congress holds the lifework of this remarkable man:

California Assembly Concurrent Resolution 92

Resolution relative to the death of Harry Lundeberg

Whereas the members of this legislature have learned with deep regret of the passing of Harry Lundeberg, one of the Nation's most influential labor officials; and

Whereas thanks to his vigorous efforts, the men who sail the seas do so in substantially better quarters, under vastly improved conditions, and at appreciably higher wages; and

Whereas Harry Lundeberg, who was born in Norway on March 25, 1901, the son of a leader in the Norwegian Labor Party, went to sea at the age of 14 years and sailed under 9 different flags before becoming a member of the Sailors Union of the Pacific; and

Whereas in 1935 he was elected the business agent for the S. U. P. and later became its secretary-treasurer, thus succeeding Andrew Furuseth, the founder of the organization; and

Whereas although he had stepped into big shoes Andrew Furuseth being remembered among seamen the world around as the emancipator of the American seamen and the godfather of the Seamen's Act of 1915, the task was not beyond his ability, and under his leadership the union continued to grow in power and influence; and

Whereas as soon as Harry Lundeberg saw the west coast seamen firmly organized, he established and became the first president of the Seafarers International Union of North America, which is now composed of over 40 unions representing fishermen, merchant seamen, and allied workers on all coasts and on the Great Lakes; and

Whereas Harry Lundeberg was the first president of the Maritime Federation of the Pacific, the vice president of the California State federation of labor, and the president of the AFL–CIO maritime trades department; and

Whereas he hated communism with a fierce passion and fought it to a standstill everywhere on the waterfront; and

Whereas with equal passion he drove hard bargains in behalf of his men and as a result won almost incredible advances in wages, hours, and working conditions for those who sail the seas; and

Whereas his presence on the American waterfront will be sorely missed; Now, therefore, be it

Resolved by the Assembly of the State of California (the Senate thereof concurring), That the members of the legislature do hereby note with the deepest regret the death of Harry Lundeberg and do hereby extend to his bereaved ones their most sincere sympathy; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit a suitably prepared copy of this resolution to Mrs. Ida Lundeberg, and to the Sailors Union of the Pacific, the Seafarers International Union of North America, the California State Federation of Labor, and AFL–CIO maritime trades department.

Assembly Concurrent Resolution No. 92 read and adopted in assembly March 7, 1957.

L. H. LINCOLN,
Speaker of the Assembly.

Attest:

ARTHUR A. OHNIMUS,
Chief Clerk of the Assembly.

Aseembly Concurrent Resolution No. 92 read and adopted in senate March 7, 1957.

HAROLD J. POWERS,
President of the Senate.

Attest:

JOSEPH A. BEEK,
Secretary of the Senate.

Meader Is Right

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Jackson (Mich.) Citizen Patriot of July 18, 1957:

MEADER IS RIGHT

One of the main points in Representative GEORGE MEADER'S article on foreign aid in the April Reader's Digest is that the International Cooperation Administration doesn't always level with Congress on money needs and the effectiveness of its program.

"This bureaucracy," says Mr. MEADER in the piece, "has become so powerful, so cocksure, that it has defied Congress and done whatever it wanted."

Recent developments in the foreign aid story indicate that ICA, unwittingly perhaps, has proved Representative MEADER'S point.

After the article appeared, the ICA Director testified before a Senate committee and called the story unfair. A memorandum from ICA was included in the committee record, holding that Mr. MEADER had presented a distorted picture of the total program.

The editors of the Reader's Digest immediately set out to check the Michigan Congressman's facts, and now report they are accurate in every detail and were taken, in large measure, from the ICA's own records.

We never had any doubts about the article. Foreign aid is a field in which the Second District representative knows his way around.

And the fact that the ICA tried to discredit him seems to prove that the foreign aid bureaucracy is out of hand and will go to any lengths to protect itself from nosy Congressmen—and public indignation.

Instead of correcting the glaring errors exposed by Mr. MEADER, it went after the one who dared to bring them to light. That typifies one of the gravest threats the public faces from its entrenched bureaucracy.

Blow at Atoms-for-Peace

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. COLE. Mr. Speaker, under the leave to extend my remark in the RECORD, I include the following editorial from the New York Times of July 22, 1957:

BLOW AT ATOMS-FOR-PEACE

In a move that could imperil the whole atoms-for-peace project, the congressional Joint Atomic Energy Committee has voted 14 to 2 to approve legislation forbidding the President to allocate atomic fuel to the International Atomic Energy Agency without specific approval by Congress.

The international agency, supposed to pool the resources and knowledge of all member nations for worldwide development of atomic energy for peaceful purposes, is being created under a treaty signed by 80 nations, including the United States. It marks the realization of the dramatic proposal by President Eisenhower before the United Nations nearly 4 years ago to make the atom the servant and benefactor and not the destroyer of mankind. The Senate approved the treaty a month ago by a vote of 67 to 19. But if the proposed legislation is passed by Congress as a whole, the International Atomic Energy Agency may well share the fate of the League of Nations, which was also proposed and then repudiated by the United States with grievous results.

Under present circumstances, and for some time to come, the main supply of atomic

fuel for the international agency must come from the United States. Unless the agency is assured of a continuous supply of such fuel it can scarcely undertake or support the construction of costly atomic power plants throughout the world which might suddenly find themselves without fuel. It cannot be so assured as long as its main fuel supply depends on unpredictable political maneuvers in Congress which, as in the case of mutual-security aid, prevent long-range planning. The result might well be the end of the agency.

The drive for the proposed legislation is spearheaded by Senator BRICKER, who has long sought to impose new limitations on the President's power in international affairs. As the atomic fuel is to be sold or leased to foreign nations, he cannot denounce the project as another "international giveaway." But that does not stop him and his followers from advancing other arguments which, while pointing up unavoidable risks, either ignore the inspection and control system provided by the treaty or lack a realistic basis. The Senate defeated Senator BRICKER's attempt to attach an analogous reservation to the treaty itself. It must be hoped that Congress wil lalso defeat his move to kill the international atoms-for-peace project by a flank attack.

Our Vital Overseas Base System

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mrs. GREEN of Oregon. Mr. Speaker, on July 13 there appeared in the Oregonian an editorial which I think exhibits a sane perspective on the issues involved in those proposed resolutions and amendments to the Mutual Security Act of 1957 which would have the effect of scrapping our overseas base system. In this connection I wish to call attention to a point which I think has not and cannot receive enough emphasis.

This point is that our system of 250 overseas bases is the sole remaining military advantage of major strategic importance which this Nation possesses over the Soviet Union in that country's unceasing struggle for world domination. As has been pointed out during the debates on the Mutual Security Act, the Russians have 175 divisions of troops; we have 17. They have the second largest navy in the world, numbering among its craft between 400 and 600 atomic-powered submarines. They have an air force with tremendous striking power. They have the A-bomb and the H-bomb. The only thing they do not have is anything comparable to our system of strategic bases capable of launching a devastating retaliation into the very heartland of their country, by means of the intermediate range ballistic missile, should they ever become so ambitious or so drunk with power or so foolhardy as to launch a sudden attack on the free world.

As this editorial states, there is real danger that passage of the Bow resolution or any similar resolution would have the effect of destroying our entire mutual defense apparatus. No nation in the world—including the United States—would consent to such a surrender of its sovereign rights under international law as is envisaged in these resolutions and amendments. We would have to withdraw our troops from each one of these countries, arm to the teeth here, and wait for the Soviets to attack us on our own soil if this they decided to do.

In our chagrin over the administration's handling of the case of Pvt. William Girard, we must never forget these facts. The proposed resolutions to scrap the overseas base system are no remedy for the administration's regrettable lack of judgment. They are a formula for suicide.

I include as a part of my remarks the editorial from the Oregonian of July 13, 1957.

The editorial follows:

LEADERSHIP IS THE ISSUE

The United States Supreme Court's unanimous opinion upholding the Government's power to turn Soldier William S. Girard over to Japanese authorities for trial on charges of manslaughter has settled the judicial issues involved. But, as anticipated, it has stirred up a legislative assault on the entire framework of America's laboriously constructed postwar mutual-security system.

There is considerable support in Congress for a resolution introduced by Representative FRANK T. BOW, Ohio Republican, the effect of which would be to prevent the Federal Government from turning over United States servicemen to a foreign government for trial under any circumstances. Its supporters contend that the Girard case demonstrates the need for such a prohibition to protect the constitutional rights of American servicemen stationed abroad.

But let's take a close look at the baby Mr. Bow's supporters would toss out along with the bath water. In its relatively new position as leader of the non-Communist world, the United States has executed with the governments of a number of other free countries a series of status-of-forces agreements. In these, the foreign powers have, in most cases, granted permission to this country to station Armed Forces on their territory. For its part, the United States has acknowledged the right of the foreign nations to try American personnel in their courts under certain circumstances, usually when the alleged offense is committed while the accused is off duty.

It is the United States position in the Girard case that he was on duty at the time. Another provision in the United States-Japanese treaty permits United States authorities to waive their primary interest in such a case when the Japanese request it, or vice versa. It was the administration's decision to grant such a waiver in the Girard case which was the issue in the Supreme Court case.

Those of Mr. Bow's persuasion appear to have overlooked an important point. It is not the United States that has made a concession affecting the jurisdiction of American soldiers in foreign posts. It is the other party to the treaty, the nation on whose soil the United States has stationed troops. The Supreme Court decision in the Girard case includes this elementary statement on international law: "A sovereign nation has exclusive jurisdiction to punish offenses against its laws committed within its borders, unless it expressly or impliedly consents to surrender its jurisdiction."

No nation need agree to grant extraterritorial rights to United States forces; and it is logical to assume that many of them would decline to play host to American troops shoud this Nation demand such rights without exception, as proposed by Mr. Bow. There is real danger, therefore, that passage of the Bow resolution or any similar legislation would signal the destruction of American's mutual-defense treaty apparatus.

Now, let us assume that the situation was reversed, that a Japanese soldier, either on or off duty, had slain an American on American soil. Mr. Bow surely would not contend that America lacked jurisdiction. The status-of-forces agreements are reciprocal. They operate here with respect to foreign servicemen as well as abroad with respect to American soldiers. They cannot be otherwise, unless Americans are to assume we can maintain a sort of colonial subjugation over our weaker allies.

Ostensibly the steam behind the Bow resolution is born of a desire to assure to American servicemen abroad all the rights to which they are entitled under the United States Constitution. Actually, however, the resolution, like the Bricker amendment to restrict the President's treatymaking powers, is an oblique attack on America's role of world leadership. Mr. Bow and Mr. BRICKER would prefer that the United States revert to the isolationist role that was possible before World War II.

It cannot be done. We are big boys now, with a heavy responsibility in the world community. Long passed is the time when we could pick up our marbles and go home because the game was not played precisely by rules to our liking.

These Family Farmers Ask the President "What's the Matter?"

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, without comment, I insert in the RECORD a letter on the plight of the family farmer under this administration, addressed by my constituents, Mr. and Mrs. Gudvangen, of Gatzke, Minn., to Hon. Dwight D. Eisenhower:

GATZKE, MINN., *May 25, 1957.*
Hon. DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Please read my letter. Thank you.

I don't know just how to write this letter to you Mr. President of the good old United States of America. I am just going to let you know just how us poor or small family farmers are treated in this country. We get 19 cents tops for our eggs and it takes that amount just to feed the chickens. What do we get to live on? Nothing. Why do we keep the chickens? Because we are hoping the price will go up. We get pretty fair for our cream but we only got 5 or 6 cows. Why not more * * * most of us are grain farmers and it takes money to buy cows, too, which we haven't got. We put in for an emergency loan FHA and they turn us down. Why? The FHA man say, "They weren't any relief agency." We don't want relief, we want a little help; a loan of some kind just to help us through the next 2 or 3 years. We haven't lived so poor in years. We have a hard time to meet the REA or light bill which is $5 and clothes about $3 a month. Then just see how much flour and sugar and coffee you get from what's left to raise a family on.

I wish you could try it sometime. What is that emergency loan for if poor families like us can not get it? I know of 5 or 6 other families around here that didn't get the FHA loan either.

What can we do? We cannot give up our homes and go to town. Someone has to work the farms. It isn't so easy to go to towns and get a job either. The cities are getting pretty full too. We are American born, raised and it's a tough life for a child to grow up in a city. They learn how to be outlaws. Farm life is the only decent wholesome thing in this United States of America or world either.

I became very ill last fall, 1956, from overwork, shoveling grain and carrying feed and water to turkies and chickens, and it left a bill of $600 that has to be paid this fall. We owe $200 on our car and we will loose the car if it doesn't get paid. We want to buy some more cows and sheep but that will cost too. What can we do to get a loan?

Our Representative, COYA KNUTSON, is for the farmers so I am writing her to ask her to help us. We had that FHA loan in 1939 and we paid it out in full in a short time. I can't see why our farm isn't good enough now. It was good enough then. I think it's these Marshall County men in Warren who are behind it all. Our farm was a victory farm during World War II. What's the matter with it now?

Sincerely,

JOHN GUDVANGEN.
Mrs. EDNA V. GUDVANGEN.

NAACP in Calm Deliberation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. DINGELL. Mr. Speaker, I insert into the CONGRESSIONAL RECORD, pursuant to permission granted, a short editorial from the Michigan Catholic, published in Detroit, Mich., June 27, 1957. That issue outlines the very calm and objective meeting held in Detroit by the NAACP.

I hope all will read this excellent article. It will do much to show the clear and the real purpose behind the NAACP as manifested in their recent meeting in Detroit:

NAACP IN CALM DELIBERATION

Citizens of Detroit and the Nation this last week have gained a better appreciation and clearer insight into the problems facing not only the Negroes, but all people. The convention of the National Association for the Advancement of Colored People (NAACP) and the convention of the Urban League, to be held soon, have generated this interest in problems that affect the whole Nation.

Segregation and discrimination constitute not just a white problem, a Negro problem, or a southern problem; they are a national problem and almost everywhere a local problem.

These two national associations, while they differ in procedures and aims, both use thoroughly acceptable methods to achieve their ends. They are outstanding examples of democratic organizations functioning in a pluralistic, democratic society.

The clear and extensive coverage of the proceedings of the NAACP convention, their editorial comments and a fine series on The Role of the Negro in Detroit by the Detroit Free Press did much to show thinking people here that the delegates to this convention were not tinged with Communistic or Fascist tendencies. The workshops, discussions and proceedings of the convention followed the keynote theme, "In calm deliberation and reasonableness will we study a solution to our problems."

That objective of the NAACP was stated in a preamble to the resolutions of this convention:

"We ask for the Negroes only that to which they and other minorities are morally, legally and rationally entitled. To ask more would be to demand special privileges. To accept less, would be to deny the brotherhood of man. We will continue to use the time-honored instruments through which notable progress has already been made; namely, the courts of justice, the legislative chambers and appeals to the public conscience. We reaffirm our deep conviction that our goals can be, and will be, attained within the near future and within the American constitutional and democratic system."

There can be no criticism of these statements from a group of people who wish to live, to work, to worship, to rear their children, to own property, to vote, to be members of a community just the same as any other people. They are merely asking to be recognized on merit and to be able to live in a manner befitting the dignity of a human person, and to possess and use basic civil rights which should be theirs as citizens of our country.

The very capable and qualified leaders of the NAACP imposed on the delegates and their people an obligation to live as good citizens in every community so their example will be the only argument against the charges of racial bigots.

We hope that the results of their workshops and the proceedings of this convention will bear fruit because it means so much for the social well-being of every community and the ultimate good of our country.

R. F. A.

Cut Reserves, Says Federal Reserve, But Does Nothing About It

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. MULTER. Mr. Speaker, the following article by Leslie Gould, financial editor, which appeared in the New York Journal-American on July 19, 1957, is most interesting reading:

CUT RESERVES, MARTIN SAYS, BUT DOES NOTHING ABOUT IT

(By Leslie Gould)

The Federal Reserve requires its member banks to keep a percentage of their deposits with the central banking system. These are known as reserve requirements. They total nearly $19 billion. They are nonworking dollars.

They range from 20 percent of the demand deposits of the New York and Chicago banks down to 12 percent of the demand deposits of the country banks.

In addition, banks must keep with the Federal Reserve 5 percent of their time deposits.

This requirement is a factor in the present tight money situation.

SHOULD BE REDUCED

They should be reduced to a more realistic percentage, and Federal Reserve Chairman Martin, interestingly, also believes they are too high.

Before the House Banking Committee, when Representative MULTER, Democrat, of New York, remarked the present reserve requirements "create inequities and inconsistencies," Martin said:

"You and I are in complete agreement on that."

Yet, Mr. Martin hasn't done anything about changing them, although the Reserve Board is studying them.

The Reserve has the power to raise or lower requirements. The ceiling is 26 percent for the New York and Chicago banks, and the floor 13 percent. They are now 20 percent. Country bank requirements can be reduced to 7 percent, with the ceiling 14.

NOT CUT SINCE 1954

The last change was in the summer of 1954, when a 1 percent reduction was made across the board.

For 19 years, from 1917 to 1936, the New York and Chicago banks had to keep only 13 percent of their demand deposits with the Federal. They were raised in 3 jumps in 1936 and 1937 to 26 percent. The next year they were reduced to 20 percent, which percentage held until 1948 when they again were lifted in 3 stages to 26 percent. After that the trend was generally down by small changes, with the last change in 1954.

COULD LOOSEN MONEY

Money is very tight and one way to ease the present situation would be reduce the reserve requirements, which even Martin believes are unrealistic. A reduction to 18 percent for the New York and Chicago banks and 16 percent in the other reserve cities would provide close to $2 billion in additional lendable funds.

Under the 5 times multiplication—a dollar deposited would make $5 in credit—this would provide aroudnd $10 billion in additional credit.

The reserve requirements should be cut more than 2 percent. Over a period of time they could well be brought down to as low as 10 percent, as some bankers in the past have urged.

Address by Hon. Sam Rayburn, of Texas, at Dedication of the Harry S. Truman Library

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. MILLER of California. Mr. Speaker, I had the great privilege of attending the dedication ceremonies of the Harry S. Truman Library at Independence, Mo., on July 6, 1957.

It was an auspicious occasion when a group of distinguished Americans gathered to pay tribute to a great former President of the United States.

Former President Herbert Hoover and Mrs. Franklin D. Roosevelt together with the governors of 8 States and many ex-members of Mr. Truman's Cabinet joined to do him honor. The ceremonies drew distinguished men and women from both political parties.

Our honored and loved Speaker, 8 Senators, and 4 other Members of this body were the congressional representatives on this memorable occasion.

The Honorable Earl Warren, Chief Justice of the Supreme Court of the

United States, delivered the principal address.

One of the finest speeches of the day was delivered by Speaker RAYBURN. He spoke, as he always does, from the heart in paying tribute to Mr. Truman with whom he has been so long and closely associated.

Through the courtesy of radio station KCMO, who made a tape recording of the proceedings, I was able to obtain a copy of the Speaker's remarks. I include them for presentation in the CONGRESSIONAL RECORD that there may be preserved for posterity the evaluation of one great American by another:

SPEAKER RAYBURN'S ADDRESS

President Truman, Mrs. Truman, President Hoover, Chief Justice Warren, and other distinguished guests, I am happy to be on this ground today because this town is called Independence and always when I hear Harry Truman referred to as "the man from Independence," I always want to add that he is a man of independence, courage, fidelity, devotion to duty and to the things that are best for his community, his State, his country, and the world.

He has proven himself to be not only a leader of his own people but as a great leader of the free peoples of all the earth. For him and his friends to rear this magnificent building to house his and many other papers will teach this generation and the generations to come after us how to be real Americans.

I want to say this to you. There are a lot of old fogies of my generation who think that all of the good girls and boys were born and reared when they were. I know that is not so. I know the boys and girls of this generation are smarter than I was. They have a better opportunity to be smart. It is a long cry from a one-teacher country school and a teacher with about a second-grade certificate down on the prairies of Texas to the magnificent structures in which these children are taught. I know they are smarter than I was and I believe these boys and girls have lived good lives and just as clean ones.

I have the faith to believe that in the years to come when the burdens—and there are burdens—and when the responsibilities—and there are tremendous responsibilities—of citizenship are shifted from our shoulders to their shoulders, their shoulders will be broad enough, their minds keen enough, and their hearts big enough to preserve, protect, defend, and perpetuate this, the greatest, the freest, and the mightiest Government devised by the wisdom of statesmen.

Item Veto in Appropriations Bills Favored by 60 Percent in Survey

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an article from the Washington Post and Times Herald on Saturday, July 20, 1957, entitled "The Gallup Poll: Item Veto in Appropriations Bills Favored by 60 Percent in Survey," by George Gallup:

Although Americans ordinarily take a very cautious attitude toward changing traditional procedures of government there is one reform which appeals to a substantial majority of voters.

The public would authorize a President to veto specific items in appropriation bills.

The issue was put before a cross-section of the voters of the country in an institute poll as follows:

"At present, when Congress passes a law to spend money the President cannot approve just parts of that law, but must approve it in full or turn it down in full. Should this be changed so that he can turn down some parts of the law without turning down the entire law?"

The vote of the public today follows:

	Percent
Yes, should be changed	60
No, should not	26
No opinion	14

An analysis of attitudes today by political party affiliations follows:

	Republicans	Democrats	Independents
	Percent	*Percent*	*Percent*
Should be changed	68	56	60
Should not	20	30	29
No opinion	12	14	11

Proponents of the plan point out that Congress still could override a Presidential veto.

Disestablishment of Electrical Control Division, Portsmouth Naval Shipyard

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the memorandum issued on July 19, 1957, by the New England Council for Economic Development, Boston, Mass., to the New England congressional delegation on the subject of the disestablishment of the electrical fittings inventory control division, Portsmouth Naval Shipyard:

THE NEW ENGLAND COUNCIL
FOR ECONOMIC DEVELOPMENT,
Boston, Mass., July 19, 1957.

To: The New England congressional delegation.
From: Gardner A. Caverly, executive vice president.
Subject: The disestablishment of the Electrical Fittings Inventory Control Division, Portsmouth Naval Shipyard.

The following is a copy of the text of my letter, sent to the Secretary of the Navy, Thomas S. Gates, Jr., and to the Secretary of Defense, Charles E. Wilson, on July 19.

We appreciate very much the active interest which you have taken in this matter, which is so important to our New England economy:

"It has been called to our attention that the Department of the Navy is considering the disestablishment of the electrical fittings inventory control division at the Portsmouth Naval Shipyard, in Portsmouth, N. H. Because of the importance of this activity to the New England economy, we are vigorously protesting this move, as we did in 1952, when similar action was contemplated.

"The New England Council, representing approximately 3,300 firms in industry, business, and commerce in New England, is in complete accord with the Navy's desire to economize, and save taxpayers' dollars. We do not believe, however, that the disestablishment of this facility at Portsmouth will result in any true economy.

"We have been informed by the shipyard that this facility awards around $8 million worth of electrical contracts annually, and that 48 percent of them are in New England. This high percentage of contracts in New England is not surprising when one stops to consider that approximately 11 percent of the electrical industry is in the same region.

"It would seem to us that it would be false economy to decentralize a facility of this importance. Such a move would not make for the expeditious completion of contracts for the Navy and would result in a serious handicap to almost half of the present contractors. Such a move could not help but result in an eventual loss of business to New England firms and an attendant labor problem.

"We sincerely hope that the Department of the Navy will reconsider their action and its manifold serious implications, both to themselves and to New England, and rescind the order calling for the disestablishment of the electrical fittings inventory control division, Portsmouth Naval Shipyard, Portsmouth, N. H."

Equal Rights for Women

SPEECH
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. REUSS. Mr. Speaker, I am glad to join today in this expression of support for the equal rights amendment introduced by the energetic and dedicated Congresswoman from New York, Mrs. ST. GEORGE.

Over a generation ago, this Nation took a tremendous stride forward by adopting the 19th amendment to the United States Constitution. The right of every citizen, regardless of sex, to participate fully in the political life of our Nation was thus assured. Looking back from 1957, it is hard to believe that the struggle to achieve equal suffrage could have been a long and bitter one. The right of women to vote today appears self-evident. Yet it was achieved only through unremitting effort and devoted sacrifice.

Not only at the ballot box but in every walk of life, women today stand side by side with men. Women represent almost a third of the national labor force. They own, as we men are often reminded, more than half the Nation's wealth. They hold high public office in State and national government.

Yet our laws have been slow to keep up with such progress. A survey made by the National Women's Party has revealed as many as 1,001 discriminatory statutes on the Federal and State law books. They range all the way from prohibitions on the performance of jury duty, restrictions on property ownership, to limitations of guardianship rights over offspring. These laws lay a heavy and unfair burden on American women.

Once again, therefore, I believe that we must take the fundamental step of amending the Constitution so as to guarantee that before the law American women shall be free and equal citizens in every respect. To this end, I am proud to share in sponsoring the equal rights amendment.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ULLMAN. Mr. Speaker, a frequently heard argument against Federal aid to education is the contention that Federal aid is synonymous with Federal control. Many opponents of Federal aid have, of course, utilized this easy phrase with something less than good faith. However, I am certain that there are many public-spirited citizens who, despite their concern over the present state of their school systems, have nevertheless felt compelled to oppose Federal aid for education because of certain supposed dangers of Federal control.

Many arguments could be put forth to show that Federal aid need not be Federal control. But I think an examination of the experience of a federally impacted school district in the congressional district which I represent will do much to allay the fear of such opponents. An editorial appearing in the July 15 edition of the East Oregonian, of Pendleton, Oreg., commented at length on the experience of the Hermiston School District and the effect upon that school district of substantial Federal assistance for education. I think it will be of great interest to my colleagues to examine this editorial, now that the school-aid bill is before the House. Under unanimous consent, I insert this in the Appendix of the RECORD:

FEDERAL AID TO EDUCATION

Federal aid to schools does not mean Federal dominance or control of education, according to Armand Larive, superintendent of schools at Hermiston, a district which probably has had more experience with such aid than any other area of Oregon. Mr. Larive, to the contrary, contends officials administering the program in the Hermiston School District have leaned over backward to keep away from any action which might be construed as Federal interference or control.

Closest thing to Federal dominance of the Hermiston School District, which had about 600 students last year under Federal aid, is an audit of the books, according to Larive.

Under the program, the Government pays one-half of the estimated local cost to the taxpayer per student whose parent or parents are federally employed.

"An escape for those who oppose Federal aid to schools," says Mr. Larive to charges of Federal dominance of control of education. The Hermiston superintendent contends school officials of the area have been more than satisfied with the results. "There has never been even a hint of Federal interference," says Larive, who has been active for many years in the program of study of need for Federal assistance to schools.

More than 3,000 school districts in the Nation now qualify for Government financial assistance because their school enrollments have been enlarged by various Federal activities, such as military posts, defense production plants, Federal dam projects, and so forth. Hermiston is one of these.

Oregon's Senator RICHARD NEUBERGER, speaking recently before the Senate, pointed to a study just conducted by Teachers College at Columbia University, in New York City, as "one of the most convincing presentations in favor of Federal aid to schools." The study, said Senator NEUBERGER, "has demonstrated that Federal aid to schools in no measure means Federal dominance or control of education."

Teachers College sponsored a study of 500 of the previously mentioned 3,000 school districts, to determine whether payment of Federal funds resulted in Federal domination. The study concluded that, "Federal control over school personnel, the curriculum, and instructional programs had not accompanied the distribution of funds."

The study, noted NEUBERGER, thoroughly refuted the old charge that the Federal Government cannot assist our school construction needs financially without controlling the operation of schools.

Only a tiny minority of the 500 districts complained of any Federal control over their educational programs, even though they received substantial Government support, the study found.

Federal control over school personnel, the curriculum, and instructional programs had not accompanied the distribution of funds, the study concludes. The specific conclusions that the study reached are:

(1) No Federal control had resulted from field examinations of school districts by regional representatives of the Division of School Assistance in federally affected areas, a unit of the Office of Education.

(2) Discretionary control powers granted to the United States Commissioner of Education by the law had not led to Federal control.

(3) The vast majority of school officials spent very little time in handling matters pertaining to Federal aid.

(4) Most school officials felt that citizens were more willing to support their local school programs as a result of receiving Federal aid.

The teachers college study, conducted by Dr. Robert I. Sperber, also found that Federal control is not likely to occur when Federal support legislation is carefully conceived.

Dr. Sperber contended Federal control is not likely to occur, either, when the Federal officials who administer the program "are sensitive to the dangers of Federal control over personnel, curriculum, and instructional programs." If Mr. Larive is to be believed—and certainly he has adequate experience and excellent standing for his comments on the subject—those who administer the program in the Hermiston district appear to be sensitive to these dangers.

What then are the arguments advanced against Federal aid to education? Undoubtedly they are many. Mr. Larive believes most of the arguments against aid are weak and have little basis, particularly when opponents to aid for education are advised of the many merits of such aid.

Probably the greatest opposition comes from those who fear any form of Federal controls, regardless of benefits. These people would turn thumbs down on almost any form of Federal aid, reasoning that there is too much opportunity for Uncle Sam to dictate how those receiving the aid should conduct themselves. That opportunity, of course, does exist.

But, as the teachers college study points out, the greatest single weapon against Federal control is the feeling of the American people against it. A sensitivity to control and interference has been built up over the century and a half of American history.

One can be certain the Hermiston district is in the latter category and would refuse aid before surrendering rights to attain it.

Centennial of the Birth of Theodore Roosevelt

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. O'BRIEN of New York. Mr. Speaker, our Nation will celebrate next year the centennial of the birth of a great man, Theodore Roosevelt.

It is fitting that we learn as much about his life and public career as possible. For that reason I am submitting a reading list, prepared by experts, that will be helpful to that end:

THEODORE ROOSEVELT CENTENNIAL READING LIST

GENERAL BIOGRAPHIES

Joseph Bucklin Bishop, Theodore Roosevelt and His Times (shown in his own letters). New York: C. Scribner's Sons, 1920, two volumes.

Lord Charnwood (Godfrey R. Benson), Theodore Roosevelt. Boston: the Atlantic Monthly Press (c. 1923).

Paul W. Cutright, Theodore Roosevelt the Naturalist. New York: Harper & Bros., 1956.

Ferdinand Iglehart, Theodore Roosevelt the Man. New York: the Christian Herald, 1919.

William Draper Lewis, The Life of Theodore Roosevelt. Chicago: the John C. Winston Co. (c. 1919).

Edmund L. Pearson, Theodore Roosevelt. New York: the Macmillan Co., 1920 (also other editions).

Henry F. Pringle, Theodore Roosevelt. New York: Harcourt Brace (new edition, pocket size, 1956).

Jacob A. Riis, Theodore Roosevelt the Citizen. New York: Grosset & Dunlap (1907).

Theodore Roosevelt, An Autobiography. New York: the Macmillan Co., 1913 (also other editions).

Albert Shaw, A Cartoon History of Roosevelt's Career. New York: The Review of Reviews Co. (c. 1910).

William Roscoe Thayer, Theodore Roosevelt. Boston and New York. Houghton Mifflin Co., 1919.

APPRAISALS

Albert J. Beveridge, The Statesmanship of Theodore Roosevelt. (In: Roosevelt, Theodore. Works. National edition, New York, C. Scribner's Sons, 1926. Vol. VII, pp. ix-xxviii.)

John M. Blum, The Republican Roosevelt. Cambridge: Harvard University Press, 1954.

Lewis David Einstein, Roosevelt, His Mind in Action. New York: Houghton Mifflin, 1930.

William Hard, Theodore Roosevelt. Portland, Maine: T. B. Mosher, 1919.

George S. Mowry, Theodore Roosevelt and the Progressive Movement. Madison: The University of Wisconsin Press, 1946.

Gifford Pinchot, Roosevelt as President. (In the National Edition of Theodore Roosevelt's Works, vol. XV, pp. xxv-xxxv). New York: C. Scribner's Sons, 1926.

John Ford Rhodes, the McKinley and Roosevelt Administrations (1897–1909). New York: The Macmillan Co., 1923.

Julian Street, The Most Interesting American, New York: The Century Co., 1915.

Herbert Knox Smith, Roosevelt's Leadership. New York: Roosevelt Memorial Association, Inc., 1925.

Herbert Knox Smith, The Great Progressive. (Theodore Roosevelt's Works, national edition, vol. XVII, pp. xi–xviii). New York: C. Scribner's Sons, 1926.

REMINISCENSES OF THEODORE ROOSEVELT

Lawrence F. Abbott, Impressions of Theodore Roosevelt. Garden City, New York: Doubleday, Page & Co., 1919.

James E. Amis, Theodore Roosevelt, a Hero to His Valet. New York: The John Day Co., 1927.

John Burroughs, Camping and Tramping with Theodore Roosevelt. Boston and New York: Houghton Mifflin and Co. (1907) (also other editions).

Archibald W. Butt, Taft and Roosevelt, The Intimate Letters of Archie Butts. 2 vols. Garden City, New York: Doubleday, Doran & Co., Inc., 1930 (also other editions).

O. K. Davis, Released for Publication. Boston and New York: Houghton Mifflin Co., 1925.

Bradley Gilman, Roosevelt the Happy Warrior. Boston: Little, Brown, & Co., 1921 (also another edition).

John J. Leary, Talks with T. R. Boston and New York: Houghton Mifflin Co., 1920.

Alice Roosevelt Longworth, Crowded Hours. New York and London: C. Scribner's Sons, 1933.

Corrine Roosevelt Robinson, My Brother, Theodore Roosevelt. New York: C. Scribner's Sons, 1921.

Kermit Roosevelt, Happy Hunting Grounds. New York: C. Scribner's Sons, 1920.

Theodore Roosevelt, Jr., All in the Family. New York and London: G. P. Putnam's Sons, 1929.

Henry L. Stoddard, As I Knew Them. New York: Harper & Bros., 1927.

Henry L. Stoddard, It Costs To Be President. New York and London: Harper & Bros., 1938.

Owen Wister, Theodore Roosevelt, the Story of a Friendship. New York: The Macmillian Co., 1930.

RANCHING PERIOD

Hermann Hagedorn, Roosevelt in the Bad Lands (also other editions). Boston and New York: Houghton Mifflin Co., 1921.

Lincoln Lang, Ranching With Roosevelt. Philadelphia and London: J. B. Lippincott Co., 1926.

Theodore Roosevelt, Ranch Life and the Hunting Trail. New York: the Century Co. (1888).

William W. Sewall, Bill Sewall's Story of T. R. New York and London: Harper & Bros. (c. 1919).

SPANISH WAR

Hermann Hagedorn, The Rough Riders (historical novel). New York and London: Harper & Bros., 1927.

Theodore Roosevelt, The Rough Riders. New York: C. Scribner's Sons, 1900 (also other editions).

Leonard Wood, Roosevelt, Soldier, Statesman and Friend (Theodore Roosevelt's Works, national edition, vol. XI, pp. ix–xix). New York: C. Scribner's Sons, 1926.

HUNTING AND EXPLORATION

Carl E. Akeley, Roosevelt in Africa. (Theodore Roosevelt's Works, national edtion, vol. IV, pp. ix–xviii).

Donald Day (editor), Hunting and Exploring Adventures of Theodore Roosevelt—told in his own words. New York: Dial Press, 1955.

Theodore Roosevelt, African Game Trails. New York and London: Syndicated Publishing Co. (1910?).

Gets $209,000 Check—Raps Soil Bank

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. HAGEN. Mr. Speaker, a short time ago the distinguished gentleman from Arizona, Congressman UDALL, related the story of the Arizona farmer who had accepted a $209,000 soil-bank check for retirement of lands growing price supported crops including cotton and almost simultaneously leased 4,500 acres of land to grow cotton for which he did not have an allotment. The implication was that either the farmer was violating the law or the Department of Agriculture was guilty of maladministration. It develops that neither implication was true. Everything was done according to statute. It is clear that the fault lies in the statute.

It was, however, not this aspect of the problem which intrigued me. It was rather the question of what a farmer could gain from planting approximately 4,500 acres of penalty cotton. The phrase "penalty cotton" needs some explanation. It refers to cotton on which the grower must pay the Government approximately 18½ cents a pound. With the support level at a minimum of 28.15 cents per pound, a figure which represents 77 percent of parity and presumably only 77 percent of a profit it became clear that something was suspect in the economics of our parity formulas. The profit motive for this grower was the only incentive because he could not establish a history of cotton planting with this penalty cotton and would derive no benefit beyond 1 year's crop. I thought of writing to Mr. Harris to ask whether or not he could make a profit on cotton which he would, in effect, sell at approximately 10½ cents a pound but I dropped this idea with the discovery of the following article in the Fresno Bee of July 17, 1957. This article reads as follows:

FRESNAN GETS $209,000 CHECK, RAPS SOIL BANK

Jack A. Harris, of Fresno, is the recipient of one of the biggest soil-bank checks in the country—$209,000.

And the distinction is causing him some headaches, largely in the form of criticism from Congressman STEWART L. UDALL, Democrat, of Arizona.

Udall is critical of Harris because Harris is getting the $209,000 for taking land out of cotton production at the same time he is growing cotton without an allotment on other land.

"UDALL is a politician," said Harris. "What he doesn't say in his criticism of me is that I will have to pay a penalty of 18½ cents on every pound of cotton I grow without an allotment.

"So even though I will get about $209,000 in soil-bank payments, I will have to pay about $650,000 in penalties on the cotton I grow without an allotment."

This apparent losing proposition does not bother Harris.

Here is the way he outlines his farming operations, which total about 25,000 acres in California and Arizona:

The soil-bank payment comes from 1,600 acres owned by Harris Ranches, Inc., south of Tucson.

The penalty cotton is being grown on 4,500 acres of leased land farmed under the name of Jaresa Cotton Co. 85 miles southwest of Phoenix.

In addition, he has another 1,000 acres of cotton operated by the Harris Cattle Co. near Phoenix, and another 2,000 acres farmed as Jack Harris, Inc., near Five Points.

The remainder of the 25,000 acres is in alfalfa, barley, cantaloups, and vegetables.

The crux of Udall's criticism is that Harris is taking advantage of the soil bank on one hand and farming nonallotment cotton on the other.

"Make it plain that I'm against Government controls and supports," said Harris. "We ought to be able to compete on the world market.

"I was hoping this 4,500 acres I'm farming outside the program would show how silly the program is and how unnecessary it is."

GIVES ILLUSTRATION

He illustrated the situation this way:

Suppose cotton sells for 36 cents. If he pays 18½ cents a pound penalty, that leaves him 17½ cents to operate on. He says he can just about do it, but that it will not leave him any profit.

But he says he also is a cotton ginner and he will make money ginning the cotton.

He says he is shooting for two bales an acre or better on his penalty acreage and is not planning to try for any exceptionally high yields. Some department of agriculture sources estimate the penalty payments may be closed to $800,000 than the $650,000 mentioned by Harris.

"They may be right," he says, "because they base the penalty on the estimated yield rather than actual yield."

DIFFERENT GROUPS

Harris stresses that the farming operations which brought him under fire from Udall are not all carried on by the same companies, although he owns them all, and that they are carried on in different counties under different agriculture stabilization and conservation committees.

"This was all cleared with the soil bank people and it was done with their knowledge," he said.

"I hope it shows how ridiculous the soil bank is. There are a lot of people growing cotton who shouldn't be. The efficient cotton farmer doesn't need Government help."

You will note that Mr. Harris says that he can just about break even on cotton selling at 10½ cents a pound. If this is true—or even approximately true—and 28.15 cents a pound is only considered to be 77 percent of parity—77 percent of a profit—something is wrong with our parity formulas. This information points up the fact that our support programs have created millionaires at one end of the farming scale in the guise of helping a subsistence farmer at the bottom. I will add that they have resulted in the economic squeeze of our best class of farmers and the most numerous worthwhile class in the middle.

I would suggest to the Agriculture Secretary that he engage in some studies to determine the real cost of producing the various price-supported crops in order that we might have some fair idea of a reasonable support price whether it be couched in terms of some percentage of parity or some other mathematical formula.

Disappearance of the Loyalists in Washington

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. SHEEHAN. Mr. Speaker, the Chicago Tribune, in their editorial of Sunday, July 21, commented on the Socialist New Leader and their viewpoint of the invigorating new climate in Washington according to the New Leader standard.

The editorial is as follows:

HOPEFUL SIGNS?

We learn from the Socialist New Leader that the air has been "massively cleared" in Washington and thus there has been "released the vast talents of the National Capital."

Instead of saying, "Is that so?" we shall inquire, "Why?" permitting the New Leader to inform us.

All this, we learn, has come about because of the Supreme Court, "in a series of major decisions on civil liberties." The New Leader apparently refers to 11 cases involving Communst Party membership or association that have been decided adversely to the Government by the present Court.

There are other reasons for the invigorating new climate in Washington, according to the New Leader. Among these are the censure of Senator McCarthy, and, presumably, his demise, although the New Leader does not go so far as to say so, merely reporting that it has been helpful that the conservative Senator STYLES BRIDGES "has been in the hospital for weeks."

The New Leader also finds that the defeat of Senator Herman Welker of Idaho through the liberal application of New York money has had a salutary effect. Also that Adm. Arthur Radford has retired as Chairman of the Joint Chiefs of Staff; that Senator KNOWLAND is retiring from the Senate; that Scott McLeod has departed as Chief of the State Department's Security Bureau "and packed off to Ireland as Ambassador"; and that Representative FRANCIS WALTER, chairman of the House Committee on Un-American Activities has been told to keep the bolos off TV.

It is true, in the New Leader view, that an American, Adm. Lewis L. Strauss, still remains on the Washington scene as Chairman of the Atomic Energy Commission. The New Leader find this deplorable, because Admiral Strauss had something to do with the fact that Dr. J. Robert Oppenheimer "was tried for heresy." We always thought that Dr. Oppenheimer was called before a loyalty board and was denied clearance because he. palled around with too many Communists, even having a Communist as a mistress, marrying the widow of a Communist, admittedly lying in behalf of a suspected Communist espionage agent, and contributing freely to many party causes.

The removal of most of the loyalists in Washington, the New Leader reports, has lifted the "fear that some security office has a thick folder filled with gossip and half truths"—such folders one may assume, as reflected on the integrity of Hiss, Silvermaster, and Coe brothers, Noel Field, Lee Pressman, Abt, and countless other bureaucrats and former bureaucrats.

This fear which the New Leader detects "had sterilized Washington of all but the most cautious thinking." Now that it has been lifted, we can see the rich result: The comrades are free to pursue their innocent interests, the Supreme Court to expound its attenuated aberrations, the President to admit that he is hardly equal to winning a debate on the question of whether communism is superior to the American system, and Congress and the bureaucracy to blow the national substance against the background of a declining market in Federal bonds. The bottom has dropped out from under these, we learn, because Secretary Humphrey won't attend the inflationary preachments of Dr. Seymour Harris, the Harvard Keynesian.

Now that "the vast talents of the Nation's Capital" have been released, we can, with the New Leader, look forward to something absolutely gone. Up to now, those Washington cats have simply been rehearsing.

Resolution on the Girard Case

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Pennsylvania Department, Sons of Union Veterans of the Civil War, resolved at its 77th annual encampment, recently held in Wilkes-Barre, on the William S. Girard case:

PENNSYLVANIA DEPARTMENT,
SONS OF UNION VETERANS OF THE CIVIL WAR,
Philadelphia, Pa.

Hon. DANIEL FLOOD,
Member of Congress,
Washington, D. C.

Whereas the rights and privileges guaranteed to all American citizens under the Constitution of the United States, including members of the Armed Forces, have always been upheld and protected; and

Whereas the Constitution of the United States of America specifies that anyone charged with any crime or violation of the law shall be tried by 12 men of his peers; and

Whereas the rights and privileges guaranteed by the Constitution has been jeopardized and threatened in submitting one of our American members of our Armed Forces, William S. Girard, to trial by a foreign court, thereby breaching the guaranties of the Constitution of the United States of America: Therefore be it

Resolved, That the Sons of Union Veterans of the Civil War in 77th annual encampment at Wilkes-Barre, Pa., definitely go on record in defense of the rights and privileges of William S. Girard to be tried under

American jurisdiction and by an American court and/or United States military court; and be it further

Resolved, That the department secretary of the Sons of Union Veterans of the Civil War be instructed to send copies of this resolution to the two United States Senators from Pennsylvania and Congressman DANIEL FLOOD.

Approved this 25th day of June 1957.

CARL P. GUTEKUNST,
Department Commander.

Attest:

CHESTER S. SHRINER,
Department Secretary.

Inflation: The Poor Man's Menace

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, Henry Hazlitt, as usual, has again pointed out that there is a great swindle underway in this country and all over the world.

Inflation is in the saddle. At this point I am inserting an article by Mr. Hazlitt which indicates how currency has been shrinking throughout the world. Our so-called leaders should get busy immediately.

THE GREAT SWINDLE

(By Henry Hazlitt)

A year ago (Newsweek, June 25, 1956) I printed here, under the above title, a table showing the depreciation, in terms of domestic purchasing power, of the currencies of 53 countries in the 10 years from 1946 to 1955. This table had been compiled by Franz Pick. He has now carried it forward, for the 9-year period from January 1948 to December 1956, in the 1957 edition of his Currency Yearbook. I present the results below, showing the depreciation of 56 currencies in that period.

It is important to keep this appalling worldwide picture constantly before our minds. For it reminds us that inflation is nothing but a great swindle, and that this swindle is practiced in varying degrees, sometimes ignorantly and sometimes cynically, by nearly every government in the world. This swindle erodes the purchasing power of everybody's income and the purchasing power of everybody's savings. It is a concealed tax, and the most vicious of all taxes. It taxes the incomes and savings of the poor by the same percentage as the incomes and savings of the rich. It falls with greatest force precisely on the thrifty, on the aged, on those who cannot protect themselves by speculation or by demanding and getting higher money incomes to compensate for the depreciation of the monetary unit.

WHY INFLATION?

Why does this swindle go on? It goes on because governments wish to spend, partly for armaments and in most cases preponderantly for subsidies and handouts to various pressure groups, but lack the courage to tax as much as they spend. It goes on, in other words, because governments wish to buy the votes of some of us while concealing from the rest of us that those votes are being bought with our own money. It goes on because politicians (partly through the second- or third-hand influence of the theories of the late Lord Keynes) think that this is the way, and the only way, to maintain full employment, the present-day fetish of the self-styled progressives. It goes on because the international gold standard has been abandoned, because the world's currencies are essentially paper currencies, adrift without an anchor, blown about by every political wind, and at the mercy of every bureaucratic caprice. And the very governments that are inflating profess solemnly to be fighting inflation. Through cheap-money policies, or the printing press, or both, they increase the supply of money and credit and affect to deplore the inevitable result.

The following table is based on official cost-of-living indexes, many of which understate the real extent of currency debasement. Russia and its satellite countries are omitted because disparities between actual and official price levels are so wide and the statistics are meaningless. The American dollar, to which so many other currencies are ostensibly tied, itself shows a depreciation of 15 percent in the period. The British pound sterling, the world's most important trade unit, lost 34 percent, the French franc, 52 percent, the currencies of Chile, Paraguay, Bolivia, and Korea, from 93 to 99 percent.

Currency shrinkage: Percentage decline in purchasing power of monetary units, January 1948–December 1956

Address of Mrs. L. M. Bashinsky on the Occasion of the Dedication of the Stonewall Jackson Bronze in the Hall of Fame, New York University, May 19, 1957

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. GRANT. Mr. Speaker, Mrs. L. M. Bashinsky of Troy, Ala., and chairman of the United Daughters of the Confederacy, promoting the Stonewall Jackson bronze for the Hall of Fame, had the privilege of seeing her dream fulfilled.

She worked for many years in promoting General Jackson for the Hall of Fame; this became a labor of love for her. The crowning effort was her participation in the dedication.

I am pleased to have her remarks recorded for all time in the CONGRESSIONAL RECORD.

ADDRESS OF MRS. L. M. BASHINSKY ON THE OCCASION OF THE DEDICATION OF THE STONEWALL JACKSON BRONZE IN THE HALL OF FAME, NEW YORK UNIVERSITY, MAY 19, 1957

Dr. Newsome, Dr. Sockman, participating guests of the university, and others, today I recall my first appearance, and these, my first words spoken in public—"I am too young to speak in public on the stage." On this occasion, I face that condition in reverse, but even for a woman of my rather mature years, I am somewhat embarrassed in addressing an audience so distinguished.

We wish to thank you, Dr. Newsome, Dr. Sockman, and other representatives of the university for the gracious welcome accorded us and to express our pleasure in having these eminent speakers and the West Point and Virginia Military Academy cadets here to join with us in paying tribute to our beloved general. I feel that somehow, in some way, he must know they are saluting him today with "Well done, great and noble teacher and alumnus of the South."

This is the second time I have been privileged to participate in a Hall of Fame ceremony. In 1931, as the representative of the United Daughters of the Confederacy, I had the honor of presenting the bronze of Matthew Fontaine Maury. Other representatives of this orgahization have presented bronzes of General Lee and Sidney Lanier. Since then this glorious colonnade has become populous with bronzes. Today it is the proud privilege of the United Daughters of the Confederacy to bring you General Jackson to join General Lee and other great Americans here enshrined. Let us hope that through the years to come, they will be an inspiration to those who visit this beautiful colonnade.

Mr. Churchill, in conversation with President Roosevelt, declared Lee and Jackson "two of the greatest Americans born on the American Continent." What could be more fitting than that these two, so closely associated in life, should be thus linked in memory?

I know of no other institution, anywhere, which commemorates its native sons and daughters as does this Hall of Fame, and it is gratifying to learn how judiciously and effectively this shrine has been administered by New York University, its trustee for the Nation.

To the members of the distinguished College of Electors, many of them potential candidates in future years, I particularly wish to express the appreciation and gratitude of the United Daughters of the Confederacy for their selection of General Jackson. In their choice of the general, these electors, representing every State of the Union, have attested not only to the eminence of this spiritual leader, but also to the esteem in which he is held throughout the Nation. His election is a national recognition of his nobility of character, his supreme faith, his greatness of mind and heart, as a conscientious teacher, a humanitarian, who made no distinction of race or color in his benevolences and to his unmatched genius as a military leader whose tactics electrified the world and have never been surpassed and seldom, if ever, equaled.

Sir Francis Bacon in his essay entitled "Honor and Reputation," stated that "The honor that ranks greatest is that of those who sacrifice themselves to danger of death, not for acquisition of territory, not for acquisition of power, not for fame, not for self-enrichment, or self-glorification, but for defense of a principle." Jackson won many such honors notably at Contrevas, Cherubuscuro, and Chapultepec, often in his valley campaigns; and at the first Battle of Manassas, he leaped into immortality and by the dying lips of that great Georgian, Gen. Barnard Bee, Thomas Jonathan Jackson was baptized with a new name, "Stonewall," in the fiery font of battle.

Last, he won that honor at Chancellorsville, where he accomplished his greatest achievement in a daring flanking movement that established his reputation as master of the art of war. It was in that, at the age of 39, he sacrificed his life, not for acquisition of territory, not for power or fame, but for a principle.

He was not only a great soldier in war, but a great soldier of the cross. His religion, deep and sincere, was no shining Sabbath garment, but his everyday service uniform. Like St. Louis of France, Gustavus Adolphus of Sweden, and Sir Oliver Cromwell of England, he is classed among the soldier saints of the world.

That name, Stonewall, is still a bright shibboleth of all the qualities of honor, courage, force, and steadfastness that every American should aspire to attain. Stonewall Jackson as an ideal of conduct will last as long as our culture lasts. After all, we realize that our country's first line of defense is the moral integrity of our people, the stabilizing influence of spiritual ideals, and force of character—characteristics potentially represented in the lives of those commemorated in this sacred Valhalla of America's immortals.

I thank you.

Shakespeare's Word Applied to Hungary

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following poem written by 13-year-old Sandy Holtzman, of Brooklyn, N. Y., as it appeared in the Kings Courier of July 20, 1957:

SHAKESPEARE'S WORD APPLIED TO HUNGARY

Thirteen-year-old Sandy Holtzman who attends Andries Huddie Junior High School wrote this poem in February at the same time he was reading Shakespeare's Julius Caesar and the Hungarian situation was before the eyes of the world. With the Hungarian story again receiving headlines in the United Nations we are publishing Sandy's poem below:

"SPEECH IN THE U. N. BY THE HUNGARIAN DELEGATE

"Friends, delegates, and Mr. President, lend
me your ears
I come to praise Hungary and not to bury her.
The evil that a country does lives after it;
The good is oft interred with its defeats;
So let it be with Hungary.
The noble Russians have told you that Hungary was rebellious;
If it were so, was it a grievous fault, and did
she have to answer for it so grievously?
Here, under leave of Russia and the rest—
For the Russians are honorable men—so are
you all—honorable men,
Come I to speak in Hungary's behalf.
She is my homeland and I love her:
But Russia says she was rebellious, and Russia is an honorable country
They suffered strife and misery under Russian rule,
And wanted freedom from oppression.
Did this in Hungary seem rebellious?
While the Hungarians have starved, the Russians have feasted:
If it was rebellion, had it not just cause?
Yet the Russians say she must be punished
and the Russians are honorable men.
Bear with me; my heart is in Hungary with
my people,
And I must pause till it comes back to me."

Tobacco on Trial

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Clarksville Leaf-Chronicle of July 17, 1957. It is my opinion that the statements contained in this editorial regarding the possibility of the removal of tobacco as 1 of the 6 basic crops are of much merit and deserve serious thought and study:

TOBACCO ON TRIAL

Drew Pearson writes that Senator NEUBERGER, of Oregon, is all set to ask that tobacco be removed as 1 of the 6 basic crops which is receiving subsidies through support prices.

NEUBERGER's proposed move is based on the suspicion that tobacco may be the cause of some cancers, particularly lung cancer. Pearson adds that Secretary Benson is happy over the NEUBERGER plan since Benson is a strict Mormon and does not use tobacco in any form.

Of course NEUBERGER will make some headway in his proposal to remove the support prices from tobacco, especially since there is belief in some circles that tobacco may be the villain in certain cancer cases. But it should be added here that so far there has been no concrete proof of this suspicion.

Barring the suspicion against tobacco, it should rank as one of the basic crops and should warrant support prices. Aside from the fact that tobacco is an important cash crop in Tennessee, Kentucky, North and South Carolina, Virginia, and of some importance in several other States, the Government derives a tremendous revenue from taxes on tobacco products.

If the cause of cancer can be traced to tobacco's door, then it should be treated as a health menace and it use discouraged if not forbidden. But until there is proof of the charges, tobacco should be accepted as a basic crop entitled to its subsidies from the standpoint of the tobacco grower as well as from the viewpoint of the treasuries of both State and Federal Governments.

Hon. Joseph McCarthy

EXTENSION OF REMARKS
OF
HON. MARTIN DIES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. DIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Americanization bureau of the National Republic, dated May 10, 1957, and including also a resolution from the Public Affairs Luncheon Club of Dallas:

AMERICANIZATION BUREAU,
NATIONAL REPUBLIC,
Washington, D. C., May 10, 1957.

MY DEAR FRIEND: It is not news to you or to the millions of newspaper readers, radio and television listeners that Senator Joseph McCarthy has passed away, but it would be amiss for this writer to shirk this opportunity to add to the praise that has so belatedly been bestowed upon him.

The late Senator it is said was a "very controversial figure," which is nothing new, in that to date anyone and everyone who has dared attack the subversive elements in this country are immediately so labeled. Look back over history and the toll is great. Senator McCarthy was at least conscientious, patriotic, and determined to do his utmost, even against the odds of ill health, to rout the enemies of our country from the public payroll. He did his part nobly.

From the day of his now famous speech in West Virginia, his maiden speech on the subject, until his censure by the Senate, he kept the enemy groggy.

It may appear irony that no Senator, once censured, has been paid greater honor at death than Senator McCarthy.

Even his bitter enemies were softened by the news of his death, or at least by the official and public respect paid him. Thousands of people lined the funeral parlor outside in Washington and in Appleton, Wis., to pay him their respects. The Senate Chamber and the gallery were crowded to the limit and hundreds stood outside who could not be admitted. A Marine honor guard stood beside the casket, which was draped with the flag he so loved. Newspapers, many that had often panned him, devoted pages to him. Radio and TV commentators praised him.

Senator REVERCOMB, West Virginia, said: "Senator McCarthy's death is a tragedy to the Nation. He was a great patriot. He loved his country and he fought consistently to protect it." The Most Reverend John J. Cartwright said: "Senator McCarthy filled a role which will be more and more honored as history unfolds its record." Rev. Frederick Brown Harris, Chaplain of the Senate, said: "All Americans can hail his clearly defined objective—which was to expose cunning foes who under cowardly cover plot the betrayal of our freedom."

This writer says well done, Senator McCarthy, may eternal peace be with you, and

may another great Christian patriot spring up amongst us to take up the battle where you left off.

Your Washington reporter,

WALTER S. STEELE.

Whereas the Senate of the United States voted censure of the late Senator Joseph R. McCarthy; and

Whereas Senator GEORGE MALONE has stated his intention to use his efforts to have this censure and all debate and discussion pertaining thereto expunged from the CONGRESSIONAL RECORD: Therefore be it

Resolved, That the Public Affairs Luncheon Club here assembled this 13th day of May 1957 do heartily commend Senator MALONE for his proposal; be it further

Resolved, That a copy of this resolution be spread upon the minutes of this organization and copies be sent to Senator MALONE and to Senators LYNDON JOHNSON and RALPH YARBOROUGH and to Mrs. Joseph R. McCarthy.

Respectfully submitted.

RESOLUTIONS COMMITTEE,
WINNIFRED E. DILLARD
(Mrs. Joe P. Dillard),
Chairman.

Unanimously adopted May 13, 1957.

PUBLIC AFFAIRS LUNCHEON
CLUB OF DALLAS,
SUE B. FITCH
(Mrs. Robert Fitch),
President.

Memorandum of Observations Made While Visiting Hungarian Refugee-Escapee Camps in Yugoslavia

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a Memorandum of Observations Made While Visiting Hungarian Refugee-Escapee Camps in Yugoslavia, by observer Adam Tarnoczy, and prepared by the Hungarian Catholic League of America, Inc., of 30 East 30th Street, New York City, together with a status report prepared by the same league:

MEMORANDUM OF OBSERVATIONS MADE WHILE VISITING HUNGARIAN REFUGEE-ESCAPEE CAMPS IN YUGOSLAVIA

(Observer: Mr. Adam Tarnoczy)

HIGH COMMISSIONER'S OFFICE

The Yugoslavs already show complete willingness to cooperate in moving the Hungarians out of Yugoslavia. However, there is no freedom of movement as far as the refugees themselves are concerned, and if he leaves the camp without the permission of the Ministry of the Interior—this permission is only granted by a high official in the Ministry in Belgrade itself—he is thrown into prison without trial. There are known instances of the Hungarians receiving severe beatings for leaving the camp without permission.

The secretaries and interpreters in the high commissioner's office, who are furnished by the Yugoslav Government, are supposedly all Communists, which makes the operation of the office difficult. Three of them have definite Communist connections. Colonel Stefanovic, who is a top-ranking member of the state secret police, is a frequent visitor to the high commissioner's office. The international personnel of the high commissioner's office are watched 24 hours a day.

VISITING CAMPS

In order to visit a camp, one must first obtain the permission of the Ministry of the Interior. A visitor may then go through a camp but he is accompanied by a guard. In view of the presence of the guard, the refugees in the camp are afraid to talk. It is extremely difficult to be alone with a refugee for a sufficient priod of time to learn anything. They want to talk but they are afraid.

During the month of June, 17 reporters were invited by the high commissioner to visit the camps in Yugoslavia. Later, I saw newspaper headlines in Austrian and German newspapers reading "Refugee Camps or Concentration Camps?" (Die Presse, June 4, 1957). These reporters left with a terrible impression of the situation under which these refugees live in Yugoslavia.

CAMPS

The quality of the camps vary from very bad to fairly good. Most of the camps are surrounded with barbed wire and under guard. When normal camp facilities became overcrowded, the Yugoslav authorities put large numbers of refugees in country estates and beach hotels. Some of the camps are badly overcrowded and far out in the country. The Yugoslavs have placed most of the single male and female refuges in camps while the beach hotels were mainly filled with families.

CAMP RATIONS

While it is claimed officially that the food meets the required 2,600 calories per day, from all reports I have had and I wish to say these reports are verbal, the food is insufficient. The refugees complain that they are always hungary. I spoke with one doctor who told me that in his opinion the people will be able to resist disease for some time to come, but that the inadequate diet will eventually prove harmful to their constitutions. They live chiefly on soup and bread, and a bit of meat served twice a week.

MORALE

The morale of the refugees in the camps is terrible. The refugees who have already left Yugoslavia for other countries had hoped to emigrate to the United States. It is also the hope of those who remain in Yugoslavia to emigrate to the United States. In other European countries, particularly Sweden, I met refugees from Yugoslavia who had been resettled. These refugees told me they had planned to go to the States, but they had an opportunity to go to other countries so they went rather than wait and possibly get to the States.

One of the main problems is that these people in Yugoslavia have no connection with the outside world. For example, they are not informed of the fact that the U. N. agreement with Yugoslavia prohibits the Yugoslav government returning any refugees to Hungary without their consent. Because of the lack of information of this kind, the refugees are afraid that one of these days Tito will return all of them to Hungary. They live in a world of rumor. My opinion is that they could resist any other hardship but the thought of returning to Hungary or being returned is frightening to the refugees. The only newspaper I saw in the hands of the refugees was the Hungarian language Communist newspaper printed in Yugoslavia.

REGISTRATION

The registration of Hungarians in Yugoslavia was carried out solely by the Yugoslav authorities on a form based upon the one used by ICEM in Italy. The voluntary agencies have complete control over all of these registration forms and the preparation and detail are excellent.

RELIGION

Ninety-two percent of the refugees are Catholic. There were 80 Jews and the balance Protestant. At the time of the registration of the refugees by the Communist authorities in Yugoslavia, only 13 persons out of 19,000 said they were of no religious faith. In other words, out of 19,000 refugees only 13 apparently followed the Communist line to the extent of leaving their faith.

REPATRIATION

Two thousand three hundred refugees returned to Hungary of their own free will because they were discouraged and hopeless. Their return was used by the Hungarian government for propaganda purposes in Hungary. I met Hungarian refugees in other countries who said that they had definite information from their relatives in Hungary that the refugees returned en masse from Yugoslavia. I have the impression that these facts were used by the Hungarian authorities to force Hungarians in Hungary to write their relatives outside Hungary and call them home by telling them that nothing would happen if they would return and that they could have a nice life in Hungary.

Only 13 teen-agers were sent back to Hungary from Yugoslavia, and those returned at the request of their parents. This action caused many rumors in the camps, and many of the refugees are now afraid that they, too, will be returned to Hungary.

CONCLUSION

It is my opinion that the eyes of the free world are closely watching these refugees in Yugoslavia, who were forced to seek asylum in a Communist country. I asked many of them why they did not flee before the border between Austria and Hungary was closed. Their answer was that they hoped that they could fight further against communism and for the freedom of Hungary. They saw the hopeless situation in Hungary and the fact that the Communist government was getting stronger day by day, so they decided to take a chance and go through the last open door to communist Yugoslavia.

I can say that the refugees in Yugoslavia are far above the average of refugees. One representative of a voluntary agency in Belgrade said to me, "In all my years of immigration experience, I have never come across a group of people who are of such fine caliber."

The remaining refugees in Yugoslavia are mostly young people and, judging by their occupational breakdown, intelligent. However, I feel that if the situation, which is extremely tense, continues for a long period, the refugees who are confined to camps, surrounded by barbed wire, and in most instances have not been outside of these camps since their arrival 6 months ago, will become completely demoralized through inactivity and frustration, and will rise up and return to Hungary. If this should happen, and I pray it does not, then all the millions of dollars which have been spent combating communism will have been spent in vain, and the West will suffer a tremendous blow to its prestige; it will mean just one more political victory for Russia and the Communist bloc. Many Hungarians I met, especially those leaving Yugoslavia, told me they wanted to be free envoys of the suffering refugees in Yugoslavia, and begged me to call their plight to the attention of the State Department of the United States as well as the Congress of the United States inasmuch as the freedom-loving people of America were their last hope.

Status report: Hungarian refugee situation in Yugoslavia for the week ending June 11, 1957

Total influx of refugees into Yugoslavia	19,335
Total number of arrivals during the above period	58
Refugees presumed residing in Yugoslavia:	
In camps	11,407
Integrated	581
	11,988
Repatriation cumulative total	2,327
Declared intention of refugees in camps:	
For emigration	11,224
For integration	133
For repatriation	50
	11,407
Ethnic origin:	
Hungarians	11,144
Germans	18
Jews	50
Others	195
Number of refugees in camps	11,407
Number of complete families	1,847
Number of noncomplete families with children	593
Single women	965
Single men	4,334
Children:	
With parents:	
Up to 14	2,183
14 to 18	393
Without parents:	
Up to 14	17
14 to 18	657
Total	3,250
Others:	
10 to 25	3,593
25 to 34	2,700
35 to 45	1,200
45 to 55	650
Others	14
Social statistics:	
Unqualified workers	1,351
Qualified workers	3,369
Highly qualified workers	827
Farm workers	715
Educational workers (teachers, professors, etc.)	137
Highly qualified specialists (with university degrees)	257
Civil servants	840
Public workers (journalists, artists)	78
Free professions	292
Military persons	115
High school and university students	1,379
Others	2,047

James M. Cox

SPEECH
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Nashville Banner, Nashville, Tenn., under date of July 17, 1957. I feel sure the membership of the House will want to read this fine editorial about a great American, the late James M. Cox:

JAMES M. COX

Death at the age of 87 years has closed the rather remarkable career of James M. Cox. He rose from teacher and reporter to newspaper publisher, Governor of his native State of Ohio for three terms, service in Congress, and presidential nominee on the Democratic ticket in 1920. When he died he owned seven newspapers and had wide interests in TV and radio.

The rise of Governor Cox was not by chance. From the beginning he showed those qualities of tenacity and integrity that were to bring him honors from fellow citizens and take him to the top of the newspaper field. He was a stalwart figure on the United States scene, a man loyal to his principles and policies, a most able publisher. He was a good American, a true example of the type who reached the heights from the little red schoolhouse—in his case, one at Jacksonburg, Ohio.

Resolution Passed by New Hampshire State Association of Letter Carriers in Memory of the Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a a resolution which was passed in memory of the late Senator Joseph R. McCarthy by the New Hampshire State Association of Letter Carriers:

Whereas the late Senator Joseph R. McCarthy, of Wisconsin, was an American fighting the Communist conspiracy in order to make a great America greater; and

Whereas Senator Joe McCarthy was on the Honor Roll of the National Association of Letter Carriers: Therefore be it

Resolved, That we, the members of the New Hampshire State Association of Letter Carriers assembled at Concord, N. H., for our State convention, extend our sympathies to the widow and daughter of the late Senator McCarthy.

NEW HAMPSHIRE STATE ASSOCIATION OF LETTER CARRIERS,
ALPHONSE J. ANDRUSKEVICH, *Secretary*.

The President Stays Away

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Clarksville Leaf-Chronicle of July 10, 1957, which comments on the President's absence from the dedication of the Truman Library:

MR. EISENHOWER STAYED AWAY

It seems that President Eisenhower, who has time to take vacations, not to speak of enjoying his rounds of golf, could have found time to attend the dedication of the Truman Library. If not, he certainly could have sent a warmer, friendlier message to observe the occasion.

The only two living former Presidents attended the event, Harry S. Truman, whose official and semiofficial papers are in the library, and Herbert Hoover. It would have been a graceful and fitting gesture on the part of the incumbent president to have attended. The President's absence and the terse, informal note he dispatched indicate again an unpleasant characteristic of many commendable characteristics that Mr. Eisenhower has. He cannot take criticism, even in politics, and once antagonized by an opponent he cannot forgive and forget.

To the credit of the man from Independence, he views politics in one light and patriotism and statesmanship in another. What is said about him in a political fight is little heeded and quickly forgotten. That is not true of the present occupant of the White House.

Hon. Allan Oakley Hunter

SPEECH
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. GUBSER. Mr. Speaker, I feel a great personal loss from Oakley Hunter's decision to leave Government service to enter the practice of law in his home town of Fresno, Calif. But I feel that what is the Nation's loss will be Fresno's gain.

Oakley Hunter was a splendid colleague and a great Representative in Congress. He was an able member of the executive department. Always he conducted himself as a fair-minded gentleman and his hard work and efficiency was genuinely appreciated by Members from both sides of the aisle. I regret that we will be losing him but recognize the fact that Oakley owes an obligation to himself and his family. He has rendered great service to his country and now deserves the right to establish himself in the world of private business. Washington and the Federal Government has lost a wonderful family. May I wish him well and at the same time congratulate the citizens of Fresno. They have gained what we have lost. They now have another able lawyer and one of the most public-spirited families I have ever known.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Trinity River Survey Is Important Step Toward Building of Great Industrial Area

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. JOHNSON of Texas. Mr. President, the public works appropriation bill recommended by the Senate Appropriations Committee carries funds for a resurvey of the Trinity River watershed, in Texas.

A thought-provoking letter to the distinguished newspaper, the Dallas Morning News, written by one of the Lone Star State's industrial leaders, explains forcefully the need for this survey. This letter is signed by Mr. John W. Carpenter, chairman of the board of the Southland Life Insurance Company of Dallas. Mr. Carpenter is a longtime worker for full development of the Trinity River Basin.

I ask unanimous consent that this outstanding Texan's thoughtful letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

This is comment on your editorial (July 10) entitled, "Reservoir Sites in Texas," and quoting Senator LYNDON JOHNSON saying before a hearing of the Reclamation Bureau in Washington last Monday that "Texas needs reservoirs to contain many additional millions of acre-feet of water." Senator JOHNSON has been cooperating with the Trinity (River) Improvement Association to help bring about a resurvey of the Trinity River watershed. Such a survey will give data and information helpful toward the building of more needed dams on the Trinity River and its tributaries.

The Fort Worth-Dallas area is becoming a great industrial one. The main thing needed to induce and invite more industries is an abundant industrial water supply. The recent flooded conditions of the Trinity River and its tributaries, lasting for approximately 90 days (the Trinity River is bank full today), is very convincing that the Fort Worth-Dallas area and the entire Trinity River watershed will have an abundant supply of industrial water just as soon as the people of Fort Worth and Dallas and all over the Trinity River watershed decide not to wait longer, but to proceed vigorously with a program to bring about the building of dams at proper locations on the tributaries of the Trinity, and the main stem of the Trinity River as well.

It is stated by the corps of engineers that from rains already this year, July 1957, more than 7 million acre-feet of water which fell on the Trinity River watershed above the town of Trinity in Trinity County will waste into the Gulf of Mexico. The water falling on the Trinity River watershed below the town of Trinity will be in addition to the 7 million acre-feet and will approximate 2½ million acre-feet, making a total of 9½ million acre-feet of water going to waste into the Gulf of Mexico for this calendar year, to say nothing of the rainfall between now and December 31.

If the people in the Fort Worth-Dallas area can visualize their great opportunity, they will militantly get behind the Trinity Improvement Association and the Trinity River Authority in the building of dams on the tributaries and on the main stem of the Trinity that will give to the people of the Trinity River watershed a great and sufficient amount of water, which will insure the Fort Worth-Dallas area and the whole area along the Trinity River to the Gulf becoming one of the greatest industrial situations in the whole United States of America.

Thanks to the Dallas Morning News for its foresight and assistance toward helping to bring this important program into fruition.

Effect of Advertising on Living Standard

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. JOHNSON of Texas. Mr. President, I think no one will question the statement that advertising has been a potent force in making possible the kind of life Americans as a people enjoy today.

Thoughtful comment on the role of advertising in America was contained in an editorial which appeared recently in the Cleburne, Tex., Times-Review. The Times-Review is published by an energetic and enterprising young man named William Rawland. This editorial is typical of the comment that appears regularly in his newspaper.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Advertising has aided greatly in increasing the standard of living of the United States, said Elon Bardon, head of the Advertising Federation of America, speaking in Dallas last week. That only begins to state the case for advertising. The impact of advertising upon our entire way of life has been beyond calculation. It has been for the good insofar as it has been good advertising. And most of it, thought not all, has been good advertising.

The deepest social effect of advertising comes from the fact that it constantly keeps the lower income brackets—the have-nots—reminded that they live in a land of plenty. They are kept standard-of-living conscious. They realize this every time they pick up a newspaper or magazine. They are encouraged to ask themselves: "Why can't I have these things by the same means that others possess them?" Advertising is an antidote for political gimmeocracy.

This, as much as anything else, has tended to even up the distribution of this standard of living. In other times and countries, the disparity between upper and lower income brackets has grown until revolution followed. In our country, and largely throughout the remainder of the civilized world, advertising has maintained a constant revolution that has meant economic and social stability.

Reading Habits of Senators

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent that a very interesting article by our colleague the Senator from Oregon [Mr. NEUBERGER] on the reading habits of Senators, which was published in the New York Times Book Review for Sunday, July 21, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR OUR SENATORS, READING TIME IS STOLEN FROM HOURS OF SLEEP

(By RICHARD L. NEUBERGER)

(Mr. NEUBERGER, a former Oregonian newspaperman, was elected to the United States Senate in 1954.)

In the stately Marble Room, which has been set aside in the Capitol for the reading purposes of United States Senators, there are no books or magazines, only newspapers. This is symbolic. Few of the 94 men and 1 woman[1] who exercise in the Senate Chamber great authority over the Nation's affairs, have time to read very many of the books which come off the Nation's presses, even when those books relate directly to issues that will be decided by rollcall votes in this same Senate Chamber. Let the solitary member of the female sex to whom I have referred sum up the reading opportunities of a Senator. MARGARET CHASE SMITH of Maine, one of the most conscientious of my colleagues, recently observed to me:

"To be completely honest, the schedule of the full Appropriations Committee and the five subcommittees of it that I am on, plus the work of the Armed Services Committee and the Government Operations Committee, plus the heavy mail that I have from Maine, altogether gives me little reading time. At present, I am not reading any book because my schedule is so overloaded with official duties that there is no opportunity for adjustment to read."

Although I am far more limited in the length of my Senatorial services than is Mrs. SMITH, I can corroborate fully what she says. As a Senator, I am unquestionably less thoroughly informed about the complex world beyond the Capitol's fluted walls than prior to my election. When I was an ordinary citizen, I had time to read a substantial quantity

[1] Senate membership numbers only 95 at present, due to the death of Senator Joseph R. McCarthy.

of current literature. Today, I see innumerable books advertised and reviewed that might bolster me greatly in the decisions I must reach as a Senator, if only I had time to read them.

Any reading time now is stolen from needed hours of sleep. Even though my working day begins at 6:30 in the morning, the 60 minutes before breakfast are spent with the New York Times, the Washington Post and Times Herald and the latest issue of the CONGRESSIONAL RECORD. This reading is indispensable to some knowledge of the day's probable agenda, but it fails to put me in intimate touch with the books that are being published as a mirror of our period.

I carry a heavy speaking schedule before political, religious, school, and conservation groups. This means that only a rare evening is available for reading. By then, the tensions and stress of crowded days have made me disinclined for heavy reading. Instead, I pick up books about mountain-climbing, upland forests, canoe voyages and pack trips into the solitudes. They bring back the tang of alpine fir and help me to forget the unpleasant bickering so endemic to American politics. Occasionally I peer again into Penguin Island, by Anatole France, to make certain that we humans are really not so peculiar as these awkward birds.

What about other Senators? Do they have time at all to read? If so, what do they look at? Is my experience typical, or do others adjust their schedules more successfully?

I talked with my senior colleague from Oregon, WAYNE MORSE. This former dean of the law school at our State university said to me, "When I compare the reading time I have time to do as a Senator with the reading I once did as a teacher of law, I feel that I am almost becoming book-illiterate." Senator MORSE added that his principal dissatisfaction was that he had no chance at all for continuity in reading. He had to snatch a few chapters at a time aboard planes or trains. Even so, he said he was trying to read Benjamin Shwadran's The Middle East, Oil, and the Great Powers, as well as Guides to Straight Thinking, by Stuart Chase.

I put this inquiry to whitehaired ALEXANDER WILEY, of Wisconsin, ranking Republican member of the Senate Foreign Relations Committee:

"ALEX, do you have sufficient time to read the books, magazines, newspapers, reports, and documents you consider essential for the information necessary to your job?"

"No," answered WILEY.

He went on to say, candidly, "I do not get a chance to read any books. Once in a while I have an opportunity to scan through one. Music is my solace. I enjoy good music on both radio and television, as well as on records. I also gain real relaxation from my wife's talented piano playing."

To Senators who would read to any considerable degree, an ascetic routine is practically a prerequisite. FRANK J. LAUSCHE, the new Senator from Ohio, is omnivorous in his appetite for books. He has just finished The American Story, From Columbus to the Atom, by 60 members of the Society of American Historians, and Wilderness for Sale by Walter Havighurst.

Senator LAUSCHE told me that this feat was accomplished by going to bed early each evening. "I wake up at various hours of the night," he added, "and in those periods of waking, I do most of my reading." To climax this stern regimen, the former governor of Ohio is up every morning at sunrise, to spend the time before 8 o'clock either with a book or at a dictating machine where he handles most of his extensive correspondence.

The most proficient quoter of the Bible I have ever met is MATTHEW M. NEELY, 81-year-old Senator from West Virginia. No matter what the question before the Senate may be, NEELY can contribute a scriptural citation that provides a perfect moral for the occasion. I asked him how this was done. He told me that he eschewed nearly all social events and thus has been able to read through the King James version of the New Testament seven times.

Next to NEELY, the most prolific fountain of quotations in the Senate is PAUL H. DOUGLAS, the ex-college professor who is senior Senator from Illinois. His specialty is the classical poets in general and Shakespeare in particular. I imagine DOUGLAS is the Senate's most indefatigable reader. As in the case of Senator LAUSCHE, his reading is done at the expense of sleep. DOUGLAS informs me that he seldom sleeps more than 6 hours during any one night. "Hence," he says, "I do most of my reading in bed after 9:30 p. m. and before 6 a. m., when I arise."

Senator DOUGLAS has his reading as routinized as a train schedule. This is the way he broke it down for me:

Before breakfast: The New York Times, the Washington Post and Times Herald, the CONGRESSIONAL RECORD.

At noon: The Wall Street Journal, St. Louis Post-Dispatch, Christian Science Monitor, Chicago Daily News, Chicago Sun-Times, and five downstate Illinois papers.

In the evening: The New Republic, New Leader, the Progressive, America, Commonweal, Unitarian Register, Friends Journal, Manchester Guardian, the London Observer, and the London Economist.

Weekends: Bulletins from the Federal Reserve Board, Bureau of Labor Statistics, etc.

In between this rigorous reading timetable, the snowy-thatched intellectual from Illinois explained that he was attempting to complete the perusal of five books: C. Van Woodward's Reunion and Reaction, George Santayana's Three Philosophical Poets, Thomas and Marva Belden's So Fell the Angels, Bacon's Essays, and Bertrand Russell's Portraits From Memory.

When I showed this reading program of the 65-year-old Senator DOUGLAS to my seatmate in the Senate, 32-year-old FRANK CHURCH, of Idaho, we both felt humble and inadequate by contrast. CHURCH, youngest citizen to sit in the Senate for many years, remarked frankly, "I must need a lot more sleep than PAUL, because I haven't yet been able to solve satisfactorily the question of when to do my reading. I only hope it can be done during the 4 months when Congress isn't in session—otherwise I will feel pretty much isolated from the books I used to have time to read as a lawyer in Boise."

Another Member of the Senate who admits that a crowded schedule makes much of his reading "superficial" is JOHN F. KENNEDY, of Massachusetts, the only Senator ever to win a Pulitzer prize for biography. The author of the best-selling "Profiles in Courage," a study of political valor and independence during periods of national hysteria, shares with WAYNE MORSE the habit of reading while on the move. Senator KENNEDY generally takes along a book when speaking engagements require travel by train or plane. His current agenda in this respect includes Crisis of the Old Order, by Arthur Schlesinger, Jr.; Road to the White House, by Arthur S. Link, and Oliver Cromwell, by John Buchan.

Senator KENNEDY, whose principal committee posts are Foreign Relations and Labor, tells me that he can give scant time to reading on governmental matters beyond these immediate assignments. "As to the areas outside my own committee responsibilities," he adds, "I rely on the judgment of others with whom I have an identity of interest and in whom I have confidence."

This practice, I believe, is far more general than most people realize. Senators, who are pressed even to find hours for eating even and sleeping, tend to restrict their reading—particularly in the realm of nonfiction—to their own specialties. Then like Senator KENNEDY, they depend upon trusted colleagues to counsel them in other fields. For example, I serve on the two principal natural-resource committees, Interior and Public Works. Most of the books on my bedside table apply to the realm of timber, water, and wildlife.

A penchant for following one particular vein or ore in reading habits is extremely prevalent among southerners. These individuals harbor a brooding nostalgia for the old South and for the Civil War. Whenever I hear such Senators as STROM THURMOND, of South Carolina, or WILLIS ROBERTSON, of Virginia, talking about some recent reading, it usually applies to a book about the rise and fall of the Confederacy. Senator JOHN STENNIS, of Mississippi, a stern but fair man, is one of the most scholarly of southerners. A Phi Beta Kappa key dangles from his watch chain, and he himself is the author of many brilliant and moving speeches on the life of Gen. Robert E. Lee.

"I read slowly," Senator STENNIS said to me. "I cannot scan a book like some of you young fellows. I have to savor every word. Thus, my limited time with books is spent with something that really means a lot to me. I read all I can about the Civil War, even northern viewpoints and prejudices. Bruce Catton's This Hallowed Ground is the latest I have been reading. I have learned much from it, despite the fact that I might not share Mr. Catton's entire outlook."

Senator CLINTON P. ANDERSON, of New Mexico, is an ardent bibliophile specializing in western history and folklore. A tall and restless man, he piles his home with books about Lewis and Clark, Fremont, and John Wesley Powell. The reading of other Members of the Senate reflects the locale that they represent. Senators GEORGE D. AIKEN and RALPH FLANDERS, who carry the colors of the Green Mountain State, assure me that they read every possible book about Vermont. ESTES KEFAUVER and ALBERT GORE both pride themselves on their reading about Tennessee, and they can cite book, chapter and verse concerning such illustrious Tennessee careers as those of Andrew Jackson and Cordell Hull. Yet every Senator, when he discusses his literary propensities, always adds the inevitable qualification—"time permitting."

One night I sat at a banquet given by the Philippine Embassy with WILLIAM A. PURTELL, the junior Senator from Connecticut. I mentioned to him that I was attempting to read through the book Water, published by the Department of Agriculture, in view of the importance of rivers, lakes, and harbors to my seacoast State. I also said I had been trying to read, in fits and snatches, A History of the English-Speaking Peoples—if only to worship at the feet of that master of our tongue, Sir Winston Churchill.

"At night when I stay home with Mrs. Purtell," he said, "my greatest pleasure is to eat a plain home-cooked supper and then to read a western or a detective story. My day is packed with committee meetings, Senate sessions, and conferences with constituents. Connecticut is near enough to Washington so that my office overflows with callers from home. Following 10 or 12 hours like this, I find that I require reading that will relax me rather than stimulate."

That is the problem of the United States Senator. In Oregon my wife and I trudged up mountain peaks, played long games of golf, and swam in glacier-fed lakes. This did not make nearly the inroads on my vitality that a single day of political strain does beneath the dome of our country's Capitol. My evenings were available for reading, and so was an occasional afternoon. I could keep reasonable pace with the new literature, both fiction and nonfiction.

I once would never have imagined that the Senators struggling with the terrible

dilemma of chattel slavery had not read Uncle Tom's Cabin, which was stirring Americans of that area. Yet, how many of us in the Senate today are reading the books that move or influence our fellow citizens, as we poise on the threshold of the great decisions inevitable in this atomic era?

The Algerian Question

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials from leading newspapers in my State commenting on my recent speech on the Algerian question. I also ask unanimous consent to have printed a letter published in the New York Times, signed by M. Henri Pierre, the respected Washington correspondent of Le Monde, a newspaper which enjoys a stature in France similar to that of the New York Times. While M. Pierre does not share all my views and interpretations, his letter indicates that there are independent French observers and thinkers who are deeply concerned with the stagnation of French policy in north Africa.

There being no objection, the editorials and letter were ordered to be printed in the RECORD, as follows:

[From the Boston Herald of July 11, 1957]

POLICY BY RESOLUTION

Senator KENNEDY's big speech on the Algerian question has gotten a big reaction. The Algerian Nationalists are understandably delighted to get support in such a quarter, and the French, with equal predictableness, are furious at the intervention.

More interesting, however, is the response in the United States, which has been generally cool. One can see why Secretary Dulles' nose should be slightly out of joint over it. The Senator was sharply critical of the administration's pro-French policy. But why should so much of the press follow the Dulles line?

Surely Mr. KENNEDY's basic thesis is unassailable. The French are fighting a losing battle in Algeria and their stubbornness is doing not only themselves but the whole free world great harm. Unless Paris compromises with the rebels soon, Algeria is almost certain to go the way of Morocco, Tunisia, and Indochina, leaving a legacy of ineradicable bitterness in return for all the blood and money expended.

Why not face the facts? More and more Frenchmen are doing so every day. Several books published in France—Lieutenant in Algeria, by J. J. Servan-Schreiber, and the Algerian Tragedy, by Raymond Aron, to mention two—have gone much further than the Massachusetts Senator in blasting French policy in Algeria. The consistent refusal of the National Assembly to provide new revenue for the pacification campaign is also evidence of wavering support.

And if Mr. KENNEDY is right about this, is there anything wrong in asking the State Department to fit its policy to the changing situation? Mr. Dulles says the problem is exceptionally difficult. There is no doubt about that. Diplomatically we would like to remain on good terms with both France and the north Africans, and neutrality looks like the easiest way out. But Mr. KENNEDY's point is that we are now neutral on the side of the French. Nonintervention in this case amounts to a discrimination against the Algerian Nationalists.

If we are going to intervene, why not throw our weight on the side of self-determination for the Algerians? That is more in line with our natural bent and tradition. We did it in Indonesia. We did it to a lesser extent in Indochina and the other North African States. Why draw the line at "difficult" Algeria?

The best argument against the Senator is that by introducing a joint resolution on foreign policy he is usurping the State Department's function. It was the founder of Mr. KENNEDY's party, Thomas Jefferson, who said, "the transaction of business with foreign nations is executive altogether." Too many policymakers in foreign affairs could be disastrous. By embodying his ideas in a formal resolution, the Senator may have overstepped the line.

But he is certainly entitled to an opinion in this field, the more so since, as a member of the Foreign Relations Committee, he may be called upon to help implement Mr. Dulles' policies. We cannot believe that anything but good will come of his invitation to debate on Algeria. French and American policy in this whole area can well stand an airing.

[From the Springfield (Mass.) News of July 2, 1957]

A SENSIBLE FOREIGN POLICY

While our foreign policy has been bounding from head-in-the-sand to head-in-the-clouds, from massive retaliation to tremendous retreat, from boycott to economic aid, and from brink of war to key to disarmament, Soviet foreign policy has made considerable progress along a well charted course.

Almost in despair, Americans have been looking to Washington for some indication that our foreign policy is something more than a modern mobile of statements, declarations, and doctrines, all in motion, and all hanging by the weakest of threads. We have looked in vain.

Today, United States Senator JOHN F. KENNEDY of Massachusetts, chairman of the Senate Foreign Relations Subcommittee on U. N. Affairs, addressed the Senate and offered a foreign affairs policy. Such a statement would be welcome simply because it proposes a specific course of action instead of the present American policy of a lick and a promise, a threat and an aid grant, and a pact and a declaration.

However, Senator KENNEDY's address is not only a breath of fresh air, it is a current of new thought. It avoids the clouds of generalizations and gets down to the rocky road of practicality. Senator KENNEDY exposes himself to bumps, pitfalls, and even attacks, but those are the hazards of getting down to earth.

The Senator identifies the world's most powerful force as man's desire to be free, and identifies its enemy as imperialism, Soviet and western. In his first of two speeches, the Senator considers western imperialism, particularly in Algeria.

Senator KENNEDY says that if we do not meet the challenge of imperialism, then "no amount of foreign aid, no aggrandizement of armaments, no new pacts, or doctrines, or high-level conferences can prevent further setbacks to our course and our security."

The French will not enjoy reading the Senator's words. They would concentrate their anger on his blunt refutation of their oft-repeated claim that Algeria is the business only of France, if it were not for the fact that his frank reference to the myth of a French empire will attract oil the fury of the French Government and citizenry.

However, the Senator does not speak off the top of his head. He offers concrete proposals for the direction of American foreign policy to effect a solution to the Algerian tragedy. He speaks only after a 15-month intensive study of the Algerian crisis. His contentions are documented and substantiated; his proposed solutions are based on knowledge and intelligence. They are specific enough to invite refutation, but they are logical enough to stifle unintelligent criticism.

Mr. KENNEDY reviews American policy toward Algeria and our attitude toward Africa as evidenced by United Nations actions. He concludes: "This is not a record to view with pride as Independence Day approaches." He adds: "The record of the United States in this case is, as elsewhere, a retreat from the principles of independence and anticolonialism, regardless of what diplomatic niceties, legal technicalities, and even strategic considerations are offered in its defense."

Senator KENNEDY has offered to Congress a resolution calling upon the President and Secretary of State to have the United States work through NATO or through the good offices of the Prime Minister of Tunisia and the Sultan of Morocco to achieve a solution which will recognize the independent personality of Algeria and establish the basis for a settlement interdependent with France and the neighboring nations.

If no progress is made by the time the United Nations General Assembly opens its session, the resolution would have the United States support an international effort to derive for Algeria the basis for an orderly achievement of independence.

Senator KENNEDY has examined our foreign policy in this field and found it ineffective, vacillating and actually disgraceful. He calls for a new policy, and outlines it for examination.

It is now up to the administration either to refute his arguments that there is a need for a change in policy, to prove that his suggested solution would be as weak and shameful as the present policy, or that the administration has some new plan superior both to its present policy and to Senator KENNEDY's.

One thing is certain, Senator KENNEDY's calm but devastating indictment of America's foreign policy cannot be ignored. It must either be answered or accepted, and that is the decision which our President and State Department must make, whether they like it or not.

[From the Springfield (Mass.) News of July 3, 1957]

MERITS INTELLIGENT STUDY

The immediate reaction to Senator JOHN F. KENNEDY's call for an end to United States support of France's war against Algeria followed the easily predictable pattern.

France exploded. The French press, which rarely can agree on anything, looks as if it came from one set of plates. Wire service reporters in Paris noted that even newspapers which have made proposals which closely parallel Senator KENNEDY's nevertheless upbraided the Senator and said that the Algerian crisis is none of his business. The chief author of France's Algerian policy, Resident Minister Robert Lacoste, said that he would formally invite Senator KENNEDY to visit Algeria to prove his statements. He said that he would reply to the Massachusetts Senator in a speech Sunday.

French reaction was no surprise, and it is understandable nations which criticized as unjust our war against Mexico, which showed sympathy to the Confederacy, or which claimed that we forced Spain into war, received little support even from Americans who agreed with those views.

One French comment merits special attention however, because it utilizes a device made popular in character assassination at-

tempts in this country. Defense Minister Andre Morice accused Senator KENNEDY of aiding the Algerian rebels consciously or unconsciously. This way of saying that a man is either a criminal or a buffoon has apparently won favor in France after having been tested in the United States.

Whether the subject be the St. Lawrence seaway, wool importation, New England railroad rate schedules, or the Algerian war, Senator KENNEDY speaks only after the most careful review of the facts. His speech on Algeria is the result of 15 months of intensive research into that subject. He is certainly not only conscious of the content of his remarks, but able to defend them, and to make an intelligent judgment of the reaction to them.

Reaction in the Senate went according to unanimous predictions. Several Democratic Senators endorsed Mr. KENNEDY's resolution asking the President and the Secretary of State to start working for Algerian independence. The assistant Republican leader in the Senate, Senator EVERETT M. DIRKSEN of Illinois said that the Kennedy proposal would embarrass the administration and undoubtedly offend the French. Senator DIRKSEN cannot be accused of making ungrounded speculations.

Secretary of State John Foster Dulles lived up to his reputation. When asked about the Senate resolution asking that the United States work for Algerian independence, the Secretary made a reply of more than 400 words which were later multigraphed and released in his news conference report. In answer to a question seeking a clarification of his remarks, the Secretary said: "I have not seen the resolution."

Mr. Dulles used more than 400 words to comment on a 167-word resolution which he had not seen. It should have been very obvious that Mr. Dulles had not read the resolution, or the speech that preceded it. Mr. Dulles said that there is a lot of colonialism in the world and he listed nations living under Communist rule. "If one is really interested in going after the most evil manifestations of colonialism * * * one could perhaps find a better place to start than Algeria."

However, if Mr. Dulles had taken only a few seconds to scan even the preface to Senator KENNEDY's speech, he would have realized that such is Senator KENNEDY's intention. The Senator carefully explained that he would discuss western imperialism and particularly Algeria in his first talk and would discuss Soviet imperialism, and particularly Poland, in his second.

Senator KENNEDY's well documented and thoroughly considered report on Algeria demands more reaction than the French flare-up, or the inane comments of Mr. Dulles who hadn't seen the resolution, and obviously hadn't read even the prelude to the Senator's speech.

In his address, Mr. KENNEDY made it clear that Soviet imperialism and western imperialism are not to be equated. However, he knows that imperialism in Algeria is not good, just because it is less bad than imperialism in Hungary or Poland. He does not appear to believe that the Western World can win the uncommitted millions in Asia and Africa simply by being a bit less tyrannical, less imperialistic, and less freedom hating than the Reds. In short, he does not want the lovers of freedom's white banner to be forced to choose between jet black and tattletale gray.

Senator KENNEDY's speech is serious business, and merits more than emotional, political, and uninformed comment.

[From the Springfield (Mass.) News of July 10, 1957]

MR. COTY SAYS "NO"

The Algerian question has toppled more than one French government, and more will probably fall over the same issue before it is finally settled. The general trend of French feeling, however, was spelled out in no uncertain terms yesterday by President Rene Coty, who took a firm stand against independence for the Algerians and declared that the "abdication of France" in that territory would lead to "chaos and misery."

It is a little difficult to see how there could be much more chaos and misery in Algeria than there is at present, with half a million French troops roaming the hills, burning villages, massacring natives, raiding the various casbahs, and performing all of these unpleasant duties in the name of "retaliation."

The blame, of course, is not all on one side. For their part, the native insurrectionists have been equally bloody in their reprisals, but this is a situation that will not only continue but will grow worse as both political entities engage in conflict over the same territory.

Reason and mediation are part of the right answer. Force is the wrong one. Acts of violent revenge beget more of the same, and, following this course, the bloody vendetta could continue indefinitely.

Independence, said President Coty, would mean turning over both the French and Moslem populations of Algeria to the rebels. In part, he is correct. Should the French evacuate the territory, there would certainly be a certain period of confusion immediately following, until the more sane elements of the population were able to take command of the situation.

But French withdrawal would remove the major source of irritation. Continued occupation of the area is an extremely expensive operation for the Paris government, whose position is clearly untenable and will grow more so, instead of less.

What has happened of course is that France tried to hang onto the remnants of her colonial empire too long, and now doesn't know how to let go. The rebel uprising is the major physical manifestation of nationalistic desire. The Algerians feel they should have the right to govern their own country, without interference from outside sources. This is the general trend in the world today, and one to be highly applauded.

Some may not be able to attain that status overnight, but they should be allowed to make a beginning; to find their own way in the world, just as others have before them. They should be permitted to make their own mistakes, and certainly the type of severe paternalism that France is imposing upon Algeria is completely contradictory to the democratic concept of free government.

In an indirect swipe at criticism of French foreign policy recently uttered by Senator JOHN F. KENNEDY, of Massachusetts, Mr. Coty said, "To those states who dare accuse France of colonialism, what Frenchman cannot proudly answer: Is there a country among you where there is less imperialism, less race prejudice, less enslavement than in ours; what country is more widely humane than the French Republic?"

Well, this is all very stirring and patriotic, and ought to be good for a few more flags on the Eiffel Tower, but it doesn't really answer any questions.

It is true, of course, that very few nations, in this respect at least, are in any position to cast the first stone, and that goes for the United States just as much as for others. We have our own internal problems, but we do not attempt to force our own political doctrines down the throats of others. We may suggest, and argue and even bargain, but, in the long run, we let them go their own way, if that's what they want to do.

We do not send troops to beat them into submission, Mr. Coty's "broad" concept of "humanitarianism" is all very well, but it might be better if he and his fellow countrymen applied it a little more literally, and gave it a more specific focus.

[From the Fall River (Mass.) Herald News of July 3, 1957]

KENNEDY ATTACKS IMPERIALISM OF ANY KIND

Senator KENNEDY has expressed forcibly and well the central dilemma of our time—the difficulty of adjusting the Western World to the legitimate desire for freedom so passionately shared by the peoples of Africa and Asia.

The Massachusetts Senator asserted in a speech to the Senate yesterday, that imperialism, whether Communist or western, is the greatest enemy to that drive for freedom, and that the future of this country will, to a considerable extent, depend upon our ability to disassociate ourselves from the western form of imperialism, the form so deeply hated by formerly subject races.

Algeria was the specific topic of most of Senator KENNEDY's remarks, and he properly pointed out that the continuing crisis there has become a matter of concern to far more than France. It is now affecting adversely the strength of NATO, the effectiveness of the Eisenhower Middle East doctrine, and is providing a standing example to Communist propagandists of the evil nature of western colonialism.

The blunt fact is that the colonial policies of the European empires were for too long repressive and exploitative. It is absurd to expect Asians and Africans to forget centuries of humiliation and spoliation overnight. And as long as the United States is associated with the western imperialisms of the past and present, this country will be at a fatal disadvantage with communism in its contest to maintain freedom in the world.

Senator KENNEDY has put these facts of life squarely before the American people. It is to be hoped that his words will be read widely, and that they will have some effect on the evolution of a new foreign policy in terms of Asia and Africa in particular.

[From the Quincy (Mass.) Patriot-Leader of July 3, 1957]

TRUE TO IDEALS

Tomorrow Americans throughout the world will celebrate the 181st anniversary of the signing of the noblest document in their Nation's history.

Jefferson's haunting phrase "all men are created equal" found in the beginning of this declaration has had a profound effect on American history. Whatever greatness this Nation has achieved at home and abroad has depended upon how well Americans have lived up to this statement of principles.

For 181 years white Americans have been uneasy about their treatment of colored Americans. This uneasiness led to a Civil War mid-way in United States history. Those today who are fighting desegration realize in their hearts that history is against them. Deep down they know that their's is only a delaying action because it is un-American in the true meaning of the term.

In foreign affairs Americans have been uneasy whenever they have compromised their ideals on the equality of men. Senator KENNEDY recognized this yesterday when he called upon the United States to help Algeria gain its independence.

No nation is perfect. The United States has faltered in the past and it will falter in the future. But it will remain strong as long as the Jefferson's expression of Locke's philosophy of the purposes of man and government remain imbedded in the American conscience.

[From the New York Times of July 10, 1957]

KENNEDY SPEECH PRAISED—SENATOR DECLARED TO HAVE SOUNDED WARNING IN ALGERIAN PROBLEM

(The writer of the following letter is United States correspondent for the French daily Le Monde.)

To the EDITOR OF THE NEW YORK TIMES:

Your comments on Senator KENNEDY's speech have been very severe. Strangely enough, as a Frenchman I feel that on the whole Mr. KENNEDY is more to be commended than blamed for his forthright, frank, and provocative speech.

Many of his remarks were indeed untrue or unfair and cannot be accepted. Unfortunately, some others are justified. It is very interesting to listen to those truths when they are uttered by a foreigner.

It would be tempting for any French Deputy, when the Senator mentions the inadequate representation of the people in Algeria, to stress from the rostrum of the Assembly in Paris the poor political conditions prevailing in your Southern States, where the Negro people are in fact second-class citizens. But that kind of controversy would lead nowhere and uselessly damage Franco-American relations, already strained.

The argument that Senator KENNEDY is encouraging the rebellion is an old one, but not very valid. For the rebels have not waited for Mr. KENNEDY's speech to know exactly the feeling of Congress, the administration, and of the public in general about the Algerian problem. They probably know more about the reactions of the Americans and the world situation than many Frenchmen who deliberately prefer to ignore the harsh facts of life.

SERVICE SEEN

Senator KENNEDY performed a service to the French people, I think, by giving them a warning and putting before them a clear choice:

Either we will ourselves find a solution—a strictly French-Algerian solution—in a relatively short time, or we shall face the risk, with the prospective deterioration of the situation, that the problem will be internationalized through the United Nations, NATO or the good offices of someone.

It may be that some elements in France, even in governmental circles, hope for this internationalization in order to excuse their own failure and to blame others.

An internationalization, which in fact would confirm our inability to cope with the problem, would create a dangerous political situation in France and exacerbate the nationalist and isolationist feelings, with the risk of ruining the nation's democratic institutions.

Mr. KENNEDY's speech has made the dangers of internationalization more clear. The Senator has pulled the alarm and, we hope, opened the eyes of many Frenchmen so that the French Government will have to act quickly and boldly to find a French-Algerian solution of this Algerian tragedy.

HENRI PIERRE.

WASHINGTON, *July 7, 1957.*

Death of Senator McCarthy

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 23, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Bristol Township Republican Club, of Bristol, Pa., composed of stalwart, old-fashioned American Quakers, adopted a resolution relative to our late colleague, Senator Joseph R. McCarthy, of Wisconsin. I ask unanimous consent that the resolution may be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the late Senator Joseph R. McCarthy from Wisconsin devoted his life to his God and to his country; and

Whereas the late Senator Joseph R. McCarthy, under severe pressure, harassment, and unjust persecution, fought the Communist Party and the Communist infiltration in our Government and in our great country; and

Whereas the late Senator Joseph R. McCarthy was slandered, ridiculed, and falsely accused because, being a good American, he courageously attempted to save our American heritage and strengthen our national security; and

Whereas the late Senator Joseph R. McCarthy became a "martyr without blood" for the cause of exposing Communist activities in our Government and the apathy toward those activities by many high-ranking Government officials; and

Whereas the late Senator Joseph R. McCarthy was a brave and loyal American and a devoted public servant: Therefore, be it

Resolved, That we the Bristol Township Republican Club of the County of Bucks in the State of Pennsylvania honor the late Senator Joseph R. McCarthy and sincerely regret his passing from the American scene; be it

Resolved, That his memory and his unselfish crusade and worthwhile accomplishments be always in our hearts.

Why Limit Earnings?

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 23, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which appeared recently in the Christian Science Monitor on the subject of increasing the earning allowance permitted to retired beneficiaries under the social-security program. This letter was sent to me by my friend, Ted Ward, editor of the Benton County Review, in Philomath, Oreg., and I believe it states very well the case for removing this very restrictive ceiling on the income which may be earned by our social-security beneficiaries.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WHY LIMIT EARNINGS?

To the CHRISTIAN SCIENCE MONITOR:

Recently the first convention of its kind to be held in the United States took place in New Orleans when representatives of the Golden Age Clubs and Senior Citizens of America met for a celebration. One of the very worthwhile results was the proposed plan to form a national organization of such old folks' clubs, with maybe a central office in Washington, D. C.—where contacting their Senators and Representatives would be a comparatively easy matter.

One of the first things they should do is to urge Congress—and those administration officials responsible—to kill that part of the social security program (the old-age and survivors' insurance part) which states that no one drawing OASI benefits will be allowed to earn over $100 a month. This same program allows anyone having an income of $1,000 a week or more from stocks and bonds and rentals and other investments to draw their social security monthly pay without question. It simply means that the poor man willing and anxious to work in order to better his circumstances is penalized if he dares to earn over $100 monthly, while the rich man is allowed an unlimited income besides his OASI benefits.

Not only should this cruel and unjustified limit on the earnings of OASI recipients be eliminated completely (and many Members of Congress of the conscientious, humane type agree to this) but the monthly benefits should be increased materially—with a minimum of $100 a month.

A. L. DUNN.

NEW ORLEANS.

Commencement Address by Roderick MacLeish

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 23, 1957

Mr. SALTONSTALL. Mr. President, last month Roderick MacLeish, formerly news director of radio stations WBZ and WBZA in Boston, Mass., and at present chief of the Washington news bureau of the Westinghouse Broadcasting Co., delivered a commencement address at Baypath Junior College in Longmeadow, Mass.

Earlier this year Mr. MacLeish was selected by the Boston Junior Chamber of Commerce as one of the 10 outstanding young men of Greater Boston in 1957.

I think Mr. MacLeish's address is particularly important as the analysis by a young man who is regarded as an astute observer of the events of the day and of some of the extremely difficult problems which face our Nation and our people in these troubled times.

I ask unanimous consent that Mr. MacLeish's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MORALS IN AN AGE OF ANXIETY

In the year 399 B. C. a great man died. He was an ugly, misshapen creature with a hideous face, a gleaming bald skull, a rasping voice, and a brilliant mind. He lived in a decaying seaport town that had long since seen its day of temporal glory. Furthere, and we might be shocked by this, our man died, not in battle, not of some disease, not in the exhausted aftermath of a great labor, but by his own hand. The town in which he died was called Athens. The man's name was Socrates.

I choose to begin my comments here this afternoon with this reference to Socrates

for two reasons. First, a vain one. I am a devout admirer of this grotesque little man. His service to me, personally, across the far and frightening time of years that separates his epoch from mine, has been invaluable. I often think of Socrates as I often think of my other gods of the flesh—Voltaire, Jefferson, John Stuart Mill—and in thinking of them I am helped by the shining example of men who lived, who were excruciatingly human and yet who performed and thought things of greatness. I speak of Socrates here in this place, at this particular time and occasion because this last act of his typifies what I shall say to you as a group of young people about to assume the attitudes and burdens of adults.

It is the custom of commencement speakers, I believe, to dwell on a particular theme—a theme we shall call by its commonest title "The Challenge of the Future." I can conceive of a time when this theme was a happy one. Picture, for instance, this graduating class set back 50 years. What a rosy, halcyonic future that June of 1907 must have offered. For those fortunate enough to graduate from an institution of higher learning, God was indeed in His heaven and all was very much right with the world. Enough that the restless fevers of revolution were still burning in Europe—they were far away. Unimportant that the greatest economic society on earth—the United States—had yet to readjust its social consicence. The poor and underprivileged, while still very much with us, were also, happily far, far away; 1907. The challenge of the future, the challenge of bettering one's social graces, improving one's croquet game, refurbishing one's Edwardian outlook and making a good marriage.

Today, I offer you no such happy limitations for a future. I offer you, instead, a world torn by dissenting ideologies, a world fraught by the sharpest of fears, a world in which many weep and many despair. The challenge of the future now is a bleak and indeed forbidding aspect so let us discard the phrase and shelve the idea. Let us talk, instead, about Socrates for a moment and go on from there.

Socrates killed himself for a very particular reason. By trade he was a philosopher and teacher. It was his custom to wander the streets of Athens speaking on many things to a large group of disciples that followed him, among them Plato and Alcebiades. Basically, what Socrates talked to these people mostly about was morality—and a very particular sort of morality; the relationship between society and its individual members. Socrates, probably the greatest exponent of the seemingly difficult business of people living in harmony together, maintained that there were two definite sets of obligations: The obligation of society to the individual, the obligation of the individual to society. Ultimately the time came when Socrates' teachings got him into trouble with the wrong people in Athens—the important people. Socrates was declared guilty of treason and condemned to die by his own hand which was the customary way of executing people of his class. But the story didn't end there. Socrates was a man of powerful and influential friends. A group of these friends arranged for the great teacher to escape. They came to him in his prison and begged him to run away. But Socrates refused. In essence he said, "All my life I have been protected and cared for by Athens. She has looked after my needs as a citizen. I have been, in effect, a child of Athens. And now Athens has decreed that I must die. I would be," said Socrates, "a very poor and ungrateful child if I reject this particular decision and wish of my city simply because it is against my own best interests." With this thought Socrates drank poison hemlock and died.

The notion, you may say, of a madman. In the context of today this act is utterly and completely mad. But let us remove ourselves from this troubled context and examine the act objectively. For his whole life Socrates had preached a principle. He believed in it, very devoutly. So, at the end of his life, finding that he still believed in it, he acted upon it—even though the consequences for himself were, to say the least, ultimate. Put in another way Socrates found that principle was more important even than the preservation of his own physical being.

To a reporter who has covered the last 10 years of history, this story of Socrates has a rather special meaning. We live in a time when this act of this man does, indeed, seem insane because the whole impulse of this time is toward the elemental process of survival. Survival and security have almost replaced everything else as the ultime thule of individual social life, frequently even to the detriment of principle or any other consideration.

For a long time men have been trying hard to solve the riddle of how to live together in harmony—the riddle that our Athenian friend explored so brilliantly. To this end, society has erected a set of laws—laws to protect the greater number of men from the selfish instincts of a few. Laws are basically negative things. I don't say bad; I say negative. Take for example, that greatest of all collection of laws, the Ten Commandments. They begin with a positive: "Thou shalt love the Lord thy God." A positive thing. Thou shalt. But shortly thereafter, this great set of canons goes into thou shalt not—thou shalt not kill, steal, covet, worship graven images, and so forth. Basically negative; good, but negative because they are directed as deterrents against the negative in man.

So the law in its majority is negative. It must be. Where, then, is the positive? The positive, I submit, comes in the law's great handmaiden, morality. Law tells us what we can and cannot do. Morality etches out for us those things in which we believe. This sense of morality and law is very ancient within the accumulation of our history. It is as old as Abraham at least and probably older. In his great and troubled books, Fear and Trembling and The Sickness Unto Death, the much-misunderstood 19th-century Danish theologian, Philosopher Sren Kierkegaard, brings the twin struggles of alw and morality to a sort of titanic climax in the story of Abraham and Isaac. Looking back from this point, we can see other enormous struggles of morality and law—sometimes against each other; sometimes against their common enemies, expediency, hypocrisy, disinterest, and despair.

Today we have a surfeit of law, much of it unobeyed. I do not speak so much of the laws of this or any other particular land, but rather of the recent structure of international law by which men hoped at last to find the pragmatic answers to the problems of living together. If we place our hope for order in the law—and I, for one, do—then we must, perforce, react in sorrow and regret when the law is broken. What do we do when this happens? I think we must apply morality. I think, then, we have come back at last to the terrible burden of the future and its challenges in this year, 1957—your future—its particular challenges.

I would say that your challenge lies in this one word, "morality." You must decide, as the literal inheritors of the earth, where the particular impulse toward personal and social survival ends and where the force of morality must begin. The decisions will not always be easy. I should like to submit an example of one such problem that occurred recently. I am rather close to this particular example because I saw some of it happen. The incident started in the final week of October last year. The locale was Hungary, specifically, Budapest; the issue at stake was the interference by a brutal power, the Soviet Union, in the sovereign affairs of another state.

Historically it was nothing new. We had watched it happen during the thirties and forties when a bloody-handed little egomaniac named Adolph Hitler whipped Germany into a state of irrational frenzy and then proceeded to plunder Europe. We saw Poland crumble and fall, Holland go under, Czechoslovakia, Belgium, and finally France. We went to war in those years and, at the cost of great blood and billions of dollars and not a little shame, we finally managed to bring the madness of Hitler to a cinder-blackened halt. It was not long before another of this century's evil giants, Stalin, began the whole hideous process all over again. But this time the world had something else to reckon with: the new terror of atomic and hydrogen weapons that could obliterate nations.

This was something to stay the hand of those whose instincts demanded that they defend Hungary. Simply, Russia's ill-concealed threat that she would plunge the world into ultimate, final war, if any nation interfered with her ghastly sport of rape, plunder, and death in Hungary.

At that time I was doing my broadcasts from the United Nations in New York. I was privileged to watch that body struggle with the twin problems of invasion—Egypt and Hungary. What should the solution have been? Should it have been the simple, yet terrible course of ultimatum, by which we would have drawn the line, told the Communists not to cross it and then, if they did, have gone to war against them?

In today's context he who would advance this answer would promptly be labeled either insane or stupid. He would be asked, Why risk death and destruction for the world for the sake of Hungary?

To answer this is painful. We cannot answer without reassuring our belief in justice, our opposition to tyranny, and the lengths to which we should go in circumventing our belief for the sake of survival. The decision is not easy. There are certainly those who believe that a world in which the sacking of Budapest could happen is not a world worth living in.

I give this example to you not to refight issues or justify points of view as dead now as last autumn's leaves, but rather to illustrate the dilemmas that centuries such as this one impose. Perhaps, in all of us, there was a minute fragment of shame as Hungary cried out in the dark and no voice answered her. Hungary has become, in the sense of international tragedies, the symbol of the great dilemma that the totality of the world's people face now in a time of confused morals and swirling fears. It is not the sort of problem you here this afternoon can contemplate academically any longer. It is your problem now because you are leaving this place today and you are joining the rest of us in that great arena of ultimates—the whole world.

I have said that it is more difficult for you than it was for your counterparts of 1907.

This is quite true. But there are benefits and rewards for you that 1907's young women never knew.

We are all looking for security whether we like the word or not. You will find, I suppose, that your personal battles for security intensify as you leave this lovely campus and go out to pursue your own private destinies whatever they may be. There will be the struggle for economic security, the struggle for social security—the sort that antedates the contemporary fiduciary variety—emotional security and physical security. Security has become a very important concept to us these days. As the dangers and

complexities of life grow and enlarge, we think more and more about security as people * * * and as nations. People have bounded about from psychoanalyst's couch to health fads to installment buying in their search for security * * * or happiness or peace of mind or whatever you wish to call it. It is perhaps significant that, of late, we have developed little pills we can buy at the drugstore and take to make us tranquil and calm * * * a temporary substitute for security. None of this, however, has really brought much security.

As a nation we have joined other nations in the search for security. While seeking peace the world has contrived fancier ways of making war. While seeking national security, we have witnessed what many responsible and respectable authorities regard as serious invasions of citizens' security. Our search has led us to the summit of world political leadership and to the valleys of the shadow of military conflagration. But none of this has yet brought security to nations * * * no more than psychoanalysis and little pills have brought security to people.

Perhaps, as people and as nations, we are looking in the wrong places. I personally think we are. Further, one wonders if there isn't some common answer * * * for people and for nations. In all of our frantic search we seem to have overlooked that answer. It has been lying quite clearly before us all the time. If I may be so bold, Jesus of Nazareth proposed it to us; so did a man named Paul. Gandhi enunciated it in our own century, and a man named Socrates swallowed a draft of hemlock in his own performance of the answer.

First, and this is the most difficult part, we must devote our deep and prayerful attention to the basic question: What do we believe in? We must go on this quest for our own values as conscientiously as that other great Athenian, Diogenes, raised his lamp in the search for honesty.

In defining those things that we, as people and as members of a total society, commonly believe in, we must start with the possible. To believe in the implausible, improbable, or impossible is a waste of endeavor, a profitless mockery of idealism. As we define what we believe in, we must take ourselves and our limitations into consideration for that day may come when we shall be called upon to demonstrate in deed those things in which we profess to believe. So we must match the depth of our beliefs with the capacities of our souls and bodies and make sure that we are capable of what we profess and that what we profess is worthy of us.

Second, we must enunciate our belief with consistency. It must be enunciated in actions more than in words. Our belief must govern every day of our lives. It must provide for us the boundaries of our orderly passage through a disordered world.

As people, let us not profess against hatred and then indulge in the hatred of the spiritual wastrel.

As people, let us not profess for honesty and then spend out our self respect in the convenient and devious.

As a Nation, let us not raise a great cry against tyranny and then make our house with tyranny's ugly sister, fear.

As a Nation let us not rail against the brutal self-interest of others and then take solace in our own self interest by proclaiming it enlightened.

You face now, as you leave this place, a time of paradox and doubt. You come into a world crying for clarity and—if the word has not fallen into disrepute through the rationalization of behaviorists—a modicum of virtue.

Your own security, I am sure, lies in the simple delineation of what you believe and then fidelity to that belief in all things, however difficult such fidelity may be. The road is virtue lies in the ancient maxim of saying what you mean—and meaning what you say.

You face now, as you leave this place, a world crying for order. As you cannot escape the obligations imposed upon you as members of the human race, you cannot escape the need for your contribution to that order.

Decide for yourself when morality dictates that compromise has become pointless. Raise your voice in proclaiming the advent of that time. Define for yourself the morality of those lesser moments when crisis does not sharpen our awareness of each situation's meaning, and demand that morality from society and the forces of government.

We journalists are human. We cannot go on forever reporting to you the blood baths of tyrants. There must come a time when you, by the insistence of your professed belief, relegate us back to the ball park, the Sunday picnic and all the peaceful pursuits of a world restored to order.

A world governed by the guided missile is a world of strange and incomplete values.

A world in which the act of Socrates perhaps appears sane and reasonable is the world you are being asked to make.

No other world is worth living in.

No finer challenge was ever held out.

Good luck. And God bless you.

The Petunia Amendment—The Repeal of the Troop Law

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Petunia Amendment," published in the Washington Evening Star of July 23, 1957, which makes reference to the worthy action taken by the Senate yesterday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PETUNIA AMENDMENT

It is probably true, as Senator JAVITS said during an able analysis of part III of the civil rights bill, that the old law giving the President power to enforce civil rights by use of troops is dead anyway. He saw no reason why it should be stricken from the bill; nor did he see any reason why it should be retained. He regarded the old law as obsolete and the President still has the power under other statutes to enforce order by use of troops.

At another time in the debate, the proposal to repeal the old statute was referred to as the Petunia amendment. It reminded Senator AIKEN, who wants to strike out all of part III, of which the troops provision was a part, of the song, I Am a Lonely Little Petunia in an Onion Patch. Repeal the old law, Senator AIKEN argued, without touching the rest of part III and all that has been accomplished is to transplant the petunia, removing it from the onion patch, or, Senator RUSSELL added, taking out the petunia while leaving the poison ivy.

Nevertheless, there was some significance in the Senate's unanimous action yesterday repealing the old troop law, not only taking it out of the civil rights bill but wiping it off the books. The significance lies in the fact that until Senator RUSSELL exposed the presence of the petunia, nobody seemed to know it was there. And while Senator RUSSELL was ridiculed for mentioning it, nobody could deny that what he said was true. If the vote of 90 Senators indicated unanimous belief that the petunia was innocuous anyway, it also vindicated Senator RUSSELL's contention that it had no business in the bill. Which is true of other things still in the bill.

Death of Senator McCarthy

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. MARTIN of Pennsylvania. Mr. President, William Randolph Hearst, Jr., editor in chief of Hearst newspapers, published and editorial in all Hearst newspapers on Sunday, May 5, 1957, concerning our late colleague, Senator Joseph R. McCarthy of Wisconsin. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

(By William Randolph Hearst, Jr., editor in chief, Hearst newspapers)

The sudden and untimely death of Senator Joe McCarthy late this past week came as shocking and saddening news to his millions of friends and rooters.

I first met Joe in Washington in 1947. At the time, he was a newly elected, handsome, jovial young Senator from Wisconsin and we hit it off right from the start.

In addition to our proximity in age, views on politics and opinion of communism, we held similar views concerning the beauty and attractiveness of a young newspaper columnist on the Washington Times-Herald, named Austine.

When Austine and I were married a year later, among our wedding presents we received a little silver children's cup engraved "To William Randolph Hearst III, from Uncle Joe McCarthy." He was right about his hunch on that and he was right about his hunch that there was Communist influence in high places in our Government.

Joe did not have positive proof that many of those he suspected were actual card-holding Communists. Such proof is almost impossible for one man to obtain. There was no secret about it, nor on the other hand any cause for disparagement, although his enemies tried to make a big issue out of it.

A grand jury does not have positive proof, either, when it returns an indictment. It does have what it considers sufficient evidence. That was the same basis on which Joe proceeded. He was convinced that once the fight was joined further evidence would accumulate to substantiate him.

The Senate appointed a committee to investigate his charges of communism in the State Department, headed by Senator Millard Tydings, of Maryland, but the goal of the committee seemed to such a degree to be a whitewash of the State Department and to ridicule Joe's charges, that the good people of our country overwhelmingly felt that Joe was probably right and that he had not gotten a fair shake.

The proof of this was demonstrated when Senator Tydings, an able veteran, was defeated at the polls when he next ran.

Joe was a dedicated and indefatigable worker, with experience in law, having been a judge. It is not my purpose here to review the history of these years, but from firsthand knowledge and close acquaintance with him, I can truthfully say the charge of demagogery against him is completely unfounded. Overzealousness, perhaps. Recklessness in some of his charges and conclusions, perhaps. But demagogery, no.

He was utterly convinced that his country was being betrayed by people with communistic feelings, and he was determined to expose to the American public the facts he knew and expected to prove.

I have never seen anybody work as hard in an office as Joe McCarthy. He sensed from the start that he had taken on a formidable task and that many opposed to him were not only out to get him personally, but in doing so to ridicule the justice of his cause.

At his side through it all worked on of his secretaries, tall, brunette, bright, and beautiful Jean Kerr. She had joined his staff in 1950, after attending Georgetown University for 2 years and then graduating 2 years later from Northwestern University. He was, of course, conscious of her help and beauty, so it was not a surprise in the fall of 1953 when they were married.

Her belief and faith in him never wavered. Unquestionably she made possible his philosophical acceptance of the inner hurt caused him by the subsequent rejection of his cause by the majority of his party and his President.

Joe's life on this earth is finished, but the job he set out to do has been done better, I think, than even he realized.

They are going to hold an election in Wisconsin soon to fill his vacancy in the Senate and I think it would be altogether fitting and proper were the good people of Wisconsin to elect his able widow, Jean Kerr McCarthy, to fill his unexpired term.

I have not spoken to Jean about this, so I don't know whether she would consider it or not, but the people of Wisconsin might, I think, look a lot further and do a lot worse than to elect Jean to Joe's old job. She is fully capable of handling it and, if elected, as I believe she would be, it would be a fitting answer to those anti-anti-Communists who attempted to smear Senator Joe McCarthy's fight against communism.

The Late Senator McCarthy, of Wisconsin

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 23, 1957

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Council of the City of Warwick, R. I., in memory of the late Senator Joseph McCarthy, of Wisconsin.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Resolved—

1. That the mayor and the City Council of the City of Warwick hereby extend to the family of the late United States Senator Joseph McCarthy their heartfelt sympathy and condolences on the occasion of the untimely death of Senator Joseph McCarthy, who succumbed on the 2d day of May 1957.

2. That the city clerk is hereby authorized and directed to forward a copy of this resolution, suitably inscribed, to Jean Fraser McCarthy, the wife of the late Senator.

3. This resolution shall take effect upon its passage.

Proposed Amendment of Immigration Law

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 23, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial written by George Draut, editorial-page editor for the Patriot, Harrisburg, Pa., on Monday, July 15, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KENNEDY BILL WOULD EASE ROUGH IMMIGRATION LAW

Hopes for an easing of our immigration laws during this session of Congress are brighter than they have been since the McCarran-Walter Act was passed in 1952.

Those hopes are riding on a bill introduced last month by Senator JOHN KENNEDY. It is a bill which includes the best features of the many bills being readied on the subject in both the House and the Senate.

President Eisenhower has been calling for changes in the law since he first took office on the grounds that it contains injustices and that it does, in fact, discriminate. That is our appraisal, too, and it is the appraisal of many Americans. But Congress, to date, has dragged its feet and hasn't seen fit to take any action.

One important reason for congressional reluctance to come to grips with the immigration law has been Pennsylvania Representative FRANCIS E. WALTER, the key Washington figure on immigration legislation. He always raises his voice, his seniority, and his committee chairmanship in vigorous defense of the law he coauthored.

During a press conference with the Sunday Patriot-News last April, Congressman WALTER called the McCarran-Walter Act "the most generous, liberal immigration code in the world" and added:

"When you are dealing a piece of pie, you are going to discriminate against somebody. You have 6 pieces of pie and 100 people looking for it. Somebody is not going to get a piece of it."

The purpose of the bill introduced by Senator KENNEDY is to see to it that more people do get a chance to share in our immigration pie in keeping with humane considerations. Primarily, it would see to it that families are not kept apart because of rigid provisions of law.

Under its provisions, orphans adopted by citizens or pledged for adoption, parents of citizens and the immediate families of lawfully admitted aliens could enter the United States under a non-quota status. Certain misrepresentations, now grounds for deportation, could be forgiven if it meant splitting up a family, and tubercular members of families would be permitted to enter this country under strict health safeguards. Skilled aliens and their families now here would be granted permanent residence status, and more refugee-escapees from Europe and the Middle East would receive non-quota visas not yet issued under the provisions of the Refugee Relief Act of 1953.

Two of the bill's provisions go into more controversial territory. These would end all quota mortgages (the cutting of quotas by the numbers of refugees permitted to enter the United States under special acts of Congress) and would permit unused quotas to be redistributed to those countries where the number seeking to come to America far exceed the annual quotas.

Such quota changes have been strongly objected to by Congressman WALTER in past years, but Senator KENNEDY now says that the provisions of this bill "are in accord" with the Pennsylvanian's thinking on the subject and that Mr. WALTER supports the measure.

If his support extends to those provisions concerning the quotas, as Senator KENNEDY intimates it does, then proponents of this bill can be heartened in their efforts to ease the immigration laws in line with world conditions today.

While the changes offered by the current bill will be welcome if passed by Congress, they do not go as far as President Eisenhower and many Americans had hoped they would.

The members of Congress should support this measure at this session for the liberalization it provides. But they should continue to do the fact-seeking and soul-searching that will lead to a complete overhaul of our immigration laws.

The Parity Principle

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 23, 1957

Mr. SPARKMAN. Mr. President, one of the great agricultural publications of the country is the Progressive Farmer, which is under the direction and supervision of Dr. Clarence Poe, a great friend of the farmer and a very fine writer. A recent issue of the Progressive Farmer contained an editorial written by Dr. Poe entitled "Let's Keep the Parity Principle." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S KEEP THE PARITY PRINCIPLE

A new crisis seems to be developing in American agricultural legislation. The important lesson for all farmers from our standpoint is this: By all mean's let's fight to maintain the principle of fair parity prices for farm products.

To begin with, we may need to go back to the A, B, C's of the whole parity problem. In 1920, a sudden and calamitous drop in prices of farm products brought bankruptcy thousands of farmers both in the South and the West. But, as had often been the case, prices of what the farmer bought did not drop much as compared with prices of what he had to sell. In Congress and elsewhere, farmers started a great campaign for what they called "Equality for Agriculture." Three basic facts were emphasized:

1. Manufacturers were protected by high tariffs. These tariffs prevented foreign products from coming into America to lower prices as fixed by American business.

2. Labor unions, although not so powerful as they now are with their minimum wage and collective security acts, nevertheless could hold up wages in large measure by strikes.

3. But farmers had no way to get or keep fair prices for their products. What they

grew was thrown on the open market with no price tag affixed and with every farmer in competition with every other farmer.

To remedy this situation, a nationwide campaign for cooperative marketing was carried on. Many farmers joined, with highly helpful results. But not enough of them worked together to enable agricultural producers to fix prices as business had usually been able to do. Nor can they yet do so. But the great 1920 collapse in farm prices had also brought on a business depression. Consequently, many business and professional men were willing to join farmers in asking, "What can we do to prevent farm income from dropping unjustifiably?" How can farm purchasing power be kept up and the farmer's standard of living maintained?" Economists and others made profound research studies. "Back in the years before 1909–14—just before the First World War," it was said, "farm prices were reasonably satisfactory as compared with prices of what farmers had to buy. Would it not be to the benefit of farmers, laborers, and businessmen to have the Government keep farm prices in about the same level of equality with other prices as was the general rule in 1909–14? Let's compile a list of the most important things for which farmers have to spend money. Then let's so control prices that a bale of cotton, a bushel of wheat, or a hundredweight of pork will buy about as much farm equipment, machinery, fertilizer, and everything else the farmer buys, as it did in this 1909–14 parity period."

How to do this? It was agreed that the Government would guarantee farm prices up to this point, and would buy and store farm products which failed to bring the full parity price just indicated. At the same time, however, it was realized that the Government could not pay parity prices to farmers unless farmers would agree not to flood the market with unwanted surpluses. Hence, the programs for acreage allotments, production controls, etc., were set up.

Such, in brief, are the A B C principles of our parity price programs. Now it is being said that the policy of guaranteeing parity prices—or even 90 percent of parity—has failed. Secretary of Agriculture Benson virtually calls for the ending of all price supports in his recent letter to Senator ELLENDER, chairman of the Senate Agriculture Committee. And Mr. Benson goes to great length to explain just where production controls have failed and why price supports must fail, also.

The Secretary's analysis, however, contains enough material to knock out his own arguments. For year after year he quotes figures which show that the allotments by which farmers were asked to control production were far too high. Each year many farmers, dealers, warehousemen, etc., demanded larger acreage allotments for tobacco and cotton, for example, than the market prospects justified. Congress and the Department of Agriculture yielded to pressures they should have resisted. The result is seen in the excessive surpluses that have accumulated and which have forced prices of many farm products below production costs.

Secretary Benson has not proved that the parity principle has failed. He has simply proved that there has been too much looseness in enforcing or carrying out the parity principle. We ought not to end parity. We ought to mend parity. A vigorous fight by farmers at this time may save the parity principle, even though it may be necessary to change the methods by which fair or parity prices are obtained. If we do not save the parity principle, our farm prices may drop to bankruptcy figures any year.

Reds' Secret Weapons: United States Socialism, Inflation

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial which appeared in the Chicago Daily News of Saturday, June 6, 1957, written by the publisher, a very distinguished American, John Knight.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REDS' SECRET WEAPONS: UNITED STATES SOCIALISM, INFLATION

(By John S. Knight)

On July 4, 1776, the Thirteen United States of America declared their independence from the oppression and tyrannies of the King of Great Britain.

These they described as "a long train of abuses and usurpations" which were documented as facts to "be submittted to a candid world."

We have come a long way in the ensuing 181 years, which have seen a tiny, struggling Republic win its fight for survival and go on to become the world's major power.

And yet, even as we honor the memory of those intrepid men who broke the chains of our bondage, we may well ask ourselves whether we are as determined to preserve the Republic as our forefathers were to found it.

We live in times of great peril. Fear of international communism and the threat of Russian conquest are ever with us.

Billions of our substance have been spent to weld together economic and military alliances with other free nations for our mutual security.

A powerful defense force, capable of destroying our enemies with its fearful atomic and hydrogen weapons, has persuaded Russia there is no profit in open aggression.

In these areas we have succeeded reasonably well. The United States will not lose its precious freedoms through lack of courage in facing up to potental adversaries.

RUSSIA'S GREAT HOPE: A DEPRESSION IN UNITED STATES

But there are other and more subtle dangers to this Republic than the menace of war.

If left unchallenged they can undermine our concepts of freedom and collapse the Nation's economic structure.

Our twin perils are state socialism and inflation.

They walk hand in hand. Socialism breeds inflation, and inflation makes more socialism possible.

These are likewise Russia's secret weapons—more to be feared than hydrogen bombs or intercontinental missiles.

Russia's present leaders envision a socialistic America, following what they consider the inevitable breakdown of our economic system.

And they could be right.

The strain on America's capitalistic, or profit-and-loss system, comes from two sources:

1. Big government spending, and
2. The wage-price cycle.

At last Wednesday's press conference, President Eisenhower somewhat dolefully observed that business and labor must help hold the line against inflation, since the Government alone cannot keep a stable economy.

This was a restatement of his earlier comment on June 26 that wage increases should be related to productivity, and that business concerns should exercise restraint in raising prices.

A few days later, he was slapped in the face with an announcement by the United States Steel Corp. that steel prices would go up $6 a ton. Other leading steelmakers immediately followed suit.

United States Steel offered a ream of statistics to show that the rise in the price of steel was justified because of wage increases provided in the 3-year contract which settled a costly 34-day strike last August.

Other steel producers thought the price rise inadequate and suggested that it should have been in the $8 to $10 range.

Whatever the merits of their contention may be, the President's request for pricing restraint was flatly ignored.

The President has fared no better in his appeals to union leadership to relate wage demands to increased productivity.

Every proposed union contract is loaded with wage hikes and innumerable fringe benefits. The employer, with a gun pointed at his head, usually agrees to most of the demands and passes the cost along to the consumer.

So everybody gets hooked, including the union members and their families.

WAGE-PRICE SPIRAL REBUFFS IKE'S APPEAL

The unanswered question is how long can the wage-price squeeze continue without adversely affecting the consumer market. When people stop buying, production drops, jobs dry up, profits decline and the Government gets less in taxes to support its welfare programs.

President Eisenhower has said there must be statesmanlike action by businessmen and labor to combat inflation, or we are lost.

He added that "the next step, if this thing got out of hand, would be Government controls which in time of peace * * * means the beginning of the end."

The President, though right, is in a real dilemma.

He could have knocked a few heads together before last year's steel strike, but avoided the issue.

Now he asks for restraint, but says he won't use the controls club.

Business and unions have brushed him off, and will do so again.

Ike should get mad.

The President's further statement that he stands firmly on the idea that the Government alone cannot keep a stable economy is more puzzling.

Apparently, he assumes that the Government has done all that it could in the fight against inflation.

Actually, the Government's big spending policies have contributed to inflation. As the First National City Bank of New York has said:

"If the Federal Government wants stable money and lower interest rates, it can have them by reducing expenditures, its demands on the money market, and its tax claims upon the citizens' income."

MILITARY MIGHT FUTILE IF WE FAIL AT HOME

The Government, which could set the example for economy, constantly increases its commitments and thereby its costs.

The Federal budget is loaded with nonessentials and includes many new projects which will entail higher and higher expenditures every year.

It is, as Senator HARRY BYRD, Democrat, Virginia, has said, an "irresponsible budget" but the administration is stoutly resisting every effort to bring it down to size.

The very bigness of government, the steady growth of bureaucracy, the social and welfare services being provided, and the moneys we are sending abroad all give rise to more inflation.

For all but 40 years of our Nation's existence, we managed to build a great America while avoiding foreign entanglements.

Two world wars have failed to bring lasting peace. We are pledged to fight on a score of fronts in case of aggression.

In our position of free world leadership, we are called upon to solve many perplexing problems.

But of what avail is our prestige and preeminent position in the world if we fail to deal resolutely with the perils we face at home?

It is not the force of arms that could spell disaster, but decay from within.

Ending the Tito Farce

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. BUTLER. Mr. President, recent events have indicated with a measure of certainty that our policy of extending aid to Soviet satellites demands a reappraisal. On this subject, the Catholic Review, of Baltimore, Md., in a lead editorial on July 12, entitled "Ending the Tito Farce," presents an interesting point of view.

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ENDING THE TITO FARCE

During a recent TV interview with Edward R. Murrow, Marshal Tito of Yugoslavia made one notable comment—he admitted that there was little difference between his brand of communism and that expounded by his Soviet mentors.

On the surface there is nothing surprising in this admission. Indeed, some people will suggest that it's not even news. But we wonder how many realize the implications of this admission, particularly with regard to loans and subsidies handed out by this country to keep Tito in command in his.

In the past, our Government has sought to justify aiding Tito by arguing that his survival was in the interest of the free world; that his opposition to Moscow was aiding the ultimate fight against Soviet colonialism. Yet here we have an admission from Tito himself that there is very little difference between him and Moscow. Moreover, we learn that the Yugoslav Vice President and Defense Chief both are going to Moscow to "make up" with the new Kremlin bosses. The path for such a rapprochement is said to have been smoothed by the purging of Molotov, Malenkov and others.

Then there is the question of Tito and his persecution of Christians. His TV answer that he has freed Aloysius Cardinal Stepinac from jail and allows him to live in his native village is typical nonsense. Unfortunately lots of people are taken in by such statements. We all know that as long as the Yugoslav cardinal is prohibited from publicly carrying out his duties as spiritual leader of Yugoslav Catholics, then he is not free in any true sense of the word.

Finally there are Tito's views on the Hungarian revolt of last November. Despite the fact that the Reds reneged on a promise to Tito's Budapest embassy that they would grant safe passage to former Premier Nagy, we find the Yugoslav dictator admitting before an American audience that he feels the Russians were right in applying their bloodbath to squash the revolt by Hungarian patriots.

We would wish no more comment other than to suggest that our Government make their much threatened "agonizing reappraisal" of foreign policy. We would suggest that perhaps we seek a rapprochement with our West European allies and cut the line that now links us to the marshal of Belgrade. After all, there has to be some morality in Foreign Relations.

Tobacco Price Supports and Effect of Smoking on Human Health

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. NEUBERGER. Mr. President, on July 17, 1957, I introduced a bill to remove tobacco from price support, marketing quota, and soil-bank programs of the Department of Agriculture, beginning with the 1959 crop. I took this action because it seemed contradictory and inconsistent for one agency of Government to be raising warnings about the use of tobacco and its dangers to health, and for another agency to be providing subsidies from the Federal Treasury to assure the continued growing of the crop.

On the day following introduction of the bill, the Deseret News, of Salt Lake City, Utah, published an outstanding editorial expressing similar views. This historic newspaper pointed out compelling arguments for removing tobacco from the list of basic crops eligible for Federal financial assistance. I ask unanimous consent to have printed in the Appendix of the RECORD, the editorial from the Deseret News of July 18, 1957, entitled "Do You Want To Support Tobacco?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DO YOU WANT TO SUPPORT TOBACCO?

Last week's official declaration by the United States Public Health Service that cigarette smoking causes lung cancer is having its repercussions in Congress.

Senator NEUBERGER, of Oregon, made a floor speech Monday calling for a Government-sponsored campaign to "educate the American public of the perils faced by smokers." And Utah's Senator BENNETT followed up Tuesday by introducing a bill that would require every package of cigarettes sold in America to bear a label warning of the danger of smoking.

The label required in Senator BENNETT'S bill would read: "Use of this product may result in heart and circulatory ailments and diseases of the heart and lung, including cancer."

Certainly, by every standard of commonsense, at least that much ought to be done. The statistical relationship between smoking and lung cancer has been long since established. It is unmistakable and unarguable. Now, for the first time, the Nation's official health agency is on record with an official statement that cigarette smoking is a "causative" factor. The same official statement declares there is a "high association" between cigarette smoking and such diseases as coronary artery disease and cirrhosis of the liver, and a "very high association" between smoking and pneumonia, influenza, and duodenal ulcers.

Certainly, as Senator NEUBERGER said, "If our people can spend $15 billion annually on liquor and tobacco, units of Government can afford expenditures to warn of perils involved in their use."

And certainly, as Senator BENNETT said, "Compared to the hazards of cigarette smoking the highly publicized hazards of atomic radiation fallout are negligible."

Unfortunately, however, commonsense does not always prevail in such matters. To be perfectly frank about it, there is very little chance that Congress will do a great deal along the lines Senators BENNETT and NEUBERGER are talking about.

But there is one thing Congress can and should do—about which, in fact, we should all hang our heads if it doesn't.

It should remove tobacco from the list of basic crops eligible for Federal price supports.

There are compelling reasons for doing so and doing it now.

The basic reason, of course, is that it is cynically immoral for one agency of Government to be using taxpayers' money to support production of a crop that another agency of Government has condemned for causing one of mankind's most horrible diseases.

Another reason is that the price-support program is getting critical attention anyway. Secretary of Agriculture Benson just this week asked Congress to drop corn from the list of basic crops eligible for mandatory price support. The other five are wheat, rice, peanuts, cotton, and tobacco. How can Americans justify dropping one item from this list and retaining tobacco?

And a third reason is that while tobacco has not needed much support in recent years, its future is questionable in view of the mounting medical evidence against it. Suppose the American people finally awake to the danger and swear off smoking in considerable numbers. The market would be shot. Government supports would be mandatory under the present law. Are Americans willing to pay taxes to pile up in Government warehouses a crop that can't be sold because the public no longer wants it? Far better to end the legal requirement of supports now, when they aren't needed, than to try to do it when they are.

Our readers know that the Secretary of Agriculture has no desire to see tobacco under Government supports, but it is not for him to decide. Congress designates which crops shall be on the basic price-support list. That list should certainly be reduced by at least one.

The Army Takes to the Air

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD a very interesting article entitled "Army Takes to the Air," written by Hanson W. Baldwin, the military expert of the New York Times staff, and published in the New York Times of July 23, 1957. The article relates to some of our new defenses. It is very readable, and I commend it to the attention of all Senators.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARMY TAKES TO THE AIR—AN ANALYSIS OF THE GROUND FORCES' USE OF SMALL PLANES FOR COMBAT MOBILITY

(By Hanson W. Baldwin)

The Army's efforts to increase its mobility in the atomic age focus on the sky as well as on the ground.

The plane, in the Army's concept, is essential for both strategic and tactical mobility to lift units and supplies across seas between continents and to lift troops and equipment within the combat zone of a ground battlefield. Aircraft are also essential to the ground army for reconnaissance and observation, liaison and command duties, and in the new role of sky cavalry.

The strategic and most of the tactical airlift mobility of the Army is dependent upon the Air Force. Under the roles and missions assigned to the services, the Air Force must provide the transports and troop carriers essential for strategic mobility and—except for small-scale airlift operations—the planes needed for transport and supply within the combat zone.

The Army is reorganizing its divisions into five-sided units, lighter and more mobile than the present divisions. It is tailoring its equipment, as far as possible, to be transportable by air. The new airborne division, with 5 combat or battle groups, instead of the 3 regiments of the past, is organized and equipped—unlike the World War II division—to be entirely transportable by air. It does not have to have a cumbersome "land tail."

Despite its streamlined strength of 11,486 men, the new division has at least 1,000 vehicles, including 655 of the new mechanical mules, 75 jeeps, sixty-three ¼-ton trucks, and forty 2½-ton trucks.

HONEST JOHN NUCLEAR PUNCH

The nuclear punch of this division is provided by the 762-millimeter Honest John field artillery rocket, which is scheduled to be replaced by the smaller and lighter Little John.

When this replacement is made, 713 of the Air Force's C–119 Fairchild Flying Boxcars will be required to lift simultaneously the new airborne division with all its equipment. There are not enough troop-carrier aircraft today to combat load and airlift an entire airborne division simultaneously.

Probably about one-third to one-half a division at a time could be airlifted—ready for combat—across the oceans. The Lockheed C–130, now coming into service, has a greater load capacity than the C–119 and has superior performance.

The number of C–130's required to lift the airborne division would be about half the number of C–119's. A still bigger aircraft—the Douglas C–132—could carry 50 tons about 3,500 miles at 400 miles an hour. However, it has been canceled in the economy drive.

Each of the Army's new divisions—airborne, infantry and armored—is being equipped with a considerable number of Army planes and helicopters to perform various combat functions. Any large-scale troop lift in the combat zone is still the function of the Air Force. The Air Force is also charged with providing close air support for the Army, although the Army's missiles are gradually taking over some of the air-support duties.

FIFTY-THREE ARMY CRAFTIST DIVISION

The new airborne division has 53 Army aircraft assigned. Thirty-seven are helicopters, and 16 are light, fixed-wing planes. These perform a variety of functions.

Thirty-five of the Army planes are organized in a combat aviation company. These include 10 H–34 Sikorsky helicopters, 15 H–13 Bell helicopters, and 10 L–19 Cessna fixed-wing planes.

They perform command, liaison and communications duties. Helicopters, for instance, have been used for aerial wire-laying. They provide observation both visually and photographically and adjust firing. They carry out aeromedical evacuation and limited airlift of small combat units and equipment.

The 18 other aircraft are 10 H–34's, 2 H–13's, and 6 fixed-wing L–20 De Havillands. They are organized in a reconnaissance troop. These aircraft provide the Skycav or sky cavalry elements and are intended to carry out, with modern weapons and equipment, some of the traditional functions of the cavalry of the past.

Their primary mission is reconnaissance and battlefield surveillance. But the helicopters—sometimes supplemented by attached helicopters of the Transportation Corps—could lift small units to an enemy's flanks or rear to aid in the seizure of an objective.

GROUND PLATOONS IN TROOP

The reconnaissance troop has a motorized reconnaissance platoon for ground reconnaissance and an infantry platoon that can be lifted by the helicopters into an enemy position.

Its fixed-wing aircraft have various types of novel equipment for battlefield surveillance. One of the small planes is equipped with radar; another with television; others with cameras for day and night photography. Even drones for photographic purposes are being developed.

This same sky-cavalry concept for reconnaissance, battlefield surveillance, and limited tactical transportation of patrols or small units over the battlefield, is utilized in the new infantry and armored divisions.

In the armored division a reconnaissance battalion is provided with an integral sky cavalry platoon. Experimental tactics envisage both ground and air scouting and patrolling and coordinated attacks with armor, infantry, and units landed near the objective by helicopters.

Helicopters, armed with .30-caliber machineguns and 80-millimeter. Oerlikon rockets have even been used in hovering a few feet above the earth, to provide suppression fire to help cover the assault of tanks and infantry.

New Illustrious Potentate of Shriners of North America

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 23, 1957

Mr. WILEY. Mr. President, I was pleased to note in last week's newspapers that there has been elected to the high office of imperial potentate of the Shrine of North America Mr. Thomas W. Melham, a graduate of the University of Wisconsin, and for 27 years, a resident of my State.

Mr. Melham is the first member of the Tripoli Temple in Milwaukee to be selected to this honored post. He joined Tripoli Temple in 1930, was elected its potentate in 1943, and is still a member of that temple, as I, too, am proud to be.

Mr. Melham, who is now Manhattan office manager of the Prudential Life Insurance Company of America, carries with him, I know, the good wishes, not simply of the 780,000 members of the shrine, but of all Americans who appreciate the worthy role of this grand organization.

As an indication of that role, I send to the desk an article which appeared recently in Look magazine entitled "The Shriners."

The article concentrates on the finest single activity of all the splendid endeavors of this organization. I refer to its services since 1922—on behalf of 220,000 crippled children, in what the shriners call their "17 temples of baby smiles"—the famed shrine hospitals for crippled children.

The photos in that article spoke volumes, but I believe that the brief text will speak for itself, as well.

Here in Washington, D. C., in Almas Temple; in Chicago, in Medinah Temple; in Milwaukee, in Tripoli Temple, and elsewhere, the shriners are active 365 days a year in humanitarian endeavor.

What is more, they remind all Americans of the wholesomeness of life, and the pleasure—the fun—to be enjoyed in it.

I send to the desk the captions of this article as an indication of the high position to which Noble Melham has just been elected.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SHRINERS—THEY HAVE FUN FOR A GOOD CAUSE

Red fezzes with tassles flopping, elaborate hijinks, a nationally known football game and hands that stretch out quietly to help needy crippled children are the hallmarks of the colorful and paradoxical, secret Ancient Arabic Order of Nobles of the Mystic Shrine. The 780,848 Shriners of North America are dedicated to a happy mixture of fun and charity.

Although many Americans are suspicious of secret organizations, they have come to laugh with and love the Shriners, whose best-kept secret is that they really have no secrets except in the form of their rituals. Their headgear and insignia are purely decorative.

The shrine is a part of freemasonry and only a Mason can become a Shriner. Three Presidents—Warren G. Harding, Franklin D. Roosevelt, and Harry S. Truman—and Chief Justice Earl Warren have been among the distinguished members of the shrine during its 85-year history. Another well-known Shriner is movie potentate Cecil B. DeMille, who inspired the props and sets for the recent initiation feast of his temple (Al Malaikah, in Los Angeles).

Every candidate for shrine membership takes the charitable duties of shriendom seriously. Those elected are ready to participate in circuses, football games, and other events to raise money for shrine charities—crippled children's hospitals, Masonic old people's homes, children's homes, or Masonic hospitals. At the Al Malaikah Temple ini-

tiation (with 22,000 members, Al Malaikah is the second largest shrie temple in the country), 300 candidates were initiated. The height of their initiation ordeal came when they were required to walk barefooted through hot sands in groups of four. Since the advent of television, attendance at temple functions has decreased, but Shriners are confident that new members they are acquiring nationally will keep their temples full in the future.

THEIR REAL JEWELS ARE THE CAST-OFF BRACES AND THE CRUTCHES OF CHILDREN

Irrespective of race, creed, or color, more than 250,000 crippled children have been treated since 1922 in what the Shriners call their "17 temples of baby smiles," the hospitals for crippled children. Those who can pay may not enter; those who cannot are welcome. The annual hospital budget is met by a yearly $5 assessment paid by each Noble of the Shrine, together with funds that come from Shrine-sponsored events. Last year, $6.5 million was raised for Shrine hospitals. The Philadelphia hospital received $300,000 for operating expenses alone. Typical of the kind of case paid for by Shriners in the Quaker City is that of Ruth Pachik, 8½. Her right leg was half the length of her left. Doctors had to remove her right foot and fit her with an artificial leg. The following pictures tell her story.

HELPLESS CHILDREN ARE MADE WELL BY "WORLD'S LARGEST CHARITY"

Skeptics have referred to Shrinedom as "the playground of the Masons." There was a time before 1920 when the code of Shriners was simply, pleasure and fun. They considered themselves the humanizing agency of Masonry, seeking to keep alive in men the spirit of youth. Then, in 1920, Potentate W. Freeland Kendrick put it to Shriners that pleasure is something we take out of life, but happiness is something we share. He recommended to the 46th Imperial Council Session that the order establish a series of Shriners hospitals for crippled children. They have become what the Shriners call the "world's largest charity," and saving children like Ruth Pachik is now the heart of Shrine work. Shriners today have as their code Jesus' words, "As ye have done it unto one of the least of these my brethren, ye have done it unto me."

Safety Training Program of Electric Cooperatives

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. YARBOROUGH. Mr. President, the rural electrification program is one of the most beneficial programs for rural life, dairying, and agriculture in general that has been developed in the history of this Nation.

In my home State of Texas there are 78 electric cooperatives, with a vast network of transmission lines serving the rural areas of Texas.

One of these cooperatives, the Navarro County Electric Cooperative, has made one of the most outstanding industrial safety records in the Nation. That electric cooperative operated for 546,000 consecutive man-hours, handling high-voltage wires, without an accident.

This outstanding record was compiled under the direction and leadership of Osie Cauble, of Corsicana, a statewide leader in Texas in rural electrification.

The account of this record of the Navarro County Electric Cooperative under the leadership of Osie Cauble is interestingly told by one of the ablest Texas newswriters, Mr. Thomas Turner, of Waco, Tex., whose account appears in the Dallas Morning News of Sunday, July 21, 1957.

I ask unanimous consent that this account from the Dallas Morning News be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIQUE PROGRAM—TRAINING HELPS REDUCE ELECTRIC CO-OP MISHAPS

(By Thomas Turner)

CORSICANA, TEX.—Several weeks ago a 43-year-old truck driver suffered a somewhat unusual accident when a long length of heavy electric wire, after being cut, coiled up quickly like a snake and poked the end into the man's leg.

The man, after the first shock of the incident, came close to crying. Not at the pain but at the disappointment—his leg injury snapped one of the Nation's outstanding industrial safety records.

For 546,000 consecutive man-hours, the Navarro County Electric Co-Operative went about its dangerous work of handling high-voltage electricity without an injury that kept a worker off the job.

That's about the equivalent of a busy company going 10 straight years without a serious accident—something very few homes or companies have ever done.

The safety record was by far the best ever attained in Texas by any of the State's 78 electric co-ops. It ranked sixth among the thousands of co-ops in the Nation when it was ended by the snaky wire.

The boss of the unhappy injured truck driver, ironically, is one of the main reasons Texas' electric co-ops today have high standards of safety. Osie Cauble, a Hill County native who almost grew up on an electric pole, has been State chairman of a unique co-op safety training program for 13 years.

Cauble was instrumental in the founding of the Texas Job Training and Safety Program, a statewide organization supported mainly by the co-ops who take part. As long as 6 years ago all but 3 of the State's 78 rural co-ops joined in the safety program, and now all but 2 do.

"When I first went to work in this business, over in Hillsboro with a private power company in 1924, electric companies just handed you a book with safety rules in it and warned you what would happen if you didn't follow it," says Cauble.

"It was a good book, but there is more to safety on the job than just reading a book. It's a matter of constant education, and the biggest need in most cases is for management education. Emment is really interested in their personal safety, more than just for economic reasons. And safer workers do better work, too."

Cauble is manager of the Navaro County Co-op. It has 19 workers, 12 of them men out in the field engaged in work of hazardous nature at best and extra-dangerous in storms, darkness and such times.

Under the statewide co-op safety training program, they attend weekly safety meetings. Once a month 1 of 6 highly-trained specialists from Texas A and M College comes in for a detailed lesson on transformers, regulators, meters and the dozens of other types of equipment used in the big business of moving electricity. First-aid and artificial respiration courses are constantly kept up to date.

It's hard for the laymen to see, but saving lives in one industry saves money for them all over the long haul.

Navarro County's co-op has a sizable collection of citations and awards for its fine safety record. Cauble was surprised at the most recent State conference of the job training and safety program in Austin by the presentation of a fancy plaque praising his work in promoting safety. The safety evidence he likes most, however, is a live and active employee.

Mutual Security Act of 1957

SPEECH
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 2130) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. PORTER. Mr. Chairman, I see what the clock says, 7 o'clock; in fact, both clocks. And, I know that an amendment such as the one I offered and this second one should have been considered by the committee, and had they been in shape in time, they would have been considered and I can assure the Members of this House that they will be considered by appropriate committees in the future, should this House reject both of them. I also think that in the interim perhaps the American people will make their wishes better known to the Members of this House in regard to our treatment of dictators in Latin America, and perhaps that will help in deciding the issue the next time.

Now, this amendment simply seeks to say that we give no direct economic or military aid to countries in Latin America which the State Department determines to be governed by dictators.

The basis for the amendment is that we should not give economic or military aid to countries whose form of government we abhor unless the military necessity is clear and urgent, a condition which does not exist in Latin America. I want to make it plain that exceptions are specifically set forth, such as requests for funds for health programs, including mosquito control and international organizations. This amendment only affects economic and military aid.

I received a letter from Mr. Andrew J. Biemiller, former Member of this House, now the able legislative counsel for the CIO.

This is a letter giving official endorsement by that body to this amendment:

The American Federation of Labor and Congress of Industrial Organizations strongly supports the use of United States foreign policy to develop and nourish democratic institutions in other nations. It is clear to us, as we are sure it is clear to the Members of Congress. That this principle is negated when our country provides military economic aid to those Latin American na-

tions which are firmly in the grip of dictators. We believe that the product of our democratic institutions should not be used to shore up and perpetuate totalitarian institutions anywhere in the world.

I have a great deal of faith in the judgment of military men, but I have looked at the Defense Department report, as I hope you gentlemen have, and I see, for example, what they say about Venezuela. I call it to your attention. They say that Venezuela is "a model of the private-enterprise system which constitutes an example for the rest of the hemisphere."

I have news for the man who wrote that balderdash. Venezuela is a dictatorship, a tight police state, whose present ruler overthrew a representative regime, something that Mr. Truman at the time publicly condemned. Model of a private enterprise system indeed.

I could also tell the writer about the good American citizen who was in my office last week to tell me how he had been imprisoned for more than a week by the Venezuelan Security Police less than a month ago and had been denied the right to see American authorities. Model of private enterprise? I could refer the gentleman to what the Archbishop, the leading Catholic prelate in the country of Venezuela, that model of private enterprise, said about that government in a pastoral letter. He said:

Our country's wealth is increasing with astonishing rapidity. But no one can say that this wealth is being distributed in a way which enables all Venezuelans to share it, since a very large number of our people live in conditions that can hardly be called human.

Among the social evils condemned by Archbishop Arias are Venezuela's widespread unemployment and extremely low wage rates. He pointed out that these exist at a time when owners are growing richer and richer "at an almost dizzying speed."

Is this one of the countries we want to help? I say "No."

The CHAIRMAN. The time of the gentleman from Oregon has expired.

"A Golden Opportunity" on Civil Rights

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 23, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful column from the New York Herald Tribune of July 18 by Walter Lippmann on the civil rights problem.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

A GOLDEN OPPORTUNITY
(By Walter Lippmann)

Now that civil-rights legislation is before the Senate, the crucial question is whether the leaders from the Southern States are willing to let a bill pass which is directed solely to securing and protecting the right of Negroes to vote. There have been some indications that Senator RUSSELL may be willing, after the southern minority have argued their case, to let the majority of the Senate pass such a bill. There is, also, some reason to think that Senator LYNDON JOHNSON is feeling his way toward a compromise based on limiting the substance of the bill to the single issue of suffrage in the Southern States.

By such a compromise the southerners would be making a very big concession. But they would avoid, or at least postpone for some considerable time to come, what would amount to a decisive defeat on the whole range of civil rights issues. If they resorted to a filibuster to destroy a bill amended to deal only with Federal voting, there is a very good chance, as Mr. Rowland Evans, Jr., reported in the New York Herald Tribune the other day, that they will provoke a movement to amend the rules of the Senate in order to abolish the right to filibuster.

If ever the rules are amended, the southerners will be faced with a majority in the Senate which is prepared to use the Federal power to enforce all the civil-rights laws, including that against segregation in the public schools.

The South, therefore, has much to lose by being intransigent, and it has much to gain by a concession on the right to vote.

The word "compromise" needs to be defined. A genuine compromise would be an understanding that the bill should be amended by cutting out part III, which deals with integration in the schools and other civil rights. Such an amendment would mean that the special feature of this bill—the use of injunction—would be limited to the cases where there is a denial by local election officials of the right to vote. The injunction procedure would not apply to the school problem, or to the other civil-rights problems.

It would not be a true compromise, on the other hand, to cut out part III, and then also to amend part IV to require trials by jury in all election cases. That would amount to the emasculation of the bill, and would mean that Congress was passing a bill that was not meant to be enforced. Either the Federal Government is to have power to secure and protect the right to vote or it is not to have that power. That power can be, and should be, strictly defined. But there is no half-way station between granting and not granting the power.

There may be in the making something bigger than a compromise on the bill which is now before the Senate. We may venture to hope that for the first time there exists an opportunity for something like a national settlement and understanding based on the inherent principle and implied policy of an amended bill.

The principle of the amended bill would be that the paramount civil right of an American citizen is the right to vote. If he can qualify under rules that are the same for all, the right to vote is his guaranty that he will be heard and listened to and counted.

The corollary of this principle that the right to vote is the paramount civil right is that the other civil rights are not to be enforced by the executive power of the Federal Government. They are to be brought into being by persuasion, experiment, negotiation, and by judicial process.

It would be a bright day for the country if there could be a general national understanding based on such a view of the scope and nature of Federal intervention in the problem of civil rights. There are great reputations to be made by those, be they in Congress or in the administration, who seize the opportunity which is open, and make themselves the architects of such an understanding.

The Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an article by the senior Senator of my State, the Honorable STYLES BRIDGES, which appeared in the Hearst papers, together with a resolution passed by the House of Representatives of the State of New Hampshire, in tribute to the late Senator Joseph R. McCarthy, of Wisconsin.

The article and resolution follow:

(By United States Senator STYLES BRIDGES, Republican, of New Hampshire)

WASHINGTON, May 4.—Since Joe McCarthy came to the United States Senate after his election in 1946, Communist power has been in the ascendency. Since that time, communism has continued to expand and today it holds fast in its grip one-third of the earth's surface and imprisons almost a billion human beings. Its advance agents, moreover, are diligently at work in areas all over the still-unconquered world.

Communist forces have almost without diminution scored one victory after another. These Communist victories had been achieved not so much by direct Soviet conquest, but too often because of the weakness, the vacillation, and even acts of betrayal on the part of people in the still-free world. Joe McCarthy saw all this very clearly and in his direct fashion undertook to grapple with the forces responsible for our deterioration in his own area—Washington.

Because he never gave ground and never retreated in the face of the most devastating counterattacks, there was always dust swirling about him. History seemed to have ordained him for this very rugged role and he played it like a martyr. In so doing, he dramatized resistance to underground Communists such as it has never been dramatized before—either here in the United States or anywhere abroad. He stirred most of his countrymen for a time from the complacency that even now blankets the land. He should have earned the gratitude of the whole free world.

The Communists, however, had mapped out a campaign the purpose of which was to portray him as a symbol of resistance to Communist infiltration. They thereupon undertook a diabolical campaign to destroy the symbol. Whether they have succeeded in this, the future will tell.

Joe in the face of 7 years of unremitting assault never yielded. His spirit was a fighting one to the end. But his once powerful body, however, could not keep pace and he died—died of attrition and in battle. I hope, however, that the spirit of resistance that he sought to engender will not depart the land with him.

When history views this performance of Joe's, I am sure it will reserve for him a very high niche on its fabled walls. It has always reserved for the courageous a place of prominence, and as the legions of communism march closer to our homeland, there will be more and more people who will, like Joe, rise up and do battle.

The struggle that lies ahead for all of us will be a titanic one. It will probably take a great toll of lives—just as it has taken Joe's. But if his successors play their particular roles with the same show of courage that characterized his every action, we cannot fail to win in the end.

RESOLUTIONS ON THE DEATH OF SENATOR JOSEPH R. McCARTHY

Whereas we have learned of the passing of Joseph R. McCarthy, United States Senator from the State of Wisconsin; and

Whereas Senator McCarthy has served his country with valor and has won the respect of all who knew of him: Therefore be it

Resolved, That we, the members of the New Hampshire House of Representatives, do hereby pay tribute to this fearless crusader who, more than any other one person, has awakened Americans to the dangers of communism; and be it further

Resolved, That when the house adjourns today it adjourn in memory of this dearly beloved Senator; and be it further

Resolved, That a copy of these resolutions be forwarded to Mrs. McCarthy.

W. DOUGLAS SCAMMAN,
Speaker, House of Representatives.
JOSEPH P. ECKER,
Representative from Manchester.
GEORGE T. RAY, Jr.,
Clerk, House of Representatives.

Inflation Awareness Grows

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. RAY. Mr. Speaker, under leave heretofore granted, I present some thoughtful comments upon the problem of inflation which appeared in last evening's Washington Star over the signature of Sylvia Porter. The specter of inflation is becoming increasingly real and important in the minds of rapidly growing numbers of people throughout the country. Miss Porter's article is a useful reminder of the seriousness of the problem and that we in Congress should be doing something about it.

INFLATION AWARENESS GROWS
(By Sylvia Porter)

A new attitude seems to be emerging—an attitude which I can't recall having sensed as strongly since the war.

It is an awareness among average folks who ordinarily don't bother to think about inflation or the constant rise in prices.

It is an awareness which is not taking just the form of a grim resignation to the trend. Rather, it is an awareness which is taking the form of an angry determination to try to force the spiral to a halt by individual action.

NATIONWIDE TRIP CITED

Maybe I'm whistling in the dark, but in the past 3 weeks I have made a wide swing around the United States. On this trip I have listened to dozens of ordinary middle-class folks blow off steam about what's happening to prices. I have received scores of letters, taken notes on many telephone calls. Surely, I can't be hearing only from the exceptions.

Here are samples of what I'm hearing:

From a minister in Ohio: "I thought you might like to know that here is one man who is getting really mad about the continuing inflationary trend of our American economy. I'm mad clear through and mostly because nobody, from President Eisenhower down, is doing anything about it.

"How do I fight inflation? Well, we have a 1953 Chevrolet station wagon which is completely paid for. To fight inflation, I am planning to drive this car until it falls apart. * * * I'm fed up with continually rising prices and I will go on my own private strike."

From an insurance salesman in upper New York State: "I never thought about this (inflation) much because I've always made money. Now I find selling insurance is harder and harder because people ask me how much their insurance will be worth 10 years from now, and I can't convince them that the $10,000 or $20,000 policy they buy will protect them as much in 1967 as in 1957. I don't believe it will myself. I'd like to do something about this. What can an average citizen do? Where is the leadership on this?"

WAGE EARNER DISCOURAGED

From a well-paid union member in northern California: "I'm paid above the minimum and I've not been complaining. But this is starting to get me down. Every time I get more money it disappears into more payments for what I have to buy. I feel like a dog chasing his tail. I might be too small to do anything on my own, but whatever I can do—from writing to Washington to boycotting firms I think are profiteering—I'm going to do."

From a housewife in Washington, D. C.: "What gets me are the little increases they think I won't notice—a dime more for this, a quarter more for that, and the money just dribbles away. We had to cut our vacation short a week because we ran out of money and it wasn't because we splurged."

Perhaps this anger will evaporate. Perhaps it's only a reaction to the wide publicity given to the fact that recently living costs have been climbing to new highs every month. Perhaps, because of my job, I hear more squawks than others.

The Public Works Committee

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement.

May I take this opportunity to acquaint my fellow Congressmen with some of the happenings in the Public Works Committee of the House of Representatives during the past few weeks.

Only last Wednesday—July 17, 1957—the Public Works Committee reported out four major pieces of proposed legislation. These included the so-called omnibus Public Works bill; an amendment to the Tennessee Valley Authority Act of 1933; a bill to kill the present lease-purchase agreement for the construction of Federal buildings and a return to direct appropriations for such construction, and an authorization for the construction of certain improvements in the Niagara River for power.

Two of these bills—H. R. 8643 concerning the Niagara power question and H. R. 4266 on the Tennessee Valley amendment—were railroaded through the Public Works Committee without the benefit of subcommittee action or hearings. One member of the committee, who was kind enough to grace us with his presence for this meeting, then announced that any amendments would be voted upon en bloc.

As to the merits of the two pieces of proposed legislation, I have no comments. Since committee members were not furnished with reports on the proposed projects, nor did we have the opportunity of hearing witnesses, I for one have not had enough information to pass on the merit of these two bills.

Certainly, gag-rule tactics should have no part in the operation of the Congress of the United States. And certainly projects which are going to be paid for by the taxpayers of our Nation should at least have the benefit of some study by members of the House committee before they are brought out on the floor for final vote.

There also has been disagreement in Public Works Committee sessions on the so-called omnibus bill, which contains about $1,400,000,000 of Federal funds in various rivers and harbors and flood-control projects throughout the United States.

Most of these projects are of undoubted value to the health, safety, and welfare of our Nation. But it appears that the majority members of the Public Works Committee are intentionally seeking a Presidential veto of this measure.

The bill has been jammed with a deluge of projects which have not been approved by the Chief of Army Engineers or the Bureau of the Budget. These objectional items which make up 9.2 percent of the proposed public works appropriations amount to some $133,600,000.

Last year, the President was forced to veto the omnibus bill because of the inclusion of projects which had not been adequately studied. The same situation exists again this year.

In still another action by the majority members of the committee, the present lease-purchase agreement for the construction of Federal post offices and other Government buildings has been killed in favor of the outmoded and antiquated direct appropriation method, which hasn't been used to build a post office building outside the District of Columbia since WPA days.

A return to the spoils system of direct appropriation would mean an immediate increase in the Federal budget of more than $1 billion to take care of the 141 projects now ready for construction under the present lease-purchase agreements which expired last night. Another $3 billion to $5 billion probably would have to be added to the Federal budget in the near future to provide for the 200 to 300 projects now about ready for approval.

This lesson in Government economy escapes me. The addition of billions of dollars to the Federal budget can mean only one thing—an increase in income taxes if the Federal budget is to remain in balance.

The type of political shinanigans which have been displayed by the majority members of the House Committee on Public Works are to be decried. They are in the worst interest of the Nation as a whole, and are a disgrace to the orderly legislative processes of the House of Representatives and the United States Government.

Cotton Marketing

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and fact sheet from the Textile Workers Union of America:

WASHINGTON OFFICE,
TEXTILE WORKERS UNION OF AMERICA,
Washington, D. C., July 19, 1957.

DEAR MR. CONGRESSMAN: Enclosed herewith please find copy of a fact sheet just issued by the research department of this union dealing with the problem of raw cotton.

The primary purpose of this memorandum is to inform our own membership as to the position which the Textile Workers Union of America takes on legislation on cotton marketing now pending before both the Senate Committee on Agriculture and the House Committee on Agriculture. In view of the background and statistical data on this subject which our research director has compressed and included in this fact sheet we believe that you might find this document of some immediate interest.

A spokesman for the manufacturers of cotton textiles, in a recent appearance before the House Agriculture Committee, has taken a position very similar to that taken by the Textile Workers Union of America. The serious difficulties with which the cotton-textile industry is now confronted compel all those who earn their livelihood from or in this industry to seek immediate and adequate relief.

We earnestly bespeak your active assistance in achieving legislative action on this matter of "one-price cotton" at this session of the Congress.

Very truly yours,

JOHN W. EDELMAN,
Washington Representative.

RAW COTTON—TWUA FACT SHEET I

I. GENERAL POSITION OF THE TEXTILE WORKERS UNION OF AMERICA

TWUA's position is that it is in the best interests of the American consumer, the cotton textile worker, the cotton textile industry, the cotton-growing industry, and the Government, that (a) a single-price system—the world price of cotton—replace the present two-price system which establishes a higher price for domestic than for foreign cotton, and (b) that farmers receive compensatory production payments equal to the difference between the market price and projected price of cotton.

II. THE PRESENT CRISIS IN RAW COTTON

The crisis was precipitated by a number of different factors:

A. The existence of a program for the sale of cotton held by the Commodity Credit Corporation on the world market at world prices, 5 to 7 cents a pound below current support prices and domestic spot market prices. The CCC will have sold about 7.7 million bales for export between August 1, 1956, and August 15, 1957, and will sell an additional 2.9 million bales for export between August 16, 1957, and August 1, 1958. As a result, the accumulated stockpile has been substantially lowered and will continue so contract.

This program was fostered not only by the low prices charged by the CCC but also by the financial help provided by Export-Import Bank loans, the International Cooperation Administration, and titles I and II of Public Law 480.

B. The cotton products export program, which compensates exporters of processed cotton goods, has resulted in the payment of $12,388,000 in differential payments in the period from August 1, 1956, through June 21, 1957, and has raised total exports slightly above previous years' levels.

The differential payment equals the difference between domestic and foreign prices of raw cotton; it is, therefore a measure of the disadvantage suffered by American cotton textile producers in competition with foreign manufacturers.

C. The current high level of raw cotton exports has helped reestablish America's position in the free world cotton market but, at the same time, it has substantially reduced the American carryover to about 11.6 million bales, 3 million bales below that of August 1, 1956. As for the new crop, it is expected that the acreage devoted to cotton will be the lowest in 80 years; upland cotton in cultivation on July 1, 1957, totaled 14¼ million acres, compared to 16.8 million on July 1, 1956. The allotment was 17.6 million acres but 3 million were placed in the acreage reserve program under the soil-bank provision. Raw cotton production in the 1957 crop year (August 1, 1957–July 31, 1958) is currently estimated at 11.3 million bales as compared with 13.3 million last year. This drop in cotton production will leave a small margin out of the current supply for exports. There is, therefore, some concern about the adequacy of the cotton supply. With output declining and exports continuing at high levels under the export subsidy programs, domestic cotton prices may tend to rise and thereby place the domestic textile industry under a greater competitive disadvantage.

D. The relative position of cotton in total fiber consumption in the United States has been constantly dropping, with its share being diverted to synthetic fibers. This trend has recently aroused the concern of the manufacturers and the raw cotton interests who see a need for lowering cotton prices to meet this competition.

E. The cotton middlemen (particularly the brokers, merchants, and ginners, compressors, shippers, and warehousemen) have begun to complain that, with so much cotton bought and handled by the Government, especially in the case of exports, they are losing out on the business.

F. Raw cotton cultivation costs have dropped measurably because of the mechanization of many processes, increased use of irrigated lands and of fertilizers, and the growth in the size of farms. Many farmers, particularly the big ones, are able to make substantial profits at much lower prices than the support level and even the world price.

G. The rising cost of living has made the public more sensitive to the cost of the support program and there has been considerable concern about high prices. Those doubting the value of these programs have become more articulate as the present price-support program with its acreage limitation and soil-bank-payment provisions has not solved the farm problem. Scandalous practices and irrational payments are being uncovered.

H. The present administration has been unfriendly to the high price-support programs, preferring flexible price supports. With the failure of the soil-bank program, it has renewed its interest in flexible-price programs with the hope of moving toward a completely free price market.

I. These developments are worrying the agricultural groups who are concerned lest the price-support programs lose out under the impact of the economy wave. They have, therefore, become more sympathetic to the idea of such compensatory production payments as the program in effect in the wool-growing industry.

J. Local merchants oppose the soil-bank program, because the soil retirement, though maintaining the farmers' income, has reduced local business.

III. ALTERNATIVE POSITIONS

A number of plans which seek to meet the present cotton crisis have been proposed in Congress.

A. Continuance of the current plan. Under this program, national acreage allotment will continue; under the sliding provisions, the support price of 77 percent of parity (32.74 cents) may be raised to about 85 percent of parity.

B. Free market prices with no compensatory payments. The administration would prefer to support prices at a level which would eliminate all surplus (about 24 cents a pound) and maintain current marketing quotas. Farmers would not be paid any compensatory payments.

C. Lower support prices and more acreage. One bill (S. 2273), sponsored by the Farm Bureau, would give farmers a choice between the current program and a plan for 75 percent support prices with a 20 percent rise in acreage allotment.

D. Loans and compliance payments. The Poage bill (H. R. 877) provides for loans at 75 percent of parity plus compliance payments up to 90 percent of parity with a limit on payments to a single farmer of $10,000.

E. Two-price system. H. R. 7816 would give farmers 90 percent of parity on their share of the domestic market and the world price for export. The domestic market quota would be limited to seven-tenths of the present acreage allotment.

F. Two-price system plus processing tax. H. R. 7836 would provide producers full parity of income (36 to 48 cents a pound) on domestic allotment, equalling two-thirds of present allotments, and world price for exported cotton, with financing provided by a tax on all processors of cotton and synthetics.

IV. TEXTILE WORKERS UNION POSITION: WORLD PRICE PLUS COMPENSATORY PAYMENTS TO FARMERS

TWUA believes that the present situation is intolerable from the point of view of the textile worker, the textile industry, and the consumer. We are in favor of protecting the farmer but believe that the present approach will, in the long run, provide no solution to the cotton problem. Maintenance of the current high cost of cotton will only discourage expansion of cotton usage and thereby aggravate the problems of surplus accumulation. The wide gap between foreign and domestic prices makes the domestic textile industry vulnerable to outside competition. With the Federal Government unwilling to provide direct controls on imports, the cotton-price program will lead to the strangulation of the domestic textile industry.

We therefore propose the following program:

A. A single price, determined on the open market, for raw cotton, to equalize domestic and world prices.

B. Compensatory production payments to farmers, equal to the difference between the price received and the support price for that portion of the crop used for domestic consumption or that produced under a defined marketing program.

C. Maximum production payments of $10,000 to any single enterprise; under present price-support levels, this would mean payments for approximately 400 bales.

D. We have also proposed that, pending the adoption of this program, support be given to the Smith bill (S. 314)—and identical bills introduced by Congressman COFFIN (H. R. 7446), COOLEY (H. R. 8155), MCINTIRE (H. R. 7054) and HALE (H. R. 7032)—which would authorize the Secretary of Agriculture to make available to American tex-

tile manufacturers of cotton products for export the "surplus cotton owned by the Commodity Credit Corporation at such prices as the Secretary determines will allow the United States cotton textile industry to regain the level of exports of cotton products maintained by it during the period 1947 through 1952" and to meet competition from foreign imports.

We see the following advantages to the various affected interests under this program:

A. Textile worker: Lower prices for cotton would permit the industry to push the product into new uses and to expand markets. A 20-percent or 25-percent reduction in raw cotton costs would also permit an increase in wages, since labor costs on medium count fabrics represent about 40 percent of the current raw material cost.

B. Consumer: Prices of cotton products would be substantially reduced at a time when all other prices are being increased.

C. Cotton farmer: His interests would be safeguarded, since he would be compensated directly for the cotton he produces under the protected program. The limitation on payments to any one farmer would insure the protection which the family farmer needs. The large mechanized farmer, already producing cotton at costs below the world price, is making money thereon. The industry would be able to hold its world markets.

D. The Government: It would be freed from all the responsibilities of cotton purchase and marketing, and be able to disband its complicated administrative structures. There would be a saving in actual outlays by the Government, depending on the plan, variously estimated as running up to $100 million a year.

Farm Economy Muddle

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. WHITENER. Mr. Speaker, Senator W. KERR SCOTT, of North Carolina, is recognized throughout the Nation as one who understands the problems of the farmer. His recent Washington report has again brought to the attention of the people of North Carolina the weaknesses of our present agricultural program. The Gastonia (N. C.) Gazette on July 20, 1957, in an editorial, reiterated Senator SCOTT's views.

I commend the contents of this editorial to the Members of the Congress as being worthy of their perusal and earnest consideration:

FARM ECONOMY MUDDLE

Senator W. KERR SCOTT, of North Carolina, in his current Washington report, has some rather disturbing things to say about the condition of our farm-economy program.

We quote Senator SCOTT:

"Every year, it seems that our farm economy faces tougher and more difficult decisions than the year before.

"This is generally true for all segments of the farm economy, and it seems particularly true for cotton and tobacco, which are the main money crops in North Carolina.

"Next year, for example, both these commodities are facing the most crucial test in Congress in the past 20 years.

"Secretary Benson has served notice that he will seek authority to set price-support levels anywhere he pleases between zero and 90 percent of parity.

"There is a good chance that his efforts to throw tobacco in with the rest of the farm commodities so far as price supports are concerned will be defeated. Everyone agrees that tobacco is a unique product and must be treated as such, but most anything can happen when catch-all legislation is put before Congress.

"Cotton, however, is a different story. This commodity must walk a tight rope between foreign competition on the one hand and competition at home from synthetic fibers on the other.

"Many people feel that the present formula under which cotton operates is unrealistic and should be changed.

"The Farm Bureau, for example, has recommended that the 1958 crop be supported at 75 percent of parity, which translates into price supports per pound at about the same figure the 1957 crop is supported. Unless some changes are made in the present law, price supports on cotton will inch up a few cents per pound next year under the flexible price-support program.

"Most everyone agrees that a matter of a very few cents per pound means the difference between the use of cotton or synthetics in many fabrics. Price trends show that cotton must stay at about the present market price to compete successfully with synthetics.

"Taking a different approach from the Farm Bureau is quite a large segment of producers and cotton manufacturers who feel that farmers should be allowed to plant all the cotton they desire and let only that portion of their total production that goes into domestic manufacture be supported by the Government.

"This is the twice-price approach. That is, farmers would receive 90 percent of parity for that part of their crop that is used in the United States. The cotton would be sold on the market at competitive market prices, and farmers would receive a direct subsidy from the Government between the market price and 90 percent of parity. On the remainder of their crop, there would be no subsidy or price support.

"This would certainly put cotton on a competitive basis with both synthetics and foreign production.

"At the same time, it would enable American textile manufacturers to more effectively compete with imports in this country and in overseas markets alike.

"There are some dangers, however, in the two-price approach as it would apply to cotton. Among other things, it would be hard to tell where the market price would go under conditions where there are no price supports. That is, there is no way of knowing how low the producers of synthetic fibers would be willing to push their products to compete with cheaper cotton. It could well be that the larger synthetic manufacturers would deliberately lose money on their production for 2 or 3 years in the hope of increasing the subsidy to cotton to the point where Congress would refuse to appropriate money for that purpose.

"Which brings us to the really basic danger of any two-price plan for farm products. There is no way of knowing when Congress may snap its fingers and say this is the end. There will be no more money to subsidize this crop or that. If that danger can be avoided, it will greatly improve the chances of two-price plans in Congress next year.

"I have always felt that it would be a good idea to give two-price plans a chance and see what they would do. Basically, it is a good approach, and I would certainly like to see it tried if the kinks can be worked out.

"But even then, there is another danger. To except what he has recommended himself, Secretary Benson has said a flat 'No.' Which means trouble for any program he refuses to go along with."

A Longtime View

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the June issue of the Michigan Courthouse Review, by Elwood M. Brake, entitled "A Longtime View":

A LONGTIME VIEW

(By Elwood M. Brake, county school superintendent of Ionia County, and dean of the county superintendents of the State)

I was elected county commissioner of schools for Ionia County in 1923. I served 24 years in this elective political office and by July 1, will have served 10 years as an employee of the county board of education in the capacity of county superintendent of schools. This combined service is longer than that of any county superintendent serving in Michigan at the present time. I have recently signed a new 3 year contract.

During the time I have been in office, school enrollment has increased more than 50 percent, though the number of school districts has decreased from 141 to about 80. Annexation will continue until there are but 10 or 12 districts. It is unfortunate that Michigan copied after the Eastern States and divided into so many districts. The Florida system with only one board of education and one superintendent in the county is capable of giving all schools in the county equal services and the tax rate is the same to all. However, Michigan is evolving into a system of community school districts, most of which will eventually offer a 12-grade program.

The county office will be the intermediate office between the State school office and the local community district. It will provide those services on a countrywide basis, which districts of less than 10,000 cannot afford to provide locally, but which their citizens will demand. I refer to such services as supervision of instruction, providing speech correctionists, homebound instruction for those physically unable to attend school, classrooms for mentally and physically handicapped and health programs including such preventive programs as the fluoride program to prevent tooth decay.

Administrative services will include (1) tax allocation and administration, (2) financial accounting and auditing, (3) administration of the tuition provision of the State School Aid Act, (4) administration of the school transportation code, (5) teacher certification code, (6) administrating national school lunch and special milk program, and (7) administration of the Federal commodities distribution program.

It is my opinion that only office and traveling expense should be provided from the county budget and that all other funds should come from State school aid. State school aid should go only to local districts and to the county district. All services should be rendered by one or the other. Thorough study indicates one-half of 1 percent of the State school aid should go to county districts to provide those services not possible on a local level.

I feel that the county school office is much more important to all the people in large districts, as well as small, than at the time I was first elected. It will continue to grow in importance as it better serves the needs of our future citizens.

Everybody Can Help Lick Inflation

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. HIESTAND. Mr. Speaker, of course the basic cause of inflation is Government spending, but we cannot lick Government spending unless the people of the United States are back of us.

Our colleague, the Honorable CRAIG HOSMER, of California, wrote an outstanding article recently, which resulted in the able editorial in the Long Beach Press-Telegram, which is herewith quoted:

One of the best statements we have read on the nature, causes, and cures of ruinous inflation appears in the July edition of the magazine National Republic.

The author, Representative CRAIG HOSMER, of California's 18th Congressional District, which includes Long Beach and Lakewood.

His constituents should be proud, for the article demonstrates his incisive understanding of a complex subject, and thus reflects the good judgment the district has shown in reelecting him.

But his comments are more than an intellectual exercise. They contain candid, practical advice on how officials and public alike can help bring to an end a vicious spiral of events that threatens the country's well being.

To many persons this threat is very real right now, and has been for some time. The article, herewith digested, observes:

"The aged living in retirement, teachers, Government workers, and others on relatively fixed incomes have long felt the squeeze of prices spiraling beyond incomes. * * * It takes $4.65 today to buy what $4 did 10 years ago. During 1956 wages in California rose by an average of 6.7 percent; but two-thirds of the increase was canceled by rising prices. Only one-third went into increased purchasing power; two-thirds was taxed away by inflation. To the person whose wages did not rise, or who lives on a fixed income, the year meant a net loss in purchasing power."

This unfortunate condition, HOSMER points out, is rooted in the fact that since World War II the increasing private and public demands for goods has aggregated more than could be produced. Supply and demand have been out of balance. Thus:

"After all, 100 percent of supply is all there is, and when the grand total of all the demands add up to 110 percent, prices are bound to rise until supply and demand are brought into equilibrim. This balance must be brought about speedily before inflationary pressures wreck our economy and bring disaster to all. It means doing something to expand our productive capacity faster, and also doing something to put the brakes on demand while accomplishing it."

How do you expand productive capacity? Mainly by improving the facilities for production, and that requires investment money.

"High corporate income taxes have siphoned away large amounts of earning that otherwise would be reinvested. High individual income taxes, which have caused many a TV quiz contestants to stop short of the top prize because the tax bite makes the risk foolish, also discourages investors from risking their money for a disproportionately small return after taxes."

So the solution is to reshape tax policies to provide greater incentive for business. But how about the little guy? Isn't that leaving him out?

"Such tax changes are not a matter of lowering taxes on 'big business and the rich' while 'the poor' get no relief. Saying so is good demagoguery, but poor economics. Tax revision is a common-sense matter of doing what is needed in a free enterprise economy to eliminate the burdenss of inflation and the threat of unemployment, both of which are far more disastrous to 'the poor' than to any other economic category."

As for putting the brakes on demand, that brings up a topic much on the front pages for the past 6 months; economy in government. Government? That means all of us.

This, we believe, is the most significant passage of the entire article, the one whose truth touches home:

"Government can cut spending only in response to a common decision of the citizenry that its highest welfare lies in forgoing desirable but not essential expenses of government until the inflation problem is licked.

"Present dim prospects for this Spartan decision exemplify the vital need for a more realistic public understanding of the consequences of not making it. A wholesale constriction of government spending is involved and even the most ardent advocates of public economy usually want it accomplished by sacrificing somebody else's pet program."

Mr. HOSMER's prescription for bringing inflation under control plainly contains a very bitter ingredient—sacrifice.

Almost everybody agrees with the prescription, of course.

But how many of us are willing to take the medicine?

The Late Honorable James B. Bowler

SPEECH
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. CHELF. Mr. Speaker, the passing of our colleague and friend the Honorable JAMES BOWLER, of Illinois, has saddened us all. "Mr. JIM," as I used to call him, was a conscientious, sincere, industrious, dedicated representative of the people of his great congressional district and of the entire Nation. For several years our offices were just across the hall on the fourth floor of the Old House Office Building and because of this close location of our respective workshops, we just quite naturally became close friends.

Although "Mr. JIM" was a man of advanced years—one would never know it because he had the energy and drive of a man at least 25 years younger. There was no problem of his constituents that was to small for "Mr. JIM" to carefully study and to lend a helping hand.

His sage advice, his kindness, his humor, his ability, his friendliness, were all marks of his sterling character.

Mr. Speaker, I know that the Master has prepared a fine resting place for "Mr. JIM" in that great mansion on high. May God bless and keep his loved ones—always.

Golden Jubilee of Rt. Rev. Msgr. Peter Abouzeid

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I bring to the attention of the House the heartfelt tribute that was paid to the Right Reverend Archimandrite Peter Abouzeid, B. S., on the golden jubilee of his ordination to the priesthood.

Monsignor Abouzeid is the pastor of St. Joseph's Church in Lawrence, Mass., which is the mother church of the Melkites in America.

As a spiritual leader, Monsignor Abouzeid has few equals.

His accomplishments are truly remarkable.

All who have the pleasure of meeting him are impressed by his zeal, his devotion, and his saving grace of humor.

We who live in Greater Lawrence are very proud of him because he possesses the great human qualities that mark a true priest of God.

In his honor, therefore, I submit the jubilee program that was celebrated on Sunday, June 23, 1957, and the biography of Monsignor Abouzeid:

PARISH COMMITTEE FOR THE GOLDEN JUBILEE

General chairman: attorney Wilbur A. Hyatt.

Cochairmen: George A. Hajjar and Edward Kfoury.

Secretary: Albert G. Peters.

Financial chairmen: Michael Sabbagh and James Hajjar.

Arrangements chairman: attorney Michael J. Batal.

Religious cochairmen: Rev. Nicholas Abraham, B. S., and Rev. Lucien Maloof, B. S.

Church decorations chairmen: Irene Korbey, Eleanor Haffar, Georgette Nahil, and Rose Sabbagh.

Choir cochairmen: Rev. Nicholas Abraham, B. S., Claire Hajjar, Magda Stephanou, and Nesta Saba.

Auditorium chairman: Joseph Aziz.

Reception cochairmen: Dr. John T. Batal and Zahia Hajjar.

Program cochairmen: Doris Hajjar, Sam Saba, John Korbey.

Program committee: Phyllis Hassey, Mrs. Said Solomon, Mrs. Sam Saba, Mrs. Richard Morway, Mrs. Claire Hajjar.

Ticket cochairmen: Charles Morris, Virginia Aziz.

Ticket committee: Jessie Morris, Josephine Nahil, Dora Ann Hikel, Carol Williams, Edward Hikel, Jr., Jenna Aziz, Ted Shiepe, Claire Hajjar.

Publicity cochairmen: Edward Hikel, Jr., Brenda A. Finn.

Invitations cochairmen: Rosalie Habeeb and Jennie Nassar.

Invitations committee: Anna Shiepe, Eveleyn Hajjar, Emily Hassy, Viola Hassy, Angie Morway, Delia Hajjar.

JUBILEE PROGRAM, GOLDEN ANNIVERSARY OF ARCHIMANDRITE PETER ABOUZEID, B. S., SUNDAY, JUNE 23, 1957

11 a. m., Solemn Liturgy of St. John Chrysostom, Archimandrite Peter Abouzeid, B. S., celebrating, His Excellency Archbishop Cushing, presiding and preaching.

Cocelebrants: Rt. Rev. Archimandrite Nicholas Borkhoche, B. S., of Boston; Rt. Rev. Justin Najamy, D. D., Central Falls, R. I.; Rev. Theophilos Atala, B. S., Montreal, Canada; Very Rev. John Jadaa, B. S., St. Basil's Seminary; Rev. Emile Sharanevych, Salem, Mass.

Master of ceremonies: Rev. Lucien Maloof, B. S., St. Basil's Seminary.

Choir master: Rev. Nicholas Abraham, B. S., St. Basil's Seminary. Assisted by: Mrs. Claire Hajjar and Mrs. Madeleine Stephanou.

Organists: Nesta Saba and Lorraine Hassey.

1:30 p. m., Jubilee banquet at Central Catholic Auditorium.

Invocation: The Most Reverend Jeremiah F. Minihan, D. D., V. F. LLB., auxiliary bishop of Boston.

American national anthem: Theodore Shiepe.

Lebanese national anthem: Rev. Nicholas Abraham, B. S.

General chairman: Attorney Wilbur A. Hyatt.

Cochairman: George A. Hajjar and Edward Kfoury.

Toastmaster: Attorney Michael J. Batal.

Speakers: Mayor John J. Buckley; Congressman Thomas J. Lane; Mr. George A. Hajjar; Cor-Bishop Joseph David; Msgr. Francis M. Juras, pastor, St. Francis Church, Lawrence; Hon. John E. Fenton, judge of the land court; His Excellency Most Rev. Jeremiah Minihan, D. D., V. F. LLB.; His Excellency Most Rev. Richard J. Cushing, D. D., LL. D., archbishop of Boston; Very Rev. Archimandrite Peter Abouzeid, B. S., Jubilarian.

Polikhronion (Long Live the Archbishop).

OUR HONORED JUBILARIAN, RT. REV. ARCHIMANDRITE PETER ABOUZEID, B. S.

It is customary to refer to golden jubilarians in the priesthood as venerable. Although well entitled to be held in veneration because of what he stands for and because of what he is and has been to us in St. Joseph's Parish, it is hard to think of Monsignor Abouzeid as being venerable. His youthful appearance and his energetic administration of our parish make it difficult for us to realize that he is now completing 50 years in the sacred priesthood.

The beloved spiritual father whom we now honor was born in the city of Zahle, Lebanon, June 25, 1885. He received in holy baptism the name Joseph. His early education included studies as the Jesuit School and the diocesan schools of his native city at a time when the illustrious and far-sighted Gregory II Yussef still occupied the patriarchal throne.

Fifty-six years ago, in 1901, our jubilarian entered the Basilian Order of the Most Holy Saviour at the Motherhouse near Saida, Lebanon. He received the name Raphael in the novitiate. Two years later, he pronounced his simple vows. In January 1907 he was admitted to solemn vows. On April 14, 1907, the event we now solemnly commemorate—his ordination to the sacred priesthood—occurred with His Excellency the Most Reverend Basil Hajjar, D. D., bishop of Saida, officiating as the ordaining prelate.

As a Basilian Salvatorian Father, our good pastor became known as Father Peter. In the early days of his priesthood, he exercised the sacred ministry in various parishes to aid the local bishops and clergy, working under the direction of Bishop Clement Malouf of Cesarea di Filippo and Bishop Basil Hajjar of Saida. Later he was assigned to teach in the diocesan schools of Zahle where he himself had once been a student. During this period, Father Peter worked under and became well acquainted with the then bishop of Zahle, Monsignor Cyril Mogabgab, who was destined to reign as patriarch under the title Cyril IX.

In 1912, our jubilarian received permission from his superior general and from his patriarch to visit his father in New Zealand. His travels to and from New Zealand took him through Egypt, Palestine, India, and Australia. While in New Zealand, he visited Melkite colonies in Wellington, Auckland, and Christchurch and exercised the priestly ministry among these people with the permission and hearty encouragement of Archbishop Redwood of Wellington, Bishop William Cleary of Auckland, and Bishop John Grimes of Christchurch.

Upon the return from New Zealand, where his missionary labors among the Melkites were much appreciated, Father Peter was apointed vicor general of the Diocese of St. John of Acre in Palestine and superior of the Basilan Salvatorian Fathers working in that diocese. There he labored for nearly 2 years in close collaoration with Bishop Gregory Hajjar, B. S.

Toward the end of 1914, Father Peter returned to the Monastery of the Most Holy Savior. During the next 6 years, he devoted all his time to study and writing, translating from French to Arabic some meditations on A Happy Death, and a volume entitled "Chastity," addressed especially to teen-agers and young adults. At this time, too, he commenced the monumental task of compiling the first concordance to the Bible in Arabic, work of some 1,200 pages which he published somewhat later.

On September 10, 1920, Father Peter was assigned to parochial work at St. Joseph's in Lawrence. At Christmastime that year, he was welcomed here as an assistant to the then pastor, Msgr. Basil Nahas, B. S. Since then, except for the 8-year period of his pastorate in Boston, Father Peter has been in our midst counseling, directing, and encouraging us. He is the founder of all the St. Joseph's Parish societies now in existence and he continues to be their inspiration.

A few months after Father Peter's arrival here in Lawrence, we were honored by the visit of His Excellency the Most Reverend Maximos Saigh, M. S. P., archbishop of Tyre, who now reigns gloriously as Maximos IV, patriarch of Antioch and all the east, of Alexandria and Jerusalem. Father Peter was chosen to serve as secretary to the archbishop during his tour of eastern United States and Canada.

From the very beginning of his life in the United States, Father Peter was active in ministering to the scattered Melkites in Springfield, Fall River, and Manchester, N. H. He visited these cities regularly, in addition to attending to his duties as an assistant to Archimantrite Basil Nahas at St. Joseph's here in Lawrence. Also, Father Peter was selected to preach missions to Melkite congregations in New York, Fall River, Mass., Ohio, and in Canada. His work among the Melkites of the diocese of Manchester is especially worthy of note, encompassing as it did some 30 years during which he served under 3 bishops. At present, the Manchester mission is staffed by the fathers from St. Basil's Seminary in Methuen.

Upon the return of Monsignor Nahas to the mother house of the Basilian Salvatorian fathers in Lebanon, Father Peter was promoted to the pastorate of St. Joseph's. Two years later, in 1925. His Eminence the late Cardinal O'Connell assigned Father Peter to be parish priest of the Church of our Lady of the Annunciation in Boston. An account of our jubilarian's discharge of this important assignment appears elsewhere in this book.

In 1933 we at St. Joseph's had the happiness of welcoming Monsignor Abouzeid back to Lawrence as pastor. While in Boston he had been advanced to prelatial rank and given the title of Archimandrite by Bishop Athanasius Khoriaty, of Saida, and also by the then reigning patriarch (1927), his beatitude, Cyril IX Mogabgab, whom he had served well during the latter's tenure as Bishop of Zahle.

Since his return to St. Joseph's 24 years ago, Monsignor Abouzeid has worked diligently for the welfare of the parish. Despite many duties outside the parish, including a term as provincial superior of the Basilian Salvatorian fathers in the United States, and his work in connection with the founding of St. Basil's Seminary in Methuen, he has breathed new life into the parish societies.

The obvious material result of Monsignor Abouzeid's labors among us is our beautiful Byzantine-style St. Joseph's Church, dedicated less than 5 years ago. This sacred edifice is a fitting temple of the Most High God modernly equipped and tastefully decorated. It affords us a proper setting for the celebration of our beautiful Byzantine liturgy and for the other ceremonies of our Melkite rite. Truly, it is one of the crowning achievements of monsignor's 50 years of priesthood, especially when one considers the number and the variety of the difficulties he faced during the long preparation and construction periods.

Yet it is not the church itself, beautiful as it is, that we are proudest of. It is monsignor himself whose effectiveness as a spiritual leader and as a wise counselor is well known to us. He has impressed upon us the truths of our holy religion in kindly though firm fashion so that we are today better Catholics, better Melkites and better Americans than before his coming. By his prayerful intercession before the throne of God, by his preaching, by his zealous labors for us, and by his good example, he has led us gently to the feet of Christ. In this way, he has rekindled and kept aflame our love for God and the church, our special attachment to our Melkite traditions, and our love for the United States of America. Without this firm spiritual basis for the material advancement of the parish, the beautiful new St. Joseph's Church could not have become the wondrous reality that it is. With grateful hearts we salute our dear archimandrite and pastor on this his golden jubilee and wish him long life and true happiness.

Dangerous Power

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. ASHMORE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Greenville News, Greenville, S. C.:

DANGEROUS POWER

The President rather strongly denies he would ever send troops into any community to enforce a court order. He says he can't imagine a set of circumstances that would call for such action.

Senator JAVITS, liberal New York Republican, describes as "hobgoblin" fears the objections of the opposition to portions of the civil-rights bill and suggests that the southerners should have faith in Presidential and judicial restraint.

Why should we have any such faith? Maybe we could trust Mr. Eisenhower to forego the bayonet and the concentration camp, but how can we be sure his successors will?

The late President Roosevelt violated the Neutrality Act when, in 1940, he shipped a vast store of arms and ammunition to Great Britain. Perhaps he was right and did only

what should have been done, but he broke the law and went against the advice of many of those around him.

President Truman broke the law when he attempted to seize the steel industry to end a strike by giving the unions what they wanted.

Are these "hobgoblins"?

As for judicial restraint, recent history is so vivid and so bitter that the topic needs no discussion.

Both the President and Senator JAVITS appear to be arguing that the authority in question would never be used. To that extent they are agreeing with the Southern position that it not only isn't needed, but is dangerous.

Then why insist that it be in the law?

Veto Predicted Again for Flood-Control Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by William F. Pyper and appearing in the Flint, Mich., Journal of July 11, 1957:

VETO PREDICTED AGAIN FOR FLOOD-CONTROL BILL

(By William F. Pyper)

WASHINGTON.—Democratic as well as Republican sources in the House are predicting a veto if and when Congress passes the omnibus public works bill which contains a $16,085,000 Saginaw Valley flood control and conversation project.

The $1,450,000,000 bill is up for a final vote of the House Committee on Public Works, and may be reported out before nightfall. The House committee has cut nearly $100 million off the Senate version, but it still contains a large number of projects which lack approval of the chief of Army Engineers or the Director of the Budget or both.

It was lack of such approval for a number of projects which led President Eisenhower to veto a similar bill last year—just ahead of an election.

Republicans on the House Public Works Committee have been suggesting for weeks that the same thing might happen this year.

The Republicans blame the Democrats for loading the measure with objectionable projects. Michigan's representative on the committee, Republican WILLIAM S. BROOMFIELD of Royal Oak, has been particularly active in objecting to such projects, especially when the Democrats used proxies to insert the amendments.

Now comes a Democrat high up in the councils of his party in the House who is frank to say that the unapproved projects again jeopardize the public works authorizations for another year.

"He couldn't possibly sign this one after having vetoed the one last year," said the Democrat who preferred to remain anonymous.

The bill goes to the Committee on Rules which normally would provide a rule under which the measure could be considered on the floor of the House. In view of the circumstances, there is some doubt about such a rule.

If the bill does reach the floor, Republicans will repeat their efforts to eliminate the objectionable projects as well as efforts to cut the amounts authorized. They have little hope, however.

"If any changes are made on the floor, they'll make the bill worse," according to the Democratic source. "There isn't a chance we'll get a bill that the President can sign this year."

The House amendments would require that the bill go back to the Senate where it originated. The Senate might agree to the amendments or send the measure into a conference committee to iron out differences between the two Chambers. With the civil-rights filibuster underway, Senate action on anything is extremely doubtful at this moment.

Michigan has a considerable interest in the bill, as it did last year. Involved besides the Saginaw Valley project, are the $5,358,000 Kalamazoo River flood-control project at Kalamazoo, a $9,825,000 Grand River flood-control authorization and some smaller river and harbor projects which are said to be vital.

Deep Freeze Treatment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting editorial which appeared in the Lawrence, Mass., Sunday Sun on July 21, 1957:

DEEP FREEZE TREATMENT

Barring a last-minute surge of unexpected activity, the first session of the 85th Congress will adjourn with a shameful record of inaction on the recommendations of the second Hoover Commission.

Grassroots pressure for thrift in government was unprecedented during most of the session. Despite this citizen-mandate, the congressional committees that must initiate the action needed to put the Commission's legislative proposals into effect haven't even bothered to hold hearings on 80 percent of the more than 170 pending bills.

Instead, for a variety of reasons ranging from lack of political courage to belief in paternalistic government, the economy drive has been restricted to nibbling at appropriation requests.

This approach ignored the plainest of facts—that it is impossible to cut the cost of Government significantly unless the size and scope of Federal activity is reduced.

The task forces of the second Hoover Commission not only documented the accuracy of this age-old truth but pointed out literally hundreds of ways and places to reduce the size and cost of Government without impairing the national security or eliminating truly essential Federal programs or services.

A special United States Chamber of Commerce analysis and comparison of the 1958 budget and the Hoover Commission proposals identified 24 places where the adoption of specific recommendations would make possible a cut of at least $1 billion.

Instead of leaping at this magnificent opportunity, the 85th Congress has virtually ignored it. Worse yet, it has taken at least a dozen actions that are in direct conflict with the Commission proposals.

With over 6 months of the session already gone, Congress has sent only 2 minor Hoover Commission bills to the White House.

The Hoover group completed its painstaking audit on June 30, 1955. The plausible alibi for congressional inaction that year was: "We got the recommendations too late in the session and must study them."

In 1956, some 32 laws implementing 39 relatively minor recommendations were enacted. But the major dollar-saving proposals were ignored because they were "too controversial to take up in a presidential election year. Wait till next year. The results of our studies will be in and it's a nonelection year, and real headway can be expected."

This—1957—is that "next year" and the record of apathy and indifference speaks for itself.

An examination of the legislative history of the law that established the second Hoover Commission reveals that it had unanimous bipartisan House and Senate support.

That law declared it to be the policy of Congress "to promote economy, efficiency, and improved service in the transaction of the public business."

It directed the Commission to examine the wisdom of the policies of Government, as well as the appropriateness of its structure, and to submit to Congress its recommendations regarding any changes that are necessary to achieve the above policy objectives.

The Commission completed its assignment 2 years ago and immediately won bipartisan applause.

But Congress has failed flagrantly to recognize and discharge its moral obligation to evaluate the Commission's proposals; to translate those having merit into dollar savings and thereby expedite the achievement of long-overdue debt and tax reductions.

The great danger of the prevailing congressional attitude does not lie in the possibility that the Commission's proposals will go down the drain. The real danger is that no review of Government—such as that made by the Hoover Commission—will again be made. The size and difficulty of Government operation make such periodic reviews imperative.

Hon. James B. Bowler

SPEECH
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 18, 1957

Mr. MARSHALL. Mr. Speaker, I join with his many friends and distinguished colleagues in mourning the death of JAMES BOWLER, our respected colleague from Illinois. To his wife, I extend my deep personal sympathy in her great loss.

We know she will take comfort in the admiration expressed in this House by the many Members who came to know JIM BOWLER during his service among us. His long and distinguished career in public service will be a continuing source of inspiration just as his wealth of experience in public administration contributed to our work in the Congress.

His friendly manner was missed during the period of his illness. His love for the House of Representatives was demonstrated by his faithful attendance

and his careful attention to the legislation before the Congress.

Those of us who knew him respected his judgment and valued him as a friend.

Jury Trial Is Still the Best System

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. ASHMORE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the Greenville News Greenville, S. C., on Monday, July 22, 1957. The editorial follows:

JURY TRIAL IS STILL THE BEST SYSTEM

One of the primary objects of the proposed civil-rights bills is to move Federal civil-rights cases from the criminal side of the court, where juries must judge the facts, to the equity side, where judges may convict and punish without a jury trial persons accused of violating injunctions forbidding them to tamper with the rights of others.

Proponents of the bills justify their position by the charge that, out of prejudice, southern juries will not convict officials or plain citizens accused of civil-rights violations.

They point to the failure of a Mississippi jury to convict on purely circumstantial evidence two white men charged with murder in the death of a Chicago Negro youth and to the refusal of a South Carolina grand jury to indict five men charged with a nocturnal flogging.

They are awaiting the verdict of the Federal jury in Knoxville, which soon will decide the fate of 11 or so persons accused of violating a sweeping Federal injunction having to do with integrating the public schools of Clinton, Tenn.

We do not believe in going behind the verdict of a jury. But since these people have chosen to do so in other cases, they might well consider the action of the jury which on last Friday acquitted teamsters union official James R. Hoffa of charges of conspiring and bribing to plant a spy within the Senate subcommittee investigating union rackets.

Robert Kennedy, chief counsel of the subcommittee which originated the case, remarked beforehand that he would jump off the Capitol dome if Hoffa were acquitted. The Government prosecutor thought Hoffa had been caught with the goods on him and expressed surprise at the verdict.

The jury was drawn not from the often questioned South, but from the District of Columbia, the National Capital. It consisted of 8 Negroes and 4 whites. Joe Louis, Negro ex-heavyweight boxing champion, sat in a conspicuous place in the courtroom for a day and a half and told newsmen he was there to see what was happening to my good friend, Mr. Hoffa.

The jury considered the facts and reached a verdict. Unless evidence is produced to show that it was tampered with, that ends the case and it's good enough for us. No man should be forced by his Government to stand trial, and risk loss of life, freedom or property, except before a jury.

But if, as the proponents of civil-rights legislation imply, there is something wrong with the jury system, something should be done about it, and the District of Columbia is a good place to start.

Historical Key West, Fla.

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. FASCELL. Mr. Speaker, an article appearing in the July 1, 1957, edition of the National Airlines Star Reporter, written by Mike Silver, very accurately portrays the historical island city of Key West, Fla.

Nowhere else in the United States is there to be found such a unique community. It is replete with all the advantages of a vacation and business community. The huge naval installations at Key West and Boca Chica play a vital part in our national-defense system. Nowhere else in the world can there be found the quality of fishing opportunities that are readily available year round to tourist and resident alike.

The residents of Key West are proud of their community, and justly so. They welcome the opportunity to explain the origin and history of Key West and to extend a friendly greeting to the tourists.

I encourage all of my colleagues, both in the Senate and House, to follow the footsteps of some of our Presidents and explore the salubrious climate of this island city.

Mr. Silver's article follows:

KEY WEST VIA NATIONAL

(By Mike Silver)

He was a distinguished-looking executive from New York and, out of sixty-odd passengers aboard 405, I picked him to sit beside. As I was seating myself, he opened his briefcase and began working feverishly on the various papers in it.

We were airborne before I asked him why he had taken a window seat if he was so engrossed in his work. He gave me a startled look and, recovering his composure, told me, rather pointedly, "Look, son, I have been flying to Miami 3 times a year for the last 4 years and I have yet to look out of the window, nor do I care where I sit. Would you like to trade seats?"

"No, sir," I said, "at least, not for the present. My main concern is your indifference to where you've been, what you're over, and where you're going."

"Well, son," I said, "I wouldn't worry too much about it, if I were you. I have two very important business conferences scheduled for tomorrow. Now, if you don't mind, I had better get back to work."

"You're awfully touchy," I said.

"Keyed up," he said.

"Speaking of keyed up," I said, "have you ever been to Key West?"

He was beginning to get that panicky, trapped look on his face, but there was nowhere for him to turn. He couldn't move into the next seat because I was in it, and he couldn't jump out because his window was closed and sealed. I had him where I wanted him.

"Why should anybody go to Key West?" he asked.

So I told him, like this:

Key West is the bottom island in a string of keys south and west of the southern tip of Florida.

It is easily accessible by plane, car, boat, or a combination of all three.

National Airlines has flights daily into, and out of Key West. After a delightful 45-minute flight from Miami over the sparkling Gulf of Mexico, a rental car and boat with trailer will be waiting for you. This can be prearranged at almost any city along National's route * * * through Couture Sea-Fari. These people also supply complete fishing or skin diving equipment.

By car, it's a 150-mile drive from Miami along the beautiful toll-free Overseas Highway. Yachtsmen and skippers of larger craft are aided by the 24- to 30-foot water at various docks around the island which permits the handling of tankers and ships up to 15,000 tons.

When you arrive, you find an exotic coral island, surrounded by the clear, blue waters of the Caribbean and the Gulf of Mexico. Key West is unique as an American city because it blends Cuban, West Indian, and Bahamian atmosphere. Its facilities for comfort, health, recreation, and business however, are on modern American standards.

Key West architecture is predominantly Bahamian as the pictures illustrate, with upstairs and downstairs balconies and an accent on coolness in summer. There are also many modern housing developments. The average tourist has his choice between modern motels with pool facilities and the quaint Bahama-type guest houses.

Key West enjoys the most equable climate in the United States as it is the Nation's southernmost city. In fact, the lowest temperature ever recorded was 41 degrees in 1886. The highest was 95 in July of 1956.

Key West, like all of Florida, has a fabulous history.

It was the base for Spanish adventurers, pirate crews, and commercial fishermen. English and Negroes from the Bahamas were the first permanent settlers in the early 1800's. Families from New England, Virginia, and the Carolinas settled there after Commodore Porter and part of the United States naval fleet drove the pirates into the seas. Salvaging wrecks was profitable in the early days, then came cigar making in 1828, when Key West was incorporated. Key West is the English version of the name given the island by a Spaniard who saw the bones remaining from an Indian battle. He named it Cayo Hueso, Island of Bones.

In 1950 vast shrimp beds were discovered in the waters between Key West and the Dry Tortugas, a stretch of 65 miles. Shrimping has since grown into one of the main industries on this island.

The local species is known as Tortugas pink shrimp and is highly prized because it is tasty, eye-appealing, and easily shelled.

Some 400 shrimp trawlers operate out of Key West. Fishing is done in waters ten to 20 fathoms deep—the deeper the beds the larger the shrimp. Their catch now averages 1 million pounds a month.

The dominant sport in Key West is fishing. The Gulf Stream, which flows northward along the Florida Keys provides one of the world's finest fishing grounds. Only 5 miles offshore from Key West, this natural habitat of fighting game fish is easily and quickly reached from the docks.

A fleet of over 30 deep-sea fishing boats is available for charter. Native guides, who have fished these waters all their lives, introduce the uninitiated to the area that the United States Bureau of Fisheries says is the Nation's finest, with over 600 varieties to be found in Key West waters.

Gulf Stream fishing produces tarpon, bonito, kingfish, jack snapper, bluefish, barracuda, jewfish, shark, marlin, wahoo, dolphin, cobia, mackerel, and grouper. In the shallow flats, from small boats and off bridges, typical catches include grunts, yellow-tail, snapper, sea perch, grouper, and bass.

Underwater spear-fishing and skin-diving are practiced by many fishermen and sportsmen in this area. In fact, people come from all over the world to take part in these increasingly popular sports. The clear water, and numerous islands with sloping beaches,

give the gogglemen an excellent opportunity to enjoy these sports to the fullest.

Key West offers such a perfect natural environment for underwater activities that the United States Navy trains their underwater demolition teams (frogmen) extensively there. This is only a small part of one of the largest Naval installations in the world. Also at this famous naval station are the Little White House where President Truman stayed during vacations and Quarters L where President Eisenhower convalesced from his heart attack.

Some of the most unusual structures in the South are in Key West.

The oldest house was built in 1825 and is located at 322 Duval Street which, according to Ripley, is the longest street in the world as it reaches from one ocean to another. Ernest Hemingway's former home is at 907 Whitehead Street and the southernmost house in the United States is located at the end of Whitehead Street on South Street.

East and West Martello Towers are old Civil War forts built in 1861. Incidentally, Key West, although southermost city in the Nation, was never under the Confederate flag. East Martello, with a fine museum and art gallery, is adjacent to the airport.

Still other attractions are the Key West Aquarium, where different species of underwater life are brought in each day, and the Turtle Kraals. Kraal is the Dutch word for corral. Giant deep-sea turtles, caught off the coast of Nicaragua and averaging 500 pounds apiece are brought here to the kraals to be slaughtered and canned into soup and steaks. A part of the harbor is set aside and subdivided by wooden partitions in order to keep the turtles alive prior to slaughtering, enabling tourists to see these huge turtles in their natural state.

There are a great many dining places in Key West, many famous for their Key lime pie. The adventurous can always find native dishes cooked and served excellently here, where the local chefs are noted for their turtle steak, chicken, conch, fish and yellow rice with black beans. For dessert there's always Key lime pie (what else?).

Night life in Key West has its complement of atmospheric nightclubs that have been the scenes for several movies. The Nation's southernmost city's colorful history, as you can see, blends the enchantment of yesterday with the excitement of today and makes this coral island a unique setting for a different vacation.

"Mph," he said, still ruffling the papers from his briefcase.

Apparently, I thought, he had not been listening. I didn't see how he could keep from it, but he obviously was preoccupied. As I value my life, I did not pursue the subject further, and besides, we were touching the end of the Miami International Airport runway.

Walking to the national ticket counter to claim our baggage, he turned to me and asked if I could direct him to the person who gives information on flights to Key West.

So I told him.

Politics and Post Offices

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. BROOMFIELD. Under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Grand Rapids, Mich., Press of July 18, 1957:

POLITICS AND POST OFFICES

If the Democratic Members of the House Public Works Subcommittee have their way Grand Rapids and 148 other communities probably will not get much-needed Government buildings for a long time. The Democrats on this particular committee are opposed to the present method of having the Government buy post offices and such buildings on a sort of deferred payment plan; they want to buy the buildings outright. But it would cost about $1½ billion for a scheduled 149 projects—and as Representative BROOMFIELD says, Congress isn't about to lay out that much money at one time.

The present system has worked very well. Private interests have put up the buildings and then leased them to the Government. The rent paid by the Government has applied against the purchase price, with the Government eventually gaining possession.

This has made it possible to provide Federal buildings that otherwise would have to be put off for perhaps many years. The cost has been spread over fairly long periods, thus relieving taxpayers in any 1 year of having to shoulder the entire load. In short, it would be hard to find a more satisfactory way of getting needed buildings without boosting the Federal budget to a sizable degree.

Why the Democrats couldn't go along with this procedure we don't know—unless they want to put the projects on the shelf until such time as they may regain control of the executive branch and use public works for political purposes. But whatever the reason, the public should object strenuously to their upsetting so reasonable and workable a method of getting done what needs to be done.

The Significance of Rural Life and Leadership

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech delivered by W. B. Young, dean and director, College of Agriculture, the University of Connecticut, at the dedication of the Middlesex County Agricultural Center on June 30, 1957.

Dean Young is well known not only in our State but throughout New England, and to the farming sections of the country. His views are always well respected by those of us who have been privileged to work with him. I believe his remarks to be of particular significance at this time, and I consider it a great privilege to place them in the Appendix of the RECORD so my colleagues may have the pleasure of reading them.

THE SIGNIFICANCE OF RURAL LIFE AND LEADERSHIP

(Speech given by W. B. Young, dean and director, college of agriculture, at the dedication of the Middlesex County Agricultural Center, June 30, 1957)

President Merriam, Reverend MacLeod, Commissioner Watrous, Commissioner Gill, Congressman Seely-Brown, officers and directors of the Middlesex County Farm Bureau, Middlesex County Commissioners, and friends of agriculture, this is a distinct honor, a high privilege, and a challenging responsibility. It is a genuine pleasure to be invited to participate in this dedication program today.

It is with a real sense of pride and pleasure that I bring you the warm and cordial greetings of the College of Agriculture of the University of Connecticut. My pride today is severalfold: (1) In your confidence and continued interest in agriculture in Middlesex County, in the cooperative agricultural extension program (as demonstrated by your presence and the dedication of this building today as the Middlesex County Agricultural Center); (2) in our fine staff of Middlesex County extension workers (so ably headed up by Gregory Curtis and Earl Prout in the agricultural programs, Mrs. Danforth and Mrs. Russell in homemaking, and Lloyd Wilhelm and Mrs. Watson in 4–H Club work); (3) in the outstanding accomplishments and contributions to agriculture and society made by the splendid cooperation of the Middlesex County Farm Bureau, the Middlesex County Commissioners, and the Middlesex County Extension Service.

The college of agriculture and the university and the citizens of Middlesex County shall always be indebted to you for your generosity, your vision, and your sponsorship in developing in this county such an outstanding extension educational program in agriculture, in homemaking, and in 4–H Club work.

Since 1914, when the Congress created the Agricultural Extension Service with the passage of the Smith-Lever Act, establishing the so-called county-agent system, which had as its objective "To help people help themselves"—and made it cooperative, local, State, and National, Middlesex County has been in the forefront in this program. Time will not permit to tell the whole story, but let me highlight a few of the meritorious programs, events, etc., which have occurred in this county.

Middlesex County was one of the early leaders in the grow healthy chick program. Through this and other programs came the development of your outstandingly successful poultryman of today. Your county was was also an early leader in the improvement of dairy herds by sponsoring a purebred bull campaign in the early 1900's. The dairy farmers in this county were keeping milk-production records in the 1920's. Of recent interest, is the leading position which Middlesex County has occupied again in the dairy field and the statewide leadership in the eradication of brucellosis.

Your county has had successful programs since early years in both the fruit and vegetable fields. And men from your county are known far and wide as leaders in these areas, and have been so recognized by their commodity organizations.

Today Middlesex County ranks 22d of all the leading counties in the United States in the value of nursery and greenhouse products sold.

In the home demonstration field, a significant program has been in home efficiency planning for homemakers. You were one of the first counties to gain the outstanding cooperaiton of the Heart Association, the Red Cross, and the PTA.

In 4–H Club work, Middlesex County had the first 4–H sheep club program. You developed and held the first county 4–H fair in the United States, put on by 4–H Club members for 4–H Club members. I would like to mention a current 4–H program, and that's the 4–H auction held at Durham Fair Grounds. As you know, the money from this has been used to make it possible for an increasing number of 4–H Club members to participate in statewide and New England 4–H activities. A former 4–H Club member of your county holds the distinction of being the first 4–H alumnus to be elected president

and leader of the Connecticut Farm Bureau Association, Frank Roberts.

Speaking of leadership, I note that the program for today's activities lists a great many of the very active agricultural, homemaking and youth leaders who are important here in Middlesex County and who are active not only with their extension program, but with other programs which have a vital relationship to agriculture. I would like to call your attention, though, just a moment, to some of the other leaders that Middlesex County developed and who have risen to positions of trust in public service and other work. There are, for example, Russell Anderson, now county agricultural agent in Hartford County; Sidney Edwards, who is managing director of the Connecticut Development Commission; Henry Hansen, our own associate director of agricultural extension; Phil Dean, State administrative officer of the agricultural stabilization and conservation program.

In the comparatively short time since America became a Nation, our agriculture has achieved a pattern of success that is the cornerstone of our national strength as well as the envy of the world. The land-grant college system of education through research, teaching, and extension has played a leading part in making it so.

Standing out above all other features in this pattern is a spirit of productivity. This ever-growing fruitfulness has been the basis of our national prosperity and has given character to our civilization. American historians are inclined to attribute our surprising production to good land and exploitation of our natural resources. This explanation is at best a superficial one. There are other places on the globe where land and resources are good, but somehow their people have never found the key with which to unlock their wealth. Our form of government, our belief in free enterprise, and our public education system with our agricultural education programs in each State of research, education, and extension to provide people the know-how have been the key in the United States. No other country has anything to match it.

A hundred years ago it took four farm families engaged in agriculture to provide a bonus of life's necessities to supply one family engaged in city pursuits. Now the ratio is reversed. One family on the land can now release four or five families for the manufacture of the goods and services, as well as the cultural and educational pursuits which determine our standard of living and set the tone of our civilization.

Think what an enormous advantage we enjoy because less than one-fifth of our people are needed to wrest the necessities from the land. Think of the good that could be accomplished if all this released talent and energy could be used for the advancement of mankind and the enrichment of life. Willingness to work hard, eagerness to discover and use new scientific information, and a curious kind of joy in competition and improvement have combined to make this productivity a fact and a blessing in our country.

Another significant feature of American agriculture has been the uninterrupted farm-to-city migration. A farm-to-city movement is common to all growing civilizations. American families who have been displaced from the land, or liberated have adapted themselves to industrialization with amazing success, and brought with them to the city much of the enterprise and productivity that has characterized our farm population.

The third great characteristic of American agriculture grows directly out of the two I have just mentioned. The American countryside sent its growing cities habits of work and thrift that spring from the rural pioneer. In the city these virtues blossomed into courage and resourcefulness that built great businesses and institutions.

It has been brought to our attention in the last 2 or 3 years that socialism has largely replaced capitalism in European countries because European capitalism has grown corrupt and placid. The European businessman long ago lost his desire to stand on his own feet, and he set about escaping healthy competition through governmental favor and monopolistic schemes. American business has not escaped this blight entirely, but it owes its extraordinary success to its willingness to improve its products and lower its price in a healthy competitive economy. Since industry was built largely by farm boys, it speaks well for the quality and courage of these boys who left the land to build our industrial economy.

People who come to our land from distant shores speak with respect of the honesty, the integrity, and the responsible nature of the average American. The traditional American virtues of hard work, thrift, ambition to improve, willingness to take responsibility, and respect for God were born in the farm homes of this country.

Rural life in our time is faced with disturbing dilemmas. Take, for instance, the very fact of our great productivity. We are actually beginning to wonder whether our productivity is a good or an evil.

On the good side, we admit it has freed us almost completely from the fear of hunger which has dogged the human race through most of its existence. It has also freed a large majority of our population to do a multitude of useful and exciting things.

On the bad side of the ledger, we can list such doubts as these: Is urbanization of our population really good? Should we try to slow it down? What should we do about the thousands who are displaced by mechanization? Are we producing ourselves into poverty by trying to keep farm production free while other segments protect themselves by monopoly?

For me, there can be only one acceptable answer. Productivity is good because it builds people and also administers to their needs.

I derived great satisfaction recently when I picked up a publication of the University of Illinois, entitled "Illinois Farm Economics" and I read this: "Farm people are the most religious, the most conservative, the kindest people on earth. If they succumb to a dog-eat-dog materialistic philosophy there is no hope for the Nation." I read further: "Our great chance for survival and for maximum happiness of future generations is tied to the great nonmaterial values for which our ancestors were often willing to sacrifice material welfare. I refer to belief in absolute truth, love, of our fellow men, belief in the rights of the individual to life, liberty, and the pursuit of happiness, the submission of the state to the will of the people governed, the belief that peoples have minds and souls, and that there are nonmaterial satisfactions as well as the material ones—the moral or ethical considerations far outweigh the short-term economic consideration."

Rural people are important as the custodians of the soil and producers of the world's food supply. But even that is secondary. Rural life has its greatest significance as the fountainhead of the habits, the ideals, and moral responsibility that we must have if our civilization is to prevail. The great feat that hangs over the world is a dread that we may have gone too far in substituting selfish materialism for the moral laws and spiritual values that were the strength of rural America during our formulative years as a Nation.

We cannot possibly turn back time and make America primarily rural again. Our great skill and deep reserve of productivity will be sorely needed in the great struggle that is shaping to save the world from slavery. But we must define those human virtues which are best reared and nourished in the rural environment and shoulder the responsibility of preserving these virtues. In doing so, we will be setting up yardsticks that will have strong influence upon our urban civilization, and we will be assuring a supply of wholesome and effective leadership for our country's future. I can think of no task which is more important and to which I would rather be dedicated than working with the rural people of Middlesex County, or for those of Connecticut or of this Nation.

You, the leaders of Middlesex County, are performing a service which money can never buy. For example, your interest in the boys and girls, your interest in their welfare—helping them to achieve their goals, their desires, and their needs so they may be recognized for having done something worth while—is nonmeasurable in wealth. You are building family, community, county, State, and national loyalty, achievement, and citizenry. You are doing the same for adults of this county in your agricultural and homemaking programs.

I do not believe I need to define the word or term "citizenship," for it is something we all understand. But we need to arouse, throughout our communities, our State, and Nation, a greater sense of responsibility in enthusiastically living and promoting the ideals of democracy. This, of course, is a part of our deed of citizenship.

Good citizens and good citizenship should begin in local communities and counties. Your county leaders certainly exemplify the grassroots beginning. We must love our own homes and communities and neighbors, and be good citizens there, before we can be like the pebble dropped into the water with ever-widening circles, until our influence of citizenship reaches throughout the State and Nation.

Our homes, our home communities, our friends, our State, our Nation, have specific meanings and attractions for us which other regions, other people, can never rival.

Yes, citizenship is built upon pride, upon accomplishments, upon faith, upon knowledge, upon service, not for ourselves but for others.

Certainly, you local leaders have truly demonstrated the high ideals of American citizenship and leadership in the development of this agricultural center. I congratulate you on your vision, your cooperation, and your objectives.

To anyone who holds, as I do, a deep and abiding faith in our American way of life, and in all that it stands for, there could be no prouder honor than to be recognized as a leader and as an outstanding citizen in this great county, or State, or Nation.

Personally, and in behalf of the college of agriculture and the university, we salute each of you and thank you most sincerely for your splendid leadership, your support and cooperation in furthering the agricultural extension program for the welfare of the boys and girls, the men and women—the citizens of Middlesex County.

What Does It Mean?—Loose Use of Proxies Again May Bring Public-Works Veto

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks in

the Appendix of the RECORD, I wish to include an article by William F. Pyper which appeared in the Flint, Mich., Journal, Wednesday, June 26, 1957.

The article follows:

WHAT DOES IT MEAN?—LOOSE USE OF PROXIES AGAIN MAY BRING PUBLIC-WORKS VETO

(By William F. Pyper)

WASHINGTON.—Loose use of proxies in approval of public-works authorizations again may jeopardize the public-works bill which President Eisenhower vetoed last year.

That's the word from Michigan's member of the House Public Works Committee, freshman Republican Representative WILLIAM S. BROOMFIELD, who already has started a fight against proxy voting which he criticized recently.

A former member of the State house of representatives and the State senate, Representative BROOMFIELD has the support of other Republicans on the committee, including Representative J. HARRY MCGREGOR, of Ohio, ranking minority member. The policy which permits one member of the committee to vote for others who are absent by holding a general proxy may be restricted to tighten up on the approval of questionable projects, it was indicated.

It was because Congress approved a number of projects which lacked approval of the Army Corps of Engineers and the Budget Bureau last year that Mr. Eisenhower vetoed the whole bill. The President has no item veto power, so approved projects fell along with those without legal support. A statute which fixes congressional policy requires expressed approval of the chief of Army Engineers for each project to be included in the authorization.

Representative BROOMFIELD had said that one of the greatest disappointments he had experienced in Washington was absenteeism at committee sessions and the use of general proxies on important decisions. He had added that he intended to fight the practice, particularly when his committee reached the omnibus authorization bill.

Tuesday the House committee started going through the bill. On the first page, a motion was made to insert a $500,000 item for the East Moriches Channel in Long Island Sound, it was reported. The committee had no O. K. from the Chief of Engineers and no approval from the Budget Bureau.

However, the committee was told it was a project in which the chairman, Representative CHARLES A. BUCKLEY, New York Democrat, was interested. BUCKLEY was absent, but the committee was asked to approve the addition as a favor to him. It was at this point that BROOMFIELD voiced objection.

He demanded a roll call on the motion. It carried, 15 to 14, but 4 Democratic proxies were voted to make the vote 19 to 14.

"If some of those Democrats had been present, they might have voted against the $500,000 item," BROOMFIELD speculated.

Later a Republican motion to cut a $954,000 Texas project, in line with a GOP policy to require 50 percent local contributions, was defeated by the same vote, with the same use of general proxies. The committee was to continue work on the bill today.

"They're going to jeopardize this whole bill and all of the worthy projects again, if they load it down with objectionable programs," Representative BROOMFIELD predicted. Representative MCGREGOR, who had predicted last year's veto, agreed, saying he does not see how Mr. Eisenhower could approve such a bill with any consistency.

Involved are such important Michigan projects as the Saginaw Valley $16,085,000 combination flood-control and wildlife-refuge program, a $9,825,000 Grand River flood-control authorization, and a $5,358,000 flood-control program for the Kalamazoo River at Kalamazoo, all of which have approval of the Army engineers and the Budget Bureau. Such programs have been through long years of laborious study before reaching this point, and the work is badly needed, but they can be delayed another year if the President again has to veto the bill because of the loose back-scratching practices.

"We are against the general proxies," MCGREGOR said in support of BROOMFIELD. "Proxies are sometimes justified, but they should be dated and restricted."

BROOMFIELD, however, is against all use of proxies, and he intends to take his fight to the floor of the House, showing among other things what the present practice will cost the taxpayers.

Civil-Defense Workers Annoyed

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editor of the Wilkes-Barre Sunday Independent of July 21, 1957, which stresses the apathy on the part of the public in the work being carried on by volunteers comprising the ground-observer corps:

GROUND-OBSERVER CORPS VOLUNTEER DECRIES APATHY OF THE PUBLIC

Last Tuesday's mail brought two letters to the editor of the Sunday Independent dealing with two separate phases on the important subject of civil defense.

The first letter, written by Mrs. Dorothy Todd, 77 Sullivan Street, Wilkes-Barre, deals in a serious vein with the public apathy displayed in this region in the work being carried on by volunteers comprising the ground-observer corps.

The second letter, written by a person who identified himself only as a "Discouraged CD Man," takes issue with this newspaper for its coverage of a recent civil-defense test.

Mrs. Todd's letter follows:

"Editor, Sunday Independent: As a 40-year-old housewife and mother, born in Wilkes-Barre and raised with a love of God, my country, and fellow man, I am writing to you with a fear down deep inside, for my fellow Wilkes-Barreans. Are they so confident, so sure that they are smug and safe and cannot be touched by the ravages of war? I cannot bring myself to believe that it is complete indifference.

"My husband, 2 children, 13 and 15 years of age, and myself are members of the ground-observer corps. Until last December, when the Wilkes-Barre post went on ready reserve, with constant recruiting and hard work, we boasted 140 members, mostly children, and were on 24-hour duty, 7 days a week. Because of ready reserve we have lost 100 members. Now as a ready-reserve post, we must be prepared in case of a red alert (which, of course, means we are under attack), to man our post within one-half hour.

"TEEN-AGERS ASK WHY

"I believe right now, we have with us 15 adults and the rest children. It is quite a turnabout with all the talk of teen-agers, to hear them ask, what's wrong with the adults? I wonder if a 'red alert' should occur, whether the parents of our young members would allow them to go on duty?

"Upper New York protects Wilkes-Barre and we here protect Philadelphia, Pittsburgh, Washington, and Baltimore, or rather these important cities actually depend on us to do our share.

"Has too much been said about our wonderful radar detection system? Can it be that the public is not aware that our valley here affords a perfect protection from radar for low flying bombers? If radar cannot locate these aircraft, who else is there than these trained volunteers to spot them and give warning.

"REASON FOR WRITING

"Why am I writing all this to you? Let us say it all started one and a half years ago when I joined the GOC. Besides being a spotter I agreed to do some recruiting. Oh, how big were my plans and the wonders that I would do. I was warned not to be surprised at the refusals and letdowns I would encounter, but I was too confident and was slowly given shock treatment after shock treatment until now I am convinced there is something wrong here.

"My friends laughed at me and the groups and organizations that I spoke to were very kind and listened carefully and 1 or 2 people joined. Please do not misunderstand, our supervisor, chief observer, Air Force personnel, and others were recruiting with me or rather I with them, but I am speaking strictly on my own in this letter.

"PROGRAM WAS FAILURE

"The climax of my shock treatment was our fifth anniversary program at the West Side Armory last Sunday. I need not tell you the months of planning and the weeks of actually working day and night to put on such an affair. It would have been rather simple if the GOC had money to work with, and it certainly would have helped if we had more adults to share the responsibilities. A handful of members put on the whole affair.

"I cannot tell you how delighted we were when informed that the 1st Air Force Band from Mitchell Field would be here for the occasion. What a treat for the public.

"We worked many hours on backdrops to make a live enactment of exactly what happens when an unknown aircraft is reported. We thought the people would really like to know. We also planned other interesting things for the public.

"Our programs alone took us three nights from 7:30 p. m. to 1 a. m. to put together. Arrangements for the band to sleep and eat had to be made and also transportation. Of course I could go on and on.

"INVITATIONS SENT OUT

"We wrote 25 organizations, inviting them to attend, with special seating arrangements. Only CAP showed up. Our television and radio stations here were wonderful to us. They read the announcements I wrote over and over and were kind enough to give us interviews on radio and TV that I had requested. All our drive-in theaters announced night after night our program to be. We even wrote to Hazelton, Pittston, and Scranton radio stations and they announced our program. The Dallas Post, Hazleton, Pittston, and Scranton papers ran the announcements I sent. The Times Leader and Record ran a small announcement and your paper printed the fine announcement that it did. We even made a sign, spotlighted, and attached it to the Observation Post to advertise.

"Now, I for one am tired of any coverup and pretense. I think it should be known that it was one big flop. Did you know that not more than 20 people attended our program. Oh, yes, beside some of our faithful observers and six CAP representatives, my mother attended.

"Air Force personnel was on hand. Franklin Coslett put himself out to M. C. Congressman FLOOD said he was not surprised at the turnout. His very words were, 'I knew who would be here, you people.' Colo-

nel Townend and other dignified guests were there.

"During the dinner that we gave for the band and guests, some of the boys in the band said they had been told that there would be a poor showing in Wilkes-Barre and asked if we knew why. They usually play to 25,000.

"SOMETHING IS WRONG

"I'm trying hard to blame our lack of advertising in some way, but surely with all we did, more than 20 people knew about it. I'm afraid because of my experience in recruiting and the attitude of the public in general, that something is very wrong here and that definite steps should be taken. One very old man told me that the only thing that would wake Wilkes-Barre up would be to drop a bomb on Public Square. I hope he is wrong.

"ON HER OWN MOTION

"I am sending this to you strictly on my own. No one but my husband and children know I am writing this. I doubt if my supervisor would approve because everything must look good for the Corps, but I feel not at all disgraced after our snub from the public and I do not feel that our dignitaries feel disgraced in any way. They know Wilkes-Barre, know what to expect and honored us with their presence anyhow. Real troopers, I'd say.

"Oh, yes, when I was a little girl, on Flag Day, July 4th, etc., when one walked down the street just about everyone had a flag displayed. But not today. Why? There has to be a reason.

"DOROTHY TODD."

Election Polling and Research

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by my old friend, Louis Harris, who has done a great deal of work in the field of surveys and polls. I was impressed with the content of Mr. Harris' article and thought it would be helpful to those who are interested in the growing use of election polls:

ELECTION POLLING AND RESEARCH

(By Louis Harris)

Whatever else might be said about it, election polling is the glamor girl of social research. This is certainly true as far as the general public is concerned. One doesn't have to ring many doorbells before finding out that the quickest way to identify survey research is to say, "You know, it's a poll—like the election polls." Surprisingly, perhaps, this is also the case among colleagues in other disciplines and among articulate men and women who indeed know something about the field.

The reason, perhaps, lies most of all with those of us who are engaged in this work. Nearly everyone likes to have at least a small finger in the election research pie. And this is as much the case among academic people as among those who describe themselves as market researchers, or practitioners of consumer or public relations research. Election research has been the irresistible magnet, just as attractive to those who claim their primary interest lies in the political field as those who have achieved peeminence in other facets of research.

The consequences of this attention have not always been salutary. When the polls fell flat on their faces in 1948, confidence in all forms of opinion research was shaken. Commercial business fell off; major segments of the press wanted to throw the baby out with the bath; foundations took a second long look as this burgeoning area of potential grants; the Government cut back on programs involving surveys; and students seemed less interested in becoming researchers.

Everyone in the field realized that survey research had become too closely identified with election polling. There were a few untoward snipers who suggested they were in a quite different field. Some said: "Well, advertising research is something quite different." Corporate researchers added, "We would never try to use such a close margin of error on which to base recommendations for management policy." Academic researchers muttered, "It should be clearly understood that we use a much more sophisticated methodology, and our interests are not in the spectacular."

It was a wise man who realized, back in 1948, that anyone in research who tried to get out of the boat was toying with utter nonsense. For better or for worse, the public reputation of this field has been inextricably wedded to the quadriennial pre- and post-election spectacles.

As a consequence, the field has a serious obligation to itself to look the whole area of election research squarely in the eye and confront it with candid and searching criticism. For election research is an integral part of nearly all other applications of research. It has played a critical role in the development of action analysis and decision analysis; it is probably the father of public affairs and public relations research; and it has been a training ground for social researchers of all varieties. Let us look first, therefore, at some of the areas in which election polling and research, as we know it, have contributed to political knowledge.

CONTRIBUTIONS OF RESEARCH TO POLITICAL UNDERSTANDING

Broadly speaking, research has contributed most appreciably to our understanding of four areas:

1. How voters decide to cast their ballots the way they do.
2. Who votes and who does not.
3. How the social and economic structure reflects itself in elections.
4. How the events of our time affect the political complexion of America.

Out of researches in these four areas have come a number of more or less hard findings which have led to some responsible generalizations.

Most voters have made up their minds well in advance of the campaign: Despite the protestations of politicians and students of politics that campaigns are "great democratic forums" the overwhelming evidence indicates that most voters have decided how to vote well before the campaign has got under way. A small group of voters may be honestly undecided and may switch in midstream, but not the vast majority. Campaigns may have the polarizing effect of making partisans even more partisan, but for the most part they are sound and fury affecting relatively few voters, and in many cases not affecting the ultimate outcome. (But woe betide the poll taker who says, "There is simply no point in surveying from here on in, for no appreciable change can take place.") An exception to this rule is that larger and later shifts may be made when the voters do not feel strongly about either candidate, as in 1948. Also, the more local the election, the more likely it is that a campaign can change voting intentions.

Independent voters tend to be those who know and care the least: More and more elections in the United States are unquestionably being decided by voters who split their tickets within a given election, or who switch from one party to the other from election to election. Yet, when the much-discussed and even glorified independent voter is looked at and empirical data about him are analyzed, he almost invariably tends to be a sporadic voter, to be quite poorly informed, and to have done little integrated thinking on political subjects. In fact, this slippery political animal tends to be more bored than other voters with the election process. The independents include some are above politics and some who are below—those who are excessively ideological and those almost lacking in ideology. The people who used to be independents no longer are, and people who never dreamed of being independents have indeed become switch voters. I shall cite but two cases of this juxtaposition. First, independent liberals, such as those who kicked over Democratic Party traces in the 1930's to elect New York mayor, Fiorello LaGuardia, time and again have now almost entirely joined the Democratic Party and, in many cases, have risen to positions of responsibility within it. Second, larger numbers of Irish Catholic voters, almost monolithically Democratic from 1928 through 1940, have since then gone more and more heavily over to the Republican column in national elections, and yet have by and large remained Democratic in local elections. They must now be classified as among the most independent of voters.

Turnout can alter the basic political balance: Who votes and who does not vote can make a critical difference in the traditionally close elections that mark American politics. The fact that proportionately more upper-income people vote gives the Republican Party an advantage in most elections. In 1952, there is no doubt that increased turnout by middle-income women, heavily disposed toward Eisenhower, was an important element in changing what might have been a close election into a relative landslide. In nonpartisan local elections, where turnout is low and disproportionately of upper-income people, the results generally tend to favor a conservative victory. On the other hand, overconfidence in 1948 cost the Republicans heavily.

Voting in America is a symbol of social affiliation: Despite the tradional claim that each voter is an individual who makes up his own mind, social group pressures limit choices sharply, and are highly significant determinants of individual voting patterns. The fact is that political allegiances are a basic reflection of social allegiances. When the group tends to shift, cross pressures on the individual may be heightened, but the pressure to shift with the group is usually dominant.

American politics tend to be highly personalized and unideological: These group patterns have much deeper roots in social and economic bases than in any firmly held ideological dogma. Americans are perhaps the least subject to ideological dogma and integrated lines on political thinking than any people in the world. In election after election, whole groups of voters have reacted in a similar fashion, but almost always in terms of a protest against a specific fear (the depression, the Korean war), in terms of a man they trust to work for the things that will personally enhance their lot (Roosevelt, Truman, Eisenhower), or in terms of pocketbook self-interest. This tends to personalize American politics. American voters most nearly approached integrated mass thinking in their acceptance of the tenets of the New Deal, but even then, as was dramatically illustrated in the case of World War II, the allegiance turned out to be more a trust in

Roosevelt and the Democratic Party than in a specific foreign policy program.

Class cleavages run deep, though the balance of power rests with the everchanging middle income group: Every cross-section political survey ever conducted shows the inevitable pattern of low-income people being dominantly Democratic and upper income people being Republican. Irrespective of their leadership and program at any given moment, the two parties do, indeed, have very different economic bases. To this extent, politics in America are a reflection of econmic divisions as well as varied social affiliations. The divisions were sharpest in the depression years. Recently, however, important exceptions have arisen. For instance, low-income Germans are more Republican today than low-income Catholics. Most of these exceptions reflect a clash between traditional economic ties and changing cultural pressures. Although the middle class may have been effectively squeezed out in Britain, it maintains the balance of power in any American election. The recent trend in American politics, however, has been toward a sharp deemphasis of class lines and a regrouping along cultural patterns which sensitize voters to such issues as those involving civil rights and foreign policy.

Class cleavages grow more diffuse as foreign policy becomes a major issue: In the United States, as opposed to Europe, separate issues tend to cut across economic lines and make for a blurring of the traditional political structure. Surveys have provided abundant evidence that lower income groups tend to be less internationalist (rooted in the belief we have enough unsolved problems at home), while upper income groups tend to be more internationalist (though until Eisenhower's pronounced internationalism, they believed in the traditionally Republican high tariffs and noninvolvement overseas). With the shift of the Republican Party, or at least of Republicans in the executive branch, to an internationalist position, the confict for upper income groups tends to be resolved. At the same time, the lower income groups have tended to split. In 1956, whole segments of the lower income groups, especially those of Eastern European origins, switched to the Republican Party in defiance of their traditional economic base in politics. This switch was in response to the charge that the Democratic Party was a war party. When faced with apprehensions of war, they yielded to religious and cultural, rather than to economic pressures.

Sharp and meaningful political differences emerge when an electorate is viewed in terms of the length of time particular ethnic groups have been in this country. The newer the arrivals, the more Democratic their inclinations. As time passes, and the more prosperous third and fourth generations emerge, economic pressures push them toward the Republicans. This process may be accelerated, in the case of the Germans for instance, for almost entirely noneconomic reasons, and can be reversed or decelerate, as among Jewish voters, again for almost entirely noneconomic reasons. It can also be switched in one 4-year span, as among the Negroes in 1956, and again for noneconomic reasons.

Single issues can change long time trends: As of 1952, there seemed little question that the Negro group would continue to go more heavily Democratic in the future. The old-time Republican base among Negroes seemed to have nearly evaporated; the combined civil rights-New Deal base among Negroes seemed nearly monolithic. Nevertheless the dramatic events of desegregation under a Republican administration produced wholesale shifts among Negro voters in 1956. The cause is clear: the Negro group is today almost wholly absorbed with a single issue, and the Republicans have convinced many that their chances are greater under their leadership, and that the Democrats must be punished unless they set their own civil-rights record straight. Much the same thing happened when the farmers broke from their Republican pattern in 1948.

Historical issues can dominate voting long after the event: In some parts of Kentucky, vote patterns are still determined by bitter battles over road construction which took place some 70 years ago. The slavery issue has dominated southern voting patterns with regularity over the same period. The antieastern tradition has been dominant in important sections in the Pacific Northwest. The indigenous radicalism of Wisconsin politics has its roots in the antiwar tradition of those who emigrated from Germany more than a century ago.

Political party images persist despite changing events: To millions, the Democratic Party is known as the party of the "working man," the "little fellow," the "common man," while to these same millions, the Republican Party is known as the party of "big business," "the bosses," "the rich." To others, however, the Republican Party is known as the "party of peace," and "the party of moderation." To these people the Democratic Party is known as "the party of war" and the "party of radicalism." For years the Republican Party suffered mightily under the impact of the "big business" image. In recent presidential elections, the Democrats have labored under the handicap of the "war radicalism" image. Yet even in the 1956 Eisenhower sweep, the underlying distrust of the Republicans must surely account for an important part of the electorate splitting its ticket on the congressional and gubernatorial level.

These are only a few of the generalizations about politics toward which survey research has made contributions. Many others, both more general and more specific, may be found in the growing library of election studies.

CONTRIBUTION TO RESEARCH METHODOLOGY

A distinct advantage which election research has enjoyed and perhaps continues to enjoy over research in other substantive areas is that it has continuity of problems of design and execution—a continuity which is probably the basic condition of long-term methodological advance. We can trace to election studies the beginnings of some of the most important developments in the entire field of survey research, many of which are discussed in more detail elsewhere in this 20-year survey.

Among those methodological advances which deserve special mention is the reinterview or panel technique, in which the same respondents are subjected to repeated interviews over time. Progress in precision sampling has also been sparked by election studies; the modified area, pinpoint, and precinct sampling methods employed in recent years are distinct marks of progress. Another area is that of questionnaire design: The early awareness of the need to document the role of issues in elections led to the development of techniques to elicit opinions in an increasingly broad area. Indexing and scaling methodology have been similarly advanced by the experience gained in studying elections. Indeed, there is scarcely any major technique of opinion research which has not been called into play—and further developed—in the course of researches on voting behavior.

SOME PRACTICAL PROBLEMS

Even a cursory review of election research over the past 20 years must include many of the practical problems that those on the firing line have faced with regularity.

A four-cornered debate is still raging, for instance, as to which is preferable: the direct question—"Are you for Mr. X, the Democrat, or Mr. Y, the Republican?", the cafeteria question (a four-part alternative question, developed first by Elmo Roper and Carolyn Crusius), construction of an index or series of indices, or a series of short, scalable questions. This writer sees no special point in selecting one over the other, but believes that the direct question works much better than its critics would allow, and that indexing and scaling provide a much more flexible and subtle tool for analysis than the old direct-question advocates realize. In certain areas of psychological subtlety, projective techniques work better than direct questions, but the vast majority of respondents are able to answer forthrightly a question on their political preference.

Still another practical problem is that of convincing researchers and interviewers alike that people are probably more easy to interview on their politics than on nearly any other subject. One constantly runs into a timidity of approach suggesting that the problems are comparable to those faced in eliciting Kinsey-type information. To be sure, some people will not reveal their political views, but with sound and effective interviewing this reaction can be limited to no more than 1 to 2 percent.

Another much-discussed problem is the "don't know" response. The problem, of course, is that people whose views cannot be ascertained might settle a close election one way or the other. This writer must confess that he is prejudiced about this question, having felt for some time that a high number of "don't knows" is a function of a low standard of interviewing and inadequate analysis of data on decisionmaking. Too often interviewers are frightened off from pinning their respondents down. Often, too, the study design does not take account of critical influences which can shed light on the real direction of the respondent's choice. This was borne out in the past election, when in the course of conducting over 2,000 interviews personally, the writer found no more than two percent who were really undecided. To be sure, degrees of certainty about choice and the possibility of developments which could switch voter preference are very real factors. But the "don't know" dilemma probably receives more attention, by both professionals and amateurs, than any other single question. It merely highlights, in this writer's view, the absurdity of making flatfooted percentage point predictions.

The dilemma caused by the nonvoter is as distressing as the "don't know" problem. Some progress has been made in this area. We know, for instance, that the two soundest indicators of turnout are past voting and interest in the current election, provided, of course, that questions about both are asked properly and the replies are analyzed skillfully. But up to now, election surveys have not really solved this problem, which can be a thorny poser to those on the firing line.

Then there is a bugaboo which has occurred only once in a presidential election in the history of modern survey research, the last-minute switch in vote in the Truman election of 1948. While the switch was a very real phenomenon, one over-the-shoulder criticism of 1948 research which was not emphasized enough in the SSRC committee analysis was that if the full dimensions of that election had been analyzed, the chance of a Truman comeback would have been recognized. The possibility of an upset has been more fully explored since 1948.

THE FARCE OF PREDICTIONS

There is a legitimate need to validate a cross section by comparing the results obtained from it with the actual results of an election. A 1956 cross section showing Stevenson winning 55 to 45 percent would not be very trustworthy in retrospect.

But this writer has been of the view for all of the 8 years during which he has been directly responsible for major election research undertakings, including two Presidential

and some 27 local and State election studies, that prediction in election research tends to abort and becloud the purpose of sound political research; to give essentially superficial research an air of profundity; and to thoroughly mislead the public and even fellow researchers as to the preciseness of the current state of attitude and social research.

Having made such categorical objections to predicting, the writer should elaborate at some length, but space limitations make this impossible. One can only list some of the errors, measurable and not measurable, which make precise predictions scarcely more than an informed guessing game:

1. Sampling, for all of the claims, is still not so precise as to warrant much less than a 3 percent margin of error (and this is generous on the low side);

2. Interviewing is not, nor is it likely to be, as standardized as question wording and interviewer instructions would suggest. This is mainly due to the fact that respondents insist on answering questions in their own way and not necessarily in the content of the questionnaire, thus necessitating judgmental editing by interviewers;

3. The positioning of the key question or series of questions in itself can make an important difference;

4. Qualitative dimensions of intensity and firmness of opinions have rarely been systematically analyzed, but may make a real difference in any kind of precise percentage point result;

5. Researchers have not learned how to determine who in a sample is going to vote and who isn't.

A MORE EXCITING BUT NOT AS CONTROVERSIAL LOOK TO THE FUTURE

One cannot think about the vibrant and living election research world of these past 20 years without at least listing some of the possible contributions now in the offing. In this writer's view, the fact that the future is so full of challenges is proof enough of the pioneering and substantively rewarding character of election research.

Here are some subjects on which further research is desirable:

1. Ticket-splitting and switch-voting, not only within elections, but from election to election;

2. How the so-called "new independents" (Catholics, Negroes, etc.) are replacing the old "independents" (non-conformist liberals, etc.);

3. The declining role of political parties in determining voter behavior;

4. The role of mass media versus personal appearances in major political campaigns;

5. Extension of reference group research, especially in the suburban vote shifts, the urban South's political transition, and the Negro vote protest, by drawing universes of such groups for separate study instead of trying to isolate relatively small samples as part of a larger sample;

6. The role of so-called conscience issues (foreign policy and civil rights versus self-interest issues) in elections, with special emphasis on the possible gradual shift to foreign-policy orientations among a key and growing number of voting subgroups;

7. The role of personality types in voting behavior, done on a systematic and centrally focused basis, rather than by tossing in a few personality questions. (One might debate the current state of methodology in this area but its substantive promise may be enormously revealing.)

8. The gyrations in turnout from election to election. (This might be more profitable than trying to crack the hard shell of the ephemeral nonvoter in presidential elections alone.)

9. Cross-pressure situations, election by election, as well as the respective and relative roles of issues, personalities, and political parties in major elections.

Apart from work in these substantive areas, there is much methodological progress to be made in such directions as integrating qualitative data with quantitative measurements, developing structural methodology in the reference group area, giving more serious consideration to the implications of research findings for democratic theory, making greater use of the experience of those working on the analysis of election returns and ecological analysis, continuing to fill in the many gaps in our knowledge about the political decision-making process, and documenting the full role of personal influence in politics.

Acceptance of election studies appears to be on the rise. Politicians are coming to use political survey research as they now use advertising and other standard campaign aids. In addition, of course, the public will continue to be rather insistent to hear about itself in the course of any major election. With the entry of the New York Times, the Alsop brothers, and others into the business of talking with live voters, many reporters are astir with the prospect that in election research they have discovered a new dimension to reporting. There is no doubt now that election studies have become an indispensable contributor to empirical political science. Acceptance by traditional political scientists is growing, and the next 5 years should see more blending of political theory, ecological analysis, survey research, and political sociology—much to the improvement of all of them.

Corona Naval Hospital Closing Calls for Bureau of Medicine and Surgery Initiative Toward Obtaining Authorized Naval Hospital in Los Angeles-Long Beach Naval Area

---

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. HOSMER. Mr. Speaker, since 1950 there has been an authorization for a naval hospital in the Los Angeles-Long Beach area to serve large numbers of naval personnel, active and retired, together with their dependents. The Naval Vessel Register indicates that 14.15 percent of the entire United States fleet operates from the port of Long Beach. This amounts to 30 percent of the Pacific Fleet. In short, 1 out of every 7 families of our considerable Naval Establishment live in Long Beach or nearby cities. It is reasonable to expect that almost 1 out of every 7 retired naval men and their families also live in this area.

They were poorly provided for indeed by Corona Naval Hospital, which required a round trip of some 80 or 90 miles for medical care. With Corona Hospital closed, the nearest naval hospital facility will be Camp Pendleton, requiring a round trip of some 140 miles for medical care.

Now in these days of difficulty in keeping personnel in the naval service, it seems to me that the Bureau of Medicine and Surgery will not be doing its share of the job unless and until it vigorously carries to success an all-out campaign for construction of the hospital authorized in 1950. This hospital would be located at the area where it is needed, repeat, at the area where it is needed. Aside from purely humane considerations, it would do much to make the naval service an attractive career, repeat, much to make the naval service an attractive career, not only for the 1 in 7 stationed there now, but for all naval personnel, because during a career every naval man would normally be stationed in that area for at least 1 tour of duty and possibly several.

The time for equivocation and timidity by the Bureau of Medicine and Surgery on the issue of building this hospital is long past, if in fact it ever was. I believe the Bureau has a clear duty to make the proper recommendations to the Secretary of the Navy and his budget staff for the inclusion of this construction in its next budget. I say this duty is upon the Bureau of Medicine and Surgery because whatever that Bureau does is to some extent wrapped up in the technical mysteries of the medical profession. Generally, its decisions are not competently evaluable by nonprofessionals. But this is one case where they are and where it is apparent that the Bureau should exercise a strong initiative.

For the RECORD I submit an exchange of correspondence between myself and the Navy Department on the matter of Corona's closing:

DEPARTMENT OF THE NAVY,
BUREAU OF MEDICINE AND SURGERY,
Washington, D. C., July 16, 1957.

Hon. CRAIG HOSMER,
House of Representatives,
Washington, D. C.

MY DEAR MR. HOSMER: The Secretary of the Navy has referred your letter of July 9, 1957, to me for direct reply. The following information is provided on the reasoning behind the Navy's decision to inactivate the United States Naval Hospital, Corona, Calif. The Department of the Navy has been concerned for some time with the problem of maintaining high standards of medical care in an adequate hospital system as a result of increasing budgetary limitation and rising costs.

Inadequate funding during 1957 had to be compensated for by drastically reducing the program for equipment replacement and for repairs to the physical plant of naval hospitals. As a result, a backlog of over $1,500,000 in equipment and approximately $3,150,000 in work requests accumulated. This Bureau originally requested new obligation authority of the Congress in the amount of $87,200,000 for fiscal year 1958. This amount was reduced by House action to $85,200,000 which latter amount is now proposed to be reduced by an additional $1,700,000.

The above reductions in expenditure and obligations will result in the following effects:

1. Funds for hospitals in 1958 will be less than those for fiscal year 1957 when taking into consideration the additional cost during 1958 wage board increases and civil service retirement fund contributions.

2. In addition to the foregoing requirements, this Bureau is faced with the unbudgeted requirement of $775,500 for a new influenza vaccine to combat the threat of the spreading influenza epidemic from the Far East and an additional $300,000 to provide for directed financing of the Navy's

share of the cost of operation of the Armed Forces Examining Station. Other anticipated but unbudgeted requirements, including wage board and price increases, must be considered which cannot be estimated at this time.

The planned military strength reduction of 18,500 man-years was considered in the foregoing plan of reducing obligations by $1,700,000. In effect, this planned military strength reduction accounts for an average decrease of approximately 7 patients per hospital which would not constitute any significant fund saving in individual facilities.

As a result of the foregoing action, the Navy considered all possible alternative means of satisfying the prescribed cut in Medical Department funds. As a result of these considerations, several basic conclusions were reached with respect to Medical Department financing during the coming fiscal year. First, it was determined that none of the Bureau of Medicine and Surgery programs or functions could be feasibly eliminated in order to satisfy the budgetary cut.

The compound effect of the present reduction together with the fundamental stringency of the 1958 budget and the impact of heavy unbudgeted requirements necessitated serious action. Accordingly, the Department of the Navy proposed closure of the naval hospitals at Corona, Calif., and Mare Island, Calif., as the only feasible method by which the accumulative financial problem facing the Bureau of Medicine and Surgery can be alleviated and an effective, efficient medical care program be conducted throughout the rest of the Navy.

This proposal also permits a directed reduction of 340 naval personnel and 387 civilian personnel in naval hospitals.

In regard to the closure of the United States Naval Hospital, Long Beach, Calif., in June 1950, it may be restated that this hospital was not closed and transferred to the Veterans Administration at the Navy's request or with the concurrence of the Navy. It is agreed that there has been great inconvenience and difficulty in providing adequate treatment and hospitalization to military personnel, their dependents and retired personnel since closure of the hospital because of the relative remoteness of another Navy hospital. Considerable correspondence has accumulated on the difficulties of providing adequate medical care in this area since 1950.

It may be recalled that incident to the Korean fighting, the construction of a new temporary hospital was projected at Long Beach. This hospital was planned and approved as part of a triservice hospital expansion program in 1950–51 based on anticipated military patient loads incident to the Korean fighting; that is, on the basis for active service military personnel. At that time, reviewing authorities would approve inclusion of only 10 percent beds for dependents. On May 8, 1952, this hospital project was deferred by the Secretary of Defense "until planned strengths and hospital expansion indicated a positive need for these beds." This statement effectively stopped all Navy plans for construction of this hospital as it was impossible to project a further military buildup or resumption of severe fighting in Korea. The Navy never receded from its stand that a naval hospital was and is needed in this area. It is believed the record clearly shows that the Navy pushed its plans for construction of a hospital in this area as vigorously as the other hospitals involved in the hospital expansion program.

The project for new construction at San Diego was approved essentially on the basis of relieving the extremely overcrowded patient conditions by permitting as many beds as possible to be placed on 8-foot centers rather than 6-foot centers with double-decking in some areas, and also to provide a modern surgical suite. This construction did not detract from the need for beds in other areas. As the postwar condition settles down, the new building will permit the placing of patients in permanent construction and the inactivation of the deteriorated, obsolete, temporary buildings constructed from 1922 through World War II. These temporary buildings have proved to be expensive in upkeep and maintenance. In addition, this new construction permits the consolidation of existing widely dispersed laboratory and clinical facilities. In connection with the provision of inpatient dependent care in this area, the Navy found it essential due to budgetary limitations to close the family hospital on North Island to inpatient dependent care in April 1957.

The dispensary at the United States naval station was never designed to carry out its current mission which overtaxes the capability of the facility. The location of this facility within the station does not readily lend itself to expansion. In addition, the Navy does not deem it advisable to expend any large sums of funds for expansion of the dispensary as any alterations or expansions that could be accomplished would not solve the long-range needs of the service in this area.

Although the justification for a United States naval hospital in the Long Beach area still exists, the limited funds and personnel made available to the Bureau of Medicine and Surgery for operation of naval hospitals require that priority be given to retention of those hospitals that more directly support the operating forces.

The utilization of the hospital ship at Long Beach has served a very practical purpose. A large number of military patients, requiring specialty treatment, have been saved a round trip to Corona; and secondarily, this arrangement has permitted a greater utilization of the overcrowded United States naval station dispensary for outpatient care. This is important as outpatient care for dependents is not currently authorized in civilian institutions at Government expense. When the United States Naval Hospital, Corona, is inactivated a greater utilization of the hospital ship for military personnel is anticipated. Although the details have not been worked out, additional provisions will also be made for expanded outpatient dependent care at either or both the United States naval station dispensary and the hospital ship. Some provision for strictly emergency inpatient dependent care will be provided at the dispensary or hospital ship. The Corona hospital patient load will be distributed to the United States Naval Hospital, Camp Pendleton, San Diego, and the U. S. S. *Haven*, Long Beach.

The inactivation of the United States Naval Hospital, Corona, does not mean that all buildings will stand idle. Approximately one-third of the buildings are currently in use by the Naval Ordnance Laboratory. It may be that the Naval Ordnance Laboratory, upon inactivation of the hospital, will request the use of additional buildings.
